Employment in the bookbinding trades was quiet on the whole during March, and worse than in February, though rather better than in March last year. In London, the percentage of unemployed, out of 3,354 Trade Unionists, rose from 4·9 to 6·3, as compared with 5·6 in March, 1912. In other parts of the kingdom, the percentage, out of a total of 3,304, was only 3·1, against 3·0 in February, and 4·1 in March, 1912. In Glasgow, Leeds and Newcastle work was good, and it also improved at Manchester. At Edinburgh, however, it was worse than it was a year ago. Employment amongst fancy leather workers was fair at Birmingham, good, and better than in February, at Walsall, and good at Manchester, where some overtime was worked.

The following were amongst the contracts placed by H.M. Stationery Office during March:—Binding 6,994 Priced Vocabulary of Clothing, etc., Dickens and Cooper, Ltd., 6, New-court, Farringdon-street, E.C.; Bookbinding in Leather, Cloth, etc., Scotland, T. A. Nelson, I. T. Nelson, G. M. Brown, Parkside Works, Dalkeith-road, Edinburgh; Binding, etc., 5,000 Diaries, 1,700 Engineers' Pocket Books, printing, binding, etc., 2,000 Books Works Instruction Forms, 600 Army Book "294a," 2,000 Books "S. 72a," 2,000 cps. Vaccination Officers Notices "Q.," 1,000 Army Book "No. 275," 3,500 Books, "S. 71a," 1,000 Books, "S. 381," 1,000 Books "S. 81, size 1," 1,000 Books, "S. 242," 600 Vaccination Officers' Report Books, supplying 1,000 Books "S. 76b," 2,000 Pairs Millboards, McCorquodale and Co., Ltd., Wolverton, Bucks; Binding 9,000 Classification, etc., Finger Prints, A. Straker and Sons, Ltd., Carmelite-street, E.C.; Parchments of various descriptions, Cooper, Dennison and Walkden, Ltd., Verney-road, S.E., W. Cowley, Newport Pagnell, G. J. Dilley, Potton (Beds.) and Canonbury, N., G. W. Russell and Son, Hitchin; Portfolios, W. W. Cleland, Ltd., Cullingtree Factory, Belfast.

A lecture on Bookbinding was delivered on April 22nd at the King Edward VII. School of Art, Armstrong College, Newcastle, by Mr. R. G. Hatton, the director of the school. Mr. J. McGill Sinclair, president of the Newcastle and District Branch of the National Union of Bookbinders, occupied the chair. Mr. Hatton expressed his belief in technique, but thought that something more was needed to produce a work of art. He also pointed out the danger of regarding costliness and elaborateness as artistic in themselves. A concise, informative history of books and bookmaking followed, and the lecture was fitly illustrated by lantern slides and exhibits of the craft. As is usually the case, no adequate report of the lecture appeared in any of the local papers.

The Bookbinding Class of the Central School of Arts and Crafts, Southampton-row, held a most enjoyable social evening on April 12th in the hall of (and with the kind permission of) the National Sunday League in Red-Lion-square. Over a hundred guests, ladies and gentlemen, sat down to tea, most of the leading London binderies being represented. A full and very excellent programme of music, vocal and instrumental, followed. The proceedings concluded with a dance, which commenced at 10 p.m. and went merrily until, as a gentle hint that the "wee sma' hours" were approaching, the lights began to go out. On April 16th the class visited the Leathersellers Institute, in Tower Bridge-road, by courtesy of Dr. Gordon Parker. Mr. Lamb conducted the party round the workshops and explained the various processes of leather production, and in addition gave some interesting practical demonstrations—with the machinery in motion—of the different methods of finishing the tanned skins. Amongst other future arrangements for the class are a country ramble and a visit to Messrs. Dickinson's paper mills at Croxley, near Watford.

The commercial value of a well-bound catalogue was referred to in our last Bookbinding Number. In the current issue of the *Stationery and Trades Journal* the point is again emphasised, this time by Mr. H. A. Maddox, in an interesting article on "The Wholesale Stationer's Catalogue." His remarks on the binding of it are as follows:—"The main objection to an efficient clothing of the catalogue has hitherto been the cost. Of course many of the lesser houses think they cannot afford a high-class catalogue. This is a mistaken notion, for the . . . great majority of paper wrappered and board bound catalogues last no time, and are replaced far more often than an efficiently bound one would be. Thus in the end, an extra outlay on stronger binding proves to be an economy. . . . The sections must be sewn on strong tapes (wiring and French sewing leads to speedy decay), using tough thread, and the tapes afterwards inserted in split boards. The sides will of course be stiff but not too heavy. End sections should be lined with linen, to give additional strength at the points bearing the greatest strain. To the same end the paste-ups should be of strong white cartridge paper, cloth jointed. The back will of course be loose, or open. Choice of material is important, and by far the best wearing is linen buckram, which may be obtained in tasty art shades. For effective designs and colours it may be superseded by art cloths, but where durability is concerned, buckram undoubtedly is the best."

A full account of the annual meeting of the Bookbinders' Pension and Asylum Society appeared in the issue of this journal for May 1st, when also a summary of the 82nd yearly Report was published. One of the points on which stress was laid was the fact that the list of "shop collectors" does not by any means cover the trade as a whole, there being many binderies where no collector is in evidence. This will be obvious enough when we say that only seventy-two shops are represented in the list. At some large ones, like Fisher's, there is only a single collector for the Society, whilst at others there are quite a number, *e.g.*, six at Burns', and four at Leighton, Son and Hodge's. Every effort should be made to gather funds for this most deserving charity. How greatly it is appreciated by aged members and their wives may be seen from the fact that at last month's election there were 35 candidates (twenty of whom were women) for the eleven vacant pensions. Three of them were then making their seventh application, and all these were fortunately successful on this occasion. Only one of the old men was elected to a pension, and residence at the Home if desired, and he is 82. The only other male elected, aged 63, is already in an infirmary, and his name had been on the candidates list four years. The Society which has to deal with these cases is not at all rich, and we hope that those of our readers who can will not fail to extend their help to it.

At a quarterly meeting of the Council of the Federation of Master Printers last month, bookbinding rates and conditions were considered, and a course of action decided on.

Messrs. Stanley Paul and Co. will in future issue their one shilling net novels bound in cloth, instead of in illustrated paper covers. The first volume in the new binding will be "In Fear of a Throne," by R. Andom.

Messrs. H. K. Judd and Co., Ltd, wholesale bookbinders, Stanhope Works, Clerkenwell-close, E.C., sued the London and South Western Bank, Ltd., last month, asking for a declaration that the defendants agreed to honour a bill of exchange for £1,384. Plaintiffs also claimed damages for alleged breach of agreement in dishonouring the bill, and alternatively damages for conversion. Further they claimed damages for alleged libel, namely the writing on the face of the bill "Not provided for." It appeared from the evidence given that during 1911 the plaintiffs were doing a good deal of work for Mr. Jackson, an American who, in conjunction with a Mr. Hooper (who was connected with the *Times*), had been bringing out the "Encyclopædia Britannica." The plaintiffs' work in binding that book was coming to an end in 1911, and about that time Mr. Jackson started a more extensive book circulating campaign in an American company named the Grolier Society. The plaintiffs undertook to do work for the Society, knowing that it was a bigger thing than they were accustomed to, and they were in need from time to time of quantities of leather, which they obtained from Messrs. Hart and Co., City merchants. The plaintiffs drew on the Grolier Society for large sums which became due to them, in the shape of six months bills, which were discounted by the bank. The plaintiffs gave acceptances to Messrs. Hart and Co. in four months bills, and it was in respect of one of these that the action was brought. It was stated in the course of the hearing that the bank were discounting the Grolier Society's bills, to the extent of some thousands of pounds, for another firm of bookbinders. Mr. Henry K. Judd, of the plaintiff firm, said that they had bound over 178,000 copies of the "Encyclopædia Britannica," and were doing a very substantial business, the turnover in 1911 being £40,000 and in 1912 £35,000. At the conclusion of the second day's hearing, the jury returned a verdict for the plaintiffs, with £2,500 damages. Mr. Justice Pickford granted a stay of execution, in order to allow the defendants to consider the position.

To Messrs. Thomas Nelson and Son's useful series of hand-books, entitled "The Hobby Books," published at 1s. net, has recently been added a volume on "Handy-work," by W. Graystoke. This contains a chapter on "Bookbinding without Tools, and the Repairing of Old Books," which may prove useful to persons who desire to keep certain publications tidy without going to the expense of having them bound.

The imports of book cloth during April amounted to 22,160 yards, value £569, as compared with 27,949 yards, value £676, in

Digitized by Google

the same month of last year, and 22,900 yards, value £603, in April, 1911.

Of late years, says Mr. A. E. Palmer in the *Leather World*, there has been a great development in connection with skiver work in this country, and some of the imitations on sheep grains are now so good that it is quite impossible for practical leather dressers to tell them from seal, morocco, pig and other natural grains, when made up into the finished article. Huge quantities are now utilised both at home and abroad for the cheaper classes of bookbinding and other work, and it is satisfactory to mention that for sheep-leather dressing the British maker is as yet not surpassed by any country in the world. "In my opinion one great reason why the fancy leather trade has shown such marked progress during the past few years is the vast improvements made in skiver tanning and finishing."

Mr. J. W. Zaehnsdorf, the well-known art bookbinder, has converted his business into a company, with the title of Zaehnsdorf, Ltd., and a capital of £10,000. He is the governing director. The offices of the company are at 53, Berners-street, W.

The Parisian Master Bookbinders' Association has nominated a committee to consider the advisability of raising the price of binding work to a reasonable level, having regard to the constant increase in the cost of the raw materials used in the trade.

A Parisian bookbinder named Julien Baury enjoys the distinction of being the smallest conscript called up to serve the usual term of military service. He is 4 feet 4 inches high, and weighs only 72 lbs. The authorities for his district have nevertheless decided that he is strong enough to render auxiliary services in a siege battery.

It is stated that the binding of the little edition of 100 copies of the catalogue of the collection of bronzes got together by the late Mr. Pierpont Morgan cost £1,200, or £12 a copy. The work was done at Paris, the only place, says a French contemporary, where such a job could have been successfully carried out.

A catalogue of "Old French Books" (No. 149) just issued by that prince of antiquarian booksellers, M. Ludwig Rosenthal (14, Hildegardstrasse, Munich), contains a section devoted to Bindings, which includes about a hundred items. Whilst there are none of very special importance, the styles of many of the French binders of the eighteenth century—and a few earlier—are represented. There is a series of Royal and Imperial armorial bindings from Louis XIII. down to Napoleon III., and some from the Libraries of the Pompadour and other celebrities of the old régime. The catalogue will be sent free on application.

A recently published German official report states that the wages earned by piece-workers in the bookbinding trade range from 30s. to £2 per week for men, and 15s. to 26s. for women. In certain special cases, however, as much as £2 10s., £3, or even £3 10s. is earned.

Employment in the German bookbinding trade remained unchanged during February, and was only a trifle less active than in the corresponding month of last year. The same was also the case in Norway.

A strike of bookbinders occurred lately at Mayence, and resulted in an increase of wages being secured. It is said that nearly two-thirds of the employees in the trade there are females.

Some interesting notes on the Dutch Bookbinding Industry and Foreign Trade appear in one of the pamphlets recently published by the association styled "Het Vrije Ruilverkeer" (Free Trade). For many years foreign-made articles, and in particular German ones, held a prominent position in this section of the trade. Latterly, however, the Dutch industry has not only made a market for itself, but is also supported by orders from other countries. This represents not merely the manufacture of bindings for large firms, and the execution of special art work and albums, but also the production of account book bindings. In the latter part of the last century the latter were almost entirely neglected, and therefore imported on a large scale. Now the local industry largely supplies the demands of the home market, and in addition does an important export trade, not only with the Dutch Colonies in the East and West Indies, but South Africa and the United States of America. Exports, increasing to a very large degree, are also made of fancy and commercial bindings. There is a trade with Belgium and France in leather and linen bindings, whilst Bibles and prayer books (a special class of binding in which, it is said, Holland formerly excelled) find a market in Belgium, South Africa and the United States.

According to the current year's edition of Sijthoff's Directory of the Dutch Printing Trades, there are in the Netherlands quite an extraordinary number of bookbinding firms, nearly 700 in fact. If the United Kingdom was equally well provided in proportion to its population, which is about eight times as great as that of the Netherlands, there would be some 5,500 bookbinders in the British Printing Trades Directory, instead of which less than a third of that number are actually listed. Thus there are more than three times as many master bookbinders, per thousand of the population of Holland, as there are in this country. Upwards of 200 Dutch towns have one or more. Amsterdam, with 108, has the largest number, then comes Rotterdam with 47, The Hague 38, Leyden and Groningen 15 each, Utrecht and Bois le Duc 13 each, etc. The large amount of printing work done for publishers and others in our own and other European countries no doubt accounts mainly for the importance of the Dutch bookbinding trade. There are also about a score of firms in that line in the Dutch East Indies. The number of bookbinders' supply houses in Holland is rather more than thirty. The Directory in question, with nearly 800 closely printed large 8vo. pages, bears eloquent testimony to the magnitude of the printing and allied trades in the Netherlands.

The proportion of bookbinders to population is even more astonishing in the case of Switzerland, which little country, with only about 3½ millions of inhabitants, contrives to support no less than 800 firms of bookbinders, or more than one per thousand households, if we take the usual proportion of five persons to a family. In the United Kingdom the proportion is only about one to 5,000 families. A very large number of the so-called "bookbinders" listed in directories are probably only persons who take in binding work, and place it somewhere else for execution, but this of course does not do away with the relative disproportion between the binders of different countries, unless we suppose that most of those on the Continent are of the non-binding variety. This, at any rate, cannot be the case in some countries, such as Germany, where it is an offence to pretend to practise a trade which is not really being carried on.

In March, the Swedish operative binders celebrated the twentieth anniversary of the foundation of their central organisation. At the start in 1893, there were seven affiliated associations, with a total membership of 356. In 1908, the number of members had increased to 1,300, but an unfortunate strike in the following year reduced the ranks so considerably that the Association has not yet recovered from the effects. At the present day, there are eleven affiliated sections, with about 700 members. During the past twenty years, the wages paid in the trade in Sweden have been increased by about 60 per cent., and the hours of labour reduced by 10 per cent.

The *Nordisk Boktrycharekonst* (Stockholm) has been lately publishing some notes on the History of Bookbinding in Sweden. In the April issue is a fine illustration of the cover of a volume bound *c.* 1760-70. The scheme of decoration is of a rather exaggerated rococo type, making it tolerably obvious that the motif was derived from a French source, though the metal clasp fittings, in high relief, are more in the German style.

"The most important improvement that has been placed on wire stitchers for a generation" is the claim made on behalf of a new block-feeding mechanism which has lately been introduced in connection with the wire stitching machines manufactured by the F. P. Rosback Co. (Benton Harbour, Michigan, U.S.A.), who are well-known in the States. It is an "anti-kinking" device, by means of which any knotting of the wire is said to be avoided. The export agents for the Rosback machines

are Messrs. Parsons and Whittemore, Inc., 174, Fulton-street, New York, who will be pleased to supply full particulars.

According to the financial statement for 1912 given in the 48th annual report of the Public Library of Detroit, Michigan, U.S.A., $8,934.07 (about £1,800) was spent on bookbinding, out of a total expenditure on the library for the year of $263,751.29.

On the 5th inst., the International Brotherhood of Bookbinders, one of the leading labour organisations for our trade in the United States and Canada, celebrated the 21st anniversary of its foundation. We offer our congratulations. May it long continue to go on and prosper!

Some improvements in the preliminary processes of bookbinding have been lately introduced by an American, Mr. P. J. Renninger, who is intending to introduce them on this side of the Atlantic. A French Patent was granted last month, and an English one has been applied for. The matter relates to an improved method of stitching the leaves of books, pamphlets, etc., according to which the edges of the folded sheets are notched obliquely with a saw cut towards the interior, near their extremities, and with intervening notches running obliquely to the exterior, at suitable intervals. Another notch is made at or near the middle part of the edges of the leaves. On the inner extremities of the intervening saw cuts, there are other short notches pointing inwards. Thread is run through the cut or notch in the middle part, passes along one side of the leaves and is pulled through one of the intervening saw cuts. The thread is then run along the opposite side of the leaf, drawn through the adjacent exterior notch, and then back to the intervening saw cut, through which it is pulled. Then it is twisted tightly into one or more loops around the part of the leaves between the intervening notch and the exterior one. The last part of these coiled loops runs through the intervening cut and is next brought along the side of the leaves to the intervening notch on the opposite side to the cut on the middle part of the edges, through which it is pulled and brought to the adjacent terminal notch, then through the latter to the intervening cut, and after being pulled through this it is wound tightly through the part between the two notches, in one or more loops, the end of these being passed through the intervening notch, run along the side of the leaves and pulled through the central notch, after which the ends of the thread are knotted and the loose ends run into the said notch. The leaf is then pulled to tighten the sheets and make the parts in the intervening cuts penetrate. The notches running inwards to the interior edges of the intervening cuts receive the parts of the thread in the latter ones which run to or from the middle part of the leaf, to prevent the thread being drawn away by the resistance. Linen or other textile fabric guards are pasted on the outer leaves along their folded borders, before cutting the back, and after stitching the leaves. The boards for binding are fixed to the free parts of these guards.

A few weeks since there passed away one of the most prominent figures in the New York binding trade—William Knoepke. He was born in Czarnikow, Germany, in 1843. At the age of fifteen he became an apprentice to a bookbinder in Schneidemuhl, and at nineteen received the degree of master-bookbinder. Two specimens of his work made at this time were placed in the library of the Imperial Family of Germany. He continued at the trade a few years in Berlin, emigrated to the United States in 1865, and almost immediately on his arrival in New York was engaged as manager by Thos. H. Eaton, bookbinder. Mr. Knoepke purchased the business in 1877, a short time after which he discontinued the heavy binding line and concentrated in the pamphlet and magazine branch until he developed one of the largest plants of its kind in the country. In 1900 he incorporated the Wm. Knoepke Pamphlet Binding Co. and continued as its active head until shortly before his death.

In our Bookbinding Number of December last we referred to the new rate of duty levied on bookbinders' cloth imported into Uruguay. It has since been announced that the Tariff valuation for this article is about 10d. per square yard.

American Bindings and Binders.

By an Occasional Contributor.

I notice in the April Bookbinding Section of the *British and Colonial Printer and Stationer* an interesting article on "Early American Bindings," the writer of which appeared anxious to prove at the outset that America possessed high-class binders before the days of Wm. Matthews. This may be the case, for anything I know to the contrary, but the context of most of the article certainly suggests that whatever merit existed in American bindings during that period was chiefly due to the fact that the lines on which contemporary English bindings were executed were more or less closely followed, notwithstanding the Grolier Club cataloguer's claim for the American binder that he was not a mere copyist. Most of the distinctiveness attached to American bindings in pre-Matthews times seems to have been largely due to certain local mannerisms, rather of the nature of freaks than real improvements on the practice that obtained in other countries. Two of them are mentioned in the article referred to, one being the use in the United States of wooden boards for binding long after they had been abandoned in England. This seems to have lingered on in America until well on in the last century. Some time since I came across a 12mo. volume bound in very thin paper-covered wooden boards at a New Hampshire town in the thirties.* It had evidently been issued in this style by the publisher. Lettering the title of a book in the middle of the back was another Americanism, belonging chiefly to the first half of the nineteenth century.

The article also refers to the blocking of book covers *à la* Thouvenin, and here again the Americans were only imitators. This was indeed possibly the case in more senses than one. For example, among the numerous illustrations of English bindings of the thirties and forties in the *British and Colonial Printer and Stationer* of January 31st, 1907, is one of the cover of the first issue of an annual, "The Offering," for 1834, which was blocked in this style. The surrounding border and the ornamental panels above and below the central pictorial design were reproduced exactly, though on a slightly larger scale, on the covers of the Boston "Token" in the same year. The centre panel, which differs altogether from the London one, is signed "Godbrecht," presumably the engraver or blocker's name, but the dies used on the London book were the work of Remnant and Edmonds, the English rivals and contemporaries of Thouvenin, and the firm to whom Matthews was apprenticed. These imported dies were used in various ways. I have a pair of covers from a 4to. American atlas of the forties, on which a large die of the usual pseudo-rococo order appears, bearing the mark of Barrett of London. It was not large enough to cover the board fully, so the American binder supplemented it by filling up the margins beyond

* I think this is now in the Technical Library of the St. Bride Foundation, to which I sent it with a number of other books.

Bookbinders' MACHINERY and SUPPLIES

We have a very fine range of machinery for the Binding Trade, and solicit your enquiries. We can meet all your requirements whether large or small.

Caxton-Beatrice Blockers

Made in England from the original patterns—not a German imitation. Four supports to head, sliding feed table, powerful inking system.

Caxton Rotary Perforator

For run-through and stop work. Gives a clean reliable, slot-like perforation. Easy to adjust, speedy in operation.

Stitchers, Cutters, Presses

Large and small, hand and power.

JOHN HADDON & CO.

Specialists in Labor-Saving Machinery.

Digitized by Google

with a couple of rows of roll-produced ornament in blind, a rather grotesque combination of intaglio and relief decoration being the result.

No doubt these local usages were almost laid aside when Matthews came to New York in the early forties, but it must not be forgotten that he was a Britisher by birth, and learnt his trade in London, so that the higher standard of workmanship which he introduced into the States was based on his English experiences. According to an article which appeared in the *British Bookmaker* in 1892, young Matthews (he was only in his twenty-second year when he landed in America) was not long in perceiving that his proficiency in the art was at least equal, if not superior, to that of any of the men by whom he was surrounded, and that an opportunity existed for a very much better class of work than that which was being generally executed. Thus, after only two years' work as a journeyman, he started "on his own." I was rather amused to read in this same article that Matthews "was surprised and nettled to think that America had sent no exhibit" to the great Exhibition held in London in 1851. So far from this being the case, several American binders exhibited there, including two firms still well known in connection with paper and print, *i.e.*, Lippincott and Co., of Philadelphia, and G. P. Putnam, of New York. This last-named city was also represented by Ed. Walker and Co., who sent a Bible bound in two volumes, containing a large number of plates guarded on satin, for the purpose of making an easy hinge and preventing the paper cracking. The silk sewing was bound round the bands from end to end, in the good old mediæval style, and special attention was paid to the flexible backs. Boston binding was illustrated by the exhibits of Bradley and Hy. Gassett. There was also an embossing and backing machine for book covers, invented by Chas. Starr, of New York, but for some reason it was never to be found at work when the jurors made their rounds. If Matthews ever saw the Jurors' Report on the American bookbinding exhibits, he might have had some reason for being "surprised and nettled," as they seem to have had a very poor opinion of the workmanship displayed. "Judging from the collection in the American Department," they said, "bookbinding has not advanced in that country as much as some other branches of the book trade. The works exhibited are loosely forwarded, and twist in handling; and although much labour is bestowed in gilding and finishing, sufficient attention is not paid to the minor details on which good workmanship so much depends." Under these circumstances, it was not surprising that no awards were gained by any American exhibitor in this line, though Honourable Mention was made of the displays of Starr, Bradley, Gassett and Walker, which latter was considered the best of the lot.

In 1853, the Americans, still following their rôle of imitators,* had an International Exhibition at New York, when Matthews (who seems to have entered early into the aspirations of the country of his adoption) had a fine display of his work. His masterpiece was a copy of Owen Jones' well-known work on the Alhambra, the covers of which embodied much elaborate inlay work, mainly on the Veneto-Oriental lines familiar in early sixteenth century North Italian bindings. The exhibit gained him a silver medal, the highest award given in that section, and it was said to have been bestowed with "special approbation for excellence in bookbinding." The jurors seem, indeed, to have been well furnished with laudatory adjectives. For example, amongst the exhibitors in this line who received Honourable Mention, E. Dunigan and Co., of New York, had it for their "superb and elegant" examples of bookbinding; E. Walker and Sons, of the same city, for specimens of "substantial and elegant" binding, with "richly illuminated edges"; and Niedree and Co., of Paris, for their "superior" examples of bookbinding. On the British exhibitors no such flowery encomiums were bestowed, or indeed any at all, as far as I can discover, except that plain "Honourable Mention" was made of J. L. Wilson's (of St. John-street, London) display of book cloths. J. W. Rudd, of London, and R. Seton, of Edinburgh, showed examples of bookbinding, but they received no recognition at the hands of the American jurors.

Full of praise as these latter were, in the case of local firms, Mr. Geo. Wallis, the British Commissioner, considered that the specimens of American letterpress bookbinding exhibited did not call for any special remarks in his Report. "They are," he said, "of the usual character, so far as the external appearance is concerned, and the style of gilding and the taste displayed in the decorations are altogether based on European modes, a redundancy of unnecessary ornamentation being the leading feature, as in England." He however admitted that the workmanship and finish of the account books exhibited was generally excellent.

There would be no advantage in following up this matter any further. If imitation be the sincerest form of flattery, then our English binders of the past had every reason to be proud, so far as American practice was concerned. There seems, in fact, to have been nearly always a hankering for foreign designs or methods in American binding shops, and largely also for foreign work on the part of American patrons of fine binding, who, whether rightly or wrongly, seem to think that in order to get the best results they must place their binding orders on this side of the Atlantic. If we are to trust the article in the *British Bookmaker* (already quoted), this was the case in the early forties, as we read there that "fine binding was a branch of art which had not then taken root in the United States. Bibliophilism was almost unknown; the utilitarian predilections even of the rich favoured only such plain or neat forms of binding as served for book preservation; the few choice works or fine editions which found their way into the country were imported with a garb enriched by European workmanship, or were sent over to Europe to be decently clothed by the very few who appreciated a *reliure de luxe*."

Readers of your Bookbinding Numbers will not need to be told that this practice forms one of the grievances of the American operative binder to-day, and I think that a perusal of the trade journals of twenty or twenty-five years ago will show that the same fact was then given just the same prominence that it has now.

One of the greatest patrons of high-class art binding was the late Mr. Robert Hoe—himself an American—and his record in that direction must have put those of the much-praised Grolier or Maioli completely in the shade, although it is improbable that his name will ever be remembered in this connection to the same extent as theirs, seeing that he did not follow their example in advertising himself on the covers of the books he had bound.

Mr. Hoe evidently felt as his brother collectors did on the matter of binding, *i.e.*, although he had the whole Continent to choose from, and almost unlimited means wherewith to indulge his patriotic or other tastes, he confined his binding orders, so far as America was concerned, to one concern, viz., the successors of Matthews, at New York. But even this firm did not do a great deal for him, as most of what binding work he had executed on his own side of the "pond" was done in what we may look upon

* The Bookbinding exhibits, for instance, were included in Class 17, just as they had been in London.

as his own private shop, the so-called (Grolier) Club Bindery. The fact seems to be that whilst as regards stationery (*i.e.*, "blank book"), cloth and ordinary leather binding the Yankees can hold their own with anybody, orders for jobs which combine super-extra binding with the highest class of artistic finishing are mostly placed outside the States by its wealthiest citizens. If the country were a relatively poor one, able to produce only a few such orders, one could understand it would not pay to establish an art bindery of the first rank, but having regard to the fact that it is emphatically the breeding place of the multi-millionaire, the only conclusion possible is that there is not, and apparently never has been, a sufficient choice of such binderies in the States to warrant orders of this kind being regularly placed there. R. M. B.

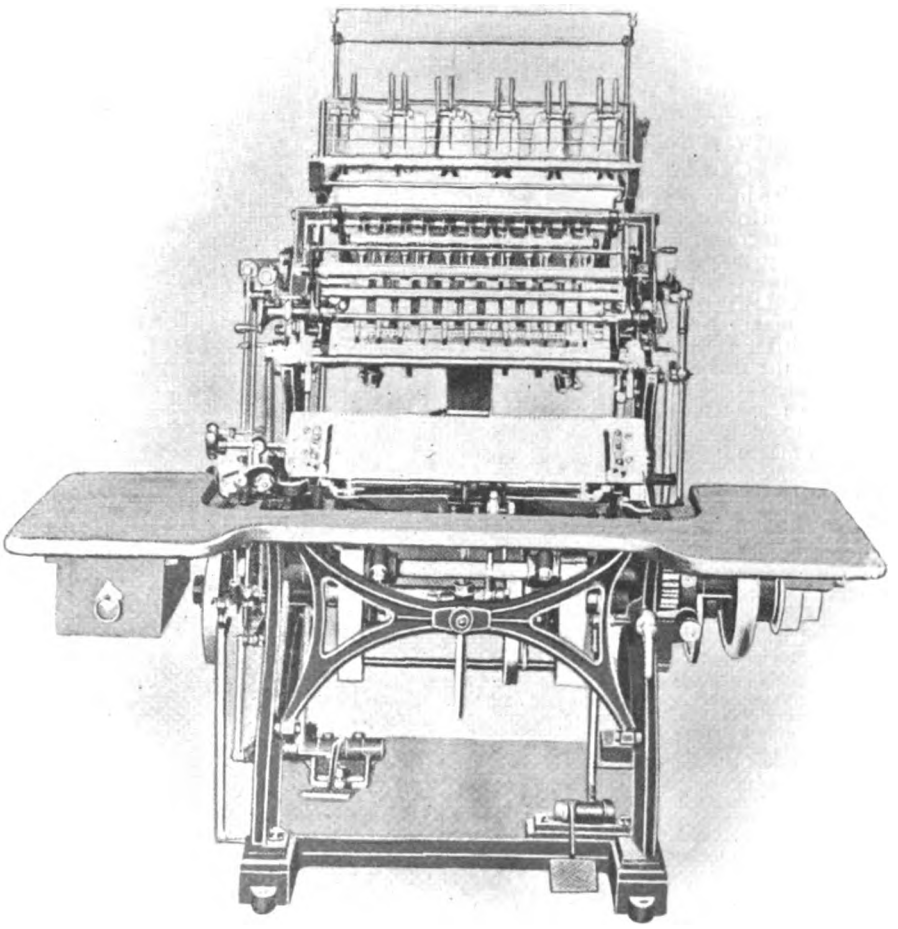
The Old Bookbinder
AND THE
MODERN ADVERTISER.

In our Bookbinding Number of November last we said something about the use of old book cover decoration designs for modern advertising purposes in America. The matter has since been carried a stage further, by the Boston *Graphic Arts* announcing that during the coming year that journal will present on its covers a series of designs by Brainard L. Bates, adapted from the ornamentation of books produced in the period extending from the Revival of Letters to the middle of the eighteenth century. "Some of the finest bindings ever produced, notably those of the Grolier school, were the work of this era, and with instances from other schools, influenced more or less by Grolier, have served as a standard for succeding craftsmen. The designs were principally characterised by the application of pigments and gold to elaborate geometrical patterns formed by parallels, interlacements, and convolutions of the highest decorative merit. The bindings of the different centres, such as Lyons, Venice, Paris, and London, were signalised by the introduction of florets and other units of design in accordance with the taste and local custom of the binders. This work is accomplished with a few simple and imperfect tools. Some of the best examples of modern covers treated in conventional design are based upon the conceptions of these Middle Age craftsmen. This new series of . . . covers is obviously appropriate for a magazine believing in the commercial value of good taste, and dealing with the improved appearance of advertising. These covers, in bronze and colours, will not be merely a decorative feature of the *Graphic Arts*, but since they are based on historic design will be definite working material, sufficiently conventional to be adapted to general pamphlet and catalogue work."

The varying decorative value of a gold-line design, in its application to different materials, is well illustrated in the March number of our contemporary, in which its new cover series is inaugurated. Except in a particular light, the design (which greatly resembles that illustrated in our former article on this subject) is almost invisible on the matt surface of the dull crimson cover paper used. How different it would look on leather!

Another instance—though in this case the design was reproduced for a different purpose—is the cover of the "Souvenir" for 1913 of the Institute of Printers and Kindred Traders, a large 4to. of some 12-in. by 10-in. The rather plain gilt border, evidently from a design of eighteenth century date, was printed from a line block on orange levant morocco cover paper, on which the grain of the leather was well reproduced by the half-tone process. The cover was lined with "old Rose" coloured imitation watered-silk paper, and was very well made up by the Fisher Boobinding Co. in portfolio style, the contained plates and text being loose except for a piece of tape. Here also the gilt design is almost invisible except when viewed in a particular light, but the illusion of a book cover would have been much more perfect had the back been stiffer and the cover paper been attached to the boards throughout, instead of only at the edges. We do not think the bookbinder need fear being ousted from his job by the advertising cover yet awhile.

Religion v. Bookbinding.



The Humours of a German Strike.

A rather unusual situation arose in the course of a strike of bookbinders that occurred a short time since at Kevelaar, in Rhenish Prussia, near the Dutch frontier. Some hundreds of workers are employed there in the production of Roman Catholic prayer books, and wages are extremely low. Nevertheless, the workers are very religious, and mostly preferred a poor living to going on strike for a better one. At the end of last year, however, the increased cost of living was such that about a hundred of them decided to join a "Christian" trade union, *i.e.*, one which had no connection with the Socialistic Syndicate of Bookbinders. The employers objected to their hands joining any association whatsoever, "sacked" some and threatened others, whereupon the "Christian" organisation plucked up enough courage to declare a strike. The masters then advertised in the clerical and other papers for fresh hands, promising them a bonus of 10 per cent. on their wages so long as the strike lasted The Christians were thus driven to the rather un-Christian expedient of boycotting the prayer book manufacturing branch, an excellent opportunity of doing so effectually being afforded by the fact that the "First Communion" season was at hand, when there is always a big demand for books. This step brought the clergy into the conflict, and they formally interdicted the workers from carrying out their boycott threat. Terrified, perhaps, by the thought of the fate which might await them in a future world, if they set at defiance the clergy in this one, the Christian unionists promptly threw up the sponge, regardless of the fact that if they had held on for another week or two they would probably have gained what they were fighting for, *i.e.*, a 10 per cent. increase in wages and recognition of the right to combine. As it was, the employers conceded the latter point after a fashion, and graciously promised to consider the other matter a twelvemonth hence, if the state of trade warrants it. But during the first half of that period the subject is not even to be mentioned by a working bookbinder to his employer!

According to the *Manchester Guardian*, the latest American propaganda is a crusade against the hyphen. It is estimated that there are 200 million persons who write English, and that each of these writes "to-day" or "to-night" or "to-morrow" three times a day. It takes half an ounce of force to make a hyphen with pen or pencil, which means a total waste of 2,190,000 pounds of energy daily, or enough to propel a passenger train round the world. If type-writers and type-setting machines are used, an even greater proportion of strength is consumed. As it is, the tendency to eliminate the hyphen has long been noticeable in the custom of American printing offices. Many an English reader of American books and magazines has been puzzled for the moment by such odd-looking words as "coworkers" and "anticanal."

Should a Printer Manage a Bindery?

Some methods which will tend to overcome the discrepancy of meanings given to terms used in binding, largely due to a system of management which compels the workman to adopt the office version of the terms and styles used in the trade, needs to be devised, says Mr. J. J. Pleger, foreman of the United States Government bindery at Manila. Work orders such as "half morocco leather sides" or "three-quarter seal or calf, reinforced with paper sides" or "leather sides and paper back," written by novices, are amusing to read, but mean only "guess" to the binder. In many cases high-sounding names are employed to deceive the purchasing public. In nine instances out of ten where printing offices have binderies, the management is in the hands of a printer, who must rely on the foreman of binding for his knowledge of binding. Frequently the printer-manager who receives the work makes suggestions to the customer regarding styles of binding, thus giving the customer the impression that the suggestions come from a practical man. Between the customer's vague idea of what would be best, and the printer-manager's recommendations, the purchaser frequently gets work which is a disgrace to bookbinding. There is an iron-clad rule in most printing houses to "follow copy and work order." This is responsible for the bindery foreman's attitude in carrying out instructions, even though he knows a monstrosity will result. If errors occur, and copy and work order instructions have been followed, the binder cannot be blamed. This reasoning, while it absolves him, does not remedy the defects nor inspire bookbinders to question work orders which appear to be absurd. To remedy this defect, a graceful acknowledgment on the part of the receiver of work that the bindery man might have practical ideas which would save time and money, would seem to be in order.

The City and Guilds of London Institute Examinations in Bookbinding, 1913.

The Institute's annual examination in bookbinding finished on Saturday the 3rd inst.

The following papers of questions were arranged for the candidates on this occasion :—

WRITTEN EXAMINATION: SECTION A. FORWARDING.

GRADE I.

1. Give the size in inches of a crown octavo book, a medium quarto book, an imperial octavo book, a crown folio book, a demy octavo book. (50 marks.)
2. Describe the method of making bookbinders' paste. (25.)
3. What is meant by the term "proof" in connection with the edges of books? (25.)
4. Describe the method of backing a book. (50.)
5. Give the reason for rounding and backing books. (100.)
6. What is meant by the terms, flush binding, flush turned in, paper boards, quarter bound, three-quarter bound? (50.)

FINAL EXAMINATION.

1. The printed sections of a large map, 8-ft. by 5-ft., are sent to you with orders to mount them so that the map may be displayed on a wall. How would you do the job? (75 marks.)
2. Answer the following letter:—

Gentlemen,

An old parish register belonging to my church has got into a very bad state. The paper is stained, and has become so soft that it cannot be handled with safety. The writing is very faint in places. I am told that the register can be repaired. I shall be obliged if you will let me know exactly how you would propose to treat it if it is entrusted to your care for repair.

I am,
Yours truly,
(Rev.) J. BROWN.

To Messrs. Press, Pin and Co.,
Bookbinders.

(100.)

3. How would you make silk ends for a book? (25.)
4. There are 1,000 demy 8vo books to be bound in art linen. The books are ½-in. thick. Write out an order for the boards and art linen that you would need for the job. (50.)
5. Describe the method of covering a whole bound flexible morocco book. (50.)

SECTION B.—FINISHING.

GRADE I.

1. How would you prepare the back of a half-calf extra book for finishing? (50 marks.)
2. Give the reasons for the processes described in answer to question 1. (50.)
3. In a private library there are a large number of French novels (crown 8vo) in paper. These are to be bound in quarter-morocco, without bands. The owner wants them to look well on the shelves, and would like some variety in the finishing. Give a sketch showing two or three backs with the finishing you think suitable for such books. The books are about 1-in. thick. (150.)
4. How would you prepare and block limp lamb-skin covers? (50.)

FINAL EXAMINATION.

1. A foolscap octavo book of poems comes to you to be finished. The book is bound in full dark green Levant morocco. Make out a pattern for the book on the squared paper supplied to you. The owner is willing to pay from three to five guineas for the finishing. (200 marks.)
2. Describe the method of hand lettering books. (50.)
3. Say what grease you prefer to use in finishing, giving your reasons for your preference. (50.)

PRACTICAL TEST.

FORWARDING.

GRADE I.

A guard book of brown paper is given you sewn on tapes. Make a case from the materials supplied, forward the book and attach the case.

FINAL EXAMINATION.

A flexibly sewn book is given you. Forward this, and cover in half morocco. The top edge is to be gilt or coloured, the other edges to be uncut.

FINISHING.

GRADE I.

A morocco covered back is given you. Finish this in any way you like. Letter:

C.G.L.I. Finishing. Grade I. 1913.

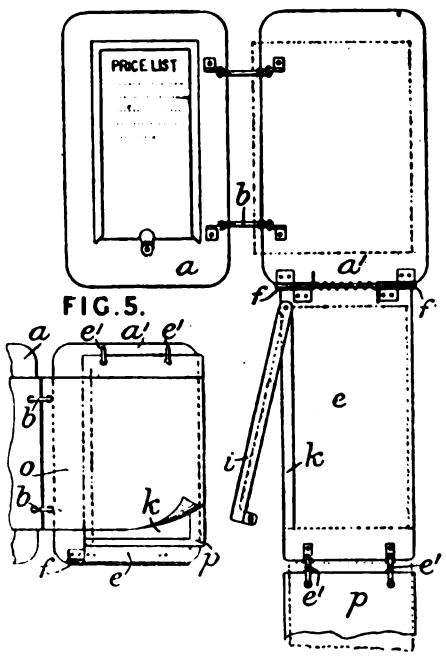
FINAL EXAMINATION.

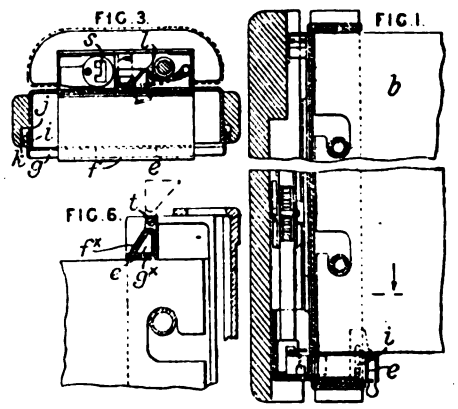
A morocco covered board is given you. Finish this with an all-over pattern.

P.S.—Do not try to do too much in the time. A small portion worked perfectly will receive higher marks than a larger amount showing careless workmanship.

Some Bookbinding Patents.

A manifolding sales book, patented by Mr. M. Kuhn, comprises two cover plates *a*, a^1, connected by rings *b* adapted to hold loose leaves *o*, and a holder plate *e*, connected to the





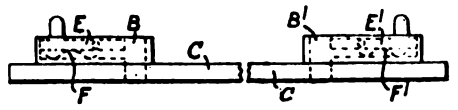


plate a^1 by means of a spring hinge *f* and provided with rings e^1 for holding loose leaves *p*. The holder plate is provided with a clamp *i* for carbon papers *k*.

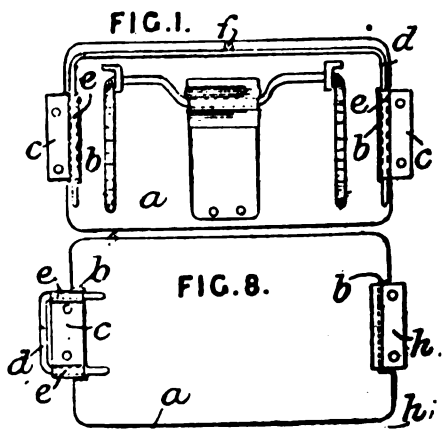
In a loose-leaf book or binder of the type in which the leaves have L-shaped open slots adapted to operate with the telescopic posts of the binder, telescopic transverse members are provided which press against one side edge of the leaves, so as to secure the engagement of the posts with the portions of the L-shaped slots parallel to the rear edge of the leaves. In Figs. 1 and 3, which show a binder of the kind described in Specification 21,546, 1907, the transverse member *e* comprises a tubular part *f*, into which extend two sliding parts *g* connected to the longitudinal or clamping members *j* of the binder by means of pins *k*, which enter slots *i* in the turned backed portions of the parts *g*. This arrangement permits the parts *g* to slide in or out of the tubular part *f* during the clamping operation, and at the same time to move edgeways with respect to the members *j* in order to press against the side edges of the leaves *b*. The transverse member may be secured in its engaging position with the leaves by means of a latch *l* actuated by a security lock *s*. In



the modification shown in Fig. 6, the transverse member *e* comprises two telescoping parts $f\times$, $g\times$ pivoted eccentrically on pins *t* at the end of the binder, so that they can easily be swung in or out of pressing engagement with the side edge of the leaves. In another modification the transverse member comprises telescopic parts adapted to slide longitudinally in slots on the clamping members *j*, and to be locked in their leaf-retaining position by means of a bolt engaging a notch on one of the clamping members. In a further modification, the member *e* comprises two plates which are hinged to the clamping members, and can be turned in or out of engagement with the leaves; while in another form the leaves are retained against movement edgeways by means of a pin attached to one of the clamping members and telescoping into a socket on the other clamping member. The patentee is Mr. A. Hess.

Mr. F. Harcourt has patented an invention in which in loose-leaf binders of the kind in which follower bars are provided with rocking pieces to grip the posts, the rocking pieces E, E^1 are pivoted on the follower bar C and are held in a slightly tilted position

so as to grip the posts B, B_1 by means of springs F, F^1. The follower bar C is free to move downwards to clamp the leaves, but can be withdrawn only by depressing the ends of the rocking pieces E, E^1 so as to disengage these from the posts.

In another invention, files are removably attached to covers by clips *c* which are fixed to the cover and lie in recess *b* or enter slots in the base plate *a* of the file. The clips *c* are formed with eyes *e* engaged by a forked pin *d* which lies over the plate *a* to retain it in position. A stud *f* on the plate *a* holds the fork *d* in place. Various forms of the clip *c* are described. In one of these, each clip has

two eyes and the fork *d* extends laterally across the plate *a*, while in another form, the recesses *b* in the plate *a* have each a projection which enters a recess in the clip. In the form shown in Fig. 8, the fork *d* or a pin passes through only one of the clips *e*, the other clip *h* being adapted to overlie the edge of the recess *b*. The patentee is Mr. R. Waldschmidt.

PERFECTED BRONZING MACHINE

(Patent "KOHLBACH.")

At Work in the Finest British and Foreign Printing Works.

The speed of this Machine is enormous owing to the absence ot cylinders, thereby also doing away with all fear of gripper marks.

Contrary to the Dust Exhaust system of other makes, the used bronze does not pass back into the machine, but collects in a box, thereby ensuring first class work.

By the system of wipers a very much brighter result is obtained than by the system of rollers. The Machine will not only bronze and dust paper but any thickness of card. The rollers are automatically cleaned whilst the machine is actually at work.

A FEW OTHER SPECIALITIES:

Book Sewing Machines. "Marvel," for smaller runs at £60 for Treadle, or £75 for Power;
the **"Rapid"** for Letterpress Binding,
the **"Universal"** for sewing all classes of work, and

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

"EFFICIENCY."

A Lecture by MR. F. BURNETT.

The May meeting of this Centre of the P.M. and O.A. was held at the "Crown" hotel, Booth-street, Manchester, when the minutes of previous meeting were read and passed, after which the President called upon Mr. F. Burnett, vice-president, to read his paper, entitled:—"Efficiency."

Mr. BURNETT said:—As we all must be aware, the subject of "Efficiency" covers quite a large number of points in connection with our daily occupation, no matter in what position we may be placed. In fact it is almost an impossibility to take the word and explain its far-reaching effect within the limits of this short paper. What I have endeavoured to do has been to touch on several important points which I considered would perhaps be of interest, and at the same time lead up to a profitable discussion afterwards, from which we may all benefit in some way or another. Let it be understood that I am not an "Efficiency" expert, but that I wish to learn something on the subject if possible. Some of us are in charge of departments only, others in complete charge of the whole of a printing office; so that our various opinions and experiences when expressed, will perhaps tend to making us have broader views in relation to the conditions which exist at the present time amongst men and equipment generally.

Efficiency.

My chief reason in taking for the subject of this paper, the word "Efficiency," is that I consider it the most important factor in connection with the successful working of a printing office.

Let us first take the definition of the word "Efficiency," which is "power to produce the result intended," or "adequate fitness," and I think we must all agree that it concerns us to a large extent in our respective positions as managers and overseers.

It is not my intention to dictate or put forward any specific plan in regard to how a printing office should be managed. The chief aim and object that I wish to be considered is—do we ever think of our own individual efficiency as men whose occupation is to manage or supervise other men and their work? Are we sure of ourselves? Do we know whether we are acting rightly towards those who come within our charge? Each of us is more competent to make an expert study of our own department than is any outsider, if we will only do it. Criticism of our own methods sometimes proves valuable, as we find out where changes can be made, and often improve matters considerably.

It is essential first of all that "Efficiency" should commence in the front office of any establishment. Instructions should be issued with each job in a clear, thorough manner, giving full details, and stating definitely the date when a job may be required. This important section of every printing works should be more closely acquainted with actual conditions which exist in the various departments and of the plant generally, than what we must certainly agree they appear to be on many occasions.

We all know how often it happens that instructions are sent along with jobs, which it is impossible for us to fulfil. Promises are made to customers without consulting the individual who may be responsible in regard to seeing that the promise is faithfully kept. We are informed that a job is wanted on a certain date. There is no question as to whether it can be done or otherwise. The capabilities of the plant, material, etc., required, are often not taken into consideration. How can work be produced in a satisfactory manner where these conditions prevail, and there is no need to question the matter, as this state of things exists in many printing offices at the present time.

Rush Jobs.

We all understand the necessity at times of certain work having to be hurried along to be completed by a fixed date, but what about

Photo, Van Ralty.

Mr. F. Burnett.

instructions that are issued to rush work when it is not necessary. The fact seems to be forgotten that hurried work is generally inefficient. Men are very scarce who can produce high-class work under pressure. Surely other methods might be adopted where a department is not turning out work in a reasonable time. Either the equipment is at fault or the management. Rushing work when it is unnecessary will not improve matters, but only tend to make them worse.

Another point which is often lost sight of is that one of the many sources of "late deliveries" may be traced to "rush jobs." When this class of work is sent into a department, either the existing orders already in hand have to be put aside, or overtime is necessary, with the resulting increase in cost of production. This should not be forgotten when quoting prices for "rush jobs"; even with additional charges there is generally a loss on this sort of work.

Efficiency of Plant and Material.

In connection with the question of cost, which is being discussed so prominently in the printing trade at the present time, efficiency of plant must certainly be the first consideration. We are all agreed that the printer as well as any other business man is by all means entitled to a price for his work based on the cost of production, but he must also see that he is well equipped as far as possible in his establishment with first-class machinery, and a sufficiency of type, material, etc This should be the foundation of any reliable cost system. If the equipment is seen to, and the workmen well organised, there is not much difficulty in getting at actual cost, also we shall have a more correct basis on which to make our estimates.

It is for us in the respective positions we are placed in the trade to do all that is possible towards getting actual time recorded on work done, but the matter of equipment must certainly receive due consideration if we expect to obtain efficiency in any department with which we may be connected.

Let us for instance touch on a matter which concerns the composing department, I refer to the time which is taken up in *hunting for sorts or "picking."* Any experienced man knows that the chief causes of this are insufficient material or want of systematic distribution, and where these conditions are allowed to exist, we shall always have men covering up some of the time thus occupied, either through fear of discharge, or that their abilities may be called into question. It is said that this lost time should be recorded on the particular job where it may have occurred, so as to get actual cost. I wonder how often the same excuse would be used when a man has sufficient material, but perhaps has been wasting time in other ways.

Another practice which is carried on to a large extent in many offices is that of setting jobs from the spare shelf containing dead matter, or else from the stone instead of from the cases. This generally occurs through purchasing small founts, or from the wrong idea that the bulk of distribution must only be done during periods of slackness. How can we expect a man to have the same interest in his job when working under these conditions?

Worn Type.

Another serious point I wish to mention is that of worn and battered type being put back in the cases instead of in the hell-box. When we come to consider the time lost in some offices through this mistake, where the machineman spends too much time in trying to make it print fairly decent, and when he is not successful a compositor has to be sent to the machine to change the letters; if the time is reckoned up of these two men, in addition to the machine standing idle, I think we can soon decide what ought to be done with worn type.

A considerable amount of this trouble can be eliminated if a modern proof-press is used. On these presses we can get a proof that is clear and legible if the type is good, and if defective, the reader can see and mark it as he reads for errors. We are thus enabled to put matters right before the form gets to the machine.

Efficiency of Output In Composing Department.

I consider first that it is an overseer's duty to see that there is sufficient material as far as possible so as to enable men to work in a satisfactory manner, otherwise we have a leakage that is soon shown to our disadvantage. We should see that men have no excuse in this direction when time taken on work has been excessive.

Another point is to see that a man is kept as close to his particular job as possible.

Digitized by Google

Cases containing leads, clumps, rules, etc., should be kept within easy distance of the men, instead of having one particular place which is often seen in jobbing offices. Cases and frames should be numbered and labelled; a plan of the room should also be put in a prominent position, which should contain frame numbers and a description of the type to be found therein. This is very useful, and enables fresh men to find their own way about instead of having to interrupt others by asking questions.

Display work should always be kept in one or two series of type at the most; by this means we can get all the effectiveness required, a good style, and the comp saves a considerable amount of shoe leather in addition to time taken on any job.

There are still many offices that are stocked with founts of type which are never put into use, entirely out of date, and often occupying valuable space, in addition to being a loss to the department. It would be better for all concerned in such places if these old founts were cleared out, and replaced with more modern material which could be brought into daily use.

Efficiency of Workmen.

There always will be different grades of workmen. Some who know how to do their work, are interested in it, and others who require a considerable amount of attention being very often indifferent regarding their work, merely wanting the clock to point to the hour of departure. However, I expect most of us have had experience with wrong founts, and should know how to deal with them.

I consider the overseer who keeps in personal touch with his men, and the occupation or job they may be engaged upon, will get to understand more of their general character, the class of work they may be most adapted for, and their capabilities generally. Cultivate an attitude towards your men which, although firm, will make them not hesitate to ask your opinion when in a difficulty with any particular job. I expect many of us some time or another have worked in places where the overseer has been almost unapproachable, keeping a stand-off attitude towards the men. Now, I am not advocating fraternising with those who may be in our charge; we know that it is not altogether advisable. But there is a middle course we can take, and which I do not hesitate to say means a considerable gain in time on work, and that is when the overseer is capable, and shows his men better methods of working where he can see it is necessary, and without doubt this is one of the chief factors concerning efficiency of output. Is it not better to help a man out of a difficulty with his work, instead of allowing him to waste time? In addition, this causes a better feeling to exist between yourself and the men, a more harmonious working altogether; and enthusiasm grows in regard to good workmanship, and in getting work done in more reasonable time. Always try to make men work with you, and not in the opposite direction, if you wish to obtain a maximum output in any department.

It may seem rather a peculiar way of expressing an opinion as to how men should work when I say they ought to be trained how "not to hurry." One of the greatest fallacies is to think that because a man appears to be very quick in his movements that he must certainly be a fast workman. If we take the majority of capable men, and study their style of working, their motions will be found calm and deliberate, but well thought out; they have more confidence in themselves, and the work progresses in an altogether more satisfactory manner than is the case with men who have excited rapid motions, and who we find are generally responsible for most of the mistakes. The old motto, "More haste, less speed," could with good effect, be posted up in many printing offices. By training men to work accurately, speed will certainly follow; and we get a better class of workmanship.

The Apprentice.

I consider that a great deal of this insufficiency amongst workmen may be traced to lack of proper tuition during apprenticeship, or to the binding of lads to a trade for which they are unsuitable. An employer should endeavour as far as possible to make sure that a lad is adapted for the trade before taking him as an apprentice. His intelligence and character should be carefully studied. It ought to be thoroughly understood that the lad wishes to be put to the trade, also that he has ideas of his own and the capacity to express them. He should certainly be put into the department in which he is intended to be an apprentice for a few months on trial, and if considered unsuitable for the trade, he should be sent away. Don't bind him, because it is only adding to the list of incompetent workmen.

Then again, in how many offices have apprentices been kept on a certain class of work which has been profitable for the firm, instead of being taught their trade thoroughly, and when their time has been completed they have to get out. This is usually followed by a career of intermittent employment, as it is almost impossible for men of this class to get regular work. After a time they lose interest in their trade, and begin to get indifferent. They know when called into anywhere to help, that it is only temporary employment. Now we cannot put all the blame on these men. Had they been taught their trade in a proper manner, we should not have to complain at the present time of the large number of incompetent workmen; they are certainly one of the most serious defects in any business, and lessen the profits considerably. Finally, the members of this Association are in a position to help towards the making of competent workmen for the future. Let us see to it that in regard to the apprentices who may come within our charge, we do our best in the way of teaching them their business thoroughly, and thus add to the efficiency of the workmen and the printing trade generally.

DISCUSSION.

Mr. THOS. KIRKWOOD (president) complimented Mr. Burnett on his paper being brief and to the point. He advocated the overseer getting in touch with his men and knowing their qualifications, so that work could be laid out to best possible advantage. Speaking on the apprenticeship question, he was afraid there was too much forcing of unsuitable individuals upon the overseer because Mr. So-and-So would like his son to learn a certain branch of the trade whether he were suited to it or not, and the overseer had to do the best he could.

Mr. THOS. SHAW (first president) agreed mainly with the paper, as it appealed to all branches of the trade. Although it had been written from a letterpress standpoint, it applied equally to the lithographic and bookbinding sections. Where rush work had to be done founts of type should be heavy, as forms holding useful material might have to stand for weeks together before being completed, and if picking had to be resorted to there would be extra loss of time and danger of mistakes being found after the jobs had been printed. Every composing-room was apt to have shorts, but it was the duty of the overseer to keep his department up to as good a standard as possible. Suppliers of material were willing to quote at any time, and if employers would see that money was far better spent in material than in labour the evil of picking would not be so prevalent. He advocated the purchase of founts in series, and supported the lecturer in his suggestion that not more than three faces of type should be used in a job.

Mr. J. H. NUTTALL said a large percentage of the loss in a printing office was the result of insufficient explanation on the part of those in the clerical department. To sum it up from a practical standpoint, "There were plenty of instructions but nothing definite," and his word for it was "Inefficiency." He had been studying some of the recent costing forms, and failed to see their utility unless they were in the hands of practical men, and to follow out and fill up some of them would place a tax on the profits of certain departments. Where the daily or weekly docket was in vogue, only the overseer could put his hand on any laxity that might be alleged against a workman. A costing system within reason would be a good thing if a capable accountant and bookkeeper was able to bring together the various costs accurately. He thought efficiency ought first to be secured in the clerical departments and then jobs would not have to stand for queries and fuller instructions, because the more times a worker had to take up his job the more would be the cost of production. A source of waste in the composing-room was worn out type. If the reader's time, the compositor's time in corrections, and the pressman's time in patching and bringing up worn type were put together it would surprise a good many employers to see what the cost and maintenance of such bad material was to them. It was impossible to expect men to show their ability by the use of worn material and shortages. Where possible, distribution should never stop, because the continual setting up without distribution meant picking. Another waste was the bad locking-up by some stone-hands. If they had eight pages to lock up, some resorted to the principle of locking-up one section and twisting the cross-bars, and then locking-up the other three consecutively. Every form should be properly pulled in the composing department and made perfect before being sent into the pressroom, so as to give as little opportunity as possible for the pressman to find fault. In the training of an apprentice in the composing-room he should first place him under the supervision of the distribution and stone-hands, following on setting simple jobs and reprints, then under different men until he had confidence to place him in charge of the best display compositor.

Mr. J. MCCOSH thought the greatest bugbears in the printing offices of the present day were those who came with swelled heads from schools of technology and training colleges, and young printers should first have a good drilling in a printing works before being permitted to attend such institutions. Too many of the students get the idea that as soon as they obtain a school diploma they are qualified to walk into any printing office, and if someone offers to instruct them in the practical way of executing their work they will not be taught. Mr. Nuttall had mentioned type being worn in the press-room, but he (Mr. McCosh) would say it was not always the fault of the pressman. Some machines were worn and out of pitch, and some forms that came down from the composing-rooms were improperly locked up, thereby causing springing, and those with blocks in them might show upon a first pull, half of the blocks almost piercing the packing whilst others could dimly be seen on the impression sheet. Where offices could afford a lightning proof-press there was small necessity for stoppages in the press-room owing to bad letters, slips, and bad register, because everything could be pulled up and passed almost ready for printing, except in the matter of overlays and dressing. The form should be checked in the composing-room until it was free from imperfections. A lightning proof-press if properly used was a great saver in costs connected with composing and press-rooms. Many a rush job that required a few good proofs could be pulled equally as well on it as on a printing machine, and the latter could be running off jobs instead of standing for proofing purposes.

Digitized by Google

Another cause for unnecessary rushing was the promising by the office staff of certain jobs within an almost incredible time, without consulting the departments affected to know if they could be done. Almost all rush jobs when correctly checked would be found to come out at a loss owing to the upsetting of all plans for work passing systematically through each department.

Mr. GEO. E. SHIRRA and Mr. F. E. ROBINSON acquiesced in Mr. McCosh's remarks.

Mr. EDWARD MCVAY said there could be no efficiency without a competent office staff, and such was as essential as any other department. He always looked upon the compositor as a man of art and intelligence, and believed he was blamed for many faults that could be laid at the doors of other departments As a lithographer, he could find fault with the pressmen because they so very seldom pulled a good litho transfer. It seemed to be the general cry that nearly all printing offices were handicapped by the front office's vague instructions. Some people thought a practical man should be there, but it would be found impossible for him to do all the work, and an intelligent person could do just as well so long as he did his work in a systematic manner. As soon as orders were received into the works the overseer should read all the instructions, and if anything was wrong or not clear have it rectified at once.

Mr. T. RIGNALL said the apprentice question was an awkward problem, as it was difficult to tell, especially in the lithographic trade, before it was too late whether a lad would be suitable or not. It was not always possible for the overseer to see what progress the lad was making, because his time was occupied too much with estimating and supervising. It had been said that the overseer should help his men, and to a certain extent he agreed with it, but at the same time he found some men always required help and would not use their brains. In the lithographic trade it was difficult to get good workmen. The overseer should be allowed, within limits, to get what necessary materials and appliances he required, although in some cases it might not be feasible owing to the employer's limited means for extensions.

Mr. F. J. HUGHES fully supported Mr. Burnett in his paper, and instanced faults in front office instructions, advantages and drawbacks in composing and press-rooms, choosing of apprentices a quarter-of-a-century ago and the present time, and the duties and systems connected with letterpress printing, etc.

Mr. THOS. SHAW moved a hearty vote of thanks to the lecturer, and Mr. H. C. CRITTEN seconded.

In replying, Mr. F. BURNETT said he believed in showing and helping men, although he would not go so far as to allow a man to unnecessarily occupy his attention, yet there was a middle course in not making oneself unapproachable. There was a lot of time lost through men struggling along instead of being able to appeal to the unapproachable overseer. He believed three to six months was sufficient to tell whether an apprentice was or was not suitable. If unsuitable, he should be immediately dispensed with, because his retention would only mean the addition of another undesirable in the labour market. Mr. Hughes had mentioned that the number of the form in the rack should be placed on the job ticket for the pressman, so that he would not have to wander up and down looking for the particular one he required, and he agreed with him. Some press-room overseers who required forms relocking for special machines usually left the instructions until the form was actually wanted, and the presses had to wait until the necessary changes were made. To sum up his paper, he might say, "Lack of foresight, vague instructions from the front office, and lack of material," brought about the inefficiency of the printing office.

P.S.—One of the trustees, Mr. H. C. Critten, has sent in his resignation owing to acceptance of a responsible position with a Derbyshire firm of printers. We wish him every success in his new sphere.

WEE MACGREEGOR.

THE editors of the leading Swedish newspapers have been invited to visit this country next month. The arrangements have been made by the Swedish Chamber of Commerce and the leading members of the Swedish colony in London.

Real and Imitation Parchment PAPER.

In referring to methods lately put forward for distinguishing real from imitation parchment paper, Professor Herzberg points out that if a sample is soaked in hot water, the real paper, which has been treated with sulphuric acid, remains firm and dilatable, will tear only when subjected to a strong pull and shows at the tear either no fibres at all or only a few, and then short ones. The substitute (imitation parchment paper) when thus soaked in hot water, completely loses its strength, can be readily pulled apart and distinctly shows at the tear numerous fibres. Still more palpable is the different behaviour of the papers when boiled with a dilute caustic soda solution and smartly stirred with a glass rod; the paper previously untreated with sulphuric acid gradually disintegrates into a more or less fine fibrous paste, the real paper on the other hand retains its form, does not discharge fibres and can be withdrawn from the solution just as it was when inserted therein. The method which is simplest and can be carried out everywhere and at all times without special auxiliaries is the chewing test. A small piece of the paper is thoroughly chewed; the imitation parchment paper can then be chewed to a pasty lump of fibres, but the real paper cannot.

THE Anglo and South American Publishing Co., Ltd., was recently formed in London for the purpose of publishing works of reference and others relating to the South American Republic, both in the Spanish and in the English languages. The first of these publications will be a comprehensive "Encyclopedia of South America" in four quarto volumes, provided with coloured maps and other illustrations under the general editorship of Mr. W. H. Koebel, the well-known authority on South America. This work will be followed by a "South-American Year Book," a statistical compilation dealing with the commercial, industrial, financial, and political affairs of the various Republics.

OUR SPECIALITY.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this - and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

"The Editor and Publisher."

Leading Weekly Periodical of the United States devoted to the Newspaper and Advertising Fields.

Presents the Important News of the daily and weekly publications, their editors, managers and staffs. Gives lists of new papers, new incorporations and changes in interest. Prints articles on newspaper management, the latest improvements in printing machinery and methods for increasing circulation. One of its most valuable features is the department devoted to the subject of advertising. Each week it contains "Tips for Business Managers," in which is given the names of new advertisers, lists of old firms that are making new contracts for space, and general news concerning the entire field. Some publishers have secured thousands of dollars worth of advertising through the information thus furnished.

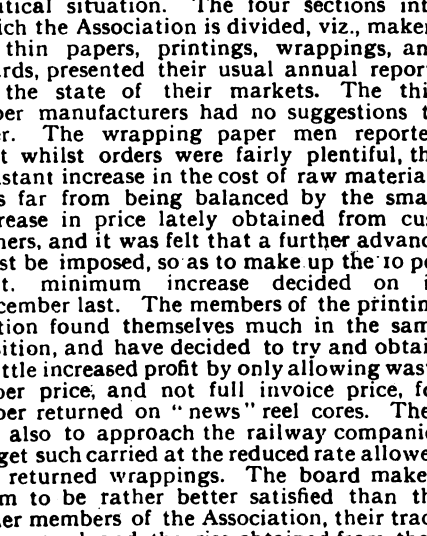
French Papermakers' Association.



The French Papermakers' Association has just attained its jubilee, the 50th annual meeting having been held in Paris last month. The formal celebration of the event will not, however, take place until next year. The meeting was not characterised by any debate of importance, the general feeling being that the trade was in a rather quiescent condition just now, owing to the unstable political situation. The four sections into which the Association is divided, viz., makers of thin papers, printings, wrappings, and boards, presented their usual annual reports on the state of their markets. The thin paper manufacturers had no suggestions to offer. The wrapping paper men reported that whilst orders were fairly plentiful, the constant increase in the cost of raw materials was far from being balanced by the small increase in price lately obtained from customers, and it was felt that a further advance must be imposed, so as to make up the 10 per cent. minimum increase decided on in December last. The members of the printing section found themselves much in the same position, and have decided to try and obtain a little increased profit by only allowing waste paper price, and not full invoice price, for paper returned on "news" reel cores. They are also to approach the railway companies to get such carried at the reduced rate allowed for returned wrappings. The board makers seem to be rather better satisfied than the other members of the Association, their trade being good, and the rise obtained from their customers sufficient to cover the increased cost of materials.

Stationery Exports.

The following are the exports of stationery, other than paper, from the United Kingdom for the month of April, compared with the corresponding month of the two previous years:—

	1911.	1912.	1913.
To Germany ...	£7,122	£9,524	£12,949
" France... ...	4,463	4,794	3,617
" United States of America...	7,218	8,247	7,531
" British India...	13,808	19,664	19,071
" Straits Settlements ...	3,982	2,683	5,117
" Ceylon ...	1,806	2,425	2,499
" Australia ...	10,331	14,041	13,150
" New Zealand	3,426	3,025	3,307
" Canada ...	5,778	7,494	6,935
" Other Countries... ...	61,468	66,320	69,882
Totals	£119,392	£138,167	£144,058

For the four months, ending April, the total exports reached £561,929, an increase of £32,820 over the same period of 1912, and an increase of £74,343 over the corresponding period of 1911.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

10,372 TRIMMLER, C., letter files, loose-leaf binders and the like.

10,385 GOSS PRINTING PRESS CO. (OF ENGLAND), LTD., and RAABE, O. L., adjustable bearing or journal boxes for use in printing machines.

10,405 MERTENS, E., and ELSASSISCHE MASCHINENBAUGES., adjustable bearings for printing machine rollers.

10,446 NELSON, I. T., and MURRAY, J., multi-colour printing machinery.

10,449 MERGENTHALER SETZMASCHINEN FABRIK G m.b.H., typographical casting machines.

10,451 ELSWORTH, T. F., rotary printing machines.

10,469 ROSE, H., and ROSE BROS. (GAINSBOROUGH), LTD., apparatus for feeding a web or webs of paper or other material from a roll or rolls to a predetermined definite position.

10,474 PETTY, J. P., files or binders for loose-leaf sheets or the like.

10,528 LINDSTROM, C., A.G., stamp-affixing machines.

10,551 ENGLER, J., letter and like files.

10,575 MACKENZIE, J. W., typecasting machines.

10,581 WILTON-COX, L., advertising or displaying devices

10,589 KITCHING, H., machines or apparatus for gumming envelopes and the like.

10,603 BROOKER, H., SEWELL, H. W., and T. H. BROOKE and CO., LTD., coin-freed apparatus for delivering postage stamps, labels, and the like from a continuous strip.

10,649 WILKINSON, W. J., production of half-tone printing plates.

10,654 JOHNSON, I. L., stamp-affixing apparatus.

10,699 KLEIN, F. J., paper fasteners.

10,727 NASMITH, J. W., apparatus for applying adhesive substances to paper and the like.

10,763 ASMUSSEN, O., rotary machines used for intaglio printing.

10,767 HARRISON, A. B., reply postal wrappers. envelopes, and the like.

10,768 SCHROEDER, O. H., process for raising letterpress printed matter.

10,777 MACKAY, L. F., VON, blotting appliance.

10,795 BRUER, C., stencil printing machines.

10,826 HOLLICK, W. J., caps or protectors for fountain pens, pencils, and the like.

10,859 MCCORMICK, L., advertising apparatus.

10,867 KROENERT, C. F. M., and MEYER, H. J., rotary printing machines.

10,868 KROENERT, C. F. M., and MEYER, H. J., rotary printing machines

10,898 SMITH, T. E., combination holder or cover and stand for note-books, loose-leaves, and the like.

10,932 DORMAN, J. E., and W. H. DORMAN and CO., LTD., machines for separating and feeding sheets of paper.

11,023 FIVEASH, A. P., displaying goods of all descriptions advertisements, post cards, and the like.

11,041 VEALE, K. C., handle and lid fastening for boxes made of pasteboard, or other like material.

11,046 PIERPONT, F. H., and LANSTON MONOTYPE CORPORATION, LTD., machines for testing type matrices and similar bodies.

11,055 MORRIS, E. F., and LEECH, H. L., production of coated paper for printing purposes.

11,068 STACEY, H. J., and MACINTOSH, A. B., stencil printing apparatus.

11,070 BHISEY, S. A., typecasting machines.

11,074 MOSER, W. E., holding device for exhibiting advertisements, signs, tablets, or pictorial representations for commercial decorative and other like purposes.

11,098 MARTIN, F. L., printers' chases.

11,103 KAUFMANN, L., advertising apparatus.

Specifications Published, 1912.

Letters, signs, advertisements, facias, show-cards, and the like, and other indicating devices—Beville; 9,077.

Stick circulating mechanism for paper or cloth coating printing machines, and the like—Marresford; 9,169.

Binders or covers for books, papers, and the like—Hunt; 9,674.

Typesetting and distributing machines—Borchers; 9,838.

Printing machines—Goss Printing Press Co., of England, Raabe and Terrey; 10,121.

Rubber or other printing stamps—Rushworth; 10,401.

Typecasting and composing mechanism or machines—Pierpont and Lanston Monotype Corporation; 10,527.

Means for securing electrotypes and the like upon the cylinders of rotary printing machines—Brown and Murray; 11,109.

Apparatus for machining curved stereotype plates—Printing Machinery Co. and Bennison; 11,139.

Writing styles for stylographic pens—White and Hewitt; 13,536.

Loose-leaf binders—King; 13,723.

Manufacture of receptacles formed of paper or the like—Hanshue; 15,123.

Bookmarkers and the like—Warin; 15,268.

Machines for printing from intaglio plates or cylinders—Bell and Bell; 15,561.

Treatment of printed or lithographed pictures to produce relief effects—Arenowitz; 19,167.

Ruling machine for stereotype matrices—Dunn; 20,388.

Printing presses—Miehle and Miehle; 25,931.

Securing printing chases in machines—Wadewitz; 26,588.

Expanding reel bars or cores for use in winding and unwinding paper, cloth, and like material—Milne; 27,355.

COMPLETE SPECIFICATIONS OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE

1913.

Fountain and like pens—Klio-Werke Fabrik für Gebrauchsgeganstande Ges.; 9,185.

Apparatus for moulding stereotype matrices—Bechman; 9,313.

Machines for cutting piles of paper and the like—Bautzner Industriewerk m b.H.; 9,601.

Wiping the plates in copperplate printing machines—Soc. Anon. des Machines T.D.R.; 9,977.

Adjustable bearings for printing machine rollers—Mertens and Another; 14,405.

THE Printers' Cost Finding Movement.

Meeting of Master Printers with Managers and Overseers.

At the request of the Costing Committee of the Federation of Master Printers, a special meeting of the Printers' Managers and Overseers Association was held on Monday evening, at the Salisbury Hotel, Salisbury-square, Fleet-street, E.C. The President of the Association, Mr. C. J. Gray, was in the chair, and there was a large attendance of members. Messrs. W. Wright Bemrose, Harry Cooke, W. Howard Hazell, R. A. Austen Leigh, and W. A. Waterlow (members of the Costing Committee) and A. E. Goodwin, organising secretary, attended and addressed the meeting.

The CHAIRMAN, in some introductory remarks, said the subject which they were met to discuss was not a new one to them; it was with them all day long and had proved a nightmare to them. The Printers' Managers and Overseers Association took some pride, over and above the Costing Campaign that had now developed, in feeling that they had something to do with its initiation. In going through the records of the Association he found that ten years ago a much respected member of their Association, Mr. W. W. Fox—who he regretted, owing to failing health, had had to retire from active interest in the Association — read a paper, in 1903, on "Printers' Costs and Charges," and that paper evoked so much interest that a deputation from their Association was invited to meet the master printers at Stationers' Hall with the object of going into that matter. That paper, fortunately or unfortunately, dealt with composition only, and therein they fouud that in a rough and ready fashion Mr. Fox was able to bring out the cost, under the conditions existing at that day, at something like 1s. 4d. per hour. It was very pleasing to him to find they had among the employers with them that night a gentleman who was present at the meeting ten years ago, Mr. Howard Hazell. Mr. Eaton Hart was chairman on that occasion, and in a few preliminary remarks he said: "We have met together to-night to discuss a very interesting problem, a problem which I suppose has engaged our attention during the many years which we have been associated with the printing trade. It is a subject which affects the probity and vitality of our business. It is a truism that if we do not and cannot count the cost of our wares, it is impossible that we can solve the difficulty of price." That statement was as true to-day as it was then—in fact truer. They as an Association had been hammering away at this question. Some three or four years back Mr. Fox was good enough to give them another paper on the subject, but he found the employing printer had not taken the lesson much to heart. If the principle then advocated had been adopted in the composing-room it would have extended to other departments, and he did not think there would have been any need for this costing campaign now. Concluding, the Chairman gave a hearty welcome to the members of the Master Printers' Association, and remarked that if they did not accept all the theories propounded in the System it was because they did not claim to be scientific men, but rather practical men controlling practical departments where hard practical facts were daily presented. Speaking for the Association, they wished this costing campaign to be successful.

COLONEL WRIGHT BEMROSE, President of the Master Printers' Federation, then made a preliminary statement, introducing the subject to the meeting. He said the meeting with the P. M. and O. A. seemed a step in the right direction, and he hoped it would not be the last. The large audience was encouraging, because it showed that a deep interest was being taken in the question from the side of the manager and overseer. Referring to the Chairman's remarks about Mr. Fox, he said Mr. Fox seemed to have been born before his time. However, they now hoped they had reached the time when they could realise that some scientific as well as practical steps must be taken with reference to this subject, a subject which he ventured to suggest interested them in every way almost as much as it did their employers, and also those under them whom they (the master printers) employed, because they could not raise the status of the printing trade without benefitting all who were employed in it. The present movement was started by some enthusiast on their side, but they had got far past that stage. They had realised the advantages that were to be obtained from it, they had got their theories tabulated, and they were now looking forward to the time when they should put it into practical use. The sooner that was achieved the better. Beyond that, they must have not only theory and practice, but united action and co-operation, without which they would not achieve the success they hoped to do. He and other members of the Costing Committee realised the great assistance that the members of the P. M. and O. A. could give them in this matter. He ventured to suggest that they would not have reached as far as they had without incorporating many ideas and suggestions which had emanated from the managers and overseers in London and the provinces. They did not claim that their scheme was perfect; far from it. But they did claim that it was a fairly good start. Amongst themselves they had had differences of opinion on matters of detail, and when they took the members of the Printers' Managers and Overseers Association into their confidence those differences might be somewhat widened. They came to the conclusion that they must meet one another on small matters to attain their object, and as time went on they might improve the defects in their present system. But that must take time, here as in America. This costing system of theirs was a small basis, and they had much to build up on it before they got a complete edifice. For the moment they wanted to confine themselves to the ascertainment of costs. The other things must follow. When they knew their costs they must add their profits, and then, above all, they must stick to their prices. (Hear, hear.) He realised that this was in the hands more particularly of those who were their employers, but in many cases it was undoubtedly left to the managers and overseers to shape other's opinions and judgments, and he asked them to back the employers up in being firm in this matter. It was too soon to expect any results from their present movement, but he hoped it was beginning to have an effect, and that they would see a determination on the part of all employers to take work only at such a price as would realise some profitable results. The members of the P.M. and O.A. could help them once again by explaining it to those who were employed, if any explanation was still necessary on this subject, when they better understood it. They had absolutely nothing to hide from their employees, generally speaking. He believed it to be a system in which all was perfectly straight and above board, and if they heard any opinion expressed to the contrary he hoped, when they had heard their methods explained, they would do all they possibly could to support them in the statement he had made.

Mr. HOWARD HAZELL, who was received with applause, said that as Colonel Bemrose had explained to them the principal objects of the Costing Campaign they were carrying on throughout the country for improving the cost finding methods of printing, he would plunge into the middle of the explanation of the system. In the course of this explanation (similar to that he gave at the General Cost Congress in London in February), with the aid of enlarged diagrams of the several forms used in the system, which were suspended round the walls of the room, Mr. Hazell pointed out that a satisfactory cost finding system should have the four following points:—(1) You should know the cost per hour of each process in your works; (2) That the costs per hour should cover all the expenses—rent, rates and taxes and all general expenses; (3) That you should know the cost of each job on this basis; and (4) Finally, that you should be able to check these costs per hour at recurring intervals to see if your costs were going up or down. In order to do this, it was necessary, first, to divide the business into departments, and each printer must decide for himself how his business is to be divided and what the departments should be. Mr. Hazell then gave a full explanation of the use of the forms, and in summarising his remarks, he said that at the beginning of the year they made out the form, "Statement of Expenses, showing Standing Departmental Expenses per Annum and per Week," and dealt with all of the general expenses and found their weekly standing departmental costs, which did not vary whether they were busy or slack. At the same time they found what percentage they must add to the departmental costs to cover their overhead expenses. Once a week they made out this form to find out what was the cost of each department, the value of the work produced in that department, and incidentally to tell them whether their hourly rates were correct. Every day every worker makes out a daily docket. Each day the total number of chargeable hours are transferred to the Value of Production Form, and the weekly total of each department to the Statement of Cost of Production Form. The costs are daily collected from the Daily Docket and entered on the Job Cost Sheet to show you the cost of each job. It was only since the beginning of February that the printing trade as a whole had become acquainted with the benefits of this system, and he was astonished in going through the country, at the many glowing accounts he heard of the value of the system. After quoting some instances of this, Mr. Hazell said a printer might be a Tory or a Liberal, but he must be progressive in his business or he would eventually land in the bankruptcy court. The time had arrived when they must revise their costs. The printing machinery they considered satisfactory now would be obsolete a few years hence. Their labour costs, rent, rates, taxation—all the costs were going up in the printing business, and the only thing that was likely to go down was the profits of the printer. (Laughter.) They were looking to the managers and overseers to help them in this great campaign; they wanted their co-operation; they invited their suggestions. They also wanted their tact in handling the staff under their control in their departments, in order that any possible friction that might arise in the introduction of these improved methods might be tactfully dealt with and so overcome.

Some criticisms of the system were made and a number of questions were put, all of which were tersely and satisfactorily dealt with by Mr. Hazell. Those who spoke included Messrs. F. W. Seeley, D. Greenhill, and Limbrey.

Mr. HARRY COOKE then gave an account of the Costing Committee's views on the machine rate by the unit system. He could not tell what genius evolved it; he was only out to explain it, and could not take any credit for it. In a room where there were a lot of machines of different values and sizes, the different rates per hour must be arrived at for different classes of machines. After a lot of discussion the Committee felt that this unit system gave a very reasonable method of dealing with it. Mr. Cooke then described the use of Form 13, "Machine Units," showing how to find the hourly rate of each machine.

Mr. AUSTEN LEIGH followed with a brief address, in which he pointed out that by this system they got the whole cost of everything. It was a cost per chargeable hour, and not per paid hour, so that in the composing-room it was quite impossible to sell all your hours to the customer.

After some more questions had been replied to by Mr. Hazell and Mr. Cooke, Mr. GOODWIN made a few remarks, emphasising the need of the cordial support of the managers and overseers if the system was to be a success, and remarking on the importance of the movement and its world-wide influence.

Mr. HAZELL having replied to questions from Messrs. F. W. Lewis, R. B. Hardie and F. W. Seeley, Mr. E. R. ALEXANDER spoke of the folly of printers giving away their profits to their customers, and supported the adoption of some principle such as the one that had been illustrated by the diagrams before them.

Mr. FRANK COLEBROOK also spoke of the terms "chargeable" and "non-chargeable" as an improvement on the terms "productive" and "non-productive" used in the early stages of the movement, and mentioned the importance of disarming any feeling of antagonism on the part of the journeymen. He was quite sure there was no contrast of interests, but that it was to the permanent interests of all to introduce and make the most of this system. It was directed not against labour, but against labour in vain.

The CHAIRMAN, after some concluding remarks, called upon Mr. E. C. MOYCE (general secretary of the Association) to move a vote of thanks to the members of the Costing Committee who had come and laid before them their views on this important question. Mr. R. J. DAVIES (ex-president), who was received with loud applause, seconded, and the vote was heartily carried.

Mr. W. WATERLOW returned thanks, and regretted the absence of Mr. J. E. T. Allen (Manchester), chairman of the Costing Committee, who was unable to be present, and Mr. J. Forman (Nottingham), who was engaged in a costing meeting in Nottingham that night.

The meeting terminated after sitting just over two and a-half hours.

IN connection with a delegate meeting of the Typographical Association, the Northern District representatives paid a visit to the Newcastle Branch on Saturday night, when a smoking concert was held in the Crow's Nest Hotel. Mr. J. D. Harvey, branch president, occupied the chair, and was the recipient of a gold watch and rose-bowl for Mrs. Harvey in recognition of services rendered during 20 years in various capacities. Mr. John Dixon made the presentation, and said the success which had attended the negotiations with the masters was largely due to Mr. Harvey's efforts. Mr. Harvey, in returning thanks, said he looked back upon his work for the Society with the greatest pleasure and satisfaction. He went into the work because he liked it. The evening was then devoted to harmony, and an enjoyable time was spent.

Trade Notes.

MESSRS. WOOLGAR AND ROBERTS' Press Cutting Agency has been removed to larger and more commodious premises at 169, Fleet-street, E.C.

THE death took place on Monday of Mr. Isaac Suwalsky, editor of the first newspaper in Hebrew in London, the *Hayehoody*, which he established 16 years ago.

AT the recent quarterly meeting of the *Evening Chronicle* companionship, Newcastle-on-Tyne, Mr. Dan Healey was presented with a gold-mounted walking stick, suitably inscribed.

MESSRS. LINOTYPE AND MACHINERY, LTD., 188-9, Fleet-street, E.C., have introduced a new clover or trefoil border that can be supplied in any body from nonpareil to pica at 1¾d. per matrix. The design is very neat and lends itself to many forms of display printing.

AT a meeting recently held at Blyth, Northumberland, a Newsagents' Association for East Northumberland was formed, and the following were appointed officials:—Mr. J. B. Nicholson, chairman; Mr. W. Robson, vice-chairman; Mr. R. Watson, secretary; Mr. J. Speeding, treasurer; Messrs. Burke, Duncan, Lee, E. Elliott, Hindmarch, Wilson and Thompson, committee.

JUBB'S METALS.—As instancing the popularity in the Colonies of the stereo, lino, and other metals manufactured by Messrs. T. G. and J. Jubb, of Brandling-street, Hunslet, Leeds, that firm's New Zealand representative writes:—"I called on ——— in Christchurch; they are using your metal; they say that your metal costs them a little more than metals they have had before, but they would not change now for any other, so you may expect an order from them when they are requiring metal again." This speaks well for the quality of "Jubb's Metals."

TENDERS WANTED. — By the Stockport Guardians for the supply of 100 copies of the "Union Year Book" for ensuing three years. Particulars from Mr. C. F. Johnson, clerk, Union Offices, Stockport. By the Corporation of Newcastle-upon-Tyne, for the supply of printing, etc., to the several departments of the Corporation for three years from April 1st. Forms of tender from the Town Clerk's Office, Town Hall, Newcastle-on-Tyne. By the Corporation of Rotherham, printing and supplying 1,000 and 1,500 copies of a new catalogue for the free library; specification on application to the Chief Librarian, Rotherham Free Library.

COMMENCING in the office of the *Newcastle Guardian* on May 12th, 1863, afterwards acting as district reporter at Morpeth for the *Newcastle Chronicle*, and, in 1877, appointed Sunderland representative of the *Journal*, which latter post he held for thirty-four years, is a record on which Mr. J. C. Moor, of Sunderland, may be congratulated—half-a-century of press work. Mr. Moor was for some years a member of the Council of the Newspaper Press Fund, also holding a similar position on the Council of the Institute of Journalists. He for many years took an active part in connection with Sunderland Y.M.C.A., and his genial personality is well known far beyond Wearside and Tyneside.

THE HUTH LIBRARY SALE.—Messrs. Sotheby, Wilkinson and Hodge have arranged to dispose of another portion (the third) of this fine collection on June 2nd to 6th and June 9th to 12th next. This section of the sale includes rather more than 1,300 items, the enumeration and description of which extends over nearly 400 pages. The Huth collection is in many respects similar to that got together by the late Mr. Robert Hoe. In both cases we find a wealth of early English literature, and from the Elizabethan age onward a very fine series of works on poetry and the drama, as well as most of those well-established English classics which no Victorian collector could afford to overlook. As is well known the Huth Library was especially rich in unique volumes, and a number of these occur in the forthcoming sale. Early printed books, though not an exceptionally strong section on this occasion, are yet represented by some items of great rarity and interest, such as the copy of St. Alban's Chronicle (1483), printed on vellum, and thus probably unique; the Oxford-printed St. Jerome, dated (no doubt in error) 1468, etc. The illustrated edition of the catalogue of this part of the sale (5s.) is well worth securing, as it contains a number of facsimiles of title-pages, wood-cuts, and miniatures from the MS. Horae section, and fine bindings, these latter being printed by Mr. Griggs in gold and colours, in his usual excellent style. This catalogue only brings down the alphabetical arrangement of the sale to H, so that more than half the library will still remain for future sales.

ACCORDING to *Kemp's Mercantile Gazette* there were two failures in the printing and stationery trades of England and Wales for the week ending Friday, May 16th; the corresponding week in 1912 showed four.

TWO CASES of lead poisoning were reported to the Home Office from printing establishments during last month, making a total of five since the commencement of this year, against nine in the corresponding period of 1912.

THE artistic cover of this year's *London Opinion* "Summer Annual" cannot fail to arouse curiosity as to what other smart things are inside. That curiosity will not be disappointed, for the stories and drawings are all by first class authors and artists, and the annual is really an admirable shillingsworth, and should attain to a large sale.

PRINCE LICHNOWSKY, the German Ambassador, and the representatives of the German press in London, have accepted an invitation to dinner on May 30th from the members of the English press who visited Germany in 1907 as guests of the German press. Among those who have signified their intention of being present are Mr. Harry Lawson, M.P., Sir Clement Kinloch-Cooke, M.P., Sir Frederick Wilson, Mr. Robert Donald, and Sir W. Robertson Nicoll. Mr. J. A. Spender will preside.

THE Board of Trade Labour Exchanges, during the five weeks ended April 18th, received 2,062 applications for work in the printing, stationery, book and paper trades, of which 1,025 were from women. The number of vacant situations notified during the same period in those trades was only 860, and of these 525 were for women. The number of vacancies actually filled by the Exchanges during the term under notice was 636, and 404 of the places were filled by women. In the Juvenile Branch 874 such vacancies were notified, of which 506 were for girls, and 619 filled, 443 of them being taken by girls.

MR. EDGAR WHITELEY, manager of the National Labour Press, Ltd., Manchester, answered to his bail on Tuesday, at Manchester, on a charge of committing a misdemeanour by publishing on May 9th the *Suffragette*, which, it was alleged, contained an incitement to crime. Inspector Taylor deposed that before the Labour Press published the *Suffragette* he communicated to the defendant an intimation that if it contained an incitement to destroy property he would be prosecuted. Defendant contended that the paper contained no such incitement. He admitted publishing without his directors' authority. He was remanded till Monday on bail.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Machines de-preciate; men ap-preciate.

o o o

Here for instance is Mr. William Henry Slater. For twenty-one years he has served his day and generation as printing instructor at the Borough-road Polytechnic. I wish I were wearing an Eiffel Tower of hats just at the moment, that I might take them all off to him. The most however that I can claim to be or do, at all out of the way in congratulation is to give him the grip or grips of an octopus. For I'm no pessimist; and I see that a schoolboy has just written in a paper that the opposite of a pessimist is "a hopeful man or an octopus."

o o o

With the clasp of a score of healthy tentacles I have much pleasure in giving Mr. Slater the time of his life; for he's never been octopus'd before.

o o o

He has appreciated through these long years. He can't have known a very great deal about mechanical composition twenty-one year ago when "he began" at *T.P.'s Weekly* would phrase it. He may be forgiven if he had somewhat less artistic conceptions than now of what is good form in display. I really don't know much as to his personal ideas of good print so long since, but I do know that I as a young printer had some lingering respect twenty-one year ago for the monumental mason and the milliner; and I have great pleasure in attributing to Mr. Slater in the handsomest manner a few of my own youthful follies.

o o o

Whatever his initial stock of knowledge, whatever his early judgment, and early character, all these have been appreciating through twenty-one years. They have grown by their persistent exercise. The fire of his own zeal and devotion has doubtless many a time been itself rekindled at the fire of zeal and devotion in some youth which fire himself had lit. He has lived the laborious life and the large life; and he can look back and look around with a glow at the heart.

o o o

I am very glad that representative men in the trade have by a handsome testimonial expressed their sense of what he has been and has become; have appreciated the fact that

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS
(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C

Situations Vacant.

PRINTERS' ROLLERS.—Experienced Traveller required to sell Printers' Rollers; must have good connection in Printing Trade; good opening for energetic man; applications treated confidentially.—Write, stating salary, experience, etc., Box 607, Judd's, 5, Queen Victoria-street, E.C. 13210

SALESMAN wanted to Sell Riessner's Combination Gold Ink as a side line; liberal commission.—Address, T. Riessner, 57, Gold-street, New York. 13100

Situations Wanted.

ADVERTISER is open for engagement as MANAGER, WORKS MANAGER, or OVERSEER; good experience and qualifications.—Address, Printer, 43, Middleton-street, Hull. 13211

PRINTING INK MAKER, thoroughly experienced and up-to-date, desires position in London; moderate salary.—Address, No. 13207, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13207

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Miscellaneous.

FIRST-CLASS FIRMS wanted in all parts of the world, having good connections with the Printing Trade, to introduce new and most successful Automatic Feeder and other Machines.—Address, "Zetetic," No. 13206, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13206

PRIVATE TUITION by Correspondence in Typographical subjects.—Send particulars of requirements, with stamp, to Fredk. G. Shepard (Quadruple Honoursman and Lecturer in Honours, London), 17, Cicely-road, Peckham, S.E. 13209

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13181

Digitized by Google

he has been—ap-preciating; that he has been becoming more valuable every year.

o o o

I am very glad that among his pleasures he has had that satisfaction which Gladstone once called (speaking of the then young Austen Chamberlain's *debut*) a satisfaction "dear and refreshing to a father's heart." I am told by a common friend that Mr. Slater's sons are shaping splendidly; and that the family name is likely to be upborne in scientific and other connections as worthily as the "Boro" instructor has upborne it in the sphere of print.

o o o

By the way, the Boro' Polytechnic printing school had plant worth about £20 when its printing classes were started. Its plant is now worth about £1,000. I don't know how many or how few students worked on that £20 plant, but 260 are on the roll to-day.

o o o

I hear a growl about my writing too much upon costing. The growler is cousin to a man who said he had become tired of the sunshine. You and I, however, are sensible people—at any rate I'm speaking for yourself—and we feel just now that although it is the same old sun, we can do with it; and although it is the same old brightening of the printer's lot by the accurate finding of costs—well we can do with a bit more of that, too.

o o o

Let me say then that a Glasgow printer put in a cost finding system very similar to the Committee's about two years ago. He drew out about £700 access of profit in the first financial year, and he attributed that almost entirely to stoppage of leakages disclosed by his better costing methods, and to better prices his firm had found itself obliged to charge and able to charge.

o o o

Mr. Hazell tells us, too, of a business in the South of England which installed a somewhat similar system. Whereupon it promptly made in one department alone £400 more than had been made in the previous year.

o o o

Mr. Johnson (of Ben Johnson's in York) has testified that the turnover and profits have both increased since the installing of a practically identical method.

o o o

Turnover might decrease while profit increased; but it is more satisfactory to have the increase both ways. It carries more assurance of permanency.

o o o

Mr. Hazell always makes plain at the outset of his expositions that no costing system can be satisfactory which does not show the cost per hour of each process in the works; which does not show *all* the costs; which does not show the cost of each job on that basis; and which does not enable you to check the costs per hour from week to week.

o o o

That checking is one of the most distinctive and most valuable features of the Federation system. And let me suggest that it is one of the most interesting.

o o o

I could not have believed, Mr. Waterlow said at the London Congress, that I could have taken such deep interest in the details of my business, as I have done since I installed this system.

o o o

He was not admitting previous indifference. I am sure he simply meant that what had been matter of duty and had had conscientious attention, had suddenly become a pleasure.

o o o

Which is in every way to the good; for "no profit grows where is no pleasure ta'en."

o o o

A good costing system changes the management and changes the manager. He conceives new hope and confidence, and everything takes on a new aspect.

o o o

A little hope, a little trust,
And life—as dry as desert dust—
Is fresher than a mountain stream.

o o o

And now I want to enter one or two cautions. First, remember that useful French phrase about "letting the better be the enemy of the good." Don't disparage or refuse hearty helpfulness to the system because you could, perhaps, somewhat improve it. Adopt it—and improve it. I have already illustrated, and could illustrate with more instances, that it is very elastic. I don't want to overdo the talk of modification or exceptions, lest some should fail to realise the vital necessity of its essentials through too much attention to the flexibility of non-essentials.

But though I don't want to overdo the aspect of modifiability—horrible word—it is yet quite proper to note that the plan is not one of cast iron. It is not the product of the accountant firm of Mede, Persia and Co. And it is not offered to children.

o o o

Of course, it must be adaptable, for no two printing businesses are quite alike. I speak as one who has looked pretty closely in many scores of businesses.

o o o

Take it, then; and take it now; and get to work with it at once. This is a time in the affairs of the craft which taken at the flood will lead to fortune. Neglected, all the voyage of our lives will be bound in shallows and in miseries.

o o o

Again, don't expect too much of the present leaders. Mr. Howard Hazell in particular is becoming overworked; besides he'll be going to America in the autumn. Nor can the other chief spokesmen be expected to continue their platforming very long. It probably won't be in their power; and if they don't see good response it may not be in their inclination. This is not an inspired note; I speak for no one but myself, but I am sure the warning is due.

o o o

It is no light thing to give the same expositions or much the same time after time. And to put so much spirit into it. "I feel like a discharged cargo" said Mr. Gladstone after one of his budgets; the phrase revealed the weight of the speech making even upon him. It is almost pathetic, too, to read how in his early prime his deaf old father would press him late at night or early in the morning to tell him what had been happening in the House. It is almost cruel, the minister reflects in his diary, filial son as he was; "it is like making a tired man run up stairs."

o o o

Mr. Hazell goes all out too in his speeches. He's not like the late Duke of Devonshire, "The other night," said the Duke, "I dreamt I was addressing the House of Lords; and I woke up and found *I was*."

o o o

A last hint for this week, send up 2s. 6d. to the office of the Federation, 24, Holborn, and get the new 4to booklet, "The Printers' Cost-finding System." It embodies ten forms, illustrative of the application of the Federation's system to a small business. I hope to revert to this pamphlet, but now just the hint to you to do yourself the justice and the real pleasure to get it at once. It is compiled by busy men for busy men. It is a model of directness and lucidity and easy comprehendableness.

FRANK COLEBROOK.

MESSRS. P. S. KING AND SON, Orchard House, Westminster, S.W., have issued a shilling book entitled "The New English System of Money, Weights and Measures, and of Arithmetic." It explains and illustrates a new system devised and compiled by Engineer Rear-Admiral G. Elbrow, R.N., and has an introduction by Mr. George Moores, F.S.S., secretary of the British Weights and Measures Association. The system described is claimed to be "adaptable for all peoples and serviceable for all purposes." The book is well worth a study by all interested in the reform of our present money, weights and measures systems.

Nothing if not the Best Value for Money.

That is the outstanding feature of Kidd's Inks. If you want proof, put the assertion to the test by sending a trial order.

The American Tariff Bill.

THE United States Tariff Bill, which has passed the House of Representatives, and is now being considered by the Senate, is being violently opposed by a minority of those affected by its provisions, and every effort is being made to induce the Upper Chamber to modify, if not to kill it. The Secretary of Commerce, Mr. Redfield, has just pointed out an instance in which threats have been used, and in the course of an address he gave to the Association of Employing Lithographers at a convention in Washington the other day, he quoted a circular issued by the Association in which the following passage referring to the reduction of the tariff on articles affecting themselves occurred:—"This means that the workmen will be thrown out of their jobs and their wages reduced in order to compete, and it may mean longer hours than 48 per week." Mr. Redfield told the employers that if this threat were put into execution the department of commerce and labour would inquire into their business methods and find out whether the facts justified the threatened reduction. He did not consider that the unscientific treatment of material, antiquated methods, and inefficient management were satisfactory reasons for reducing wages. Public sentiment had revolted against the idea that an employer's business and his employees were his own to do with as he wished without regard to the welfare of the workmen or recognition of the public need. The public conscience demanded that operatives should receive a living wage, and should work under healthy conditions. Under shelter of the tariff wall there had cowered certain employers whose methods were archaic and whose equipment was poor, but who were secure against foreign competition. They got along at the expense of the general community, but this would all now be altered. On the other hand the Tariff Bill is being warmly welcomed, and its provisions are expected to make living easier for the general public by reducing the prices at present charged for foreign-made articles of consumption.

* * *

An Empire Press Postage.

A STATEMENT that has passed without much notice, and that should have due attention drawn to its value, was made the other night in the House of Commons by the Postmaster-General, who, in his speech on the Post Office Estimates, announced a most important postal reform in the following words: "Newspapers which are published in the Dominions, if they happen to be posted in this country, have not at present got the benefit of our inland newspaper rates. An emigrant in Canada or Australia sends home a copy of some local newspaper to his brother, and that brother wishes to forward it to some other relative, but that paper cannot be posted as an English newspaper, and has to be charged according to weight. The publishers of the Dominion newspapers are handicapped in their efforts to obtain an English circulation by being deprived of the benefit of the English newspaper rate for their newspapers which are published in this country, although they may conform in every particular to the British Post Office requirements. The Empire Press Union, which has rendered useful service in several directions, urged me to effect this reform, and to extend the benefit of the English newspaper rate to Dominion newspapers. That I propose to do. It needs legislation, and I propose within a few days to introduce a very brief one-clause Bill, which, I hope, will receive the general approval of the House." Taking this announcement at its full value, it means that henceforth about sixty colonies, states, and dominions beyond the seas will be treated in the matter of newspaper postage in the same way as the Mother Country, and the thanks of the newspaper world are due to the present Postmaster-General for the benefit that will accrue.

* * *

"Suppressing Newspapers."

ABOUT three weeks ago we had to comment rather strongly on words alleged to have been used by Mr. Bodkin, at Bow-street Police Court, in regard to a certain newspaper. This statement formed a threat in our view, because he used the phrase when speaking of the newspaper that it must "be put a stop to." We were of the opinion that there was no power in England to suppress the future publication of a newspaper, but we were, also, aware of the fact that suppression can be brougut about—and very rightly to—when indecent, and seditious libels, or any statements to cause incitement, are published. It is now gratifying to know that an official statement has been made on the subject of Mr. Bodkin's speech, and it is pointed out "that neither by Mr. MacKenna in the House of Commons, nor by Mr. Bodkin at Bow-street Police Court, has any statement been made which warrants the suggestion "*that there has been any attempt to suppress*" the newspaper's publication, unless, of course, after its publication it was found to contain incitement to the commission of crime, etc. The liberty of the Press is one of England's greatest boasts, and if that is tampered with in any way our prestige is gone.

CANADA.—A firm in Toronto seeks the agencies of United Kingdom manufacturers of advertising novelties, such as penknives, playing cards, aluminium or tin lithographed signs, and would be glad to hear from United Kingdom manufacturers seeking representation in the Province of Ontaria. Further information may be obtained on application to the Canadian Government City Trade Branch, 73, Basinghall-street, London, E.C.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, May 21st, 1913.

MONEY has not been so flush this week, and recourse was had to the Bank of England for a small amount on Friday. Loan rates are rather harder, as also are discount rates. In the bullion market bar gold has been bought freely, resulting in a net influx for the week, to date, of £590,000. The position in the Balkans has again cast a shadow over stock markets. The activity and cheerfulness that developed in the middle of last week has given way to weakness and public indifference. Consols are lower than a week ago, the quotations being 75 to 75⅛ for money, and 75 1/16 to 75 5/16 for the June account.

Business has been very restricted throughout the past week in the miscellaneous industrial market, and prices have fluctuated within narrow limits either way. In our list of printing, newspaper and publishing shares, Associated Newspapers Ord. are down 1s. to 23s.—24s.xd., and the Pref. down 6d. to 20s.—21s.xd.; International Linotype have given way 5 to 76—81xd., and Spicer Bros. Pref. have dropped ¼ to 8¾—9¼xd. Business has been done during the past seven days in Associated Newspapers Pref. at 21s.; in Sir Joseph Causton and Sons Pref. at 90s.; in Ilford Ord. at 14s., 14s. 3d. and 14s. 6d.; in *Illustrated London News* and *Sketch* Pref. at 14s. 3d.; in International Linotype at 80xd. and 79xd.; in Kelly's Directories Deb. at acc. 10 1/16; in Lanston Monotype Corporation at 10s.; in Edward Lloyd Pref. at acc. 22s. 6d., 22s. and 22s.; in Mansell, Hunt, Catty and Co. Ord. at acc. 40s., 41s. 3d. and 41s. 9d.; in George Newnes Pref. at 15s.; in C. Arthur Pearson Pref. at 65s.; in Raphael Tuck and Sons Pref. at 99s. 4½d.; in Waterlow and Sons Pref. Ord. at 12; and in Weldons Ord. at acc. 31s. 10½d.

D. F. TAYLER and CO., Ltd.

The report of the directors of this firm, chromo almanac and colour printers, New Hall Works, Birmingham, submitted at the twenty-seventh annual general meeting at Birmingham, showed that the net profits of the business during that period, added to the balance brought forward from last account, after providing for directors' remuneration, expenses of management, depreciation of plant and machinery, and all other expenses, amount to £13,787 16s. 4d. From this amount has to be deducted:—interest on debentures, £1,506 13s. 4d.; interim dividend on the preference shares at the rate of 2s. 6d. per share, less income-tax, for the first six months, paid September 30th, 1912, £1,059 7s. 6d.; interim dividend on the ordinary shares at the rate of 2s. 6d. per share, free of income-tax, for the first six months, paid September 30th, 1912, £1,625; leaving available for distribution a balance of £9,596 15s. 6d. The directors recommend that this sum shall be dealt with as follows:—To pay a dividend for the second six months on the preference shares at the rate of 2s. 6d. per share, less income-tax, £1,059 7s. 6d.; to pay a dividend for the second six months on the ordinary shares at the rate of 7s. 6d. per share, free of income-tax, making 10 per cent. for the year, £4,875; to place to reserve fund (making it £13,000), £2,000; and to carry forward to next account, £1,662 8s.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

PROVINCIAL ADDRESSING AND ADVERTISING CO., LTD.—Debenture dated April 11th, 1913, to secure £100, charged on the company's property, present and future, including uncalled capital. Holder—J. Calderbank, Darwenbank-cottage, Walton-le-Dale, near Preston.

CHIVERZEZ PRESS, LTD.—Land registry charge on certain land, dated April 23rd, 1913, to secure all moneys due or to become due from the company to the London City and Midland Bank, Ltd., 246, Lavender-hill, S.W.

UNIVERSAL MEDICAL PERIODICALS, LTD.—Particulars of £1,000 debentures, created April 18th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £500. Property charged—the company's property, present and future, including uncalled capital. No trustees.

E. MORAN AND SONS, LTD.—Particulars of £3,000 debentures, created April 17th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's property, present and future, including uncalled capital. No trustees.

GRIFFITHS AND MILLINGTON, LTD.—Amended statement of the total amount outstanding on July 1st in respect of mortgages and charges created prior to that date and not required to be registered under Section 14 of the Companies' Act, 1900, has been filed pursuant to Section 12 of the Companies' Act, 1907. Debentures dated September, 1875, to November, 1900, securing £5,050. Original statement gave amount secured as £5,750.

CHADWICK AND SHAPCOTT, LTD.—Issue on May 5th, 1913, of £1,100 debentures, part of a series of which particulars have already been filed.

SURREY PRESS, LTD.—Particulars of £1,000 debentures, created May 9th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital, and 145 and 147, North-end, Croydon, with goodwill of business. No trustees.

COMPANY NOTICES.

MULTI-VIEW ADVERTISING CO., Ltd.

Notice is given, that a petition for the winding-up of the company was, on May 6th, presented to the Court by Edwin Cripps, of 52, Great Eastern-street, London, and the Adnil Electric Co., Ltd., of Adnil-buildings, Artillery-lane, London, creditors of the company; and that the said petition is directed to be heard before the Court at London, on May 27th.

COMMERCIAL INTELLIGENCE.

Re GUSTAV JACKEL HERZ.
Picture Post Cards and Labels.

This debtor, who carried on business at 45 Hatton-garden, as a jeweller, attended recently at the London Bankruptcy Court, before Mr. Registrar Hood, for public examination upon accounts showing total liabilities £5,385 11s. 3d. (unsecured £5,350 11s. 3d.), and net assets valued at £573 0s. 5d. In the course of his evidence the debtor stated that he came to London from Berlin in 1899, and shortly afterwards commenced business as a fancy jewellery factor. In March, 1905, he took over the business of a picture post card publisher at Woodford, and employed the previous owner to manage it on his behalf. That arrangement came to an end in December, 1907, and recently only a few orders had been executed. In January, 1908, witness took over the business of a manufacturer of trade labels, carried on at Hackney, under the style of the Brandon Label Co.; that business he also continued under the management of the previous proprietor until January, 1909, when it was closed. Witness attributed his failure and insolvency to losses by bad debts, and in connection with the post card and label businesses, to loss on Stock Exchange speculations and to heavy family and medical expenses. The examination was concluded.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

WHITAKER, P. J., late of the Manor House, Bratton, Westbury, Wilts., retired wholesale stationer. Claims by June 30th to Hewitt, Urquhart and Woollacott, 158, Leadenhall-street, London, E.C., solicitors for the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890.
RECEIVING ORDERS.

HANDLEY, A., 133, Stratford-road, Sparkbrook, Birmingham, stationer, etc. Date of order and of adjudication order May 9th, made on the debtor's own petition. First meeting of creditors May 28th, 11.30 a.m., at Ruskin Chambers, Corporation-street, Birmingham. Public examination of debtor, June 23rd, 2.30 p.m., at the Court House, Corporation-street, Birmingham.

HARTNALL, A. J., The Colonade, Ryde, Isle of Wight, newspaper proprietor. Date of order May 9th, made on a creditor's petition. First meeting of creditors May 30th, 11 a.m., at Yelf's Hotel, Ryde. Examination of debtor June 10th, 3 p.m., at the Town Hall, Ryde.

NOTICES OF INTENDED DIVIDENDS.

PAYNE, A. E. and R., trading as A. E. Payne, 182, Finchley-road, London, N., stationers, etc. Claims by June 3rd to G. M. White, 14, Old Jewry-chambers, E.C., who will also up to the same date receive claims against the separate estate of the partners.

TATCHELL, C. J., 171-172, Snargate-street, Dover, stationer, etc. Claims by June 4th to J. O. Morris, official receiver, 68A, Castle-street, Canterbury.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

BLOOMFIELD, W., 2, Second-avenue, Cromwell-road, and 50A, Victoria-street, Great Grimsby printer and publisher. Date of order April 16th. Discharge suspended until 10s. in the pound be paid. The grounds named in the order for refusing an absolute order of discharge were proof of facts mentioned in sec. 8, sub-sec. 3 (A), (B), (C) and (D), of the Bankruptcy Act, 1890.

THE late Mr. Whitelaw Reid, of New York, U.S.A., formerly United States Ambassador in London, and for some years editor of the *New York Tribune*, has left estate in England of the net value of £1,427 18s. 11d.

Printers' Managers and Overseers ASSOCIATION.

Annual Bohemian Concert.

The wives, daughters and lady friends of members gathered in large numbers, with a fairly large sprinkling of "mere man," in the magnificent King's Hall, Holborn Restaurant, on Saturday evening last, the occasion being the nineteenth annual Bohemian concert ("Ladies' Night") of the P.M. and O.A. (Parent Body). The President, Mr. C. J. Gray, was in the chair, the vice-chairman being Mr. T. A. Catling, Vice-President, who were supported by a full attendance of members of the council and officials of the Association, and the large hall was well filled.

The concert commenced with the singing of the National Anthem by the whole company, and then followed a varied and attractive programme that was thoroughly appreciated, as was evidenced by the fact that nearly every item was encored. Mr. David Richards, A.R.C.O., led off with a brilliantly executed pianoforte solo, "Valse Brilliante" (Moszkowski), and equally skilful was his playing of Rubenstein's "Cavalry Trot" as an introduction to Part II. Throughout the evening he ably officiated as pianoforte accompanist. The first song was contributed by Mr. Herbert Carter, who gave a nice rendering of the baritone song, "The Sea Road" (Haydn Wood), for which he was recalled, his song in the second part being "Drake Goes West." Perhaps the most enjoyable turn of the evening was the cultured singing of Miss Eileen A. Boyd (Australian contralto), whose beautiful voice was heard to great advantage in "Out on the Rocks" (Dalby), and, responding to a determined encore, she gave a charming interpretation of the old favourite, "Annie Laurie." Her second effort, "Crossing the Bar," was equally well received. One of the novel attractions of the programme was the singing of Mr. Ernest Davis, a male soprano, and the possessor of an extraordinary voice, which won for him loud applause in each of his efforts—"Rose of my Heart" and "A Spray of Roses," and he gave an extra turn. Miss Louise Wagner sang with pleasing effect "Love the Pedler (Edward German), and was loudly recalled for her second song, "I Hear You Calling Me (Charles Marshall), giving in reply a capital rendering of the pretty little song, "Cuckoo." Miss May Windsor achieved a popular reception for each of her songs at the piano, "Hurrah for England" and "Always a Little Lady." Some pleasing quartettes were rendered by the Cappélla Singers (Messrs. Ernest Davis, alto; Cecil H. Millard, tenor; John Roberts, baritone; and Ralph Yates, bass). The first was "The Rosary" (arranged by H. L. Heartz), and in reply to an encore they gave "Tommy went a-fishing," their other contribution to the programme being "The Long Day Closes." The most popular reception of the evening was gained by Mr. Will Edwards, who was vociferously encored for both his clever humorous turns, "The Art of Song Writing" and "Districts." Another entertaining variety in the programme was the humorous interlude, "Mimetic Miscellany," by Mr. Jack Treval, who gave clever imitations of a German band, a Salvation Army band, a cornet solo, the clarionet, the French horn, the Jews harp, the sound of the Tube lift, the scissors grinder and a snappy dog, and catching a noisy fowl. There was also a laughable ventriloquial entertainment.

The stewards of the concert, who are to be congratulated on the successful carrying out of the programme, were Messrs. H. W. Jackson, W. W. Curtis and R. B. Hardie.

The Typographical Association.

According to the 127th half-yearly report of the Typographical Association from July 1st to December 28th, 1912, there has been a decrease of £2,055 13s. 9½d. in out-of-work payments, of £203 17s. 11d. in strike payments, and of £190 in funeral benefits. The membership is now 22,078, showing a gain of 208. There has been an increase of fully-employed members by 606, bringing up the total to 17,235, and the casually employed number has fallen to 2,382, a decrease of 461 on the previous half-year. Members' contributions during the period have been £18,516 6s 4d., a gain of £268 6s. 2½d., and £252 1s. 10d. has been received for entrance fees, etc., representing an increase of £48 18s. 11d. Other items of income also show improvement. The increase in the general fund is £2,241 7s. 11d., making it £39,377 18s. 7d., and the superannuation fund totals £29,449 12s. 9d., showing a gain of £302 13s. 8d. on the past six months' working. Local strike payments in various parts of the country have been £563 15s. 7d., but none of these disputes have been of a serious nature, and generally speaking, the relations between master printers and their workmen have been of an amicable character.

PRINTERS' PIE, 1913.—That annual of annuals, so eagerly looked forward to by all, appeared on Monday, and will doubtless sell as quickly as the previous number. The contributors include:—The Duke of Argyll, K.T., G. B. Burgin, Dion Clayton Calthrop, Egerton Castle, Lt.-Col. Newnham-Davis, Athol Forbes, H. Hamilton Fyfe, Tom Gallon, Harry Graham, Sarah Grand, Keble Howard, Sir Henry Lucy, Baroness Orczy, Barry Pain, Max Pemberton, Mostyn T. Pigott, W. Pett Ridge, Ethel and Adrian Ross, George R. Sims, J. Ashby-Sterry, Katharine Tynan, G. D. Armour, Mabel Lucie Attwell, H. M. Bateman, Lewis Baumer, George Belcher, H. M. Brock, René Bull, Dudley Buxton, Hilda Cowham, Charles Crombie, Hesketh Daubeny, T. C. Dugdale, Harold C. Earnshaw, Charles Folkard, Charles Grave, Dudley Hardy, Charles Harrison, W. K. Haselden, John Hassall, S. Hebblethwaite, E. Huskinson, Charles Ince, Gunning King, Arthur Lee, Savile Lumley, Wilmot Lunt, J. Mac Wilson, Phil May, A. Wallis Mills, Hawley Morgan, George Morrow, Nibs, Will Owen, Charles Pears, Frank Reynolds, Charles Robinson, W. Heath Robinson, Harry Rountree, Tony Sarg, Charles Sheldon, Ernest H. Shepard, G. L. Stampa, G. E. Studdy, Charles Sykes, Lance Thackeray, J. H. Thorpe, Louis Wain, Godfrey Wilson, Lawson Wood and Starr Wood. The book is published at 1s. net by the *Sphere and Tatler*, Limited, and is on sale at all booksellers, bookstalls and newsagents. We understand that the orders received for the present issue have broken all previous records. Although 175,000 copies are being printed this year, the publisher will not be able to supply the demand. The order given by Messrs. W. H. Smith and Son is the largest they have ever given, viz.: 100.000. Messrs. Wyman, Messrs. Menzies, of Scotland, and Messrs. Easons, of Ireland, have also beaten their own records.

MAKERS TO H·M THE KING

Do *not* fail to take advantage!

WOLFF'S £750 PRIZES

——are going to help you sell BRITISH made goods which everyone prefers because they are——

The BEST in the WORLD

YOU or your ASSISTANTS may enter the competition.

IN addition to the Special Prize of £50 to Stationers and £5 to assistants we wish to emphasize that you may, and we shall be glad if you will, *enter for the general competition.* You will find all necessary information in the proof of the press advertisement we recentlysent you

***YOU* may be the winner of the STATIONER'S PRIZE.**

TO show our appreciation of the support the Stationer gives to BRITISH products, we are giving a Special Prize to that Stationer who supplied the pencil to the Special £250 Prize Winner. The Stationer will receive £50 and each of his assistants £5 up to five assistants.

Crust, each of whom shall be permanent. Registered office, 4, The Colonnade, Eastbourne.

W. C. HALLS AND CO., LTD.—Registered on May 10th, with a capital of £2,500, in £1 shares, to carry on the business of pine gum, glue, size and adhesive manufacturers, bone boilers, chemical manure manufacturers, printers, printers' merchants, lithographers, collotype and process engravers, etc., and in particular to take over the business of pine gum manufacturers carried on by W. C. Halls and Co. at Newark-on-Trent. The subscribers are W. C. Halls and J. Fearn. Private company. The number of directors is not to be less than two nor more than four; the first are J. Fearn (chairman), W. C. Halls and S. Henry. Qualification, 400 shares. Registered office, Beacon-hill-road, Newark-on-Trent.

CHARLES BOWMAN, LTD.—Registered on May 14th, with a capital of £25,000, in £1 shares, to take over the property and assets of Charles Bowman, Ltd., stencil ink and brush manufacturers and general engravers. The subscribers are G. Rowson and G. Lomax. Private company. The number of directors is not to be less than two nor more than five; the subscribers are to appoint the first. Qualification £100.

CLACTON, FRINTON AND WALTON BILL-POSTERS, LTD.—Registered on May 14th, with a capital of £2,000, in £1 shares (1,000 cumulative preference), to take over the business of billposters, advertising contractors, etc., carried on by the Clacton Billposting and Advertising Co., at Station-road, Clacton. The subscribers are C. M. Caplen and A. J. Hardy. Private company. The number of directors is not to be less than three nor more than seven; the first are D. Weston, J.P. (chairman), A. Quick and J. E. Hornby. Qualification, 25 shares. Remuneration as fixed by the company.

A. H. CARDBOARD BOX CO., LTD.—Registered on May 15th, with a capital of £1,000, in £1 shares, to take over from F. Hemming the business of a cardboard box manufacturer carried on as the "A. H. Cardboard Box Co.," Birmingham. The subscribers are F. Hemming and A. Hemming. Private company. The number of directors is not to be less than two nor more than five; the first are F. Hemming (managing director and secretary) and A. Hemming. Qualification, £10.

SPORTS AND SPORTSMEN, LTD.—Registered on May 9th, with a capital of £20,000, in £1 shares (2,000 preference), to take over the business of a publisher of "British Sports and Sportsmen, Past and Present," carried on by S. Atkinson, at 41-2, King-street, Covent-garden, and to carry on the business of printers, etc. The subscribers are S. Atkinson and A. I. Sharp. Private company. The number of directors is not to be less than two nor more than five; the first are S. Atkinson, Mrs. A. Atkinson and H. W. Lucas. Qualification, £100. Remuneration as fixed by the company. No dividend is to be paid on the ordinary shares till £500 has been set aside in the first year and £1,000 per annum in the second and third years towards the redemption of £2,500 first mortgage debentures about to be issued, or until such debentures have been redeemed. Registered office, 41-2, King-street, Covent-garden, W.C.

"MUSIC STUDENT," LTD.—Registered on May 3rd, with 100 members, each liable for 2s. 6d. in the event of winding-up, to take over the publication known as the *Music Student*, and to adopt an agreement between P. A. Scholes (agent for and on behalf of the Home Music Study Union) of the first part, the said P. A. Scholes of the second part, and the company of the third part. The directors are E. C. Bairstow, P. C. Buck, F. Banner, W. W. Cobbett, H. C. Collis, Mrs. A. J. Curwen, A. J. Hadrill, G. C. A. Jonson, S. Macpherson, T. A. Matthasy, H. W. Richards, P. A. Scholes, A. Visetti, and J. Warriner. Registered office, 30, Carlton-terrace, Child's Hill, N.W.

JOURNALISTIC ENTERPRISES, LTD.—Registered on May 5th, with a capital of £2,000, in 1,750 non-cumulative preference shares of £1 each, and 5,000 ordinary shares of 1s. each, to carry on the business of publishers, newspaper proprietors, etc. The subscribers are F. E. Ranson and A. Bowen. Private company. Table "A" mainly applies.

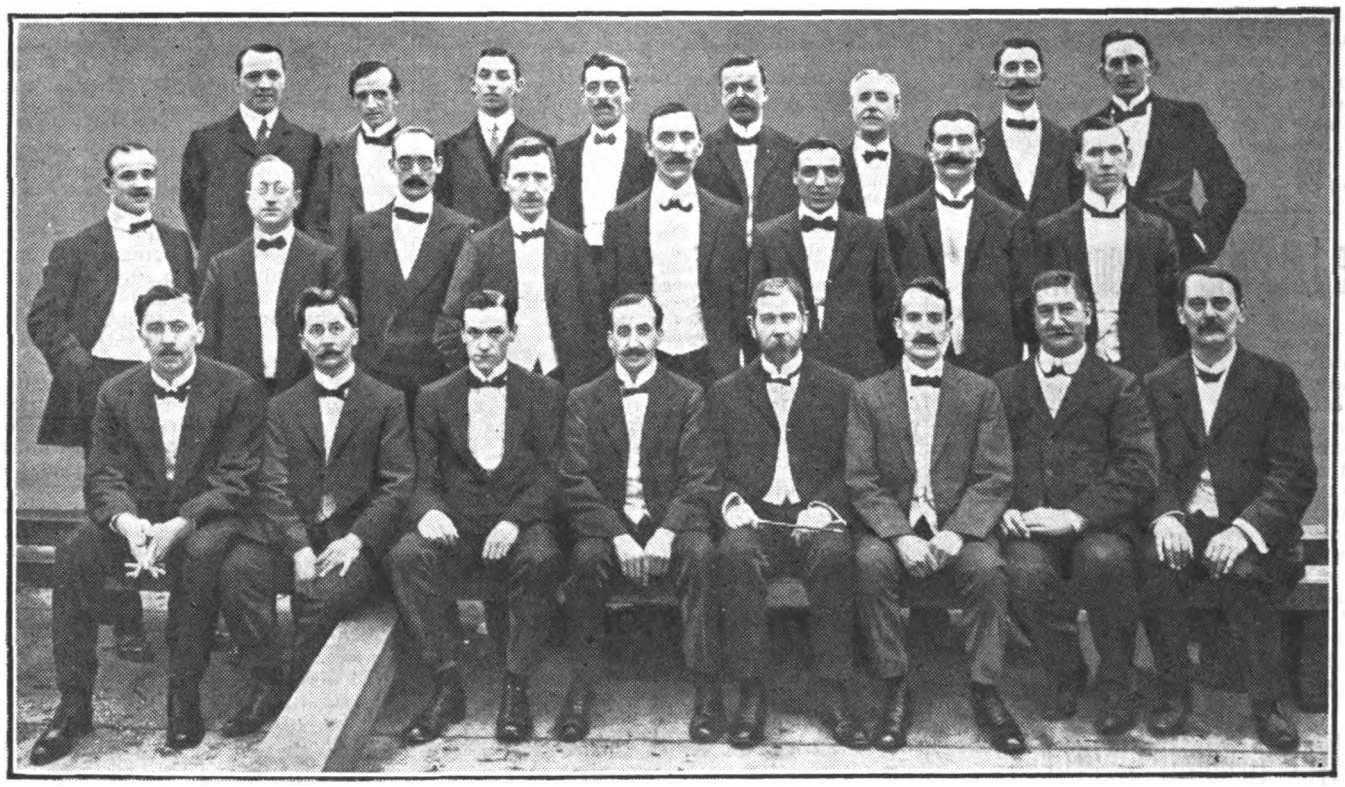
THE Associated Singers at Walworth.



A highly successful concert, promoted by the Deal Home Musical Society, was held at the "Duke of Clarence," Manor-place, Walworth, on Saturday, 10th inst., the chairmen being Mr. C. W. Bowerman, M.P., and Mr. A. Parbery, vice-presidents of the Lloyd Memorial Caxton Seaside Home, Deal. Supporting them were Messrs. W. A. Fricker, G. J. Harrison, H. W. Howes, J. Mabey, C. McCarthy, T. A. Newnham, H. F. Parker, H. W. Sutton, W. Burrows, C. A. Eastop, T. D. Boyd, J. L. Scorgie, H. Foster, W. Whicheloe, W. J. Mould, and many other members of the Committee.

The programme was unusually good, each item being a musical tit-bit. The concert-room has been remodelled, and a pretty proscenium and scenery is now a great attraction to the place. The feature of the programme was the Associated Singers, whose part songs have been the subject of many encomiums of late in the daily press. The conductor, Mr. J. Fewster, is a thorough musician whose talent was evidenced in the way he used the baton, the party fairly interpreting the spirit of their leader in the crescendo parts as well as in the finishing up of the pieces. The members are well trained, and their singing improves each time they appear before the public. The singing on Saturday was exceptionally good and encouraging, and the songs were admirably chosen to suit the voices at command. Their best effort was in the rendering of Ciro Pinsuti's pretty love song, "In this Hour of Softened Splendour," wherein the basses and second tenors were heard to special advantage, and it was awarded an encore. Their other songs were "Comrades in Arms," "Mynheer Vandunck," and "A Catastrophe," concluding with Mendelssohn's melodious parting song, at the end of which they met with tremendous applause.

The next special feature of the programme was the display of Miss Nellie Nunan, whose magnificent playing of a trumpet and a trombone created a sensation. In the playing of the "Post Horn," and the "Rosary" she was par excellence, only equalled by the trombone solo, "Asleep in the Deep." The other singers included Messrs. A. Saxton and E. White, whose rendering of "The Battle Eve" was particularly good; Mr. E. Bentley, Master G. G. Lewis, a delighful soprano; Mr. George Smithern, Miss Violet Renton, Master F. Holden (a clever little turn), Mr. G. Rhodes, Mr. J. Hyde, Mr. Will Waters (one of the best known South London humorists), Mr. H. Warren, Mr. J. Vassie, Mr. Wilson Hall, Mr. Will Miles, Messrs. King and Jack, Miss Florence Sherwin, Mr. Harry Piper, and Mr. E. Heywood. Mr. J. P. Sims, the musical conductor, carried the long programme through promptly, whilst Miss M. Andrews was an excellent accompanist.

Although barely six months old, the Associated Singers Male Voice Choir has, nevertheless, obtained a popularity that is fully merited by the excellence of its performances on the several occasions on which it has appeared on the concert platform. Having its inception in the desire of a few members of the composing staff of Carmelite House to form themselves into a glee party, the body has increased in numbers till at the present time it boasts of a choir of thirty-five voices, recruited from the business and mechanical departments of the various establishments controlled by Lord Northcliffe.

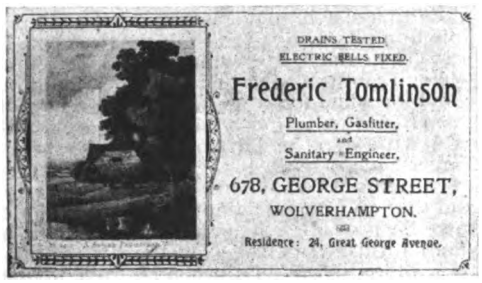
Its first appearance was made at the splendid Bohemian concert which it gave at the Holborn Hall in April last in aid of the Printers' Medical Aid and Sanatoria Association, when the high artistic quality of its performance came as a complete surprise to those unacquainted with the enthusiasm with which the singers had set about their task, under the able direction of Mr. Joseph Fewster. While the singers have already an extensive repertoire of part songs they have in contemplation works of a much more ambitious character. Rehearsals take place every alternate Tuesday at six p.m. during the summer months, and weekly during the winter season at the St. Bride Foundation Institute, the secretary, Mr. Reuben Henry, being in attendance on these occasions to receive applications from employees of the Northcliffe publications to enrol themselves in the choir.

A Group of the Associated Singers.

Mr. A. Parbery, in announcing that the concert had been the means of netting another £21 that night, said that he could commend the objects to the notice of everyone present. There was not a workshop of any description but what could join in this grand co-operative work. If they subscribed a penny per week they were entitled, without any fuss, to three weeks' free stay in the Home at Deal in cases of convalescence. There was no other existing institution that could give them so much value for their money. As a vice-president of the Home he was pleased to see so much enthusiasm displayed in so worthy a cause. Mr. Parker told him that there were no less than 65 persons in the Home that night, and another dozen waiting their turn. The Home was proving too small already, and immediate steps should be taken to consider the situation. Some people deprecated the Home being used for anyone but real convalescents. Mr. Parker assured him that only ten persons were in the Home other than true convalescent patients. Facts such as these told their own story. On behalf of himself and Mr. Bowerman he thanked them one and all for their company and support, and also, on behalf of the committee of the Home, he thanked Mr. J. Fewster and the Associated Singers for their kindness in contributing to the programme, and in doing so he thanked all the other artistes for their valuable assistance.

The secretary of the Home, Mr. H. F. Parker, the well-known general hon. secretary of the Printing and Allied Trades Charity Sports Association, in thanking the chairmen and gentlemen supporting them, said that the object which he and their committee had in view was to provide a home from home within the means even of the office boy, or the learner at bookfolding, where they could have the inestimable experience of a good example of home-life, be well looked after, and sent back to work fit and strong. For 1d. per week such benefits could be secured. It had been said that it was more of a holiday home than a convalescent home. In answer to that he could say that experience had proved that only a few of the quieter folk cared to be under the restraint of a home of this kind, and this class of persons were just the ones who could do a great deal towards making the convalescents forget some of the imaginary complaints that they were so prone to dwell upon, and which militated against speedy recovery. Mr. Parker, in conclusion, appealed to the trade to assist him in renting a house to enable him to satisfy a long-felt requirement. If persons in the trade who felt that a scheme wherein mothers with their children could be cared for when too ill to accept the benefits of the parent institution, would only communicate with him, he felt that they would no longer have to refuse to the wife of a subscriber the benefits for which her husband had paid, and that an immense amount of good would then be possible. The idea was to rent a small furnished cottage for the special purpose of receiving mothers and their young children. He had already had a very alluring offer from a lady at Deal who would take on the work at a very reasonable charge, and if the trade would only support the movement, he was sure that it would be a great success. Another feature for which Mr. Parker would like to seek the help of the trade was to send rheumatic and gout patients to suitable places where the latest scientific methods could be secured for the benefit of this large class of sufferers. Mr. Parker was in the position to carry out this scheme immediately if persons were prepared to pay a small weekly payment in addition to having a subscribers' letter. Any person suffering from such complaints should communicate with him, when something tangible could be done in the matter. The Secretary would be glad to supply them with further information, or to address chapels, or employees of any other trade, on receipt of a post card, addressed to 8, Albion-road, Wandsworth-road, S.W.

Mr. W. J. Mould, the acting hon. secretary, must have been satisfied with the results of the concert, for not only were persons unable to gain admission, but the collection was eminently satisfactory.



The concert concluded with the singing of the National Anthem.

The United States Consul at Lyons, reports that an International Exhibition will be held at Vichy, from May 5th to October 15th this year. It is intended that the exhibition should include a section for printing, book manufacture, lithography and binding. Particulars as to space, etc., may be obtained from the Direction de l'Exposition Internationale, 18, Rue Sornin, Vichy, France.

A Neat Reminder.

Many and varied are the forms which advertising takes, and one that has gained much popularity of late is a blotting slip for the desk, with an advertisement printed on one side. Its popularity is due to its dual merits of being acceptable because useful to the recipient, and of being of commercial value to the sender because it carries an effective advertisement in an inexpensive manner. Some of the most effective of these lines have just been published by Messrs. Taylor Bros.,

of the Colour Printing Works, Sovereign-street, Leeds. These Pictorial Blotting Slips are in two sizes, 3 by 6 inches and 4½ by 8 inches. One side has a smooth white surface, with a coloured picture in the left half, the right half being left blank for an advertisement. The pictures are printed in colours in the excellent style that Messrs. Taylor Bros. are noted for, and the subjects embrace beautiful female figure studies, charming rural scenery, and pretty children and pet animal studies. Particulars as to prices, etc., may be obtained on application to the above firm.

The Late Mr. William Hilton.

The Executive of the Readers' Pensions Committee have decided, in order to commemorate the great work accomplished on behalf of the trade charities by the late Mr. William Hilton (who was founder of the organisation, with which he was connected up to the time of his death), to proceed at once to the establishment of a seventh pension in connection with the Printers' Pension Corporation. The pension will be known as the "William Hilton Memorial Pension," and friends of the deceased gentleman who desire to be associated with the movement are requested to communicate with Mr. W. H. Shortell, hon. sec., St. Bride Institute, E.C., who will be pleased to acknowledge contributions to the fund.

A Wet Graphiting Process.

The A. R. Koehler Wet Graphiting Process is the subject of a handsome brochure published by the Buffalo Electrotyping Works, Buffalo, N.Y., manufacturers of the appliances.

The Koehler Wet Graphiting Machine takes 4 by 6 feet floor space; it consists of a stone tank, 31½ by 35½ inches, into which the solution of graphite is placed. The cases containing the moulds are laid on a metal rack at the top of the tank and mechanically lowered into the solution. A brass pipe with a flaring nozzle is lowered into position directly over the submerged moulds, and the power turned on. The solution of graphite is automatically pumped out of the tank, up through the upright pipe, and is spouted out through the nozzle, which by an ingenious mechanical arrangement is kept moving about in an irregular manner, thoroughly agitating the fluid and preventing unequal deposit of graphite on any parts of the mould.

There is no necessity for the operator reaching into the graphite solution to immerse or take out the cases. There are safety locking devices which make it impossible to start the machine until the cases are in their proper position. The tank is of stone; the pumping mechanism and pipes are of bronze and brass; it is as nearly indestructible as any machine can be made. Its operation is entirely free from dust and noise attending brush graphiters, and it is claimed that its capacity is equal to that of the largest of that type of machinery. —*Printing Trade News.*

Tariff Changes
AND
CUSTOMS REGULATIONS.

From the "Board of Trade Journal."

ITALY.

The following is the substance of some decisions respecting the tariff treatment of various articles on importation into Italy, which are contained in a Bulletin of the Italian Ministry of Finance recently received at the Board of Trade:—

[100 kilogs. = 220·46 lbs.; lira (100 ct.) = 9·6d.]

Articles.	Tariff No. under which dutiable.	Rate of Duty
Apparatus for the compression and the drying of matrices for stereotype plates, consisting of a double press, the pedestal of which—permanently joined to the press and closed by sheet iron so as to form a kind of chamber—serves, by means of steam produced by a suitable apparatus placed within the said chamber, to heat the lower plates of the press, so that the matrices are quickly dried; dutiable as "Apparatus for heating"	315	Per 100 kilgos. Lire et. 18 00
Blocks of commercial invoice forms, formed of sheets of white paper with printed headings, joined together in the form of books bound in boards, with cloth backs, and perforated in the direction of the length, near the back, to facilitate the withdrawal of the forms one by one: dutiable as "Manufactures of paper not specially provided for"	256	70 00
Common cardboard, not glazed, of a greyish colour, which colour results from the fibres of various kinds and of different colours (rags, waste of paper and of cardboard) incorporated in the pulp: dutiable as undyed cardboard	251 a 1	2 00
Common cardboard, undyed, not glazed, coated with tar (incatramato	251 a 1	2 00

BRITISH GUIANA.

The following goods have lately been added to the free list:—

Maps and almanacs.

Printing ink reducers and driers used exclusively for letterpress printing, imported by or directly for the conductor of any newspaper or printing establishment for the exclusive purpose of being used by him in the course of his trade.

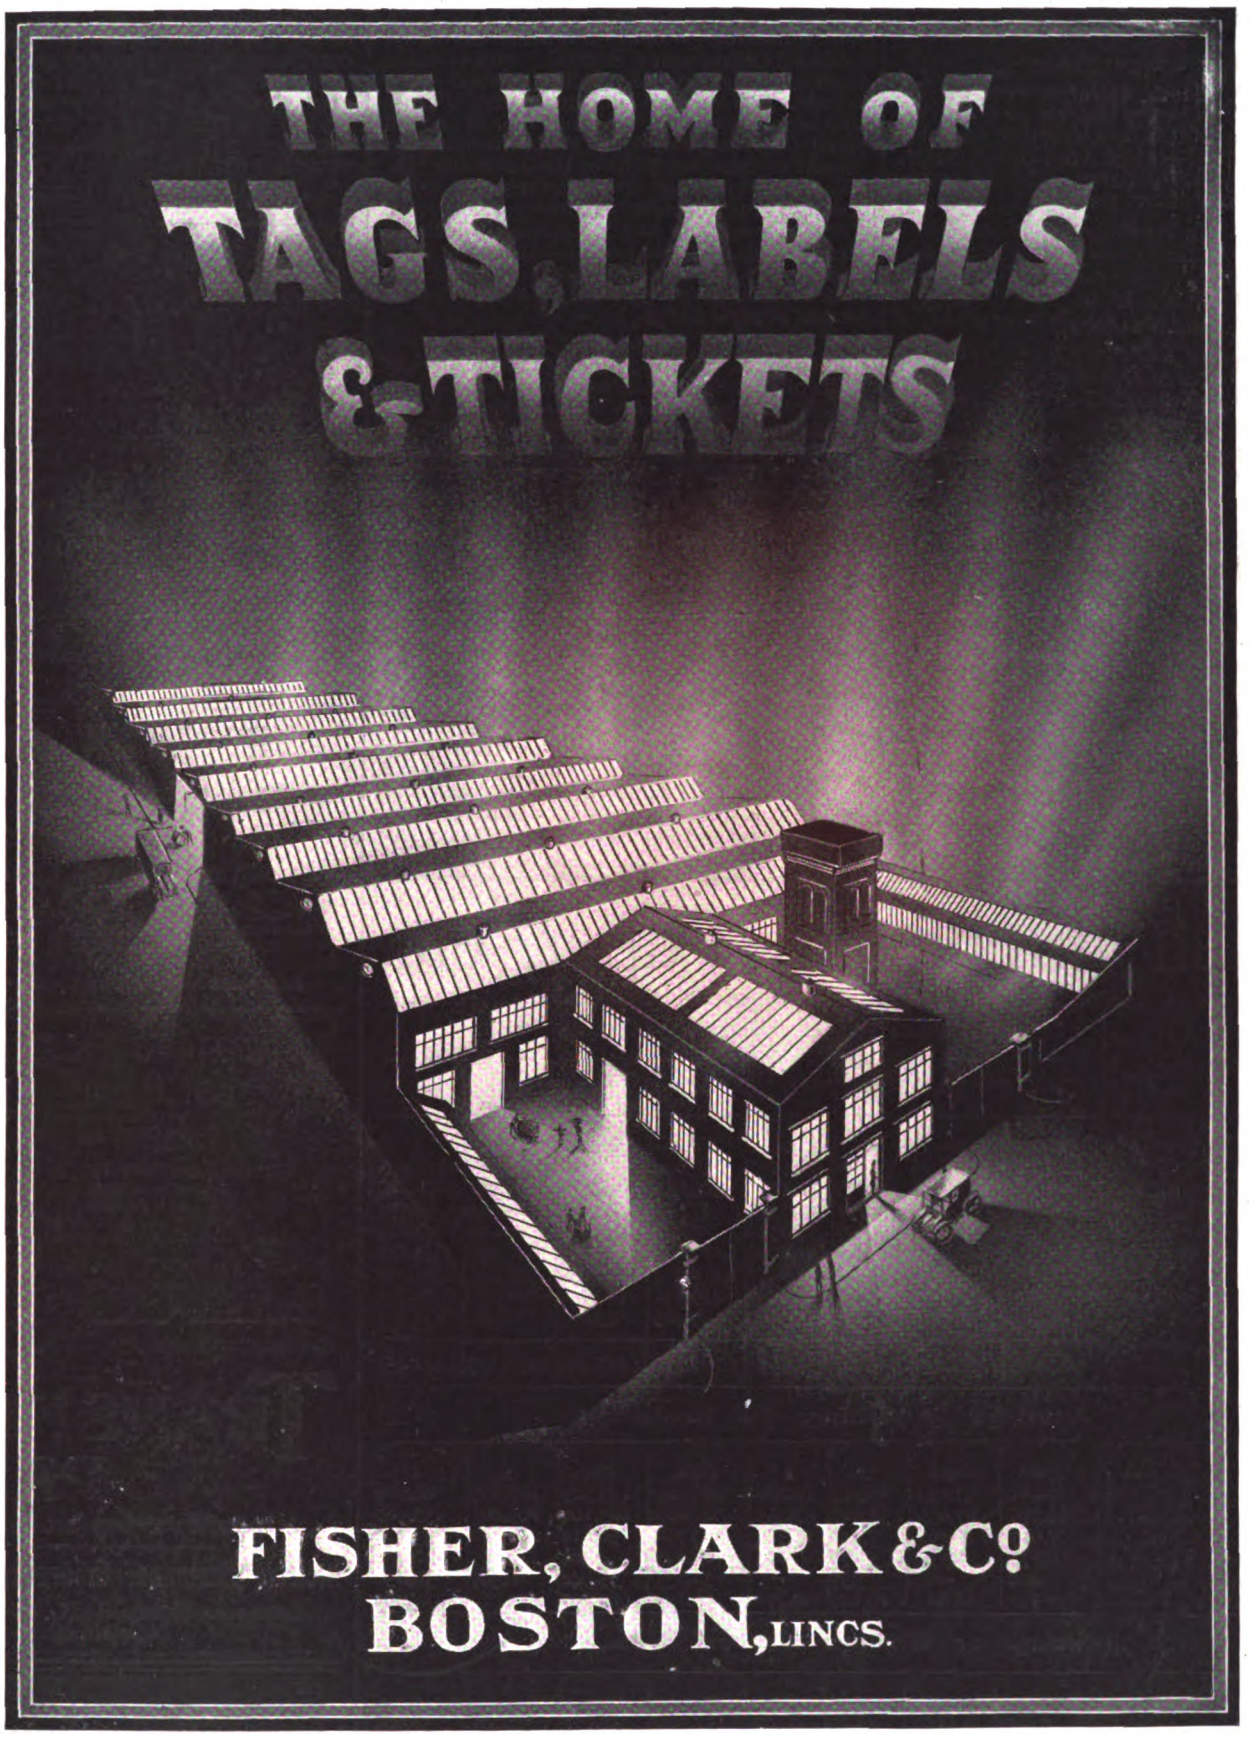
DOMINION OF NEW ZEALAND.

The *New Zealand Gazette* of March 6th last contains copy of a Minister's Order (No. 1,037) giving Customs decisions relative to the rates of duty leviable upon certain articles on importation into New Zealand.

The following are among the principal decisions given:—

Articles.	No. of Tariff Heading.	Rates of Import Duty. On Foreign Goods.	Rates of Import Duty. On Goods the produce or manufacture of any part of the British Dominions.
Advertising matter, viz.— "Glacier" show labels	142	3½d. per lb.	3d. per lb.
Bottles. "Easy-fill," for Swan fountain pens .. .. [Writing ink contained therein is liable to duty under Tariff heading No. 148]	148	30 % ad. val.	20 % ad. val.
Educational apparatus, viz.— Wall pictures in sets on map rollers or sticks, specially suited for teaching in Sunday schools...	441	Free	Free

UNITED STATES OF AMERICA.



In a recent Circular (T.D. 33,315) the Treasury Department notify that lithographic catalogue covers imported for use on catalogues of American manufacture are required to be marked so as to indicate the country of origin, in accordance with Section 7 of the present Tariff Act. The marking on the covers should not, however, give the impression that the catalogue itself is of foreign production, but should be confined to the origin of the covers, and may be stated thus, "German litho," or similar expression, as the case may be.

Pictures and Post Cards in Colombia

Colombia and other countries of western South America offer a good market for printed pictures, especially cheap coloured pictures. Better kinds do not find a favourable market, says a German consular report from Bogota. In the houses of the well-to-do classes moderately good chromo-lithographs, steel and copper engravings, etc., are to be seen. Frequently, however, coloured advertisements form a not inconsiderable part of the internal decorations, and even the natives in the remote parts of the country are not lacking in the taste for pictures. Those mostly seen are the striking North American placards advertising patent medicines, soaps, sewing machines, phonographs, etc., as well as advertisements of French toilet articles, preserves, beverages, etc. The imports of pictures of all kinds, including post cards, comprise the following goods:—(1.) Oleographs and chromo-lithographs. These are generally cheap kinds, but in Bogota some more expensive kinds called artistic chromos are sold. Religious subjects are specially saleable, then historical pictures (Napoleon, etc.), scenes from opera (Othello, Tosca, etc.), still life and domestic subjects. The largest sizes are 50 by 70 cm., ordinary sizes 40 by 50 cm., the smaller sizes are not so saleable. (2.) Steel engravings of the same subjects. Sizes vary, the largest being 41 by 53 cm. and 60 by 80 cm. At Bogota, the capital town Colombia, steel engravings are sold more often than oleographs, but at other places, such as Medellin, the second largest town in the Republic, cheap oleographs are mostly in demand. (3.) Imitation steel engravings ("bromines") of the same subjects are sold only in one size, 50 by 72 cm., and are popular on account of their cheapness. (4.) Imitation water-colour drawings, especially those of flowers, and to a less extent those of landscapes, are frequently framed in Colombia; the demand is for collections of four or six pictures in all sizes, but preferably about 20 by 30 cm. or 25 by 40 cm. (5.) Bromides, produced by photographic process, so-called bromo-silver prints. Subjects: Types of women and child-life. Sizes: 20 by 30 cm. and 30 by 74 cm. The demand is not large. Nos. 1 to 5 are charged with customs duty by weight, and should therefore be packed without cardboard and in paper as light as possible in weight. (6.) Post cards. (*a*) So-called bromo-silver post cards: only the smooth and coloured kinds are sold. The chief demand is for the following subjects: Scenes of child-life, love-scenes, types of women, historic persons and scenes. The market for these kinds of cards is comparatively large. Retail prices for these post cards are 5 to 10 centavos (100 centavos = 1 peso = 4s.) each. (*b*) Religious subjects: chromo-matt, 5 centavos each; chromo-brilliant, 5 centavos each; fine colours with gold border, 10 centavos each. The market for these is fairly good. (*c*) Landscape and flowers in the better kinds of colour processes, matt, retail price 5 centavos each. There is a good market for these, in large assortment. (7.) Cigarette pictures: smooth bromo-silver, coloured or black and white. Sizes 37 by 56 mm. and 42 by 58 mm. The market for these is comparatively large because there are a number of cigarette factories in the country which carry on lotteries by means of the pictures. Recently some factories have tried the plan of giving only a lottery ticket instead of a numbered picture. (8.) Chromo-cards, which are also used as advertisements by druggists, chocolate makers, etc. Subjects: children, wild animals, costumes of different lands. The customs duties on the above-mentioned goods are as follows: Nos. 1 to 5 come under class 8 of the tariff and are charged 34 centavos gold, plus 2 per cent. per kilo. gross. Nos. 6 to 8 come under class 6, and are charged 17 centavos gold, plus 2 per cent., per kilo. gross. The usual terms for payment are six months from date of invoice by draft system; direct remittance is exceptional. In Medellin: six months by direct remittance.—*Chamber of Commerce Journal.*

MESSRS. STANLEY PAUL and Co. are issuing a series of "Author's" Letter Cards, each of which contains a collection of portraits of popular authors, well printed from half-tone blocks, with accompanying letterpress notes on each. These cards, we understand, are supplied gratis to booksellers who handle the firm's publications.

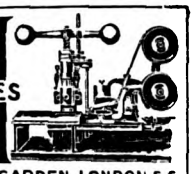
Foreign and British Paper.

Our Foreign Trade.

The Board of Trade Returns show a continued expansion in the imports and exports of paper. The total values for April, and also for the four months ended April, are as under, with increases as compared with the corresponding periods of last year :—

	APRIL.		
Imports ...	...	£634,568	+ £59,306
Exports ...	...	313,321	+ 34,627
Re-Exports	...	17,604	+ 1,530
	JANUARY–APRIL.		
Imports ...	...	£2,441,451	+ £111,296
Exports ...	...	1,270,028	+ 93,678
Re-Exports	...	79,130	+ 14,612

Imports.



In the imports for April, as compared with the corresponding month of last year, the only shrinkage in value recorded was in respect to printings or writings on reels, amounting to £4,935. Swedish supplies were on a greatly reduced scale, and receipts from the United States have dwindled to very small proportions. There were no arrivals from Newfoundland. Norway increased her shipments, and it may be noted that German reel paper is finding an increased outlet in this market. The imports of printings or writings not on reels evidence an increase of £4,283, due mainly to the activity of Germany, Norway and Sweden. Hangings and other printed or coated paper show increases of £1,124 and £1,403 respectively, the shipments to this country being mainly in the hands of Germany. Nearly 38 per cent. of the total imports consist of packings and wrappings, the increase in value last month amounting to £40,050. The competing countries rank in the following order :—Sweden, Germany, Norway, Belgium and Russia. Strawboards mark an increase of £3,174; wood pulp boards, £8,892; and unenumerated, £5,315. The imports during the four months ended April (as compared with the corresponding period of last year) show the following increases :—Printings or writings on reels, £10,785; printings or writings not on reels, £18,489; packings and wrappings, £106,481; strawboards, £33,612; mill and wood pulp boards, £13,395; unenumerated, £16,493. Decreases: Hangings, £5,164; other printed or coated papers, £2,795.

Exports.

There was a falling off of £1,889 in the exports of writings last month as compared with April of last year. This was owing to a decrease in the shipments to British Possessions, whose purchases (amounting to £25,802) show a decline of £2,819. Foreign countries bought British writings of the value of £10,797, an increase of £930. Printings, however, were in exceptionally good demand, the supplies to British Possessions amounting to £97,574 and to Foreign Countries to £57,748, increases of £13,951 and £15,651 respectively (a total of £29,602). In the exports of the following articles, the increases in value last month were :—Packings and wrappings, £4,094; paper-hangings, £898; paste, mill and cardboard, £1,083; playing cards, £776; bags, £2,140; and unenumerated, £1,924. Decreases: Printed or coated papers (other than hangings), £2,136; manufactures of paste, mill and cardboard, £1,614; and envelopes, £252. The exports for January–April (as compared with the corresponding period of last year) show the following increases in value :—Printings, £91,832; packings and wrappings, £7,140; paper-hangings, £7,544; paste, mill and cardboard, £2,615; manufactures of paste, mill and cardboard, £163; playing cards, £984; envelopes, £2,467; bags, £2,784; and unenumerated, £3,988. The only decreases were writings to the amount of £8,087, and printed or coated papers (other than hangings) to the extent of £17,753.

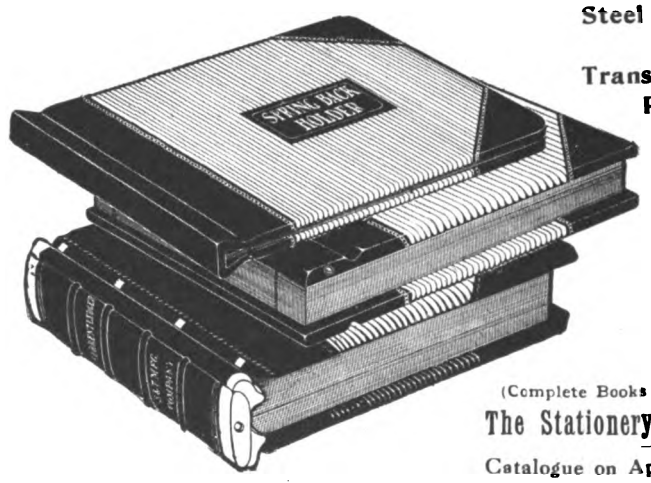
In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read, because:



It is the only strictly Business Paper.
The only Newspaper.
The only Paper which holds the attention of the man who owns the Plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 Pages weekly.

U.S.A. Tariff.

The following classification showing present duty and proposed changes in the U.S.A. Tariff will interest our readers:—

	Present duty.	Proposed duty
Valued not above 2½c. per lb.—	dols.	
News print paper from Europe	3.75 per ton	free
News print paper from freehold woods of Canada ...	free	free
News print paper from Crown lands of Canada	5.75 per ton	free
Valued above 2½c. per lb. and not above 4c. per lb.—		
Printing paper from Europe ...	10.00 per ton	12%
Printing paper from freehold woods of Canada	free	12%
Printed paper from restricted Crown land woods	10.00 per ton	12%
Mechanical pulp from Europe	free	free
Mechanical pulp from freehold woods of Canada	free	free
Mechanical pulp from restricted Crown land woods... ...	1.67 per ton	free
Unbleached wood pulp from Europe	3.33 per ton	free
Unbleached wood pulp from freehold woods of Canada ...	free	free
Unbleached wood pulp from Canadian Provinces which prohibit exportation of pulp wood	dols. 3.33 per ton	2 per ton
Bleached wood pulp from Europe	5.00 per ton	free
Bleached wood pulp from freehold woods of Canada ...	free	free
Bleached wood pulp from Canadian Provinces which prohibit exportation of pulp wood	5.00 per ton	2 per ton

The Views of Mr. A. G. Hastings.

Mr. Arthur G. Hastings, the president of the American Paper and Pulp Association, in commenting on the tariff situation, said that the Tariff placed a serious problem before the American paper manufacturers.

"The removal of the duty from paper valued at less than 2½ cents per pound was fully expected," he said, "but the proposal to allow foreign sulphite pulp to enter free of duty is beyond reason. The foreign sulphite producer can undoubtedly lay down pulp in this country at a lower cost than it can be produced here. The American mill owners who have invested in sulphite plants will be forced to buy their pulp from the importers or suffer unfair competition. The Tariff Bill also contains several elements that require deep consideration before Congress goes on record as giving its approval. In the first place, paper valued at less than 2½ cents per pound made from Crown land wood of Canada can enter free of duty, while sulphite made in a country where restrictions are in force will have to pay a duty of $2 per ton.

"The high grades of writing papers will suffer, but the general reduction of the duties of papermaking materials, such as china clay, chemicals, and wires, may tend to offset that disadvantage. As to the probable passage of the Bill intact, I feel that the House will accept the measure, but President Wilson's endeavours to coerce the Senate will be futile. It is the Senate, therefore, that most hope for securing changes will be placed. Each Senator will have some schedules for which he will want better treatment, and thus the Senator from Louisiana will fight for sugar and the Senator from New Hampshire may fight for paper. In the end it will be a case of barter. We do not fear news print paper from Scandinavian countries, but Canada, with its added leeway, will be the dangerous factor."

On Some Old Printers.

We have received a copy of the 16th Part of M. Wouter Nijhoff's interesting series of reproductions from books printed in the Netherlands in the first half of the 16th century ("L'Art Typographique dans les Pays-Bas, 1500-1540"). One of the great advantages of a work of this character is the opportunity it affords the student of the history of book-making of instituting comparisons between the typographical characteristics of different periods and printers, without any of the extensive and laborious research which a personal investigation would entail. In the Part under notice are some 30 illustrations in facsimile, in addition to numerous typographical reproductions, and it is tolerably evident, as the work draws to a conclusion, *i.e.*, as the middle of the sixteenth century is approached, that the Netherlandish printers of that period were mostly contented with a lower standard of excellence in typography than that of their predecessors. The enthusiasm of the late fifteenth and early sixteenth century had subsided, and with the more general use of Roman letter the former attractiveness of the pages from a typographical point of view was largely wanting. Crowded lines, absence of full margins, lack of ornament, etc., mainly contributed to this, and as the century advanced this indifferent workmanship became more and more accentuated. The re-use of old material, or the copying of old designs seems to have been pretty commonly practised by some of the printers in the Low Countries at the period dealt with. Thus we find amongst the illustrations given in this Part some from books produced by Van Doesborch, of Antwerp, obviously derived from French sources, whilst Vorsterman, of the same city, on the title page of his 1516 edition of the "Shepherd's Calendar" reproduces a woodcut used thirteen years before in Paris, and his trademark in 1521 is evidently based on earlier French ones. The Netherlandish printer shows up at his best when using black letter types, and some very picturesque pages of this kind are reproduced from works printed by Cornelis Henriczoon the letter cutter, at Delft, notably a fine script type which anticipates in some degree the "Lettres de Civilite" of Granjon thirty years later. Many other points of interest occur in this Part, on which space will not permit us to dwell. Particulars of this valuable contribution to the historical literature of book production may be had from the publisher, Mr. Martinus Nijhoff, bookseller, The Hague.

Exports of Printed Books.

The following were the exports of printed books from the United Kingdom during April, compared with other previous periods:—

	April		Jan.-April	
	cwts.	£	cwts.	£
1913	37,383	215,009	135,683	793,690

Father Tuck's Reign.

His Xmas. Card Preparations for 1913-14.

The reign of Father Tuck in the realm of Art, *i.e.*, in the useful service of popularising Art and encouraging the appreciation of the beautiful among the masses who would not otherwise come under its high educational influence, extends into three reigns—Queen Victoria, King Edward, and the present sovereign, King George, each of whom has conferred upon Messrs. Raphael Tuck and Sons, Ltd., the title of Art Publishers by special appointment. This interesting fact has suggested the title chosen by the firm for the daintily got-up little booklet that always heralds the new season's publications of this famous house. In golden parchment cover with gilded royal coat of arms, and secured at the back with deep gold silk cord, this ornate booklet bears as title "In Three Reigns," and therein we read that it was in the long and glorious reign of Queen Victoria that the House of Tuck was produced, and with its foundations laid and rooted firmly in the fertile soil of the Victorian Era, it has advanced onward, gaining strength in its progress, through the reign of Edward the Peacemaker, until it has reached its present unique dimensions in the reign of King George the Fifth. It has been the writer's privilege, during a series of years covering those three reigns, to annually inspect, admire, and then attempt the futile task of adequately describing the wonderful collections of Christmas and New Year cards that have been published by Tuck's each year.

As one looks back over that period one is struck by the extraordinary manner in which each collection has invariably surpassed its predecessor, although each time it seemed that the *Ultima Thule* had been reached. And so it is with the new collection now ready; the beautiful has been made more beautiful, new sources of artistic ingenuity have been tapped, and another illustration is provided of the illimitableness of human endeavour in the portrayal of beauty.

The collection of Christmas and New Year cards now before the trade consists of no less than 5,000 new designs, catering for every possible style and shade of taste, as also for every purse. A notable feature of Tuck's collection during the past eleven years is the Royal Christmas cards reproduced, by gracious permission of several royal personages, direct from the original Christmas cards Messrs. Tuck and Sons last had the honour of preparing for them. The capital idea of issuing these Royal reproductions is becoming better known to the general public now, and their popularity is consequently growing rapidly. Last year their number was increased by nearly 50 per cent., and this year the collection is one that cannot fail to greatly extend their circle of admirers. A series that the firm are doing exceedingly well with is the "Floral Scroll Parchment," there being 22 sets in that one style. The "Tapestry" is another very fine series, and wonderfully successful has been the "Art Canvas" series

An interesting innovation this year is the issuing of a special revised edition of Messrs. Tuck's illustrated annual catalogue of Christmas cards, calendars, gift books, toy books, etc., for the use of the general public, in which retail prices only will be given throughout. A quarter-of-a-million copies of these will be posted to a quarter-of-a-million homes in all parts of the United Kingdom, and in addition to these a further quantity will be reserved for the use of the trade. This will undoubtedly strengthen the hands of the firm's customers, and as the collection this year is such an unprecedentedly good one, the call for them is likely to be proportionately large. A better year could not have been chosen for introducing this excellent plan for facilitating the selection and extending the sales of these beautiful missives of goodwill.

The collection is far too huge to go in detail through the seven bulky sample volumes, and no very good purpose would be served, for a proper appreciation of them can only be obtained by a personal inspection. We will just point out some of the more striking features that arrest attention on a cursory glance through the samples. The gem of the collection is Book IV., and it leads off with the Royal Christmas Cards. These are supplied at different prices, the highest being 20s. per dozen for a handsome large folder, and the retail prices range from 2s. 6d. to 1s. 6d., 1s., and 6d., one of the cards in each set being in black and white. A specially appropriate subject has been chosen for the King's Christmas card, "The meeting of Richard Coeur de Lion with Saladin," from a stirring scene painted by Howard Davie. An historic scene has also been chosen for the Queen's card, "The first meeting of the Prince of Orange and Princess Mary," charmingly painted by John Bacon, A.R.A. The Prince of Wales' card is splendid and the subject one that appeals to British patriotism, "Nelson's ship 'Victory' in Portsmouth Harbour," decked with the flags for the famous signal, "England expects every man this day to do his duty," and the picture is symbolical of the

Digitized by Google

past and present, a torpedo and other modern types of the navy being shown beside Nelson's old battle ship. Queen Alexandra's card is in pleasing contrast to these, the title being "Benedicite Omnia Opera," a delightful reproduction of a Madonna painting by Howard Davie. The German Emperor's card returns to historic events, "The Hamburg Fleet putting to sea for the protection of the Hanseatic States," from a painting by Bernard Gribble. Then special sets of these cards are put up in inexpensive boxes, each containing six different designs, all produced from the original Royal Christmas cards.

The general collection in this book begins with a magnificent large parchment leaflet, a hand-coloured crayon study of a beautiful girl's head, accompanied with a poem in embossed gilt letters. A new feature this year is the "Coloured Carbon" series, charming carbon pictures receiving artistic relief in some tasteful and careful hand-colouring. "Silver Cloud" is the title given to a series with a picture covered by a semi-transparent leaf, on which some dainty floral designs are hand-painted and wishes are gilt embossed. "Art Canvas" is another new and effective series, real canvas variously tinted giving an admirable finish to the pictures or studies mounted on it. There is a capital selection of humorous cards under the title of "Oddities." One of these depicts grotesque cats and dogs on a surface embossed in imitation of canvas. Another shows these extraordinary animal creations looking through windows with real transparent celluloid representing the glass, and they are called the "Casement Oddities" series. That clever humorous artist, Lawson Wood, has illustrated

humming bird are each represented, with the real feathers of the birds introduced in the design with most realistic and telling effect. Canaries and other birds are also wonderfully depicted. A pretty and fanciful idea is carried out in the "Perfumed Petals" series, hand-painted flower studies having imitation silk petals inserted in the blooms and perfumed. "Hand-coloured Gravures" is another pretty example of the effectiveness of a little colour to a monotint design.

some other amusing cards. Pretty "Hand-coloured Etchings" and the novel "Wide-world" designs, are the titles of another attractive series. The prices range down to 8s. per gross, and include at the latter figure some wonderful value in carbon leaflets to sell at a penny.

In the general collection of coloured cards, Book I. contains the cards priced at 20s. a dozen down to 32s. a gross. The real bird novelty of last year was so successful that it has been reintroduced, with one or two higher priced numbers that are still more elaborate. A turkey, a peacock, and a "Broderie D'Art" was a successful series last year, and this year it finds a place in the collection with additional attractions. The feature is silk embroidered designs on very fine chiffon, let into oval cut-out openings on mounts which are also decorated with hand-painted designs. Last year there were only embroidered flowers, but this year there are also designs of birds, beautifully embroidered in rich silk colours. The "Art Canvas" series are represented here with some pleasing designs, and rather different to the former are some hunting scenes and dog studies on a rough-looking brown canvas, which is quite a novelty. Very choice is the "Water-colour" series, and many pleasing conceits are shown in the extensive "Floral Scroll" parchment series, beautiful floral designs appearing on square-shaped leaflets with an artistic scroll designed in one corner. Each has an envelope to match, made of the same material as the leaflet, and some of them have this year's new metal charm attached—a black cat. "Golden Plumage" is a pretty series of birds depicted in accurate colours on parchment. "Golden Monogram," "Hand-painted Etchings," and "Sport" are some more series whose titles denote their style. Religious cards are a strong line, some capital sixpenny leaflets appearing in the "Goodwill" series. A pretty idea is carried out in the "Silver Vista" series of parchment leaflets. There is a cut-out opening in an effective silver design, through which is caught a glimpse of a lovely scenic picture on the inset. The pretty title, "Hand-painted Posies," suggests poetic sentiments, and the cards in this series do not belie the title, the choicest of miniature flower studies being delightfully designed and hand-painted on white or tinted cards. There is

also a "Silver Monogram" parchment series, and many a child will be pleased with the "Gem Midget" series, in which the glass front of a miniature lighthouse or the window of a little cottage opens by means of a tiny hinged flap, showing a motto or wish underneath. "Purple Pastels" is quite a distinctive series, the artistic designs being done in purple

Digitized by Google

monotone. The "Tapestry" is a very chaste series, with figure or floral designs very effectively imitating fine tapestry work.

Book II. contains over 400 different sets, priced at 24s. and 16s. per gross, beginning with some of the pretty "Floral Scroll" series, and including many attractive styles, such as the "Over Land and Sea" dainty parchment leaflets that are particularly suitable for relatives and friends abroad. Devotees of My Lady Nicotine will be pleased with the "Cosy Corner" series, on which are fanciful designs of pipes, cigars, and cigarettes, with appropriate messages. There are here some more clever humorous cards, and designs specially suitable for children. Also many excellent 2d. and 3d. leaflets, some of them beautifully lithographed in colours and gold.

Book III. contains the varied assortment of cheaper cards, ranging from 12s. down to 4s. per gross; cheaper, that is, in the sense of being lower in price, but in style and quality of get up they are far removed from the idea of cheapness. Book V is devoted to the new line of Christmas and New Year Boxed Cards, all most attractively done up in 6d. and 1s. boxes of from six to twelve cards, and bearing most seductive titles, appropriately chosen for the style of the contents. The ornate celluloid cards are shown in Book VI., and the ever-popular Christmas Post Card is represented by the thousand-and-one new designs in Book VII. It should be stated that in all Tuck's leaflet cards the insets, with their very varied and happily selected quotations, verses, or mottoes, betoken the expenditure of just as much care and thought as the attractive exteriors. There is a thoroughness and good quality in all these productions that has caused the familiar trade mark, the easel and palette, to be held in the highest esteem throughout the English-speaking world, and this new collection will maintain that high reputation.

CALENDARS & BOOKS.

The endless fund of resourceful ingenuity that is annually displayed in the new season's productions published by Messrs. Raphael Tuck and Sons, Ltd., is truly wonderful. We have recently been invited to inspect the new calendars for 1914, and the picture books and novelties for the next winter season, and these samples alone when brought together mount up to proportions that are fittingly described by the phrase of old Dominie Samson—Prodigious! But a more important feature still is the originality they possess, coupled with their high artistic merit. These are valuable selling assets.

Three capital art and toy novelties have been introduced this year. One of these has the admirable purpose of awakening in children a love of drawing. It is called "Pictures and How to Make Them." An attractively got-up eighteenpenny box contains two coloured pictures and twelve outline pictures for the little ones to fill in and colour, but in addition there are 18 models of animals, trees, road, and all the several parts that constitute the rural pictures, stamped out in black cardboard, so that the child can place these on a sheet of paper, trace their outlines just where its fancy pleases, and so build up its own pictures—quite a fascinating and instructive pursuit. The other two are shilling novelties, and comprise "Toy Rockers," a series of splendidly designed and coloured models of favourite animals made to stand and rock by means of a curved base; and "Picture Building Noah's Ark," which possesses all the elements to usefully amuse little children.

The calendars are in almost infinite variety. There are acceptable little 3s. blotters decorated with figure studies in colours or black and white. The 4s. calendars include hand-coloured gravure pictures and views of London. A very effective calendar in this series is called "Sister Arts," a beautiful coloured picture being mounted on a stout card cut-out, designed and coloured in realistic imitation of marble. Some very fine head studies

and coloured reproductions from the pictures of well-known artists figure among the 4s. 6d. calendars, on handsome large mounts with neat little calendars attached at the bottom. The 5s. calendars include some fine monotone pictures, studies of horses heads, and some very chic figure studies. The "Smart Set" and "In Society" are two capital photogravure calendars in the 6s. line, and the Elmer Keene and "Flowers of Womanhood" calendars are very fine. Two magnificent calendars in the 7s. 6d. series are "The Duck Pond" and the familiar "Hope" of Watts, beautifully reproduced in colours on an unusually thick board with real gold bevelled edges, and very beautiful are the head studies on the calendar called "Masterpieces in Mezzotype." At 8s. each there are some interesting hand-coloured views, "Historic London," and "Sylvan Scenes," "Moor and Meadow," and "Mist on the Moorland" are three charming 9s. calendars. To sell at 10s. 6d. each are some more handsome calendars with pictures by Elmer Keene, and the hand-coloured figure studies, "Society Belles," have had an extra amount of care bestowed upon them, and they are truly works of art.

Among the cheaper lines there is some wonderful value in eighteenpenny blotter calendars and art calendars, a series of Great

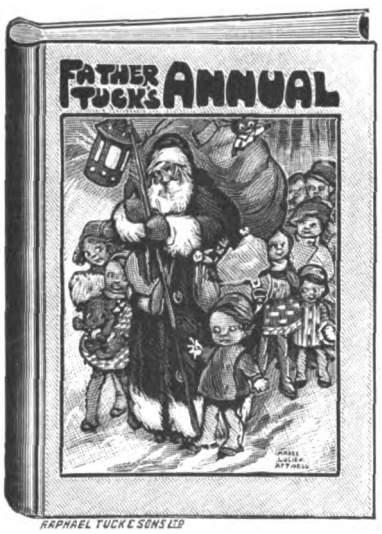
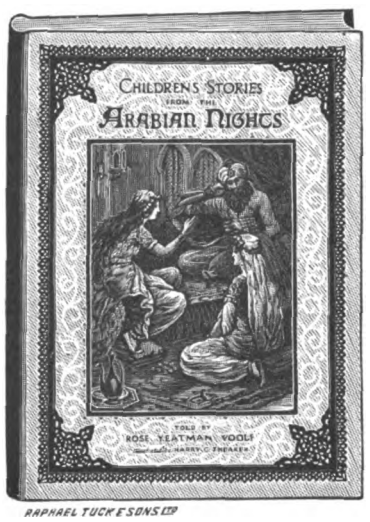
Digitized by Google



Masters with illuminated covers being particularly noticeable, and there are some amusing novelties and subjects specially suited to children and Christmastide. At 2s. also there is splendid value in effectively got-up booklet and engagement calendars, as well as blotters, the inimitable humour of Lawson Wood being drawn upon for some of these smartly finished lines. There is a clever golf calendar, whilst the modern aeroplane is fantastically introduced to amuse the children in the one entitled "Exceeding the Limit," where one is running up against the face of the moon. The retail prices of others range from 1s. panel and wall calendars and blotters down to penny drops and standing calendars, including many clever novelties that will delight children.

Block calendars are an important line, and all the old-established favourites are repeated in a style that is sure to enhance their popularity. In the 1s. line there is the Shakespeare, Tennyson, Longfellow, Dickens, Burns, Ruskin,



etc., each with an interesting picture illustrating their writings, as well as religious and sporting calendars, some of them being tablet calendars. There are also some capital sixpenny block calendars.

"Father Tuck's Annual" leads off the admirable selection of gift books and toy books which are an annual delight to innumerable young people. Mabel Lucie Attewell has designed a bright and pretty cover picture of Father Christmas surrounded by a group of happy-faced children, and inside are 32 pages in colour and 208 pages of illustrations. There

are four new 3s. 6d. gift books, and among them the "Arabian Nights" is a really fine production. The artist, Harry G. Theaker, who has provided some charming pictures, has secured a richness and brilliance of colour that is quite remarkable, and is specially appropriate to these gorgeous Eastern scenes, and the colour printer has worthily backed him up with his technical skill in reproducing them. "Hans Andersen," with illustrations by Mabel Lucie Attewell; "The Children's English History," with beautifully coloured pictures by J. H. Bacon, A.R.A., Howard Davie and others; and "Curly Heads and Long Legs," cleverly depicted by Miss Hilda Cowham, and admirably adapted to the childish fancy, are the other new books that are going to be a source of endless delight to the young next winter. Two new half-crown gift books, with 112 pages of letterpress and eight coloured plates, are "Old Fairy Tales" and "Favourite Fairy Tales," each providing ten stories which are always in demand. Two excellent new 2s. gift books are included in "Father Tuck's Children's Own Library." There is an excellent assortment of 1s. gift books (some in untearable linen at 2s.), among them the prettily entitled "A Day in the Life of a Child," and the new edition of "Children's Happy Days," which was so successful last season, promise to be very popular.

Father Tuck's Patent "Paint Box" books and "Painting Albums" have become an institution, and there are here a hundred different ones to select from. A new feature this year that will increase their popularity is the addition to every book of a paint brush, secured in a loop at the side. Quite a new line this year is the "Dressing Doll Painting Book," which provides designs of all the articles of a doll's attire for the child to paint, after which they may be cut out and put on the doll. There is also a wonderful selection of studies of flowers, fruit, animals, figures, etc., for the elder children and adults to paint, as well as some good value in sixpenny booklets of post cards for painting.

Father Tuck's "Little Lessons" Series contains many attractive new lines, comprising six new 1d., six new 2d., four new 3d., six new 4d. and untearable 6d. toy books. "Half Hours with Great Authors" is a first-rate sixpenny line—Shakespeare, Scott, Oliver Goldsmith, Charles Dickens, Emerson, and Oliver Wendell Holmes, all being laid under contribution. One of the best toy books for a little boy, and one he will rightly think bears a correct title, is the train book in the "Welcome Gift" series, the train pictures having been designed by an expert, so that the trains shown are absolutely correct in all details, whilst the colouring is wonderfully realistic.

It is a collection in every way worthy of the House of Tuck, and will maintain and strengthen their "beneficient Reign of True Art" in "all Homes throughout the Globe," to use the happy phrases appearing in the interesting Circular that is annually issued at this time of the year.

Printers' Managers and Overseers ASSOCIATION.

LIVERPOOL AND DISTRICT CENTRE.

The ninth annual general meeting of the Liverpool Centre was held at the Hanover Hotel, Liverpool, the President, Mr. Harry Firth, presiding over a large attendance of members. After the minutes of the previous meeting had been read and passed the following report was submitted:—

REPORT OF THE COUNCIL, 1912-13.

TO THE MEMBERS OF THE P.M. AND O.A. LIVERPOOL AND DISTRICT CENTRE.

GENTLEMEN,—The Council have pleasure in presenting to the members the Ninth Annual Report and Balance Sheet.

MEMBERSHIP.—The total strength of the Centre is 64. There have been four new admissions, and one member has been transferred to the Manchester Centre during the year, so that there is a gain of three on the preceding year.

Whilst this record is quite good in a general way, the Council is not altogether satisfied with the numerical progress. They wish to impress upon all that there is a strong reason for every member to exert himself to introduce new members. Each one should endeavour to make the aims of the Association known to all who are eligible for membership.

FINANCIAL.—The Balance Sheet shows a balance in favour of the Centre of £6 11s. 0½d.

The amount received from subscriptions and entrance fees was £40 4s. 0d., less payments to the Parent Association of £13 8s. 0d.: the amount of Death Levies paid to London was £22 6s. 0d.; and the expenditure on General Account was £34 18s. 2d. The Centre Levy realised £6 8s. 0d.

SOCIAL MEETINGS.—The Monthly Meetings of the Centre have been, upon the whole, well attended, and a great amount of enthusiasm shown. The Council notice with regret that several members consider they have done their duty to the Centre when they have paid their dues. This is not as it should be, because it is the duty of every member, whenever possible, to take an active part in the work of the Centre, and not to let the whole burden rest on the shoulders of members who have already given liberally of their time and experience for the common good.

(Here follows a list of the meetings held during the year.)

TRADE CUSTOM AS TO NOTICE.—An important Conference was held at Anderton's Hotel on May 24th last between representatives of the Association and the National Printing and Kindred Trades Federation. The Association was represented by Messrs. F. W. Seeley, G. Phillips and J. W. Webb (London); Mr. J. N. Poole (Liverpool); Mr. R. Bates (Manchester); Mr. H. Dixon (Yorkshire); Mr. H. B. Lane (Birmingham); Mr. W Cruickshank (Glasgow); Mr. T. Paris (Edinburgh); Mr. D. R. King, J.P. (Dublin); Mr. C. Budden (North Midlands); and Mr. E. C. Moyce, General Secretary. A full report of the proceedings has been presented to the members. At the time of writing everything points to this matter being brought to a favourable issue.

VACANCIES ON THE COUNCIL.—The retiring members are Messrs. Davy, Cooke and Conway, who are not eligible for re-election this year. It is desired to place on record a full sense of appreciation for the services these gentlemen have rendered during their time of office.

THANKS.—The Council desires to extend hearty thanks to the artistes who so kindly gave their services at the musical evenings, and to Messrs. J. E. Wilson, S. H. Hannah and A. S. Porter for arranging the concerts.

The Council also wishes to express thanks to Messrs. Geo. M. Benington, H. R. Caldwell and H. Ross Clyne, C.C., for the services they have rendered to the Centre; also to Mr. and Mrs. Winnall, of the Hanover Hotel, for their courtesy and attention.

On behalf of the Council,
HARRY FIRTH, President.
JAS. N. POOLE, Hon. Sec.

The report and balance sheet were passed unanimously, upon the motion of Messrs. Stephenson and Halton. Messrs. Harry Firth, president; George Watson, vice-president; Chas. Thomas, treasurer; and Jas. N. Poole, secretary, were unanimously re-elected. Messrs. A. Davy, H. Cooke, and Hugh Conway retired by rotation from the Council, the vacancies being filled by Messrs. J. Harding, A. W. Fox, and John Honeyman, after some keen contests.

Mr. W. Stephenson pointed out that whilst there had been an increased attendance at the meetings during the session and more enthusiasm shown, he regretted to notice that several members had not attended once. This was not as it should be, and he thought that the members should have their attention drawn to the matter. This led to a discussion, Messrs. Sheridan, Coates, Caldwell and Fox making several suggestions. The matter was finally left to the Council to deal with.

The meeting next considered the programme for the United Meeting in Liverpool, on June 21st. Great interest was shown, and after fully considering every point the final details were left to be arranged at a special general meeting.

Mr. Stewart, in a racy speech, proposed a vote of thanks to the president for his services during the past year. This was seconded by Mr. Stephenson, and carried with musical honours.

Trade Notes.

THE Anglo-German Exhibition at the Crystal Palace is to be formally opened on June 11th.

ON Monday a copy of the original Kilmarnock edition of Burns's poems (1786), was sold for £140 at Sotheby's.

MR. H. B. VINEY, who has been for many years associated with the firm, has been elected a director of Messrs. Hazell, Watson and Viney, Ltd.

THE death is announced of Mr. John Harvey, who was for 40 years a trusted and valued employee of Messrs. Waterlow Bros. and Layton, Ltd., Birchin-lane, E.C.

THE death has occurred of Mr. John Bass, managing director of Waterlow and Sons, Ltd. Mr. Bass had been connected with the firm for about 52 years. He was 75 years of age.

A GLASGOW PRINTER, named James Watt. was seriously injured the other morning in the printing works of Messrs. William Collins and Sons, St. James-road, Glasgow. He was engaged at a printing machine, and placed his left hand under it to feel if the paper was passing correctly through the folding cylinders when his hand became jammed and all the fingers were cut off.

POST CARD dealers in Scarborough, at a meeting presided over by the Mayor, appointed a committee of five censors and passed a resolution regretting that post cards were now published for sale in this country which, though not contravening the law, were, nevertheless, of an objectionable character. and calculated to be harmful to certain members of the community.

MR. JOHN PETTIGREW, an Aberdeen journalist, died on Monday in Montrose Infirmary, as the result of injuries received in a motor-cycle accident. The disaster took place at the foot of a steep incline, where the cycle failed to take the bend of the road, with the result that the machine struck the parapet of a bridge, the petrol tank burst into flames, and deceased and a companion, were terribly burned. The other man has recovered consciousness but his condition is critical.

THE Pitman Centenary is being celebrated by a series of meetings in London and Bath, and a collection of shorthand relics is being shown in the London Guildhall. The collection comprises a number of works on stenography dating from 1628. John Willis's "The Schoolmaster to the Art of Stenography," published in 1628, "to be sold at the Tyger's Head, St. Paul's Churchyard," explains, in the author's own phrase, "the rules and teaching of the practice of stenography to the understanding of the meanest capacity."

ON Monday, at Manchester, Edgar Whiteley, manager of the National Labour Press, surrendered to his bail on a charge of inciting people to destroy property by printing the *Suffragette*, the organ of the Women's Political and Social Union. Mr. Gordon Hewart, K.C., prosecuted, and Sir William Cobbett defended. The morning was occupied in hearing witnesses who were members of the special service branch of Scotland-yard, and the further hearing was adjourned till Saturday, bail being again allowed.

THE exhibit of the Lanston Monotype Corporation, Ltd., closes down at Bingley Hall, Birmingham, on May 31st. The Monotype people say "the Monotype is the versatile machine which keeps itself busy more hours than any other machine." Judging by the number of "sold" cards bedecking the stand, their representatives must have been busy, too. As a direct result of the show, and the wide publicity given to it, they have, we understand, disposed of eleven casters, eight keyboards and six display type-casting attachments, as well as one Harris Double Crown Offset Press. They hope to meet with similar success at their stand in the Palace of Electricity, at the Liverpool Exhibition, from May to October.

PICTURE POST CARDS.—Further interesting additions have been made to Messrs. Raphael Tuck and Sons' wonderful collection of picture post cards. Attractive packets of six different cards for children are "Good Friends"—pictures of children and horses in the Coloured Glosso series; "Little Folks," "Our Dogs," and "Kittendom in Catland," the last three also being in the Glosso series for children. "When other Lips and other Hearts," is a delightful photogravure series with "Glosso" surface and gilt bevelled edges. There are two packets of "Our Ironclads," one a fine photogravure series of the latest battleships, and the other illustrates a further half dozen in "Photographic Glosso." "A Dream of Fair Women" is a beautiful series of ideal ladies' heads in hand-coloured photogravure.

FOR printing the annual report, for the West Ham Corporation, the tender of Mr. W. S. Caines has been accepted.

THE Imperial Services Exhibition at Earl's Court will be opened on Saturday next by H.R.H. the Duke of Connaught, when there will be a special display of naval warfare in the Empress Hall.

THE *Board of Trade Journal* announces that a company has been incorporated in Quebec Province with a capital of 20,000 dols., to carry on the business of printers, engravers, lithographers, bookbinders, etc. The names of the company may be obtained by manufacturers in the United Kingdom desirous of supplying plant, etc., on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C.

"LLOYD'S" PENNY POULTRY BOOK has been published by *Lloyd's Weekly News*, chiefly with a view to assisting the amateur poultry keeper to derive both pleasure and profit from his hobby. The information is supplied by an expert with forty years' experience behind him, and is reliable, while the information given on the rearing of ducks, geese, guinea fowls, and turkeys is of great value. The price is only one penny, post free three-halfpence.

TENDERS WANTED.—By the Preston Corporation for printing and stationery during three years from November 1st. Particulars on application to the Town Clerk, Preston. By the Acton Urban District Council for printing the annual abstract of accounts. Form of tender from Mr. William Hodson, Council Offices, Acton, W. By the Dewsbury Corporation for printing the lists of Parliamentary electors and burgesses for the overseers and the town clerk for the year ending 1913. Particulars from the Overseers' Office, Town Hall, Dewsbury.

NORWICH is about to honour the memory of one of her notable men, George Borrow, and it is announced that the Lord Mayor has purchased the Borrow House in Willow-lane, and has presented it as a gift to the city to be used as a Borrow museum, and a centre of attraction for Borrovians. The Executive Committee, who have the arrangements in hand, desire funds to furnish the building, restore it to its original state where necessary, and to meet other expenses; and it is hoped that the Lord Mayor's generosity will stimulate a large band of cheerful givers. An interesting offer has been made by Mr. A. J. Munnings, R.I., to lend his Borrovian picture, "The Wind on the Heath," to the museum for inspection by the Borrow disciples during the commemoration proceedings, which are to be held in Norwich on July 5th next. Mr. Frank J. Farrell, M.Sc., Guilderoy, Yarmouth, will be glad to hear from anyone who is desirous of subscribing, or otherwise helping the celebration committee of which he is hon. secretary.

DESPITE the warm weather Holborn Hall was well filled on Saturday evening last by a most representative gathering, the occasion being a benefit concert organised on behalf of the widow and seven children of the late Mr. A. C. Anear, compositor (Card 181). Mr. C. W. Bowerman, M.P., presided, and was supported by Mr. A. E. Holmes, secretary, National Printing Trades Federation, Mr. T. E. Naylor, secretary, London Society of Compositors, Mr. F. Davies, organiser, L.S.C., Mr. Arthur O'Connor, secretary, Printers' Medical Aid Association, Mr. F. Francis, Mr. Geo. Mayes, and other gentlemen well known in the printing industry. Mr. W. S. Downing and Mr. C. Downing provided an excellent programme, which included Mr. A. M. Skinner's orchestra, a capital band of skilled musicians, who were well received in their various numbers: Miss Grace Holman, a pleasing and promising vocalist who was heard to advantage in "Somewhere a Voice is Calling" and "Tired Hands"; Miss Edith Shakell, who gave a capital rendition of two numbers, and afterwards appeared with that excellent tenor, Mr. Stephen Moorcroft, in a duet from "Il Trovotore"; Miss M. Goodison, a finished and refined artist, in Tosti's "Good Bye" and "Dear Heart"; the Associated Singers, a well organised and trained band of tuneful vocalists; and Mr. E. Granville Mayes, in well executed violin solos. The lighter side of the entertainment was in the hands of Miss Lilian Bentley, in Rag-time ditties; Mr. W. H. King, Scotch humourist; Mr. Will Jackson, a funny artist; Mr. J. Welch, in Yiddisher eccentricities; Mr. Reginald May; and the Melvilles, in their comedy duets. Mr. Chas. H. Hardy was a capable accompanist, and Mr. A. P. Payne and a band of willing stewards attended to the wants of the audience. Apparently the committee who so well organised this excellent entertainment have every reason to be proud of their efforts.

PERSIA.—The British Vice-Consul at Yezd reports that foolscap paper used is practically all Russian; the notepaper, Italian, German and Austro-Hungarian, with a little Russian, as a rule of cheap flimsy kinds. Some of the commoner sorts of envelopes are being made up locally from imported paper. A few of the cheapest kinds of fountain or stylographic pens are procurable, and seem to find a small sale.

THE June issue of the *Royal Magazine* appears in a fine cover and the contents are excellent. Fiction is well represented and there is plenty of other matter of an interesting character.

THE excellent issue of the *Treasury* for May contains a biographical sketch of the late Rev. Arthur Henry Stanton, better known, perhaps, as "Father" Stanton, of St. Alban's Church, Holborn. The article is profusely illustrated with portraits of the deceased clergyman and pictures taken along the route of the funeral procession. The magazine also contains an article on the Bookbinders' Strike in 1891–2, and a number of interesting items that go to make up a capital number. A finely coloured miniature portrait of "Father" Stanton is given as a Supplement.

W. J. HARTMAN, president of the Ben Franklin Club of America, has issued an appeal to its members to give aid to the Republican Publishing Co., of Hamilton, O., which for several years has issued "The Graphic Arts Year Book." This year's issue was in process of publication when the flood swept down on Hamilton and destroyed the work, entailing a loss of thousands of dollars. Mr. Hartman suggests that every master printer mail to W. L. Tobey, the manager, at once, a cheque for $5, the cost of the book, and thus help in supplying ready funds to bring out the volume.

THE report of the General Federation of Trade Unions for the quarter ended March last, is just issued, and states that during that quarter the number of disputes showed a gratifying diminution, and many hoped that the strain under which the federation had struggled for three-and-a-half years had at last been lightened. "The returns for the current quarter hardly justify the hope, for, while there are only eleven more disputes, the members involved have risen from 5,486 to 12,128. Contributions have totalled £20,243, as against £20,555. Federation and benefits have cost £25,905, as against £7,818. Approximately £10,000 of the sum paid this quarter was balance due on the transport workers' strike of July and August last. Apart from this payment of arrears of benefit, there would have been an excess of income over expenditure instead of an adverse balance of £3,488. The report adds that some of the strikes have resulted in victories for the workpeople, but the actual wage improvements have been very slight.

THREE new novels appear in Messrs. Stanley Paul's list for this month. "Brineta at Brighton," by Gabrielle Wodnil, is a successor (but not a sequel) to her first novel, "Maggie of Margate." The scene is laid in a third-rate Brighton boarding-house, where a confusion of identity places the heroine in a position of difficulty and embarrassment. Miss Kate Horn's new story, "Columbine at the Fair," is dedicated "To that critic who said that Kate Horn could never write a serious novel," and seeks to confute the critic's opinion by a study of a girl, the tenderness of whose nature lies unawakened till it is roused by the touch of a child. Mr. Will Hugo is a novelist whose work is expected to awaken considerable interest. His story, "Bound to Be," deals with the adventures of a young girl who is thrown into the position of maid-of-all-work in a household of very divided interest, and succeeds in bringing relief to one member of it at the expense of the other. The next sixpenny novels to be published by Stanley Paul and Co., in their "Clear Type" series, are "Corinna," by Rita, whose new story, "A Grey Life," is now in its fourth edition; "The Long Hand," by Sir William Magnay, Bart., author of the recently published novel "The Fruit of Indiscretion"; "Cornelius," by Mrs. Henry de la Pasture, who, of course, is now Lady Clifford, is an excellent novel in the same series.

THE June *Windsor Magazine*, which is the first number of a new volume, is an attractive issue, containing the large opening instalment of a new serial story, "The Pathway," by Gertrude Page, whose novels of modern Rhodesian life have had an almost phenomenal success in the last few years. Another new serial feature, with a continuous interest, but with each instalment forming a complete episode, deals with "The Fortunes of Virginia Bright," a charming young American girl whose adventures in England are recorded by Albert Kinross. Halliwell Sutcliffe's charming romance, "The Open Road," is carried a stage further with another complete story. A further series of Nature articles by Charles

Digitized by Google

G. D. Roberts opens with a new study of the Wild, and among articles on general themes is a finely illustrated souvenir on the great Imperial Services Exhibition at Earl's Court, which is to be one of the principal attractions of the Metropolis for the coming season. The fine-art feature consists of a survey of the art of the late G. H. Boughton, R.A., which includes some eighteen reproductions from his most attractive pictures. A finely-printed coloured plate accompanies this article.

ON Saturday evening last the London Central Branch of the National Union of Journalists, in common with other branches throughout the country, sat for three hours considering the question whether there should be a working agreement between the London Society of Compositors and other typographical bodies and the executive of the Union. The subject was fully debated by some very able speakers, and, needless to say, past actions of the typographers were criticised, and commended in some cases and condemned in others. Summing up the whole position, it was feared that the Union was too young to enter upon an affiliation movement at present, and one speaker pointed out that the Union would be better engaged going on with its present good work and studying the interests of journalists in every respect before thinking of affiliating with any typographical body. The chairman said the question would have to be considered some time or other in the future, and he agreed that the present was inopportune. Eventually the meeting decided against affiliation.

Newspaper Press Fund Dinner.

On Saturday night the jubilee dinner of the Newspaper Press Fund was held at the Whitehall Rooms, with Prince Arthur of Connaught in the chair, supported by Mr. Harry Lawson, M.P., Sir Douglas Straight, Sir Owen Philipps, Mr. John Walter, Mr. Robert Donald (president of the Institute of Journalists), Sir Ernest Shackleton, Sir Jesse Boot, Sir Adolph Tuck, Sir Joseph Lawrence, and other gentlemen.

In proposing the toast of the evening, Prince Arthur of Connaught said that through the discussion of every subject of national importance in the Press, public opinion, as gathered and represented on all its sides by journals of the day, became a force in practical statesmanship. Journalistic responsibility and intelligence had steadily grown, and for the accuracy of information and regard for the public welfare, the British Press was without doubt the best in the world. One of the greatest difficulties in the way of European concord was the attitude of mutual suspicion, and for which the Press was largely responsible. Would it not be possible, he asked, for the Press of England to exert its high-minded journalistic influence to allay this suspicion, which would be of untold advantage to the cause of peace and avoid many scares and panics. Referring to the Fund, his Royal Highness said it was the only institution of its kind which existed solely to relieve, in every form of distress, literary workers on the newspaper Press, their widows, orphans, and other dependent relatives. As the Press was the medium for advocating the claims of institutions founded for the benefit of unfortunate members of other classes of society, he was sure they would agree with him when he said that its own institution was one which should receive general and generous support. A journalist's life was one of constant stress and strain; his hours were abnormally long, and his leisure moments few and far between. The conditions, too, under which he worked, whether on the inside or outside staff of a paper, were particularly trying, and even the strongest were not immune from breakdowns.

Sir Edward Russell, treasurer of the fund, in responding to the toast in the absence, through indisposition, of the president, Lord Burnham, spoke of the remarkable success which had attended the efforts of the Fund.

Mr. T. McDonald Rendle, the Chilian Minister, and others spoke during the evening, and at the close it was announced that the dinner collection amounted to £3,000, a record sum in connection with the Fund.

United States Tariff.

The Revised Pulp and Paper Schedule.

There were no very material changes made in the Bill as it came from the Democratic caucus, excepting the particular amendment relating to the retaliatory duty on print paper.

The section in which this change was made now reads as follows:—

334. Printing paper (other than paper commercially known as hand-made or machine hand-made paper, japan paper, and imitation japan paper by whatever name known), unsized, sized, or glued, suitable for the printing of books and newspapers, but not for covers or bindings, not specially provided for in this Section, valued above 2½ cents per pound, 12 per centum *ad valorem*: *provided*, however, That if any country, dependency, province, or other subdivision of government shall impose any export duty, export license fee, or other charge of any kind whatsoever (whether in the form of additional charge or license fee or otherwise) upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, there shall not be imposed upon printing paper, valued at above 2½ cents a pound, when imported either directly or indirectly from such country, dependency, province or other subdivision of government, an additional duty equal to the amount of such export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon printing paper, wood pulp or wood for use in the manufacture of wood pulp necessary to manufacture such wood pulp.

From this revised Section it will be seen that there is eliminated every possibility of any retaliatory duty being levied on paper valued at 2½ cents a pound or less, in the event of export restrictions or prohibitions being made by other countries against the exportation of pulp or paper to this country.

From the beginning of the work of the present tariff revision, and for that matter for some time prior thereto, it has been perfectly apparent that the majority of those who have voice in the matter were disposed to remove every obstacle to the free importation of the cheaper grades of print paper in the American market. The demand of the press that newsprint should be furnished them at a minimum price, without regard to the source from which it came, or to the welfare of the domestic manufacturer, has been complied with so far as it is possible for Congress to do.

While as a matter of fact the principal amendment referred to has no immediate bearing on paper importations, inasmuch as there is no export duty levied at this time on any paper coming into the United States, nevertheless the amendment definitely fixes it so that no duty of any kind can be imposed upon paper of a valuation not exceeding 2½ cents, no matter what conditions may be exacted hereafter by the countries producing it. It is noteworthy also that this demand for free newsprint paper, under any and all circumstances, met with no substantial resistance from any political party; demonstrating again the supreme power of the press.

FREAK EFFICIENCY.—One of the organisations to promote business efficiency is attacking the waste of time and work caused by using "Dear Sir" and "Yours truly" and such phrases at the beginning and at the end of letters; and it reports that one business house estimates that it spends $6,000 a year in requiring its typewriters to use these conventional phrases. Should we not all save by omitting them? Of course men would save time also by leaving off neckties and buttons on the sleeves of their coats and many other conventional things. Figure up the necktie bill. There are about fifty million males in the United States alone. Let us assume that half of them wear neckties at least sometimes. If everyone of these twenty-five millions have only one necktie a year and that cost only 25 cents—there's a waste of six and a quarter million dollars a year. Waste? Of course it's waste. Efficiency? Yes, by all means. Let us temper it with common sense and courtesy.—*The World's Work.*

HIGH-SPEED

Rotary Photogravure.

ADVERTISER (German, 36), who has a thorough knowledge of Processes, Machinery, Apparatus, Materials, etc., in connection with the above, desires position with a leading British Machine Manufactory, or company exploiting this industry, in which he can utilise to advantage an experience of some years with a well-known South German firm; acquainted with English, German, French and Spanish; good correspondent; has been connected with Banking and Consular business in Europe and America; travelled extensively; is energetic and practical, with good commercial ability; first-class testimonials; at liberty July 1st.—Address, in first instance, No. 14,054, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 14054

The "Rush Order."

EVERY printer knows what it is to be troubled with rush orders, which from the customers' view point must be executed at once, and the worry and disorganisation that are caused in their passage through the office. American printers have the same trouble, and the "rush order" in these days of speeding up is becoming a very serious problem, as an attempt to please customers by rushing their occasional order through the plant soon begets a habit on their part of asking for "rush" on every job, and the habit spreads until it is hard to distinguish the real "rush" from the ordinary rush. The *Harris' Monthly* gives an example of how one house accomplished this, and it is well worth the consideration of every printer who has "rush" orders, and that is practically everyone:—"One printing house used a system of special order envelope for rush orders, a band of red running around the outside of the envelope which made it stick out like a scarlet fever sign. This worked very nicely for a while, but the rush orders became the greater part of the work. It was discovered that salesmen, relying upon the special attention given to rush-order envelopes, took orders for rush wherever the slightest pressure was put on them by the customer; clerks who had forgotten to put orders through promptly, or forgotten to O.K. proofs customers had returned, made out rush-order envelopes to cover their own errors. When this was discovered the big boss rushed out an order of his own, the gist of which was that every rush order was to be marked with the reason for the rush, and the name of the man authorising the red envelope. This did the trick, and the plant once more operates on a normal basis, and all rush orders are genuine."

Persian Newspapers.

THE London correspondent of the *Manchester Guardian* always contrives to contribute some specially interesting item in his daily column of notes, and the other day had some remarks on newspapers in Persia in which he said that "of the three or four hundred papers known to have been in existence during the constitutional period hardly any are left, except a tame official journal in Teheran. Professor Browne—who told the Persia Society that he was about to publish at Cambridge a translation of a valuable Persian history of newspapers—brought out in this illuminating way the extraordinary outburst of journalistic activity which followed the granting of the Constitution. In 1907 there were in Teheran alone nearly 150 newspapers marked by 'originality, sincerity and courage, and literary merit of a high order.' This development was surely unique, for the first Persian newspaper, a lithographed sheet of Court news, only appeared in the first half of last century. It circulation was obtained in the delightful old style of the Shah's, by sending it to officials and docking the subscriptions from their salaries. Professor Browne spoke bitterly of the political changes that have snuffed out the vigorous young Persian Press. The young newspapers rejoiced in such names as *Culture*, *Law*, *The Pleiades*, *Life*, and a surviving organ in Tabriz, ironically named *Thought*, is, he told us, a shameless apologist for the Russians. At an earlier date the Russians themselves circulated a paper in Persia intended, according to Professor Browne, as 'a narcotic for their intended victims.' The Professor had before him a pile of these curious little papers, including some humorous ones full of good caricatures and witty verse. One comic paper was pleasingly entitled *The Reptiles of the Earth*, and contained the lives of prominent reactionaries."

* * *

Solving the Strike Question.

SOME time ago we made short references to a visit Sir George Askwith paid to Canada for the purpose of instituting an inquiry into the *modus operandi* of the Canadian Act for dealing with strikers and strikes. The object of the visit was to get a basis on which an Act could be built in this country to cope with labour unrest, and to formulate a Bill in the first instance that would prove acceptable to the employer as well as the employee. In view of the recent trouble in the paper industry the negotiations that are now being conducted are interesting, because we have the men's leaders agitating for legislation on a certain line and the Government trying to solve a problem that will give them some power to intervene in the case of a dispute between the employer and his workers. As a result of Sir George Askwith's Canadian visit, the Industrial Council in London is not unanimous in adopting the suggestions worked out on experience obtained under the Act in the Dominion. There is disfavour against the suggestion that penalties should be imposed for breaches of agreements, but surely employers and workers who enter into agreements must honour their obligations, else the agreements are not worth the paper they are written on. The provisions of the Canadian Act recognise the right of the Government to interfere in industrial disputes before extreme measures involving a cessation of work are resorted to, but at the same time the right to organise a strike is not interfered with. However, before that right is exercised a definite period must have elapsed, during which a Government inquiry into the circumstances of the dispute is ordered, and a report presented thereon, and should a breach of this *modus operandi* be committed by either employer or employed the offending party is penalised. It

Digitized by Google

is against the penalties that the representatives of the Trade Unions on the Industrial Council are opposed, and it is difficult to conceive now what will be the outcome of the Council's deliberations and Sir George's report. The man who will devise a plan to ameliorate industrial disputes will undoubtedly be hailed as a benefactor not only in the printing trade, but in trade and commerce in general, as such disputes are not conducive to furthering the welfare of an employee, let alone an employer, who in the end suffers by the stoppage of work and competition on all sides.

"TO THE CONTINENT" is a new booklet, with facsimile water-colour illustrations, that describes the Great Eastern Railway Co.'s Harwich route to the Continent. It is charmingly got up, and gives much information of value to travellers or holiday-makers. Copies can be obtained free by sending a post card to the Continental Manager, G.E.R., Liverpool-street Station, London, E.C.

"Velvet" Paper.

What is called velvet paper is made, by the Japanese, from *Fatsia Papyrifera*—obtainable in the Formosan Island. Practically speaking, it is the pith of the plant that is used in papermaking and from all accounts velvet paper will form an important item in the future in Japan's export trade, patents and inventions having been introduced to develop the industry. At present a large portion of the paper goes to the hand of artificial flower manufacturers in Japan, and the rest to fancy goods makers and the manufacturers of picture post cards, calendars, fans, etc. The velvet paper is made by shaving the pith of the paper fatsia, and has a velvety tissue, and is of pure snow white colour. Though brittle in its dry state, it gets very strong when it is moistened, and becomes very handy for minute working. For the use of picture post cards the paper is said to have attractive features. The paper is subjected to a press, and on it pictures of various designs are hand-painted. Then the portions moistened by the touch of the brush suddenly rise up in beautiful relief, and give an appearance somewhat resembling the finest embossed velvet work, but surpassing the latter in the freedom it admits in tone and design. The paper is now being introduced to the Western market only for the picture post cards, and it is said to be novel and attractive. The paper is also used for calendars, menus, fans, etc., which are for advertising or other purposes as the hotels, restaurants, cafés, and mercantile firms in Japan are using them very extensively. The hand-painted designs are obtainable only in Japan, whilst the artist's wages is exceptionally low in the country.

A VANCOUVER firm, dealing in advertising specialities of all kinds, desires to hear from United Kingdom manufacturers of labels, diaries, memorandum books, signs of all kinds, cheap specialities for distribution at exhibitions, celluloid and aluminium specialities, enamelled badges and buttons, etc. Further information may be obtained from the High Commissioner for Canada, 17, Victoria-street, London, S.W.

Wednesday, May 28th, 1913.

A CHANGE came over the short money market last Thursday, supplies becoming very plentiful and rates falling appreciably. The Bank return showed a much improved position, and after its publication the tendency also became decidedly easier in the discount market. A small amount falling due at the Bank was paid off on Friday, and the ease continued until yesterday, when conditions became firmer on the calling in of funds by one or two of the joint stock banks, and there was also more demand for money. Discount rates rose sharply, and there was a better supply of bills. Bullion movements have resulted in a net influx to date of £283,000 Stock markets have not been very steady this week, and the better tone that made itself felt on Monday received a sharp setback yesterday, when the disturbed situation in the Near East produced a fresh wave of anxiety. Consols lost a trifle, and quotations are now 74⅞—75 for both money and the account.

The miscellaneous industrial market continues to be depressed, and business is very limited. There have been only two movements in the section relating to paper and print, C. Arthur Pearson Pref. moving up ⅛ to 3⅜—3⅞, and Waterlow Bros. and Layton Pref. falling ¼ to 6¾—7¾. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 3d.; in Associated Newspapers Pref. at 20s. 6d. and 20s. 3d.xd.; in Ilford Ord. at 14s. 3d.; in *Illustrated London News* and *Sketch* Pref. at 13s. 9d.; in International Linotype at 79 and 80xd.; in Kelly's Directories Pref. at 10⅞; in Linotype and Machinery A Deb. at 59; in Edward Lloyd Pref. at 21s. 10½d.; in George Newnes Pref. at 16s. 3d. and 16s.; in Spicer Bros. Pref. at 9⅝ xd.; in Raphael Tuck and Sons Ord. at 17s., and in the Pref. at 97s. 6d.; in Waterlow and Sons Def. Ord. at 25½, and in the Pref. Ord. at 12½ and 12⅛; in Waterlow Bros. and Layton Ord. at 6⅜, 6, and 6; in Weldons Pref. at 20s. 3d. and 20s. 6d., and in the Ord. at 31s. 10½d.; and in Wyman and Sons Pref. at 14s.

DIVIDENDS AND REPORTS.

A. B. Fleming and Co.—The report for the year ended April states that the profit, including the balance brought forward, is £22,868. The directors recommend appropriations including the following:—Depreciation at Caroline Park and branches, £1,500; to reserve fund (making same £42,000), £2,000; depreciation of investments, £1,000; in connection with redemption of preference shares a bonus of 5s. per share on 4,000 shares; and dividend of 12½ per cent. on the ordinary shares (of which 5 per cent. was paid as interim dividend), free of income-tax, £10,000—carrying forward, subject to fees, £5,955. The company's manufactures have been well marketed throughout the year, with sales and profits fully maintained. Foreign business continues an important item. The dividend has been the same for eleven years.

Printing Trades and General Insurance Co., Ltd.—The report for the year ending March 31st, 1913, shows that the net premiums amount to £4,922 13s. 1d. against £3,128 14s. for the preceding year, and the net losses (including metropolitan and other fire brigade charges) to £2,111 16s. 3d., being 42·89 per cent. of the premium income, against £2,060 5s. 7d., being 63·84 per cent. of the net premium income in the preceding year, and the commission and expenses of management to £1,659 14s. being 33·72 per cent. of the premium income against a ratio of 34·04 last year. During the year the directors have maintained the reserve fund for unexpired risks at 20 per cent. of the premium income, increasing the fund by £358 15s. 10d., making it now £984 10s. 10d. The balance, as shown, amounts to £1,098 6s. 2d., which the directors propose should be dealt with as follows:—To add to the reserve fund for unexpired risks increasing it to £1,230 13s. 4d., viz.:—25 per cent. of the premium income, in place of the 20 per cent. heretofore reserved, £246 2s. 6d.; to provide against depreciation of investments, £350; to write off the preliminary expenses, £100; to declare a dividend at the rate of 2½ per cent., free of income-tax, £174 5s.; to carry forward, subject to the deduction of such sum voted to the directors for expenses, £227 18s. 8d.

Hazell, Watson, and Viney, Printers.—The net profit for the year, before paying interest on debentures and preference shares, is £31,591, which with the amount brought forward makes £37,451. The directors propose to pay a dividend of 7 per cent. on the ordinary shares, making 10 per cent. for the year; to add £8,000 to the reserve fund, which will then amount to £38,000; and to carry forward £9,379. The dividend has been the same for nine years, but last year there was also a 10 per cent. distribution in bonus shares paid for out of the reserve.

Millar and Lang, Ltd.—After writing off £989 for depreciation, the accounts of Millar and Lang, Ltd., show a loss for the past year of £2,996, and there remains at debit of profit and loss account a balance of £2,207. The directors recommended that £37,500 be written off the amount of the ordinary shares and applied, along with the reserve fund, in extinguishing the balance at the debit of profit and loss account and in reduction of the value of the goodwill, patents, etc.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

"World," Ltd.—Issue on May 6th, 1913, of £150 debentures, part of a series of which particulars have already been filed.

Griggiths and Millington, Ltd.—A memorandum of satisfaction in full on April 18th, 1913, of mortgages dated September 14th, 1895, to March 2nd, 1906, securing £6,450, has been filed.

Clerical Press, Ltd.—Particulars of £750 debentures, created May 6th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the whole amount being now issued. COMPANY NOTICES.

THREADNEEDLE PUBLISHING CO., Ltd.

Notice is given, that a meeting of the company will be held at 2, Nicholas-passage, E.C., on June 27th, for the purpose of having an account laid before them, showing the manner in which the winding up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

OFFICE SYSTEMS CO., Ltd.

Notice is given, that a meeting of the company will be held at 107, Wool Exchange, E.C., on June 18th next, to receive the liquidator's report, showing how the winding-up of the company has been conducted and its property disposed of, and to hear any explanation that may be given by the liquidator.

HERTFORDSHIRE POST and PRINTING CO., Ltd.

Notice is given, that a meeting of the company will be held at London, on June 17th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

COMMERCIAL INTELLIGENCE.

Re ARCHIBALD L. BAYLEY, Wholesale Newsagent.

This debtor appeared at the Bristol Bankruptcy Court last week, and in answer to the official receiver said his liabilities amounted to £972, assets were £343 11s. 3d., and his deficiency was £628 9s. 6d. He started in Walsall some years ago as a bookseller and stationer in the name of Page and Bayley. He had £100, and put £40 or £50 in the business, and kept the balance. Mr. Page, his future partner, lent £14. The capital in the business was set down at £28 each. His partner drew £2 weekly and he drew £2 10s., and divided the profits equally. In January the business was sold to Messrs. W. H. Smith for £1,250. The reason for disposing of the business, which had prospered, was because of the illness of the wife of Mr. Page and because he (debtor) thought he would do better in

Digitized by Google

Bristol. With the proceeds of the sale of the Walsall concern he purchased a newsagent's business at 9, Welsh Back, Bristol, for which £844 16s. 11d. was paid. After payment of the purchase money and some debts they each had a surplus of £111. He (debtor) also had about £50 more money. A little time after purchasing the business on the Welsh Back he removed it to Bath-street, to more suitable premises. On June 21st, 1911, the partnership was dissolved, and, on a calculation being made, there was arrived at a figure on which debtor agreed to pay £500 as his share of the value of the business. He handed him £259, leaving a balance of £241. Mr. Page offered to give him £520 for his share of the business. Debtor continued the business until March 13th last, when the business was discontinued because creditors refused to supply papers. He sold his fixtures to a Mr. Dawson, but got nothing for the goodwill, because it vanished when the supplies of papers were stopped. He estimated his stock on March 13th at from £200 to £300. In October last year his overdraft at the bank was £84 2s. 4d. He obtained the overdraft in the hope and belief that he would be able to sell the business. He was asking £2,800 for it. One offer of £1,080 was made. His having to take over his partner's share of the business was part of the reason of his failure, because he had insufficient money to pay him without draining the business. The examination was adjourned till June 13th next.

THE DAILY EXPRESS, Ltd.,
Liquidation Proceedings.

Under a winding-up order made against this company, which carried on business at 23, St. Bride-street, E.C., accounts have been lodged showing unsecured liabilities £31,718 7s. 2d., and a loan of £500 on debenture bonds. The assets side of the statement shows "investments and loans £20,402 2s. 8d.; expenditure on provincial newspapers, etc., £135,174 6s. 1d.; and book debts £1,050 8s. 2d." As explained in the report of Mr. W. J. Warley, official receiver, no realisable value is placed upon these items, and the estimated deficiency of assets to meet liabilities of the company is returned at £32,218 7s. 2d., whilst the deficiency as regards contributories is estimated at £32,357 17s. 2d., which is explained as follows:—

goodwill account was thus built up. In 1901 and 1902 the debenture capital was increased for the purpose of working several provincial newspapers, and this extension of the company's business resulted ultimately in a loss of about £150,000. From 1903 the trading profit was usually sufficient to provide for the debenture interest of £12,500 a year and the interest on the bank overdraft. In 1903 the company and its subsidiary in Newcastle, the *North Mail*, Ltd., arranged for the purchase by the latter of certain Newcastle *Leader* newspapers from Lord Joicey (then Sir James Joicey, Bart.), to whom annuity bonds for £15,000 were jointly issued by both companies as part of the purchase consideration. The *North Mail*, Limited's, assets were sold in 1906, and £25,000 was received by the company in respect of debentures held by it, but the annuity bonds were not paid off, and the company alone thereafter became liable for them. The first directors were Messrs. Pearson and Johnstone, who were appointed by the articles of association, the former becoming managing director and the latter, in 1903, manager. Mr. George Lawson Johnston was appointed a director on July 31st, 1900, and the late Mr. H. C. Smith, M.P., Messrs. B. Fletcher Robinson. Archibald W. Rider, George Wetton and J. Malcolm Fraser were appointed at various dates between 1901 and 1906. Mr. Robinson resigned in 1904, but the others, excepting Mr. Smith, were on the board at January 1st, 1909, when the sale referred to below took place. Messrs. Lawson Johnston and Fraser resigned, according to the minutes, in October, 1912, and Mr. E. H. Johnstone's connection with the company ceased in July, 1912. The company's trading had not been profitable, and in consequence a reconstruction took place in December 1908. Agreements dated December 8th, 1908, January 21st and April 20th, 1909, respectively, relating to the reconstruction are filed at Somerset House, but what would seem to have been a principal agreement dated February 4th, 1909, is not filed nor has it been brought in. It would appear, however, that the company sold the *Daily Express* newspaper and part of its assets to a new company called *Daily Express* (1908), Ltd., for £479,990, payable as to £130,100 in cash, £150,000 in fully paid second debentures, and £199,890 in fully paid shares of £1 each; the company's book debts and debentures for

Deficiency as per Statement of Affairs					£32,357 17 2

The report of Mr. Warley contains the following remarks:—The winding-up order was made on February 18th, 1913, on the petition of a creditor presented January 31st, 1913. The statement of affairs was lodged on March 28th, by Mr. Edward Henderson Johnstone, a director. It shows the position as regards shareholders as at December 31st, 1908. The company was registered as the Alpine Publishing Co., Ltd., on November 10th, 1899, with a nominal capital of £100, divided into shares of £1 each, to carry on business as newspaper proprietors under the management of Mr. Cyril Arthur Pearson. On February 22nd, 1900, the company's name was changed to its present title, and in 1901 the shares were sub-divided into 1s. shares. The nominal capital was subsequently increased to £150, and the amount issued and paid up is £139 10s. The working capital to run the *Daily Express* newspaper was provided by the issue of debentures to the total amount of £250,000, a large portion of which was taken up by Mr. Pearson. The cost of publishing the newspaper was at first greater than the receipts from sales and advertisements, and a large £15,500 in the *Midland Express*, Ltd., were not included in the sale. The company undertook to discharge all its liabilities up to December 31st, 1908. . . . "Loan on debenture bonds, £500" is the amount due to a debenture holder who has not been settled with. "Unsecured creditors £31,718 7s. 2d." includes £6,904 5s. 10d. due to Lord Joicey, Lloyd's Bank overdraft and interest, £13,000 16s. 6d. guaranteed by Mr. Pearson, £10,540 18s. 4d. due to Mr. Pearson for arrears of salary and debenture interest, £330 5s. 4d. due to the Vienna correspondent, and £936 1s. 2d. due to the new company is respect of cash advances.

Re R. B. SMITH,
Printer.

This debtor, formerly of Mayfield, Brighton-road, South Croydon, made an adjourned application for his discharge from bankruptcy at the Croydon Bankruptcy Court on Thursday last, before his Honour Judge Harington. The case had been adjourned in order that the debtor might arrange with the official receiver as to what judgment should be entered up against him as a condition of discharge. Dr. Newnham said the debtor had offered £200, payable at the rate of £50 a year. The official receiver said he did not think that this was enough. Debtor's liabilities were £9,340, and a dividend of only 3d. in the £ had been paid. His Honour said that the debtor must consent to a judgment of at least £300. Debtor said he would do so, and a discharge was granted on these terms.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

SANDISON, D. W. and J., trading as D. W. Sandison and Son, at 5, Bridewell-place, London, E.C., printers. Debts by D. W. Sandison, who will in future carry on the business. April 1st.

DISTRIBUTION OF ASSETS.

ROBERTS, J., late of 4, Basinghall-avenue, Coleman-street, London, E.C., printer. Claims by July 8th to Forbes and Son, 19, Mark-lane, E.C., solicitors for the executrixes.

THE BANKRUPTCY ACTS, 1883 AND 1890.

NOTICE OF INTENDED DIVIDEND.

EDWARDS, C. F., 11, Cumbergate, Peterborough, printer and stationer. Claims by June 11th to H. W. Cox, official receiver, 5, Petty Cury, Cambridge.

NOTICE OF DIVIDEND.

BLOOMFIELD, W., 50a, Victoria-street, Grimsby, printer and stationer. First and final dividend of 10s., June 2nd, at the Official Receiver's Offices, St. Mary's-chambers, Grimsby.

APPOINTMENT OF TRUSTEES.

BELL, W. A., 40, Station-road, and 19, Hatchlands-road, Redhill, Surrey, stationer and printer. Trustee, J. S. Holmes, C.A., 33, Paternoster-row, London, E.C. Appointed May 20th.

WATKINS, E. J., 34, Marsh-street, Bristol, stationer and printer. Trustee, F. G. Tricks, 18, Nicholas-street, Bristol. Appointed May 23rd.

NOTICE OF RELEASE OF TRUSTEE.

POPP, J. I., Desborough-road, and Frogmore, High Wycombe, Bucks, newsagent, etc. Trustee, R. M. Blaikie, C.A., 27, High-street, High Wycombe. Released May 1st.

THE COMPANIES ACTS, 1890 AND 1908.

FIRST MEETINGS.

THE JAPAN PRESS, LTD., Malvern House, 9, Byward-street, London. First meeting of creditors, June 10th, 11.30 a.m., and of contributories same day, noon, both at 33, Carey-street, Lincoln's-inn, W.C.

NOTICE OF APPOINTMENT OF LIQUIDATOR.

THE ANGLO-RUSSIAN GAZETTE (1911), LTD., Salisbury House, London-wall, London, E.C. Liquidator, W. Peet (with a committee of inspection), 27, Queen Victoria-street, E.C. Appointed April 23rd.

Virginia Buildings, 28, PARADISE STREET, LIVERPOOL.

"THE PRINTERS' COST-FINDING SYSTEM."—The Costing Committee of the Master Printers' Federation (24, Holborn), have published at 2s. 6d., a new booklet with a set of forms adapted to the requirements of a business with a limited plant and small number of employees. Mr. R. A. Austen-Leigh has contributed the introductory remarks which explain the purpose of the book, and sets forth the principles of cost-finding on a scientific and practical basis. Mr. W. Howard Hazell has written in a lucid simple style the explanatory matter dealing in a practical fashion with any difficulties likely to arise in applying the system to a business of any size. The forms show how a printer can arrive at the accurate rate per hour to charge for every process, and also how to find the actual cost of every job executed in his office, and the output of each department of his business. In view of the interest aroused in the printing industry throughout the country in this movement to secure a uniform system of costing, this publication appears at a very opportune time.

The Belgian Ministry of Industry and Labour has lately issued the second volume of its series of Monographs on "Typography and its Products," the first of which was referred to in the issue of this journal for July 6th, 1911. This second volume extends to some 250 8vo. pp., and may be to a large extent regarded as a manual of printing processes, on both technical and popular lines. After a short general introduction to the subject, mainly concerned in the various varieties and sizes of types, we come to the first chapter of the work, which deals with hand composition and press-work. The various operations connected with the first-named, *i.e.*, correction, imposition, distribution, etc., are all explained in detail. The press-work section, like all the others, is fully illustrated with pictures of the various types of machines, platen, cylinder, etc., mainly of well-known French and German types, as well as of subsidiary apparatus, such as cutting and ruling machines, standing and embossing presses, and so on. A directory of Belgian printers follows, in four sections, according to class of work, sandwiched between which are descriptions of the particular branch of printing dealt with. Here we find a brief reference to the Linotype, which extends to only about a page and a half. Different descriptions of jobbing work, shares, tram tickets, maps, almanacs, cards, music, etc., are treated of subsequently. Chapter III. deals with auxiliary processes necessarily in the publishing trade, such as folding, sewing, affixing the usual continental paper covers, or the rarer boarded ones, these latter, it is stated, being rarely called for save in the case of prayer books and other devotional works, so that "Bookbinding" is dismissed in half-a-dozen pages. In a short concluding chapter on "Commercial and General Considerations," we get—almost in the last page—some idea of the existing state of things in the Belgian printing trade. It may be summed up in the old adage "too many cooks spoil the broth." Even the most trumpery Belgian village generally boasts a printing establishment, set up by some ex-comp. who possesses no proper qualification or legal sanction for thus becoming a "master printer." His stock-in-trade usually consists of a composing-stick, a few pounds of type disposed in a case, a rack, and an ancient "Cropper." Nevertheless, the typefounders and printers' furnishers are always ready to supply these men with goods—which oftener than not are simply stowed away in some corner, and used merely for show on payment of a few pounds, trusting to receive the balance of the account later on by instalments. These little "masters" largely depend for work on small orders taken by stationers (proclaiming themselves "printers") at ruinous prices, a practice which tends to still further depress the trade. The writer of the Monograph under notice very properly suggests that no one be allowed to set up as a printer unless furnished with a certificate of competence, as in Germany. A good deal of interesting miscellaneous information about Belgian practice in the printing business is contained in this work, copies of which may be had from the publishers, Lebegue and Co., Brussels, price 3s., post free.

ACCORDING to *Kemp's Mercantile Gazette* there was only one failure in the printing and stationery trades of England and Wales for the week ending Friday, May 23rd; the corresponding week in 1912 showed four.

New Companies.

WILLIAM FAIRHAM, LTD.—Registered on May 20th, with a capital of £5,000, in £1 shares, to carry on the business of dealers in cotton, wool, cotton waste, papermaking materials, iron, steel, timber, furniture, paper yarns, oil, rubber, machinery, hemp, jute and other fibres, hides, etc., to acquire the business carried on by Eliza Fairham at Henry-street, Rochdale, and elsewhere. The subscribers are T. Fairham, F. G. Fairham, Mrs. E. Fairham, and A. Walker. Private company. The number of directors is not to be less than two nor more than five; the first are T. Fairham (permanent governing director) and F. G. Fairham. Qualification £100. Remuneration as fixed by the company. Registered office: Henry-street Mill, Rochdale.

PASSENGER CO., LTD.—Registered on May 22nd, with a capital of £5,000, in £1 shares, to take over the business of proprietor and publisher of the *Passenger's Companion* carried on by S. G. Vernham, at 85, Shaftesbury-avenue, W., and to carry on the business of publishers, railway, steamboat, hotel and general agents, etc. The subscribers are S. G. Vernham and Cosmo R. Cran. Private company. The number of directors is not to be less than two nor more than five; the first are S. G. Vernham (chairman) and J. Cabourn. Remuneration as fixed by the company. Registered office: 85, Shaftesbury-avenue, W.

GEO. F. BROOK, LTD.—Registered on May 20th, with a capital of £2,000, in £10 shares, to carry on the business of general printers, manufacturing and retail stationers, publishers, newspaper proprietors, fancy goods dealers, etc. The subscribers are G. F. Brook, J. T. Issott and Miss A. G. Wood. Private company. The number of directors is not to be less than two nor more than seven; the first are G. F. Brook (managing director and working manager), J. T. Issott (secretary) and Miss A. G. Wood. Qualification, £100.

CADET PUBLICATIONS, LTD.—Registered on May 19th, with a capital of £2,800, in 2,500 preference shares of £1 each and 6,000 ordinary shares of 1s. each, to adopt an agreement with E. H. Harvey and E. A. Mercer for the acquisition of the *O. T. C. and Naval Cadets' Magazine* and the *Territorial Cadet Magazine and Journal for Naval and Marine Cadets*. The subscribers are H. D. Steers and H. E. Robertson. Private company. The number of directors is not to be less than two nor more than seven; the first are E. H. Harvey and E. A. Mercer. Qualification, £100. Registered office, Bedford-row-chambers, Princeton-street, Bedford-row, W.C.

CONTINENTAL TYPEWRITER CO., LTD.—Registered on May 16th, with a capital of £2,000, in £1 shares, to enter into an agreement with L. Wild for the purchase and sale of "Continental" typewriters and parts thereof, as manufactured and produced by the Wanderer Works, Ltd., of Schoenau-Chemnitz. The subscribers are L. Wild and G. Wild. Private company. The number of directors is not to be less than two nor more than five; the first are L. Wild and G. Wild. Qualification, 25 shares. Registered office, 12-14, Barbican, E.C.

CAPE HILL PRESS, LTD.—Registered on May 16th, with a capital of £2,000, in £1 shares, to take over the business carried on by E. J. Coles and A. Bedding, trading as the Cape Hill Press, and to carry on the business of printers, engravers, publishers, etc. The subscribers are E. J. Coles and H. Walls. Private company. The first directors are E. J. Coles and G. H. Cross. Qualification (except first directors), £25.

GEORGE TAPLIN AND CO., LTD.—Registered on May 17th, with a capital of £1,000, in £1 shares (500 preference), to carry on the business of printers, lithographers, typefounders, stationers, bookbinders, polishes, advertising agents, waste paper merchants, etc. The subscribers are G. Taplin, H. S. Parlett and A. Peters. Private company. G. Taplin is first managing director.

NEW ZEALAND.—The high character of the leading weekly newspapers published in the Dominion of New Zealand has been such as to attract attention in other parts of the world, and it has often been wondered how a country with a population of only a million inhabitants could support so many first-class publications. It now seems that there is to be a reduction in the numbers, as the *New Zealand Graphic*, a very high-grade illustrated publication, of twenty-three years' standing, has been purchased, and is to be incorporated on June 30th next with the *Auckland Weekly News*, one of the oldest and most popular weeklies in the Dominion. The *Auckland Weekly News* is on the eve of celebrating its jubilee, which takes place in November next, and now enjoys the unique distinction of being the sole remaining sixpenny weekly in the North Island of New Zealand. The announcement of the sale of the *New Zealand Graphic* came as quite a surprise in journalistic circles in New Zealand. The *Auckland Weekly News* emanates from the office of the *New Zealand Herald*, the Auckland morning paper, and the *Weekly Graphic* is issued from the *Auckland Evening Star* office, the two dailies being noted for their strong rivalry in political and other matters.

THE late Mr. Joseph Calverley, chief engineer at the *Times* office for over 30 years, has left estate of the value of £9,013.

MR. JOSEPH WOODHEAD, J.P., managing director of the *Huddersfield Examiner* since 1852, died last week at his residence, Huddersfield, in his 90th year.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

The law of England, with all its faults, is a sincere effort to express common-sense. That is my recollection of words used by Lord Esher, one time Master of the Rolls.

o o o

He was giving a fatherly or grandfatherly sort of talk to young barristers on the morning on which he retired from the Bench; and one thing that impressed me was his assurance that the law represented no effort towards "wonderfulness," but that the common-sense of things was what it did honestly aim to keep in view and to attain.

o o o

I am not an expert in such matters; in fact I never call myself names at all. For the moment, and for the purpose of these notes, I am content to assume that Lord Esher, who ought to have known, was substantially right. I want to pass on at once from the thought of law, to say that in all relations of life, the supremely important thing is to get down to, or to get up to common-sense.

o o o

There is too little common-sense in general printing operations at the moment, and there is too little common-sense in the personal relations involved in printerdom.

o o o

What common sense was the action of the Irish printer who in competing against the £460 tender for Council work, put in by Mr. Trimble, of Enniskillen, offered to do the work for £40!

o o o

What common sense was there, even in saying when the Council expressed wonderment and curiosity, that the £40, was a little mistake; that it should have been £140. Why say £140, when even that apparently was much too little?

o o o

When the next year's chance came round, the fresh Trimble tender was £480; the opposing tender that had jumped from £40 to £140 was now raised to £240. I presume the two year's requirements were not absolutely identical. Mr. Trimble's speech in Dublin, on which I base these notes, did not mention this.

o o o

Can I, without offence, suggest that there was not much common sense in a criticism in a Costing Congress in the West by a printer of mature years. After he had listened to a full exposition of the Federation's proposed costing system which, be it remembered is simply a system for ascertaining what is the actual cost incurred by any printer in his own particular office—this gentleman counselled that there was no chance of getting printers in small offices to adopt the methods suggested by the committee, and a very much better plan would be not to bother about that method at all, but simply to urge the printer to put 100 per cent. upon what he might be paying for his labour. He might be satisfied that in that way he was undoubtedly covering all his costs.

o o o

That certainly was some advance upon the plan of a printer mentioned by Mr. Hazell who knows that his compositor costs him 8½d. an hour, who adds ½d. for general expenses and thus arrives at 9d. at his total costs. 1s. 9d. would be nearer.

o o o

But though an advance upon the 8½d., plus ½d. policy, was it common sense in comparison with the urging of the Costing Committee that what printers should do was to find out what were their own actual costs?

o o o

The Federation Committee indeed would be very well pleased to see a printer who was clever enough, covering his entire actual costs by adding only 50 per cent. or 40 per cent. to his labour. They urge him to arrive at his whole costs, and nothing but his costs; with not the slightest desire that he should add anything to represent a margin of possible error. There should be no error in this ascertainment of costs.

o o o

What common sense is there in such general timidity on the part of printers. They have nothing to fear but their own fear. People must have print. A very great proportion of the printing that is done must also be done locally. In that sense, Time is always fighting on the side of the printer.

o o o

I like to dwell upon the commonsense aspect of this costing movement. The proposition put forward by the Federation's Committee is not something:—"Too wholly pure and good for human nature's daily food." Its appeal is to enlightened self interest.

o o o

Certainly that appeal is accompanied by reminders of the high values of printing service; and of its indispensableness. Such reminders are timely. We want more sense of dignity in the craft. At present the nearest we get to that is that a certain quality which I will call bignity is sometimes manifest.

o o o

Some years ago an effort to get an interview with the head of a certain one of the great London printing houses was like seeking admission to the Royal presence. Yet it was tremendously important to that house that someone should tell it some home truths. It missed hearing them apparently; it has recently sustained a serious blow.

o o o

The real dignity of the printing craft connects up with the nature of its service, and with the fact that printing at its best is a learned profession, not to say that printing is a very valuable albeit unconscious protector of our liberties. How quickly some nonsense recently talked or suggested about preventing a certain newspaper from appearing in future, whatever it might contain, was corrected by a Minister in the House.

o o o

With a few rare exceptions printers have never taken themselves at their proper value.

o o o

The costing reform movement has in it the virtual assurance also that the printer will win the respect of his banker and the virtual assurance also that the printer will win more self-respect—the only respect that finally matters.

o o o

I expect to see more cases like that recorded from Glasgow, where the system was introduced into a certain printing firm, and although six months passed before it was in practical working order, one partner obtained £700 access of profit in the first financial year. This he largely attributed to the disclosure of leakages and to improvements which the system indicated to him could be made. I expect to see more cases like that of the £400 extra profit obtained in only one department of a London business from a similar cause.

o o o

I expect to hear more printers acknowledging increase of profit through installing the Federation system, as has been acknowledged by Messrs. Ben Johnson, of York, and by some other provincial firms.

o o o

I see, too, very much greater leisure enjoyed by master printers, and I see their managers and overseers delivered from the performance of clerical work, probably irksome and unpleasant. I see the consequential increase of their time and opportunity for attending to the things that they particularly can do, and do well.

o o o

Incidentally that will facilitate the managers and overseers becoming better acquainted with the individual strength and characteristics of the work of different men. It all tends to the development and encouragement of individuality, which again means the development of more interest in one's work.

o o o

I often think that what we need is not so much that our working hours should be shorter as that the work done in those hours should be more interesting.

I work as hard as anyone I know, and ordinarily am as little conscious of boredom in my work as anyone I know; but often when carrying through what one calls the "donkey" work of some valuation — the checking of hundreds of cases of type or thousands of plates, or something of that kind—I have found myself become for a few hours as much a clock-watcher as anyone could be.

o o o

I have often proposed to myself to "go on till the men knock off," even if ordinarily I should be getting, say, a tea refresher a bit earlier. I have found that the mere repetition of the items of checking or what not has become so tedious, so uninteresting, I have felt quite keen on seeing the hands creep up to the hour. It has been a revelation to me, and almost humiliating. I found I wasn't such a paragon of industrial virtue after all.

o o o

The very next stage in that same valuation might be as interesting to me as that particular stage was boring; whereas any monotony of their work would probably continue in the case of most of the journeymen in the office.

o o o

Anything which looks towards adding an element of interest to one's work is vitally important and makes for efficiency.

o o o

I see these things in the near future; and I see too in the not distant future a levelling up of the lowest wages, and some improvement of the best. It's in this direction of better wages and not in the direction of profit-sharing schemes, or of subscriptions to printers' charities, that I am looking.

o o o

Journeymen will, I hope, do not simply what they must, but do all they can for the success of this costing movement. The help of the journeymen in electrotyping has done practically everything to make possible the costing improvement which in the electrotyping craft has taken place; and has benefitted employers and employed.

o o o

Having the greatest respect for the typical printing journeyman as I know him, I feel confident that he will help to extract from this costing reform movement its full potency for good, all round.

o o o

It is, I think, in all ways desirable that employing printers should be organised and devote themselves to the improvement of their business with the strenuousness and thoroughness which they are manifesting at this moment, and that employed printers should also be organised and devote themselves to the improvement of their own position with like strenuousness and thoroughness.

o o o

That does not mean that either of them is to be indifferent to the well-being of the other section. Very far from it. I have no respect, in common phrase, "I have no time" for any man whose interest is less comprehensive than all society; whose desire is smaller than a desire to see well-being diffused throughout the whole community.

o o o

When all is said, when all opposing economic interests are frankly recognised, the final truth is that we all have very much more in common than we have in difference.

o o o

I say I recognise this; and it is while fully recognising it that I think it is best for each great party to rely upon itself.

o o o

Last Saturday I was invited by Mr. S. A. Bhisey, who has invented and is developing what seem to be very remarkable and very hopeful things in type casting, to attend a dinner of the Indian Social Club. Sir M. Bhownagree, who made a powerful speech, emphasised that however much it might be desirable that the Indian Civil Service should become more sympathetic with the people, the great thing which should be impressed all the time upon the Indian mind was that India must help itself, must develop its own resources, must fight its own fight.

o o o

That is exactly the view I have with regard to organised labour, and that is why I scarcely ever say anything about the various arinters' charities. There are plenty to praise them; I leave them alone; and preach all the time organisation and self-reliance and independence.

o o o

Running over these notes, I think one thing should be added by way of pendant. While the Costing Committee carefully refrained from making any recommendation as to charges to be made to the customer, fearing printers would decline to take one step if they asked them to take two, there is no reason why printers should not confer locally as to such charges after they have been operating sound costing systems for some time. When some confidence in the accuracy of cost statements has been established, statements may as well be compared. Printers are not much interested in each others' guesses.

o o o

Facts are more interesting than fancies.

o o o

The thing is now—*to instal the system.* We are not so many thousand children, who can't be expected to know our own minds. We are so many thousand printers. We are so many thousand practical men of affairs. We know that in this world things have to be decided as well as discussed. We have reached now what Joel calls "the valley of decision." In front of us is a land flowing with milk and honey.

o o o

Decide—decide—decide; not in dozens, but in hundreds.

FRANK COLEBROOK.

The Printing Trade in Denmark.

The master printers at Copenhagen have just issued a special number of their journal, *Bogtryk-Kerbladet*, which contains much interesting information with regard to the history of the organisation of the printing trade in that city. It was not until 1875 that the employing printers of the Danish capiial formed an association for the protection of their mutual interests, at the time of the promulgation of the first wages scale. New scales came into operation from time to time, viz.: in July, 1884, October, 1892, and September, 1899. Those of 1904 and 1906 were the result of joint agreement between the masters' and men's unions; the last of them was revised in 1910, and remains in force until the end of the present year. Little by little, the day's work has been reduced to its present level of eight hours, whilst the minimum weekly wage has been rising in like proportion. In 1892, it was only £1; to-day it is 29s. For piecework the rate per 1,000 letters was only 3½d. some years ago, but now it is just over 6d. In 1884, work on holidays was only paid at the rate of time-and-a-half, to-day it ranks as double time. The Copenhagen Master Printers' Association employs about 1,800 Union and 360 non-Union comps, these last being mostly engaged on newspapers. The members' subscription to the Association is 0·75 per cent. of the salaries paid, with a minimum of 8s. 6d. Two-thirds of these subscriptions go to form a mutual assistance fund in case of a strike.

Last year was a good one for the Danish printing trade, so that the gross wages paid to the employees of 90 printing establishments increased by nearly £900, to a total of £15,650, of which the last three months accounted for £4,100, the worst month of the year being, as usual, August, when the comps only earned £1,190. One curious fact was noted as being contrary to former experience, viz., that the volume of business done by the smaller printing establishments was actually greater during the second quarter of 1912 than during the final one, whereas the opposite was the case with the larger places. In 1911, the smallest firms and also the bigger ones, *i.e.*, the two extremes of the trade, experienced a decided slack time, but last year they regained their lost ground.

THE late Mr. William Hale White, of Groombridge, well-known as "Mark Rutherford," has left estate of the value of £5,468.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read, because:

It is the only strictly Business Paper.
The only Newspaper.
The only Paper which holds the attention of the man who owns the Plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 Pages weekly.

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the current month, employment in the printing trades was fairly good during April, better than a month ago, and much better than a year ago.

In London, employment continued fairly good, and was better than a month ago and a year ago.

In other centres, employment also continued fairly good, and was better than a year ago. At Edinburgh, however, it was bad with letterpress machinemen and lithographic printers, and was worse than a month ago with letterpress printers. It continued to decline with letterpress printers at Dublin. A general improvement was reported at Bradford, and with letterpress printers at Glasgow.

The following table shows the percentage of Trade Union members unemployed in the various districts of the United Kingdom :—

Districts.	No. of Members of Unions at end of April, 1913.	Percentage Unemployed at end of April, 1913.	Percentage Unemployed at end of March, 1913.	Percentage Unemployed at end of April, 1912.	Increase (+) or Decrease (—) on a Month ago.	Increase (+) or Decrease (—) on a Year ago.
London	21,236	3·7	5·1	6·9	— 1·4	— 3·2
Northern Counties and Yorkshire ...	5,735	2·7	2·7	5·6	—	— 2·9
Lancs. and Cheshire	7,200	4·6	3·8	7·1	+ 0·8	— 2·5
East Midland and Eastern Counties ...	2,775	2·2	1·7	4·2	+ 0·5	— 2·0
West Midlands	2,729	2·4	2·7	6·8	— 0·3	— 4·4
S. and S. W Counties and Wales ...	4,039	2·0	4·0	3·3	— 2·0	— 1·3
Scotland	5,988	3·5	3 1	4·9	+ 0·4	— 1·4
Ireland...	2,577	7·2	6·2	7·2	+ 1 0	—
United Kingdom	52,279	3·6	4·1	6·1	— 0·5	— 2·5

FOREIGN.

In France, the printing trades continued busy during March both in Paris and the provinces. In Germany, however, trade was rather slacker, as the percentage of unemployed printing trade unionists, out of a total of 66,523, rose from 2·7 (in February) to 3·4. During March last year it was only 2·1. In Holland, but little change was recorded, and the volume of unemployment is small, only 0 4 per cent. out of a total of 7,130.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

E & S "NICKELOID" QUALITY

WHAT IS "NICKELOID"?

"NICKELOID" specifies the hardest and most durable printing plate yet produced; an electro having a non-corrosive nickel-steel alloy shell, deposited direct upon the mould, which is reinforced by a further deposit of hard tough copper and backed up with a metal of first quality, the whole combining to make up an electro of perfect quality, unsurpassed for durability.

"NICKELOIDS" must not be confused with Nickel-faced electros. They are as wide apart as the poles.

The process is equally applicable to type, line blocks, half-tones, and colour work. In fact, for half-tone and colour work, we combine all the now well-known distinctive qualities of our "Albert-Galvano" (Lead Moulding) Process with the foregoing, and all such work carries our absolute guarantee to give results equal, in every respect, to the originals.

"NICKELOIDS" are suitable for all grades of work, but especially so where long runs and hard work are required. These plates have printed, and will print, runs of exceeding one million from one plate or one set of plates, thus showing a great economy, both in the initial cost (as compared with several sets of ordinary electros), and also in the saving of time changing plates and making ready.

Note our address now, and send us your next job that runs into anything like half a million or more impressions.

Printers' Managers and Overseers ASSOCIATION.

YORKSHIRE CENTRE.

Flat-Bed and Rotary Photogravure Printing.

By Mr. E. Fisher.

The May monthly general meeting of the Yorkshire Centre, P. M. and O. A., was held at the Golden Lion Hotel, Leeds, Mr. H. Dixon (vice-president) occupying the chair. After the minutes of the last meeting had been read and confirmed, the Secretary reported to the meeting the arrangements for the combined meeting of all Centres at Liverpool, on Saturday, June 21st. The Secretary also reported to the meeting the loss of a further member of the Centre, Mr. G. H. Brace, of Hull, who was found dead on the roadside near Hull on May 2nd. Mr. G. W. Wilkinson proposed that a vote of deepest sympathy be accorded to the relatives of the deceased. The vote was carried in silence by the whole of the members upstanding.

Mr. Dixon, in introducing Mr. Fisher, said he was very glad of the further opportunity of hearing Mr. Fisher, who had been of great assistance in the formation of the Centre, and had obliged them on many occasions with papers on a variety of subjects.

Mr. Fisher read the following paper:—In coming here to-night, I do so for a two-fold reason. Firstly, that I may renew the acquaintance of old friends, and secondly, that I may show I have still a more than passing interest in the welfare of the Centre for which I had the honour of doing a little spade work in the days of its formation. As I have had exceptional opportunities of seeing and examining

The Latest Method of Illustration—

photogravure, or rather machine gravure—I thought that my first duty as a member of the P. M. and O. A., was to give to the members the benefit of what I have seen. I do not pose as a photogravure etcher, engraver, or designer, I merely wish to give you the result of my own observations, which may perhaps lead to a little discussion and be helpful and instructive to us all.

Photogravure is a method of producing by means of photography and the action of acids on a sensitised surface a kind of mezzo-engraving on metal. *Photo*—an abbreviation of photography; *Gravure*—engraving.

Less than a decade ago this process was limited to a select circle. The average craftsman looked upon it with an air of mystery, and imagined that it was far beyond his accomplishment. Photogravure printing possesses a freedom of richness to which the half-tone or zinco plate can never attain. In these processes there is a monotonous uniformity, the line being only a blackened surface of paper, whereas in photogravure printing it is a cast with an additional thickness of printing ink. The graduated tones lend a softening effect to the picture, and the density to be obtained is remarkable.

Photogravure has made wonderful progress, and will strongly appeal to those firms requiring something in advance of the now familiar screen photo, something which gives a realistic touch to the engraved subject. It is an advance upon the half-tone in the same degree that the half-tone was an advance on the line block.

There have been many attempts made since the invention of photography to bring the advantage of this discovery to the assistance of the graphic arts, but particular attention has been given to those attempts having for their object the production of blocks which could be printed along with type on a letterpress machine, and which could take the place of a wood cut.

The latter was by its nature necessarily slow and expensive, although in the hands of an artist it was capable of yielding results incomparably better than anything of which modern processes are capable, except perhaps for the reproduction of pen and ink drawings.

The Line Block.

In *Line Block* it must be borne in mind that whilst it is the easiest block to work, and causes least trouble to the printer, there is always a tendency for the lines to "clog," especially where the lines come close together. There is, of course, a limit to the fineness to which fine lines can be etched without being broken in the reproduction.

In a pen and ink or "line" drawing you have solid black lines on a white paper, but in a photo or wash drawing there is only rarely a sudden jump from black to white; instead all the tones are continuous, *i.e.*, they merge gradually into one another, and it is these tones between solid black and pure white which are the half-tones. But the problem was how to make a block which could be printed on a letterpress machine which would give us in resultant print all these tones as well as black and white, and I say at once that it is impossible except by an optical illusion.

The block of course must present a level surface to the inking rollers and impression cylinder. Now if we suppose this level surface, hollowed out in any portion so that it is not touched by the rollers, you would get in that portion a pure white in the impression, while the level surface remained solid black.

If we make the hollows small enough and sufficiently close together, the resulting impression, held at a little distance away, would give the appearance of a grey tone, and this is the optical illusion on which a block depends for its apparent half-tones. The sizes of the dots varying with the strength of tone.

Now let us look at some of the means which have been employed to break up the continuous tones of a drawing or photograph in such a way that these hollows would be produced mechanically in the plate, so that an impression from the plate would give the appearance of the continuous tones of the original.

One of the earliest—if not the earliest—of the processes to the attainment of this end was invented by an Austrian artist named Karl Klie. His process was

The Forerunner of Photogravure,

by which a copper plate was etched intaglio—*in* into: *taglaire* to cut. His process was shown in an Austrian magazine in 1897, and very little was heard about it until attention was called to it by the *Inland Printer*, in December, 1908, under the style of Rotary Photogravure.

In this process the continuous tone is broken up by means of the deposition on the copper plate, of a coating of asphaltum dust in a fine state of division, the photographic image being laid thereon in the form of a carbon transparency.

The etching of the plate is yet more or less a secret art. The skilful etcher or engraver is, like the artist whose work he reproduces, "born," not made, and it might be said that a life's study is required in order to excel.

One almost feels tempted to speak of some of the other processes which have led up to present day results, such as the Pretsch Process. The very beautiful Woodbury-type process, collotype, etc., but time will not permit.

There is one process of reproduction, however, that I should like to mention, which had undoubted merit, but for some reason has been little heard of. I refer to the process known as

"Physiotype,"

or "nature printing," which is the invention of one of the founders of the Yorkshire Centre of the P. M. and O. A.—Mr. Francis Sheridan. The specimens I am, through his kindness, able to show you have a wonderful softness, and as its name implies, a "naturalness" about them that speak for themselves, and the simplicity by which they are produced is more wonderful still. By simply impressing an object such as flowers, lace, coins, or one's hand, or even a finger-print on a sheet of specially prepared paper, and afterwards allowing a certain powder to roll over it, an exact reproduction of the object is instantly brought to light. Such reproductions can easily be taken for either lithographic or letterpress printing. It is worth noting, however, that the first step towards the modern method of breaking up in the negative the continuous tone was made in 1865 by Messrs. E. and J. Bullock. They suggested placing a *fine fabric* between the lens and the sensitive plate, and this is the modern practice so far as the position of the screen is concerned.

This idea suggested the present-day screen, which was invented by Max Levy, of Philadelphia, who is still the largest maker, though similar screens are now made in both England and Germany.

Before the advent of glass screens various substances were tried such as silk gauze and wire gauze, but were found to be too uneven in texture.

The Ruled Screen.

The first ruled screens put on the market were only ruled one way and the screen was given a quarter-turn during exposure. The resultant negative, however, gave a very flat picture and necessitated endless hand-work on the zinc plate (copper was not in use at this time) between 20 and 30 years ago.

The Levy screen was without doubt the most potent factor in making the modern half-tone block the commercial success it has become.

Screens, too, are used in the making of a photogravure plate, and are made to an exceedingly fine grain—200 to inch. The plate is mechanically etched or engraved to all outward appearances the same as a half-tone plate, but on examination it will be found to be engraved exactly opposite, for whilst the dark or heavy portions of a half-tone picture are really a cluster of raised dots, and the lighter portions smaller dots, the effect from an intaglio plate is produced by the heavy portions being recessed, or composed of a cluster of cells, whilst the lighter shades are produced from cells of less depth, and the white portions are perfectly solid in the plate.

It will be at once apparent that the rollers for printing a half-tone must be just so ac-

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I spent a delightful Saturday evening at Aldenham Institute a week or two ago, and since then I've taken the chair at a lecture on the Monotype given to the students.

o o o

A dual lecture, Mr. Elliott and Mr. Bleckett both addressing the students with wonderful fullness of information. I never knew men get so much and with such firm certitude and ease into a leisure hour, as both of these gentlemen did.

o o o

If I were in someone's employ and my time was not my own I think I should often look in at the Aldenham, I am so fond of that Institute and have so much admiration for the work of Mr. Amery and his teaching colleagues.

o o o

However, I am the master of my own time, which means that I never have any time at all.

o o o

"Jump up and say a word of welcome to our visitors," said Mr. Amery at the end of the tea, at that recent Saturday evening visit, for it was a sociable function; wives and sweethearts and a good sprinkling of very young printers in long or just shortened clothes, being of the company.

o o o

There is always a jolly family gathering of this sort during the session; a room full of 200 or more and everyone knowing everybody.

o o o

Everyone feeling on very good terms, too, with himself or herself. Certainly, each one could feel as he rose from that bounteous table that there was "something very good in him." (As the kind-hearted man wrote by way of character for his valet, whom he'd had to dismiss for drinking his best whisky.)

o o o

There was, as always, at the Aldenham "socials," a ripping programme. The singing by Miss Morrison—a young lady blind from her birth—seemed nearly perfection. She accompanied herself. Her technique, as far as I could judge, was faultless, and her sunny abandon was complete and most inspiriting. The whole programme was of the fine Aldenham quality. Here's to the Aldenham and to Mr. Amery. May his shadow never grow less. I don't think it's likely to—good all round man that he is.

o o o

I see that he's just secured a Monotype lecture also for his other classes in Camberwell, London. Those students, too, are to be congratulated.

o o o

I hope that a common-sense judgment of things will operate in the Garden City, and that the controversy, so far as there is controversy, *re* the application by the compositors for an advance upon their 32s., will be settled without more friction.

o o o

My own observation is that living in the country is cheaper but not a great deal cheaper than living in London. Rents are often very dear in country places. The occasional very cheap cottage in some place far away from anywhere, does not amount to any real refutation of this general statement.

o o o

I have worked in printing, or newspaper offices, or in offices which combined printing and newspaper business, in Reading (for about a year), in Devon and Cornwall (for about two years), in Gloucester (for about two years), in Aldershot (for about a year), in North Staffordshire (for three years), in Guildford and Dorking (for about eight years between those two).

o o o

That may entitle me to speak from personal experience as to whether it seems to be very much cheaper to live in the provinces than in London. I do not think the difference is tremendous. It is easy enough to point out very many ways in which life in the metropolis differs from life in country towns.

o o o

Pointing out differences between two places is one thing; demonstrating that one of them has a great advantage over the other is another thing, and may not be nearly so easy.

o o o

I have often been struck with the dearness in some provincial place of some of the very things that one might expect would there be very cheap. Even fruit is sometimes rather dear.

o o o

And again I have often reflected that town life provides means of much enjoyment, and of large variety of occupation, not provided in the same degree in the country. This represents a real deprivation.

o o o

Economists tell us that when a condition of living carries any particular disability, the fact should be taken into account in the money rewards for the work done in that sphere of life.

o o o

One very serious disability, connecting up with country life, is that one has not such opportunities for the education of one's children as in town. That applies both to general and to technical education. And one has not the same opportunities as in the towns of finding promising occupations for the children when of age to enter upon the jostle with the world.

o o o

If economists are right as to disabilities being virtually claims to payment, that disadvantage regarding one's children is most certainly a factor to be reckoned in the wage settlement.

o o o

I have received, for a word in this column, some books regarding which I have to ask a little indulgence. Some are "Fellowship books," published by Mr. Batsford. All being well I will deal with these very soon; I have been hard pressed and have not yet properly studied them.

o o o

Mr. Jacobi's "Notes on Books and Printing" got off my shelves; did I lend it, and was it surreptitiously returned? It is a most delightful volume, of which more anon.

o o o

Messrs. Palethorpe and Cond send me the most delightful little advertising booklet I've seen for many a long day. It was got out for Tredgar's, whose business is furnishing of the highest class. It is very interesting as illustrating what I incline to call polarity in printing tendencies. For the ideas which this little book expresses are at the opposite pole to ideas which long were sacrosancts in printing.

o o o

Take for instance your "1,000 Wonderful Words," or some other book of that, *flung* together *olla podrida* kind, such as used to be got out not so many years ago. You know the sort of book. It was cheap; but the cover contained about as much ornamentation as was physically possible; and as much gilt work.

o o o

Of good form there was none; of so-called ornament there was all that tortured ingenuity could devise. It looked fine to give to Tommy or to Mary for a prize, it was such a lot for the money. The gold alone was "worth it."

o o o

The type might be measly. The illustrations, if any, might be old and worn; with some wood block quite possibly which might already have served as a "Distant View of Edinburgh," or as a "Portrait of an old Cavalier," or as "The Harvest Home," or as "The Shipwreck." They bulked out the "list of illustrations" anyhow.

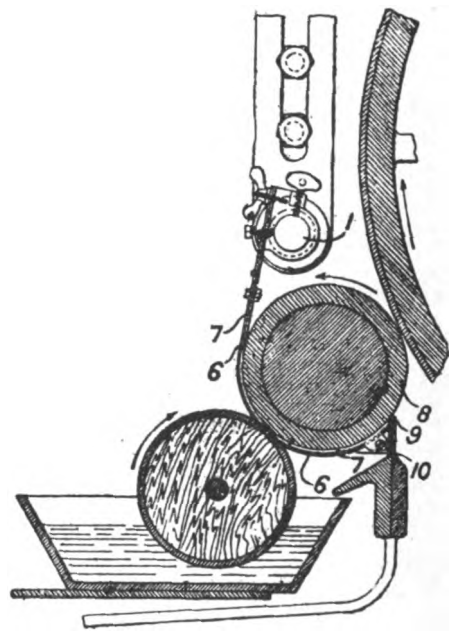
o o o

What have we here to represent the opposite pole in thought and practice? A small thin book with good blue-papered cover, with a white panel bearing the neat title, "Samuel Pepys and His House." The matter is original—very original—it is compiled (I had nearly written cord-piled) by someone who has gone carefully through Pepys' Diary; and has noted the dear old boy's talks about his buyings of this, that and the other thing for his new home; and his planning of the rooms. An artist has given us a great number of original ink drawings; peeps into Pepys' beautiful domicile. These drawings are most admirably executed. There is one opposite every reading page.

o o o

The spirit, the very flavour of the Pepys world and the Pepys' time, are there. The type is strong and clear; and generous bodied; the margination and pagination are perfect. The black is picked out with just enough well printed red.

o o o



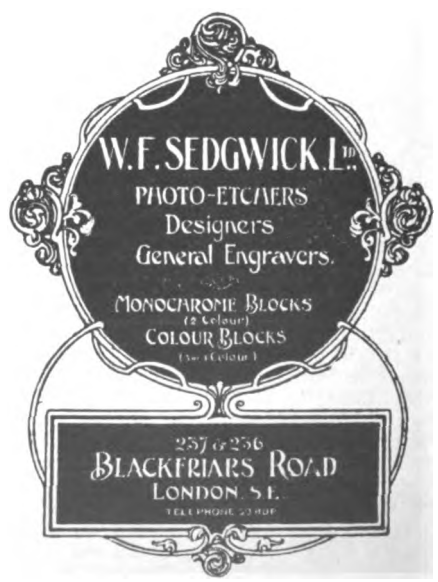
Good form, fine and understanding sympathy as between all parts of the work—these are clearly manifest.

A moderately educated village grocer may well have felt repelled by the innate vulgarity and garishness of the old style big "1,000 Wonderful Words" class of book; and his business instinct may well have detected and resented its essential cheapness, for all its finery. Whereas this Pepys book would fitly find place in the drawing-room of the young royal pair just married at Berlin.

FRANK COLEBROOK.

Inking Apparatus.

Mr. E. Ludin has patented a method whereby ink is prevented from spreading on to the side portions of the engraved printing roller 8 which are not in contact with the fabric to be printed, by shields 6 of metal with a covering 7 of leather, cloth, rubber,



etc. The shields are adjustably secured to rods 1 projecting inwards from each side frame of the machine, and stretch as far as the scraper 9, strips 10 being provided to rub against the laterally-moving scraper to prevent it from spreading the colour.

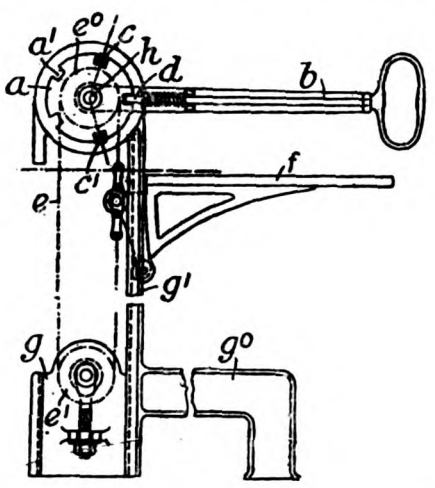
NEW INVENTIONS AND IMPROVEMENTS.

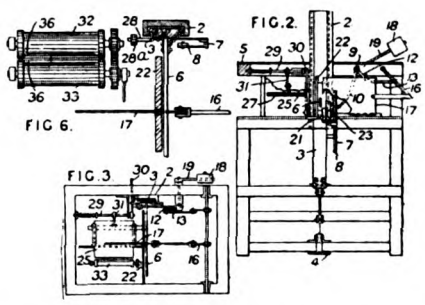
Cutting Paper Strips.



In machines, patented by Mr. F. H. Peuckert, for cutting gummed paper strips 9 to be affixed to boxes, books, etc., the cutting member is a rotating disc *k* pressed against a guide surface to effect a shearing cut. The knife *k* is secured to a shaft *i* mounted in a fork *h*, which in one form, Figs. 2 and 4, is vertically reciprocated by means of a bell-crank lever 7 and a cam groove 3 in a disc 2 on the treadle-driven main shaft. The knife co-operates with corresponding slots in the work support *e* and a member *b*, which is reciprocated by means of the cam groove 3 and a bell-crank lever 4. The knife *k* is pressed against the side of the slots by a spring *m* adjustable by means of a nut *n*, and may be

adjusted to co-operate with any desired pair of slots in the members *b*, *e*. The knife shaft *i* is driven from the main shaft by means of toothed wheels *x*, *y*, bevel gear *z*, *r*, and a shaft *q*, which is connected to the shaft *i* by a coupling *s* and articulated joints. The gearing is partly enclosed by a hollow bracket *a*, *d* and the slotted roof plate *e*, over which the paper strip 9 is fed by rollers. In a modification, Fig. 6, the fork *h* is fixed to a rock shaft 9^1, which is vertically reciprocated, and is also oscillated by means such as a drum on the shaft of the wheel *z*, with a cam groove engaging an arm on the shaft 9^1. The knife is arranged to cut on both motions to-and-fro. Instead of the fork *h*, a reciprocating slide may operate the knife.

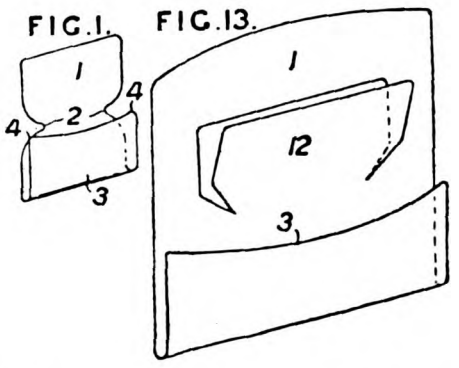
Drying Printed Sheets.



An invention relating to a stand or table for supporting the laying-out trays for drying sheets of paper, chemicals, etc., particularly applicable for receiving the printed sheets from printing presses, so arranged that the tray receiving the sheets is always at a fixed working level, and can be lowered by a quick acting mechanism for receiving the next tray, is patented by Messrs. C. Mayer and F. Trautmann. The stand comprises a frame *g* having a base g^0 for supporting a pile of empty trays, and vertical guides g^1 for a vertically moving table *f*, which supports the tray receiving the sheets. The table *f* is connected to two endless chains *e* which pass around sprocket wheels e^1, e^0 mounted respectively on adjustable bearings on the frame and on a shaft *h*, which can be turned to lower the table *f* a distance equal to the thickness of one tray, as each tray is filled. For this purpose, the shaft *h* carries a disc *a* having a series of recesses a^1 adapted to be engaged by two bevelled spring catches *c*, c_1 mounted in the frame, or by a sliding bolt *d* on a lever *b* loosely mounted on the shaft *h*. To lower the table, the bolt *d* is disengaged from the disc *a* and the lever *b* turned upward until it disengages the catch *c* from the next recess a^1, which then receives the bolt *d*. The lever

b is then lowered to its horizontal position, after which an empty tray is taken from the pile on the base g^0 and placed on the table *f*. To return the table *f*, the lever *b* is moved downward to disengage the catch c^1, and returned to the horizontal position, thus raising the table step by step. The frame *g* can be built on to the press instead of standing on the floor.

Folding Papers.



Under a patent by Mr. S. Bohm paper sheets are formed with successive folds at right-angles to each other by means of apparatus in which moving bands are dispensed with, the folds being produced by blades all actuated from a vertically reciprocating main slide, the blades forcing the papers through slits in stationary plates. As shown, the sheets are placed on a table 5, and the first fold is produced by forcing the paper through a slit in this table by means of a rule 6 on a slide 5 which moves in a vertical guide 2.

The slide 3 is actuated from a pedal 4, or it may be power-driven. The slide 3 carries an angle iron 7 with a roller 8 which acts on a lever arm 10 on a shaft 9 to which is fixed an arm 19 fitted with a counterweight 18. The roller 8 moves these parts to the position shown in Fig. 2 and by means of lever-and-link mechanism 12, 13, 16 a vertical folding plate 17 is caused to assume the position shown. The once-folded sheet is held in position to receive the second fold by a pivoted clip 21 which is opened to receive the folded sheet by a projection 23 on the slide 3. As the slide 3 returns after the release of the pedal 4, the blade 17 moves forward under the action of the counterweight 18 and forces the paper through a slit in a plate 22, thus forming the second fold. The third fold is completed simultaneously with the formation of the first fold in the next paper. This fold is effected by a blade 25 which is actuated by the engagement of a roller 28^a on a projection 28 on the slide with an arm 30 on a spring-controlled shaft 29 connected by an angle-lever 31 to the blade 25. The finished product is delivered by a pair of rollers 32, 33 which are formed with ends of larger diameter than the middle so as to grip the sheets at the edges, but strips 36 are arranged on the rollers to grip and draw in the edges of the folded paper. The rollers 32, 33 are driven from the pedal mechanism. The paper may receive more than three folds.

Fastenings for Paper Bags.

An invention that relates to fastenings for documents, paper bags, and the like, of the type in which the longer arm of a **T**-shaped clip is bent over at a weakening line thereby folding the edges of the article to be secured. The weakening of the arm 1, Fig. 1, which is effected by indentations 2, by perforations, by making it of wire, or relatively by ribbing

the shorter arm 3, is so situated that, when turned over, the arm 1 forces the papers, etc., against the edge of the arm 3, which may be concave with pointed ends 4, or may be serrated. A ring hoop, or other carrying means is provided. In a modification, Fig. 13, a tongue 12 is cut out and turned down from the arm, thus leaving a carrying handle. The invention is patented by the Patria-Papier-Ges.

Artificial Lithographic Stones.

Artificial lithographic stones, as patented by Mr. H. Wagner, are made by adding a solution such as a mixture of magnesium chloride and sulphate to a powder such as a mixture of magnesite and lime. The invention consists in conducting the mixing of the solid components *in vacuo*, adding the solution under similar conditions, the mass being cooled to about 0·5 degs. C. during the mixing processes. The mass is solidified under hydraulic or oil pressure, a rubber membrane being used to protect the surface of the stone in the former case. The cooling is continued during solidification.

Envelopes, etc.

Under an invention by Mr. W. Langguth envelopes, wrappers, money bags, etc., in the finished state are provided with a transparent portion on the outer surface, either by the application of a coating of varnish and then a layer of paste composed of china clay, wood oil and a drying-agent, in order to render the surface matt, or by the application of a varnish to which a matting substance such as wax or spermaceti has been added. The operation of varnishing can be effected in a machine also adapted to apply the gum to the closing-flap, to print a border around the transparent portion, and to stamp the firm name on the cover of the envelope, etc.

Trade Notes.

FOR printing for one year, for the Southampton Education Committee, the tenders of Messrs. Richardson and Co., Southampton; and *Hants Advertiser Co.*, Southampton; and Mr. E. S. Mead, Southampton, have been accepted.

MR. EDGAR WHITELY, the manager of the National Labour Press, was on Saturday committed for trial at Manchester Assizes on a charge of conspiracy in connection with the publication of the *Suffragette*. Accused was allowed bail.

BIRTHDAY HONOURS.—Included in the King's Birthday Honours List, announced on Tuesday, is the name of Mr. Thomas Fisher, superintendent, Government Press, Madras, who has been awarded the Imperial Service Order. Mr. J. M. Barrie, the famous novelist and dramatist, has been created a baronet.

MR. R. B. FURNIVAL informs us that he has joined the board of Messrs. Geo. Mann and Co., Ltd., of Leeds, and will take the lead in the sales organisation department. Mr. Furnival will shortly open offices and showrooms in Manchester, which city will be his headquarters.

THE libel action by ex-president Roosevelt against Mr. George Newett at Marquette, Michigan, came to a conclusion by Mr. Newett acknowledging that his charges were untrue, and apologising for the article he had published. The jury gave a verdict in favour of Mr. Roosevelt and assessed the damages at 3d. Each side pays its own costs.

ON Friday evening, at the Savoy Hotel, the British journalists who visited Germany in 1907 entertained the representatives of the German Press in London to a dinner, at which were present the German Ambassador, the Hon. Harry Lawson, M.P., Sir Clement Kinloch-Cooke, M.P., Sir Frederick W. Wilson, Mr. A. G. Gardiner, Mr. F. J. Higginbottom, Mr. Peter Keary, Mr. Robert Donald, Mr. Clement Shorter, and a number of German Press representatives.

AN Exhibition of Tools and Materials, illustrating the Japanese method of colour printing, has been arranged at the South Kensington Museum, and an interesting illustrated pamphlet (2d.) descriptive thereof has been prepared by Mr. Ed. F. Strange, of the Department of Engraving, Illustration and Design. It deals largely with the technique of the methods employed both by the old colour printer and his modern imitators, and those who do high-class art colour work with the aid of a hand-press, or other primitive appliance, should find much to interest them, both in the exhibited collection itself and—failing an opportunity of inspecting it—in Mr. Strange's pamphlet.

MESSRS. THOMAS FORMAN AND SONS, Nottingham, have issued a handsome booklet entitled "Successful Advertising," which contains a fine selection of well-known advertising and other designs which have been executed in colours by the firm. The examples comprise work in Forman-gravure (a process of machine photogravure that is eminently suited for advertising and illustrative work) offset printing, poster, show card, calendar, and miscellaneous printing, and shows well to what perfection the firm has brought these classes of work. The offset examples are specially noticeable for their fine quality, and delicate rendering of the artists colouring. Everyone interested in high-class colour printing should endeavour to get a look at this fine specimen booklet.

THE DAVIS TYPECASTER.—Messrs. Grant, Legros and Co., Ltd., of London and Willesden, improved the opportunity of the visit of the Master Printers of the United Kingdom to Liverpool to attend the annual conference, by having an exhibition and demonstration of the Davis Typecaster at the Exchange Station Hotel in that city. The Typecaster was on view from Friday, May 30th, to Tuesday, June 3rd, inclusive, and was inspected by many prominent members of the trade, who took great interest in its working, and admired the rapid way in which the appliance turned out most accurately finished type. The Davis Typecaster is making good headway among printers, and deservedly, as the makers claim that this simple machine saves 50 per cent. of loose-type bills, 25 per cent. of make-ready expenses, and 10 per cent. of composing-room costs.

AT the Sheriff's Court, Guildhall, last week, Mr. Eveleigh Nash, publisher, King-street, W.C., sued *Le Matin*, a Paris newspaper, for damages for breach of contract, and the case came on for assessment of damages. Mr. Nash's case was that, holding the copyright of a certain book, he made a contract by which *Le Matin* was to acquire the serial rights in France for £800, but the paper subsequently repudiated the contract. The jury assessed the damages at £800, the full amount claimed.

AT Hove, last week, an inquest was held on the body of Ernest Woodward Shore, a black-and-white artist, who was killed on the line near Dyke Junction Station. He was seen to throw himself in front of a train. The jury returned a verdict of "Suicide during temporary insanity."

IN the King's Bench, London, on Thursday last, the libel action brought by Mr. George Balfour against Ben Tillett and the proprietors of the *Glasgow Daily Record*, for publication by the *Daily Record* during the by-election at Govan, in which the plaintiff was a candidate, of a statement by Mr. Tillett that the plaintiff was hostile to Trade Unions, was settled. A verdict for damages of £1,000 was agreed to.

THE recent printers' strike at Brussels resulted in the twenty-six members of the Committee of the Typographical Association in that city being summoned by six ordinary members, who claim the return of the amounts paid to the strikers, of damages to the amount of £200 each, and the dissolution of the Association. On May 16th, when the case first came on in the Court, the Judge ordered that official seals be placed on the Association's cash box. This was promptly done, so that the organisation finds itself in a pretty pickle. A mass meeting of trade unionists was held on May 21st to protest against the judge's arbitrary action, and it was followed by a procession of the trades concerned round the city.

PRINTING TENDERS.—For printing and stationery for three year, for the Bermondsey Board of Guardians. Particulars from Mr. E. P. Fenton, 283, Tooley-street, S.E. For the supply of 1,000 bottles of writing ink for the Metropolitan Asylums Board. Form of tender may be obtained at the office of the Board, Embankment, E.C. For the supply of books, stationery and apparatus for the Surrey Education Committee for one year. Schedules from Mr. W. W. Finny, County Education Office, Kingston-on-Thames. For the supply of printing, stationery, books, etc., for the East Ham Town Council. Forms of tender from the Borough Treasurer, Town Hall, East Ham, E. For the printing and stationery required for three years, for the Metropolitan Asylums Board, the following tenders are recommended for acceptance: — I. Bean and Son, Golden-lane, E.C., Drake, Driver and Leaver, Ltd., Roseburv-avenue, E.C.; Hill and Ainsworth, Ltd., Stoke-on-Trent; Ben Johnson and Co., Ltd., York; McCorquodale and Co., Ltd., Cardington-street, N.W.; G. Rowney and Co., Percy-street, W.; Vail and Co., Ltd., Farringdon-road, E.C.; Waterlow Bros. and Layton, Ltd., Broken Wharf, Upper Thames-street, E.C.; A. West and Partners, York-street, Westminster, S.W.: Wightman and Co., Ltd., Regency-street, Westminster, S.W, an d E. G. Buck, Furnival-street, E.C.

PRINTERS' PENSION CORPORATION. — The annual dinner of the Printers' Pension and Almshouse Corporation was held last Thursday evening at the Connaught Rooms, W., when Mr. John Walter, chairman of the *Times* Printing and Publishing Company, presided. In proposing the toast of the "Continued Prosperity of the Printers' Pension, Almshouses, and Orphan Asylum Corporation," Mr. Walter said that those who had to do with the intellectual or imaginative side of newspapers had always been able to excite the interest of the public in an extraordinary degree far beyond that of the printer. There had been a complete revolution not only in the condition of printing works, but in the printer himself. He appealed to them to support the claims of a highly-organised, a highly-specialised, and a strenuous class of men. Now they found a large staff of men in the newspaper offices in well-ventilated rooms, doing the most delicate work, and amidst the most complicated kind of machinery attaining the highest speed with the utmost economy under the greatest pressure, and any slackness or ill-will meant the most disastrous consequences—missing the mail, which meant that thousands of readers next day would be thirsting for the blood of the managing printer. Anyone realising these facts should show their appreciation of a corporation which this year was assisting 530 printers and printers' widows and 45 inmates of their almshouses. It was announced that the subscription list amounted to £6,321.

THE annual conference of the South Wales Group of the Typographical Association was held at the White Hart Hotel, Tonypandy. Delegates were present from Aberdare, Cardiff, Llanelly, Merthyr, Newport, Pontypridd, Rhondda, Swansea, Neath and Carmarthen, and various matters affecting the district members were fully discussed in private session, the Press not being admitted to the conference. In the evening a dinner was held under the chairmanship of Councillor J. D. Williams, at which Mr. E. Edwards, the Tonypandy delegate, submitted the toast of "The Employers" in a most cordial manner. Being personally acquainted with a few of them for many years, he said it was exceedingly pleasing to him to see so many present that evening. It proved to him a sufficient criterion of the friendly relations prevailing between employer and employed. The feeling existing between them was of the warmest, and it was his wish that it might continue so. A very enjoyable programme of music was contributed during the evening.

IN the City of London Court, on Monday, a claim was made by Percy C. Sexton, printer's layer-on, 14 years of age, 25, Dendy-street, Balham, against the Governor and Company of the Bank of England, to recover compensation for an accident which he met with on March 18th in the Bank's printing department, when he slipped on a roller and fell on a spike. He suffered internal injuries and had to be operated upon at the Bolingbroke Hospital. He had been paid 9s. a week since the accident, and it was now agreed that he should be paid £10 in full settlement and 11 guineas costs.

"INCOME-TAX SIMPLIFIED" is the title of a shilling book published by Messrs. Simpkin, Marshall and Co., London, and written by Messrs. Arthur Fieldhouse and E. Ewart Fieldhouse, B.A., LL.B. The authors have endeavoured to present to the business man and the student of accountancy the essential points of the subject in a clear and concise manner, and have given various examples of forms filled in for taxation purposes. What is and what is not taxable income is pointed out, and the book is one that should be of the greatest service to all who have the worry of filling up the annual schedules of the Income-Tax Commissioners.

AT the Guildhall, last Thursday, before Alderman Sir Charles Johnson, Messrs. A. Siegle and Son, printers, of Brown's-buildings, St. Mary-axe, were summoned at the instance of Walter Minnier and seven other compositors for three days' wages. It was admitted by defendants that the men worked, but their claim was disputed on the ground that they left without notice. It appeared that the union having called Messrs. Siegle's men out, the firm, on May 5th, engaged Minnier and others, who were non-unionists. The men commenced work on May 13th, and continued to work up to six o'clock on the evening of the 15th, when they all withdrew, the union having prevailed on them to join. They followed this up with a demand for three days' wages, which, however, the defendants declined to pay. It was argued by Minnier that the custom of the trade was that inside a fortnight either side could terminate an engagement at once, but after that there must be a fortnight's notice on either side. Mr. Tomlinson, who engaged Minnier and his companions as non-unionists, however, said they were all guaranteed at least a fortnight's work, and each had the whole matter fully explained to him. The Alderman said he believed Mr. Tomlinson's account to be true, and that Minnier broke the agreement and was not entitled to recover. He added that he did not in any way dispute the custom of the trade.

ON June 10th will be published Mr. Archibald Marshall's new novel, which continues the story of the Clintons of Kencote, who are already familiar to readers of Mr. Marshall's stories. This tale, "The Honour of the Clintons," which is the only new full-length novel by this author to be published this year, shows the Squire of Kencote in the face of a threatened family disaster, and tells also the love stories of the Clinton twins, Joan and Nancy, now grown to womanhood. The publishers, Messrs. Stanley Paul and Co., have great confidence in the story, which returns to the style of "Exton Manor," and Mr. Marshall's earlier novels. A new story by Miss Dolf Wyllarde, the author of that very successful novel, "The Career of Beauty Darling" (now in its eighth edition at 6s.), is now in the press, and will be published during the holiday season. The new book deals with the problem of a wife's duty to her husband when he is serving his country in climates which would be disastrous to her health and to that of her baby. The title of the story, which will be published by Stanley Paul and Co., is "Youth will be Served." "Defiant Diana" is the title of Miss E. Everett-Green's latest novel, which tells how the four orphaned children of a country squire are left to clear themselves of a heavy family mortgage. The book will be published this month by Stanley Paul and Co. A new novel by Dorothea Gerard is announced by the same firm. This is entitled "The Unworthy Pact," and is the story of a young man's struggle between wealth and the call of his religion.

A PARTY of a dozen Swedish editors arrived in London on Monday as the guests of the Swedish colony in this country. The party includes:—Th. Blanche, *Aftonblad*, Stockholm; Hjalmar Branting, M.P., *Social Demokraten*, Stockholm; Hjalmar Cassel, *Svenska Dagblad*, Stockholm; K. Harje, *Sydsvenska Dagbladet*, Malmo; H. Hedlund, *Handels Tidning*, Gothenburg; M. Hellberg, M.P., *Tidning*, Karlstad; K. Hildebrand, M.P., *Dagblad*, Stockholm; A. Karlgren, *Dagens Nyheter*, Stockholm; L. Ljunglund, *Nya Dagligt Allehanda*, Stockholm; E. B. Rinman, *Tidningen*, Stockholm; G. Sjoberg, *Aftonblad*, Gothenburg; and Erik Sundin, *Tidningar*, Norrkoping.

A LEEDS SHOW-ROOM.—It is interesting to note that Messrs. George Mann and Co., Ltd., have opened a show-room at 84, Albion-street, Leeds, and have put there for show purposes one of their Patent Double Demy Rotary Offset Machines, which can be seen running and actually printing at any time by appointment. In addition to this, a unique exhibit is in the form of a demy size Direct Rotary Litho Machine. This is, we believe, the first attempt to put a rotary machine of such small dimensions on the market, and owing to it being specially designed to change in less time than a flat-bed of similar size, it should prove an exceedingly useful addition to any lithographic establishment. Further, the latest auxiliary machine for the offset branch of the lithographic trade is on show, viz., an Offset Proving and Reversing Press. Other exhibits will be introduced from time to time, and altogether this show-room is well worth a visit from any printer within reasonable distance of Leeds.

Mr. F. E. Giles.

It is with regret we announce the death of the esteemed representative of Messrs. Winstone and Sons, whose affliction of blindness, in addition to a most lovable nature, had endeared him, as "Fred" E. Giles, to a very large circle of friends. Of a most cheerful disposition and endowed with generous impulses "Fred" was always a welcomed guest in printerdom, and it is doubtful if a better known man could have been found amongst printers and their representatives. It came as a shock to learn that Mr. Giles was laid up, as it was recognised that it must be indeed a

Mr. F. E. Giles.

serious complaint that could confine such a merry heart within the four walls of a house. It appeared that he contracted a chill; this led to serious complications with the inevitable result. He was cheerful and optimistic up to the end, and leaves a widow behind who was devotedly attached to him, as indeed, everyone knew he was to her. Mr. Fred Allen and Mr. Ralph Manuel (two of his oldest companions) represented the firm at the funeral, whilst nearly every representative in the branch of trade of which Mr. Giles was a member, followed him to his last resting place.

THE death occurred on Monday morning last, at his Kent home, Ashford, of the Poet Laureate, Mr. Alfred Austin. Mr. Austin was born in 1835, at Headingley, near Leeds. He was educated at Stonyhurst College and London University. In 1857 he was called to the Bar, but after three years at assizes and sessions in the West Riding he turned to the quieter life of a *littérateur*. He was appointed Poet Laureate by Lord Salisbury in 1896.

The Master Printers' Conference.

Meetings of the Federation at Liverpool.

Liverpool was the city selected this year for the honour of a visit from the Federation of Master Printers and Allied Trades of Great Britain and Ireland, and on Friday evening last members from all parts of the country were welcomed at the Exchange Hotel, by the president, Colonel Wright Bemrose, of Derby.

On Saturday Council meetings were held, and river cruises helped to the enjoyment of the members. On Sunday evening a sacred concert was held in the hall of the Exchange Hotel, and there was a large attendance of members and their lady friends. The artistes including Black's Orchestra, Madame N. O. Bell as vocalist, and Mr. P. Jordan as solo and accompanying violinist, the pianoforte accompanist being Mr. H. G. Curtis.

On Monday the annual meeting of the Federation was held, when Colonel W. Wright Bemrose, in reviewing the past year, referred to the costing campaign to induce all master printers to adopt a uniform system of costing. He said that the system had led to better relationship between the various firms and an increasing knowledge of each other. Before long it would lead them to discard the bugbear of getting orders at any price and would result in their only undertaking work which would give a fair return.

The report of the Federation stated that the result of the Scottish dispute had exemplified the advantages of association and united action. The newly formed Scottish Alliance had amply vindicated its institution, and under it a new era in the relations between employers and employed in Scotland and a spell of freedom from disturbances of trade were anticipated. In a reference to the Trades Disputes Act the report continued:—"The legal interpretation of the Trades Disputes Act, obtained through the public-spirited action of Messrs. Vacher, supported by the London Association, is of significance to the printing trade, and should lead to the amendment of an Act which, in the words of one of the eminent judges who decided on the case, gives licence to the trade unions to inflict loss and misery on all or any of His Majesty's subjects. The Council will lose no opportunity of furthering the amendment of the Act, and have already been represented on an important deputation which urged this to the Government."

At a Cost Congress held in the afternoon Mr. R. A. Austen-Leigh read his paper on the advantages of a Cost System, which, he said, would show that from a very small proportion of jobs they got an extremely profitable price, and that from a great many jobs they got an exceedingly inadequate price. They could not blame the buyer of printing, for when prices varied as much as 100 per cent. for the same job, what could they expect but that the buyer would go round fishing for the lowest cost? Besides standardising costs, they desired standardising customs regarding keeping type standing and similar matters.

Mr. W. Howard Hazell followed with his exposition of the cost-finding system adopted at the first British Printers' Cost Congress in February last, and Mr. Harry Cooke contributed a paper on recovering the cost of machine units. Mr. H. Raglan Caldwell spoke on the necessity of a cost system in every printing office.

Mr. G. E. Stembridge was elected president of the Federation for the ensuing year, and it was decided to hold the next annual meeting in Sheffield.

The annual dinner of the Federation was held in the evening, under the presidency of Colonel Wright Bemrose.

The toast of "The Federation of Master Printers" was given by Sir Edward Russell, who spoke on behalf of the Liverpool community at large in welcoming their institution to the city, and recognising its great utility, and wishing it all the success which its efforts deserved. Those efforts were of a distinct and definite kind. They were all familiar with the anxiety and exigencies which were suggested by the relations of employers and employed, and the relations of those who served the public and the public they served. He had come to the conclusion that in differences between labour and capital, whatever their origin and nature, more harm was done and more difficulties arose from temper, maladroitness, from silence, from unwillingness to confer, from extremely bad manners while conferring, than any which arose from the inherent circumstances of the differences. The subject which had lately demanded their attention was one upon which he, not a man of business, should not presume to speak, but all could appreciate the enormous importance of the subject of costing. It was quite evident that if a matter of that vast importance was left to chance, was left to be a prey, perhaps, to intrigue, perhaps to ungenerous rivalry or other circumstances equally to be regretted, true prosperity and righteous prosperity could not exist in a trade.

Colonel Bemrose, in reply, thanked the Costing Committee for their labours, and, whatever the result he hoped the trade would maintain a better and more dignified position. The question of capital and labour was becoming more important. They recognised the increasing strength of trade unionism, to which, in itself, they made no objection, but they were getting a little anxious as to whether it was going to be used wisely and well. Had not the time come when questions of this nature might be approached by capital and labour side by side? It would be a great thing for the printers if they could lead the way in formulating some way by which this idea could be brought to fruition.

Mr. J. Maclehose, president of the Scottish Alliance, also responded.

The toast of "The Visitors" was proposed by Mr. W. N. Turner, and acknowledged by Mr. W. Howard Hazell, and the health of the chairman was pledged on the initiative of Mr. Edward Totty.

On Wednesday there were excursions to the Isle of Man, North Wales and Chester, which were well attended by the members.

Printing Company's Commission DISPUTE.

In the City of London Court, on Monday and Tuesday, before his Honour Judge Lumley Smith, K.C., a claim was made by Mr. George A. Cartwright, traveller in the printing trade, 15, Oxford-road, Kilburn, against the Globe Printing Co., Ltd., Scrutton-street, Finsbury, E.C., to recover the sum of £42 18s. 8d. for commission due for printing orders obtained. The defendants counterclaimed for £25 15s. commission overdrawn. Mr. Doughty and Mr. Monier-Williams appeared for the plaintiff, and Mr. Forbes for the defendants. Mr. Doughty explained that the plaintiff was claiming commissions for services rendered from January 1st to the end of August of last year at 5 per cent. up to June 25th and then 2½ per cent. By mistake it was taken at first at 2½ per cent. for the whole period. Plaintiff entered the defendants' service as bookkeeper in 1909. He had previously been in the printing business on his own account. Shortly after he entered the service, having several old customers who were willing to give him orders, he saw Mr. Fosh, defendants' managing director, and asked him if it would be to his advantage if he introduced customers to the firm. Mr. Fosh said he would be pleased to give him 5 per cent. on any orders introduced by him. Plaintiff did his bookkeeping in the earlier part of the day, and called on his customers and new ones too. In that way he was able to bring business to the firm, and he had been paid his commission from time to time until now. Plaintiff made what was said to be a bad debt in 1911. His commission accounts were passed by Mr. Fosh. Plaintiff's salary was increased as bookkeeper to £3 per week by various instalments and he was encouraged to go out travelling as much as possible, because he brought a good deal of work to the firm. In June, 1912, a fresh agreement was entered into that he should give up being a bookkeeper and devote the whole of his time to travelling and be paid £4 a week salary, and instead of 5 per cent. commission 2½ per cent. Then the defendants said that although the turnover was larger, the profit was smaller, and plaintiff must submit to a deduction. His salary was reduced to £3 a week and 2½ per cent. commission, and soon after—a month later—he left. He now claimed the commission payable. Mr. Ernest Fosh, defendant's managing director, said the arrangement which he made with the plaintiff was that he was to be paid 10 per cent. commission in lieu of the salary basis, and even on that basis plaintiff had been overpaid £25 15s. It was well known that in the printing trade they always had to allow 10 per cent. as the cost of a traveller in getting orders. He regarded the plaintiff's continued persistent claims for commission as impudence. Judge Lumley Smith, K.C., found for the defendants on the claim and counterclaim for £25 15s. with costs.

BEFORE a Divisional Court of the King's Bench, last week, Mr. F. E. Smith, K.C., M.P., moved for a *rule nisi* in consequence of alleged contempt of court by the *Pall Mall Gazette* and the *Globe*, in connection with paragraphs regarding the proceedings against Mr. Godfrey Isaacs and others. The Court granted the rule asked for.

Then and Now.

SOME interesting remarks were made, the other evening, by Mr. John Walter, of the *Times*, at the annual dinner of the Printers' Pension Corporation. In the course of his speech in proposing the toast of the evening Mr. Walter contrasted the working conditions of the printer of a few decades ago with those of the present day. In 1828 "the pay of a compositor on a morning paper was 46s. and on an evening paper 43s. 6d. for their services during a week's labour, and that during hours when no other artisan was called to business—during the whole of the night—doomed, moreover, to work amidst the smoke of oil and candles and the other stenches of a printing office." Another gentleman talked of "the injury to the eyesight, wasting of the legs, and enfeeblement of mind and body through the badly-ventilated and generally unhealthy rooms and the offensive operations they had to perform. Again, they were told that printers were peculiarly liable to pulmonary disease, hernia, failure of sight, and paralysis of the hand. That was not a very exhilarating picture of the printer and his work, and they could well imagine that, if his conditions were as wretched as that, the public might have been content to pity him from a distance, without any desire for a closer acquaintance." "Since those days," said Mr. Walter, "a complete revolution had taken place, not only in the conditions in which the printer worked but in the work itself. He was there not to ask for their pity on behalf of an ill-used and down-trodden profession, but for their intelligent sympathy and interest for a class of men highly organised, highly specialised, and doing strenuous and exacting work of a very important, responsible, and complicated kind. The printer had to work at night and get his rest in the daytime, and he doubted whether there was any other profession where a man had to show himself at the top of his form six days a week throughout the year." Certainly the conditions under which printers work nowadays are heavenly when compared with those of 40 or 50 years ago, but with the "speeding-up" methods of the present day the mental strain is much greater, and the task of the printer, whether in a newspaper or other office still tells upon his health, although perhaps more in the form of nervous troubles, so that the existence of such an institution as the Pension Corporation is extremely necessary, and it well deserves the support of the whole trade.

* * *

The Celluloid Bill.

WE have already referred in our columns to the provisions of the City of London (Celluloid Regulations) Bill, by which it was sought to introduce special legislation that would bring in a system of inspection under which every seller or manufacturer of celluloid articles in the City of London would be harassed and worried, besides having to take out and pay for a license. Such a measure would have pressed hardly on stationers, fancy goods dealers and others who deal in Christmas cards and souvenir goods into the manufacture of which celluloid enters in a more or less degree. It is therefore a pleasure to record the proceedings in the House of Commons, the other evening, when the Bill came up for second reading, Mr. Baird moving its rejection, which he said he regarded as panicky legislation that would seriously hamper an important industry, but the departmental committee which was appointed after the Moor-lane fire last July was still investigating the subject, and Parliament should await the report of that committee before legislating. Sir Croydon Marks seconded the amendment, and urged that the regulation of this industry should be based upon the results of full expert investigation, and should apply to the whole country, not merely to the City of London. It seemed to him the city fathers had gone mad over the matter. Mr. Morton, speaking in favour of the Bill, stated that the object of the City Corporation was to protect the workers in what was admittedly a dangerous trade. He pointed out that several serious fires from celluloid had occurred in recent years in the City, including one in 1902 in Queen Victoria-street, when ten lives were loss, and the Moor-lane fire, 1912, when nine lives were lost. This showed ample reason for this Bill. On a division the motion for rejection was carried by 127 to 47. Such a result was almost expected, as there was an intense opposition to the measure, petitions against it being presented by the London Chamber of Commerce, the South Eastern and Chatham Railway Co., the Great Eastern Railway Co., the Port of London Authority, the Association of Public Wharfingers, the Incorporated Association of Kinematograph Manufacturers and the British Xylonite Co., Ltd., the Sheffield Cutlery Manufacturers' Association, and the Ironmongers' Federated Association.

The Fencing of Machinery.

EMPLOYERS in the printing and allied trades should be interested in the Home Office report on the fencing of machinery, and the prevention of accidents, which was issued on Saturday. Although it refers, as a beginning, to woollen and worsted mills, there is no doubt that other trades will be dealt with in a similar manner, and the suggestions made by the Superintendent Inspector of Factories for the North-Eastern Division, would apply

Digitized by Google

to any factory or workshop where machinery is used in turning out the work. Several conferences on the subject were held and were attended by representatives of various associations, chambers of commerce, and trade unions, who were interested, as well as district inspectors. Among notes of agreements arrived at, it is stated that on new machinery all projecting set-screws on continuously revolving parts shall either be countersunk or otherwise efficiently protected, and projecting set-screws on existing machinery shall be fenced unless safe by position. Heavy overhead main driving belts shall be guarded underneath in all cases where there is liability of persons having to pass under them. The fencing for all toothed wheels shall, as far as practicable, completely surround the wheel. All present were of opinion that it was most desirable that women and girls working among machinery should have their hair put up, or otherwise confined in a net, and agreed to use their best endeavours to see that this was done. All firms are to be urged to keep a supply of sterilised dressings. Cleaning of machinery in motion was considered by all to be a dangerous practice, and should be avoided. Periodical examination of machinery was recommended. The Superintendent Inspector states that in his opinion the one agreement of all others which would be most beneficial, if properly carried out, is that of the periodical examination of machinery. In his experience, he found that fencing had been provided in most cases, but unfortunately it was not always maintained. It was obvious that if guards for machinery were provided, it was the intention of those providing them that they should be kept in position, and if periodical examinations were made by some person told off to do this, and defects brought at once to the notice of the managers, in course of time it would be found that the fencing was maintained far more efficiently. It was resolved that the representatives and others should meet again in or about March, 1914, to ascertain what had been the result of the Conference, and the Inspector proposes to have statistics kept of the accidents occurring on those parts of the machines which it was agreed should be fenced.

IN the case in which Lewis Silver, a Mile-end youth, aged sixteen, sued Mr. Alfred Pearce, a picture-poster artist, for the £50 prize awarded by the International Horse Show, at Olympia, Judge Woodfall, on Monday, at Westminster County Court, gave judgment for Silver for £30 and costs.

IF THE MIEHLE WAS NOT SOMETHING MORE THAN A TWO-REVOLUTION PRESS IT WOULD NEVER HAVE REACHED THE PROUD POSITION IT HOLDS TO-DAY IN THE ESTIMATION OF EVERY PRACTICAL PRINTER

It is because it is *the* two-revolution press that the trade buys it.

Design, material, workmanship- all combine to make and keep it the premier machine.

It is built at the Broadheath Works—in itself a guarantee of efficiency.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, June 4th, 1913.

THE ease in the money market came to an end on Friday, when there was a heavy displacement of cash and a stimulated demand. Rates stiffened and a small sum was borrowed from the Bank of England at 5 per cent. On Monday there was quite a scramble for money, but dividend disbursements had the effect on the following day of increasing the supply, and with a much lessened demand there was more than enough to go round. The discount market has been unsettled, owing to the continuance of the German demand for gold. Gold movements have been light this week, and the net influx to date is £5,000. Stock markets have been more or less depressed under the influence of the Balkan War. The tone is uncertain, and Consols are weak at the lower quotations of 73¾ to 73⅞ for money, and 74 to 74⅛ for the account.

The opening of the new Account in the miscellaneous industrial market last week brought no improvement in general conditions, and it has since continued idle and depressed. In the section relating to paper and print, business has been very restricted, and the only movement in our list of shares is a fall of ⅛ in Amalgamated Press Ord. to 6½—6¾. Business has been done during the past seven days in Associated Newspapers Pref. at acc. 20s. and 20s.; in Cassell and Co. at 95s. and 92s. 6d.; in *Country Life* Pref. at acc. 15s. and 16s. 10½d.; in John Dickinson and Co. 2nd Cum. Pref. at 100¾; in *Gentlewoman* Pref. at 8s. 6d.; in *Illustrated London News* and *Sketch* Ord. at acc. 3s. 6d., in the Cum. Pref. at acc. 13s. 6d. and in the Deb. at acc. 63; in International Linotype at 78½ and 77; in Edward Lloyd Pref. at acc. 21s. 6d.; in Mansell, Hunt, Catty and Co. Ord. at acc. 37s. 6d.; in Spicer Bros. Pref. at 9xd.; in Waterlow Bros. and Layton Pref. at acc. 7½; in Waterlow and Sons Pref. at 11 11/16; and in Weldons Ord. at acc. 30s. and 31s. 6d., and in the Pref. at 20s.

DIVIDENDS AND REPORTS.

"LONDON OPINION."—Final dividend of 200 per cent. per annum for the half-year (making 200 per cent. for the year), together with a bonus of 15s. per share, carrying forward £8,840.

NEW COMPANIES.

F. W. ARTHUR, LTD.—Registered on May 17th, with a capital of £750, in £1 shares, to carry on the business of typewriter agents, teachers of shorthand and typewriting, office equipment specialists, etc. The subscribers are F. W. Arthur, H. R. Brabrook and W. M. Guthrie. Private company. The number of directors is not to be more than three; the first are F. W. Arthur, H. R. Brabrook and W. M. Guthrie. Qualification one share. Registered office, 168a, St. Vincent-street, Glasgow.

LLOYD'S GREATER BRITAIN PUBLISHING CO., LTD.—Particulars filed May 24th. Capital £6,000, in £1 shares (1,500 preference). Registered in Natal on January 13th, 1912. Directors, J. S. Wylie, R. Lloyd and H. G. Mackcurtan, all of Durban, Natal, and L. Delaney, Rio de Janeiro. British address, Thames House, Queen-street-place, E.C., where H. E. Clarke is authorised to accept service.

MINCHIN PATENT ENVELOPE CO., LTD.—Registered on May 23rd, with a capital of £3,000, in £1 shares, to carry on the business of wholesale, retail, export and manufacturing stationers, papermakers, printers, etc., to acquire from W. A. Minchin Patent No. 11,939. The subscribers are W. A. Minchin and C. Lawrence. Private company. The first directors are W. A. Minchin (managing director with a salary of £250) and C. Lawrence (acting director).

PLEYDELL PRINTING PRESS, LTD.—Registered on May 24th, with a capital of £1,000, in £1 shares, to take over the business of printers, lithographers, manufacturing and wholesale stationers, account book makers and designers, carried on by E. E. Moore and G. Brooks. The subscribers are E. E. Moore and R. G. Campbell. Private company. The number of directors is not to be less than two nor more than five; the first are E. E. Moore and G. Brooks. Registered office, 95, Fetter-lane, Fleet-street, E.C.

HEALTH AND VIM, LTD.—Registered on May 29th, with a capital of £100, in 1s. shares, to take over the business of publishers of the magazine *Health and Vim*, manufacturers of surgical and medical appliances, and chemists and druggists, etc., carried on by A. D. Light and W. Light, at 73, Queen Victoria-street, E.C. The subscribers are W. Light and A. D. Light. Private company. The number of directors is not to be less than two nor more than five; the first are W. Light and A. D. Light. Registered office, 73, Queen Victoria-street, E.C.

VERONIQUE STATIONERY CO., LTD.—Registered on May 28th, with a capital of £2,000, in £1 shares, to carry on the business of stationers, printers, lithographers, stereotypers, envelope manufacturers, etc. The subscribers are F. A. Powell and H. B. Charles. Private company. The number of directors is not to be less than two nor more than seven; the subscribers are to appoint the first.

MAYFAIR FASHIONS CO., LTD.—Registered on May 26th, with a capital of £100, in £1 shares, to carry on the business of printers, photo-lithographers, publishers of fashion books and trade papers, etc., and to adopt agreements with A. Nebeling and E. W. Bell. The subscribers are A. Nebeling and E. W. Bell. Private company. The number of directors is not to be less than two nor more than seven; the first are A. Nebeling (chairman) and E. W. Bell. Registered office, 203, Oxford-street, W.

HAMPTONS, LTD.—Registered on May 27th, with a capital of £20,000, in £1 shares, to take over the business of printers and stationers carried on at 12, 13 and 19, Cursitor-street, E.C., as "Hampton and Co.," and to adopt an agreement with T. Reeks. The subscribers are T. Reeks and R. H. Rockcliff. Private company. The number of directors is not to be less than two nor more than five; the first are T. Reeks (permanent governing director, special qualification, 2,000 shares) and R. H. Rockcliff. Registered office, 12, Cursitor-street, E.C.

C. SMITH AND SON, LTD.—Registered on May 27th, with a capital of £3,500, in £1 shares, to take over the business of a geographical, educational and general publisher, map, plan, chart and globe manufacturer, map engraver, scientific instrument maker, metal worker and manufacturer of school appliances, carried on by G. Smith at Atlas Works, Pump Pail, Croydon, as "C. Smith and Son." The subscribers are A. V. Smith and H. M. Smith. Private company. The first directors are G. Smith, H. M. Smith and A. V. Smith. Qualification, 20 shares. Registered office, 8, Laurence-pountney-hill, E.C.

FURLEY SYNDICATE, LTD.—Registered on May 23rd, with a capital of £2,000, in 1s. shares, to acquire an option to acquire benefit of an agreement relating to an invention for treating paper so as to strengthen it and render it waterproof and greaseproof, and to adopt an agreement with A. J. Cleveland. The subscribers are L. E. Tucker and C. H. Paterson. Private company. Table "A" mainly applies.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

WEST LONDON OBSERVER, LTD.—Debenture dated May 15th, 1913, to secure £1,500. charged on the company's undertaking and property, present and future, including uncalled capital. Holder: F. Barratt, Mayes-road, Wood-green, N.

ROBERTS AND WRATE, LTD.—A memorandum of satisfaction in full on May 9th, 1913, of debenture dated February 3rd, 1905, securing £300, has been filed.

SPORTS AND SPORTSMEN, LTD.—Particulars of £2,500 debentures, created by resolutions of May 15th and 20th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

MORTON BROTHERS (PRINTERS), LTD.—Particulars of £150 debentures, created May 9th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

OFFICE APPLIANCE CO., LTD.—Issue on May 15th, 1913, of £125 debentures, part of a series of which particulars have already been filed.

RICHARDSON (PUBLISHERS), LTD.—Particulars of £800 debentures, created April 15th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

DEAN ENGRAVING CO., LTD.—Particulars of £1,000 debentures, created May 9th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £450. Property charged—the company's property, present and future, including uncalled capital. No trustees.

COMPANY NOTICES.

WEEKLY RECORDS, Ltd.

Notice is given that a meeting of the creditors of the company will be held at Whitgift-chambers, Croydon, on June 11th.

PRINTING PRESS IMPROVEMENTS, Ltd.

At a meeting of the company, held at Manchester, on May 23rd, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and at the same meeting Sidney Williams, of Manchester, was appointed liquidator for the purposes of such winding-up."

Digitized by Google

DAILY HERALD PRINTING and PUBLISHING SOCIETY, Ltd.

Notice is given, that a petition for the winding-up of the company was, on May 28th, presented to the Court by the Victoria House Printing Co., Ltd., Tudor-street, E.C., creditors of the company; and that the said petition is directed to be heard before the Court on June 10th.

COMMERCIAL INTELLIGENCE.

The DAILY EXPRESS, Ltd. Liquidation Meetings.

The statutory first meetings of the creditors and shareholders of this company were held last week at the Board of Trade Offices, Carey-street, W.C., Mr. W. J. Warley, official receiver, presiding. Full particulars of the case appeared in our last issue. It was pointed out that these liquidation proceedings were merely a necessary formality, and that the company had nothing to do with the existing company now publishing the newspaper of that name. The chairman reported that claims amounting to £31,639 had been made by creditors. On the motion of Mr. A. J. Duncan (Stibbart, Gibson and Co.), representing Lord Joicey, a resolution was passed at both meetings for the liquidation to be left in the hands of the official receiver.

Re CHAS. AUGUSTUS NOAD, Law Stationer.

A sitting of the London Bankruptcy Court was held on May 30th, before Mr. Registrar Brougham, for the public examination of this debtor, who carried on business at 59, Carey-street, W.C., and applied to pass upon accounts showing liabilities £189 19s. 11d. and assets valued at £45 4s. 5d. Questioned by Mr. J. B. Knight, official receiver, the debtor stated that a previous failure was reported against him in August, 1895, when trading as a law stationer at the above address. A dividend of 2s. 4d. in the £ was then paid on liabilities amounting to £365 7s. 11d., and his discharge was suspended for four years from December 13th, 1895. He continued the business as before and attributed his present failure and insolvency to the decline of his business during the last six years, and to lack of capital. The examination was concluded.

Re WILLIAM ANDERSON BELL, Stationer and Printer.

The official receiver for the Southern District has now issued particulars under this failure re Wm. Anderson Bell, of 40, Station-road, Redhill, and 19, Hatchlands-road, Redhill, stationer and printer, against whom a receiving order was made on May 3rd last, on debtor's own petition. The statement of affairs disclosed gross liabilities of £2,134 3s. 5d., of which £1,582 0s. 8d. was expected to rank, there being a creditor for £1,200 holding securities for £500. The net assets were returned at £465 18s. 9d., thus showing a deficiency of £1,116 1s. 11d. The debtor alleged his failure to have been caused through:—"Want of capital and insufficient profits on my business to pay expenses and the maintenance of myself and family." The debtor, who is 45 years of age, states that up to June, 1908, he had been for seven years manager to a firm of printers at Redhill, and at that date he left them and purchased a printing and stationery business at 40, Station-road, Redhill, including the lease, goodwill and stock in trade, for a sum of £300. He had no capital, and borrowed from friends a sum of £450 to purchase and carry on his business. He took over under a hire-purchase agreement all the printing plant, trade fixtures and fittings which were then on the premises for a period of 6½ years from June 1st, 1908, with the option to purchase at the price of £612 10s. He had never paid anything on account of this sum, nor had the owners pressed him for payment or taken possession. About three years ago he paid off part of his borrowed capital, borrowing for the purpose a sum of £200 from a friend, of which £25 went into his business, and the rest towards paying off his indebtedness. His friend wanted his money repaid, and in April last issued a writ, and obtained judgment against debtor for £200 and costs. On April 29th the sheriff levied execution, and the debtor thereupon filed his petition.

Re HARDING DE F. COX, Printing, etc., Businesses.

The affairs of Mr. Harding de Fonblanque Cox., newspaper proprietor, etc., Jermyn-court, Jermyn-street, and the Garrick Club, W., came before Mr. Registrar Hope recently upon the bankrupt's application for an order of discharge from proceedings instituted in October, 1911. The bankrupt, under the will of his father, who died in November, 1879, became entitled to a share of the income derived from certain real estate and certain printing and publishing businesses carried on in London. He attributed his failure, among other causes to losses in connection with various company and theatrical ventures and to heavy interest charges. The liabilities to rank for dividend are estimated by Mr. Ernest James, the trustee, to amount to £97,525; the assets have realised £5,501, and a first and final dividend of 1s. 0½d. in the £ has been paid. Mr. Hansell, on behalf of the bankrupt, asked for an adjournment of the application on the ground that a substantial sum would be brought into Court for the benefit of the creditors, and, by consent of all parties, the hearing was adjourned till June 18th.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

WEST, W. H., HARVEY, J. E., and York, W. G., trading as W. H. West and Co., at White Gate, Nottingham-road, Loughborough, printers and box manufacturers. Debts by W. H. West and W. G York, who will in future carry on the business under the same style. May 31st.

A Visit to the Home
OF
"BIBBY'S ANNUAL."

On Saturday last members of the Printing Crafts Guild School of Technology, Manchester, journeyed to Liverpool to inspect the model printing office of Messrs. Bibby and Co. They were welcomed by the genial manager, Mr. J. Prescott, and after the party, numbering between forty and fifty, had inspected some of the fine samples of colour work in course of production, Messrs. H. Prescott, deputy manager, G. Watson, overseer of press-room, and P. Ball, deputy overseer, F. Liddiard, overseer composing department, F. W. Booth and J. Parker took them through the imposing building. As a printing establishment the place is a model in respect to heating, lighting, ventilation and cleanliness. Everthing seems to be of the best and latest, and the work carried on in a commercial manner. Their costing system is in use throughout the entire works, and no detail of cost is too unimportant to be noted. In the press-room there are groups of Miehles all turning out the best class of work with the minimum of worry, because the Miehle, wherever installed, always adopts the Scotsman's principle of "never going back," but always doing its work so that when opportunity occurs another Miehle can with safety and satisfaction be introduced. In one portion of the room there is a superb Tandem Miehle doing three-colour work at something like 1,300 per hour, all being automatically fed. On an average it takes a sheet 20 seconds to pass through the three machines, and there are seven sheets in the Tandems at one time. By a system of push buttons arranged at different points the Tandem may be stopped within five seconds should anything require attention. The cross automatic feeder seems to be a great favourite, and those theorists who believe that half-tone work on art paper is apt to get marked or damaged by being rolled around the drum of the feeder should examine the sheets of "Bibby's" productions.

The composing-room is ideal, and there is no opportunity of cobwebs getting located in the minds of the compositors where so much light and air space abound. All jobs used to be set up by hand, but now we find that the Monotype has been installed, and is giving entire satisfaction. This is a good omen, as we always believe that a mechanical composing machine paves the way for more display hand compositors.

In the binding-room are folding, blocking and cutting machines, wire stitchers and perforators. There also is a special department for Christmas card work, having type, machines, Waite die press, and all accessories for executing every detail connected with this speciality.

A Mark Smith bronzer, automatic roller cleaner, a complete stereotyping department, machine tools for graining, planing, facing and routing blocks, and a nickeling tank for facing the stereos. A Tangye gas producer supplies the gas engines which drive the dynamos, and the large switchboard is quite impressive in its record of power being used. Electric lifts for passengers and goods respectively give access to all floors, and the safety swing doors and the ever-present fire appliances ensure the safety of the workpeople. The lavatory accommodation leaves nothing to be desired, whilst the dining-room is spotless and beautifully decorated with plants, etc. From this room one is able to see all round the city and neighbourhood, including New Brighton and Formby. Whilst the party was there the great "Mauretania" made preparations for her journey across the "herring pond," and they decided to watch her load up. The non-stop boat train from London to Liverpool landing stage drew up and the passengers and luggage were quickly got aboard. At five o'clock the great horn sounded for the gangways to be drawn in, and the tugs to get ready for towing her out of the river. Prompt to time the little tug began its work, but shortly afterwards we witnessed the unusual sight of the rope breaking, and the great liner being free placed herself across the river. After a short interval she was again roped to and the two tugs pulled her round with head to the Bar, when she gently glided from view on her New York journey.

To revert to our visit we ascended to the playground on the top of the building where cricket and other games are played in season. Every comfort seems to be provided for the workpeople, and many of the visitors present wished for such salubrious surroundings in the establishment where they are employed.

Having feasted our eyes on print and commerce, our President, Mr. R. B. Fishenden, moved a hearty vote of thanks to Messrs. Bibby and Co., Mr. J. Prescott, the manager, and those who had made the visit so interesting.

Mr. J. Prescott briefly replied.

Of course, the printing works, although doing business on competitive lines, were built especially for the firm's own productions, and when we find some 280 travellers and 3,000 workpeople being employed night and day, we obtain some idea of the requirements of this great firm and the agricultural community generally.

WEE MACGREEGOR.

The Anglo-German Exhibition
At the Crystal Palace.

On Wednesday next, June 11th, the Rt. Hon. the Lord Mayor of London will officially open at the Crystal Palace, the Anglo-German Exhibition, which although a small one, is of a very important character, for not only does it fill another year of exhibition life in the history of the Crystal Palace, but it also puts forward at a very seasonable time the right hand of fellowship to our German cousins. In spite of innumerable difficulties, the management of this most laudable enterprise has prepared a programme calculated to please all visitors to this historic building, famous from the year 1851.

Every year it becomes an increasingly harder matter to cater for the exacting tastes of the pleasure-seeking public; and the novelties and interests which satisfied our fathers find small place in the attentions of the succeeding generation. Everything, however, follows the whirligig of time, and it is the experience of many, and the testimony of history, that things worthy of consideration and deserving of study frequently move in cycles. Thus the more solid and instructive pleasures and interests of the past may well be looked for to engage the principal attention of the public once again. Few people have any idea of the wonderful treasures that are housed at the Crystal Palace; relics of the past they may be, but at the same time they represent in many cases the finest specimens of Art and inventive genius that our own and other countries have ever produced. The wonderful examples of statuary would in themselves make an exhibition that any group of promoters or directors might feel justly proud of.

It is a common and proverbial fault that we never value anything at its true worth until it has passed beyond our reach and has been irretrievably lost. Such is now the danger with the Crystal Palace and its beautiful grounds. Unless prompt measures are taken to preserve and secure it for the nation, the apathetic public will one day realise that in spite of all warnings and endeavours to obtain their support, they neglected the opportunity of acquiring both an historical building and a valuable site in the environments of a metropolis that could ill afford to lose them.

Visitors to the Anglo-German Exhibition can, on and from June 11th, look forward to a most pleasurable visit to the Crystal Palace. Good music and a most varied programme of in and outdoor attractions and summer sport in all its forms, together with such exciting up-to-date novelties as a balloon race, and a large and select variety of amusements have been arranged.

Anglo-German art will without doubt be one of the principal attractions of this exhibition, and a fine collection of pictures from some of the best known and most distinguished artists of the two countries will be on view. The different styles adopted will be of great interest to those visiting this section. There will also be a fine exhibit of modern sculpture, including 40–50 works of the most striking character.

One of the most novel exhibits, and one that will directly interest our readers, will be seen in the great Canadian building in the Exhibition grounds, will be a wonderful display of the Anglo-German posters, demonstrating the advance made in both countries in this most necessary method of pictorial advertisement. The promoters also are endeavouring to secure the co-operation of a well-known firm (who undertake this most important work) to furnish a live exhibit, and to enable visitors to view the poster in its making through all its varied stages.

It is to be hoped that the general public, who have this year few attractions in or around London, will once again find pleasure in a visit to the Crystal Palace.

"ANSWERS" has this week completed twenty-five years of existence, and publishes a special commemorative number with articles by many eminent men and women.

Printers' Managers and Overseers
ASSOCIATION.
NORTH MIDLANDS CENTRE.

The North Midlands Centre held their annual meeting on Saturday, May 31st, at the Queen's Hotel, Nottingham, when the Council submitted the following report:—

REPORT OF THE COUNCIL FOR 1912-13.

The Council have pleasure in presenting to the members their First Annual Report and Balance Sheet.

The membership is slowly increasing and now stands at 42. In addition to Nottingham, the Centre also includes members from Lincoln, Loughborough, Mansfield and Sutton-in-Ashfield, Notts.

The Balance Sheet shows a munerary balance of £10 6s. 9d. in Bank, which sum is very largely due to the influence of the President, Mr. C. G. Budden, in obtaining for this Centre Sir Jesse Boot's permission to supply the printing and stationery gratuitously, and the Council heartily acknowledge their appreciation of the President's kindness to the Centre during the early stages of its existence. They also wish to place on record the thanks of all the members for this valued help which has done so much to augment the balance in hand.

The Monthly Meetings of the Centre have been well attended, and a great amount of enthusiasm has been displayed at the lectures, etc., held during the past year, and trust the session 1913-14 may be equally successful. The Council desire to thank the lecturers and artistes who have so generously given their services, also Messrs. Plant and Mann for the admirable arrangements they made at the Bohemian Concert. The Sub-Committee appointed to make the arrangements for the Annual Dinner, also call for the Council's highest commendation for the valuable assistance rendered.

DISCUSSION.

After the usual business had been transacted, a discussion was opened by Mr. A. E. Moore (vice-president) on the "Better Education of Apprentices," which brought forward many suggestions and frank expressions of opinion by those present, the discussion being carried on until a late hour, when the President put the "closure" into operation.

It is to be hoped that the suggestions put forward by the various speakers may be noted and used as a basis for a suggested scheme in dealing with the apprentice question in the district.

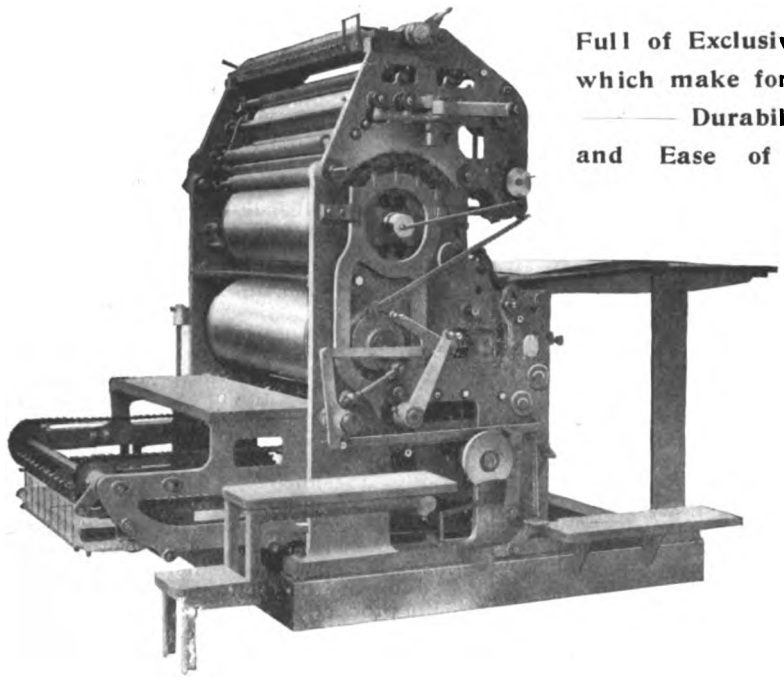
The Council of the North Midlands Centre have every reason to be satisfied with the interest and enthusiasm of their members and friends throughout the season.

A Corporation for Treasurers and Cashiers.

SIR,—I think it would be of considerable interest to those engaged in commercial and financial circles to know of the formation of the Corporation of Treasurers and Cashiers, having as its main objects the provision of a central organisation for treasurers and cashiers and the consolidation and advancement of their interests

It has been felt that, in this age of specialisation, when all professions seek the benefits which are to be derived from combination and community of interests, the most important department of commercial and financial service will be greatly benefited by the institution of an association devoted to the interests of treasurers and cashiers.

The advantages accruing to members are considerable, among which might be mentioned the prestige attaching to membership of this, the only incorporated body of treasurers and cashiers, consequent upon the members having satisfied the council as to their ability and reputation. Further, the recognition of its status by leading companies and firms, the facilities which will be granted to members with regard to the issue of guarantee fidelity bonds, and the watching of members' interests in any future legislative proposals which might affect their position, will be of the utmost benefit to the members.



The gentlemen who comprise the council hold positions in commercial and financial undertakings, and the president is Mr. Richard Burbidge, managing director of Messrs. Harrods Stores, Ltd., so that it will be seen that the utility of this Association has been recognised in a practical manner by the business world.

All information with regard to admission to the Corporation may be obtained from me on application.

Yours, etc.,
F. LODGE ROSSER,
Secretary.

British Colonial Trade.

Foreign Competition.

Acting upon a recommendation of the Advisory Committee on Commercial Intelligence, the Board of Trade has issued a return comprising information with regard to British trade in West Africa, the Straits Settlements, British Guiana, and Bermuda, compiled from particulars supplied by the honorary correspondents of the Commercial Intelligence Branch in those districts. An interesting feature of the report is that which relates to foreign competition, and the recommendations put forward by the correspondents for the improvement of British trade relations are both useful and varied, although they are, in the main, merely reiterations of previous advice.

Writing with respect to the conditions in Southern Nigeria, Mr. C. A. Birtwistle, the Commercial Intelligence Officer for that district, says:—"Whilst the position of the United Kingdom's trade with Nigeria may, on the whole, be considered fairly satisfactory, British suppliers are undoubtedly losing ground in certain classes of goods. Although such loss has been more or less obscured in the general expansion of trade, it is evident that if shipments from the Continent continue to increase as they have done during the last few years, they will, in the course of the next decade, become very formidable indeed, and the United Kingdom will not secure anything like the share of the total trade to which she is entitled."

An encouraging note is struck by Mr. O. Mitchell, the Acting Comptroller of Customs in the Gold Coast Colony, who says: "Taking the import trade of the colony as a whole, there is not the least reason for the British supplier to be dissatisfied with his position. He has held his ground in all his staple commodities, and he has taken the lion's share of all important increases. Of the strength and enterprise of his most formidable rival, the German, who incidentally is the colony's next best customer, he seems fully aware and appreciative. In this lies the hope of the future. For every pound the German has gained in the last three years he has gained seventeen, and there is every reason to believe that, in the future, he will increase rather than lose his advantages."

The complaint of non-informative catalogues comes from Sierra Leone, while in the British Guiana report the sending of fewer catalogues and more commercial travellers is advocated. Mr. Clinton Greig, in his remarks on Gambia's trade, states that the success of foreign competition is principally due to the absence of English firms in the colony, the high freight rates obtaining on British steamers, the inferior foreign goods at cheap prices to suit the purse and taste of the consumers, who are mostly natives, and to the fact that the bulk of the staple product of the colony (ground nut) is taken by France, with the result that commercial relations with that country are considerably facilitated. With regard to the Straits Settlements, it is stated that the Continental articles which compete in the markets of the United Kingdom with British are the same class as meet with success in that market, qualities being, however, inferior to suit Eastern requirements and the pockets of the comparatively poorer populations of Asiatic countries. From Bermuda comes an encouraging report showing that the trade with the United Kingdom increased since 1899 by 47 per cent., that with Canada by 154 per cent. and that with foreign countries by about 20 per cent., but in his summary of the situation the British Colonial Secretary expresses the opinion that the main causes which affect the trade of Bermuda are its geographical position, in close proximity to the markets of the United States, and the comparatively limited and infrequent steamship communication with other countries, and that no considerable development of British trade can be expected until a direct fast service with England has been re-established, leaving for Bermuda at least once a month regularly, or oftener.

"PRINTERS' INK," a monthly magazine devoted to printing and advertising, has been making a collection of clever contents bills. It awards the palm to the *Yorkshire Telegraph and Star* for the cricket bill

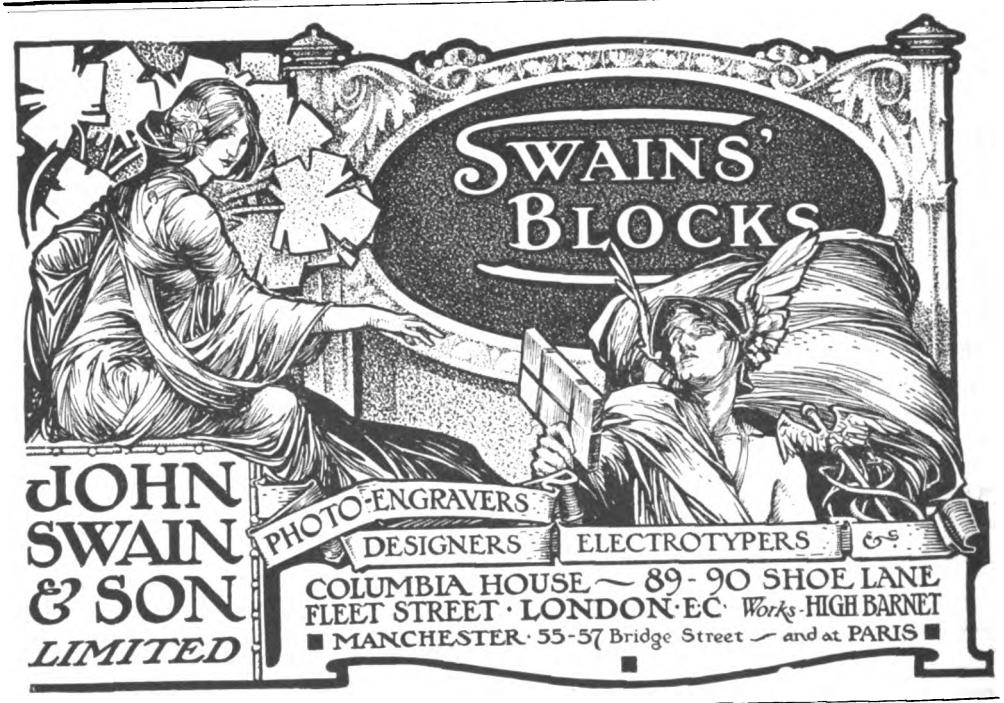
DRAKE &
SEVEN
DUCKS,

which it issued in August, 1911. When Yorkshire was beaten by Leicester on August 12th, 1911, Drake made 17 not out, but seven of the side failed to score. And the *Star*, forsaking sensation and turning to humour, produced what was really a very clever pun.

American Newspaper Publishers' ASSOCIATION.

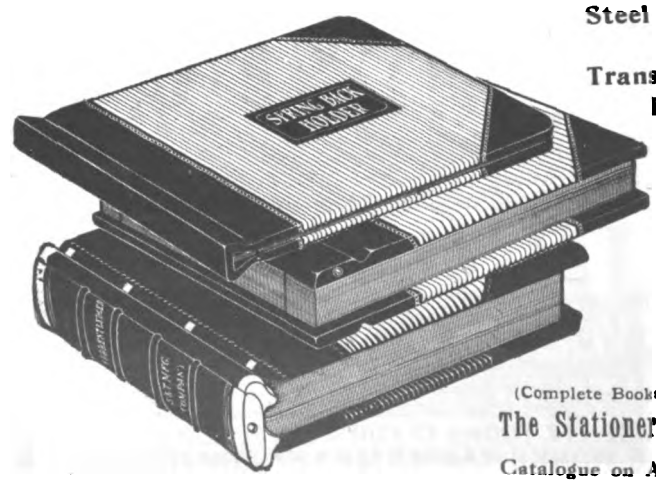
Report of Committee on Paper.

We have received a copy of the report of the Committee on Paper, submitted to the president and board of directors of the American Newspaper Publishers' Association.



It is stated that the immediate broadening of the market for the purchase of news print paper depends upon the passage of the proposed tariff on paper, substantially as reported by the Ways and Means Committee to the House of Representatives. Present indications in Congress point to the complete removal of import duties upon news print paper and upon mechanical wood pulp, as well as the abolition of all duties upon chemical wood pulp, when made from unrestricted wood. The abolition of the duty on lumber should tend to reduce the cost of wood to American papermakers by opening timber holdings that have been held for speculative purposes, and to that extent the removal of the duty on lumber should cheapen the cost of producing paper. This removal of import duties upon a consumption of 1,444,747 tons of news print paper in 1912, costing publishers over sixty-two million dollars, becomes a material item in the operation of newspapers.

More than offsetting an increased consumption of 65,203 tons in 1912 over 1911, or 209 tons per day, there was an addition of 849 tons per day in production during 1912, and a further addition of 675 tons per day planned for 1913. With these additions of 1,515 tons per day and with the American market opened to all the mills of the world without restriction, it would seem obvious that prices will soften. The reduction in duties should stop the schemes of artificial restrictions which have been made by papermakers to sustain weaker mills. It should check the secret quotations and agreed prices and one-year contracts and paper-weight standard established by papermakers. It should permit the natural forces of competition to prevail. Modern equipment and intelligent management should supplant primitive methods and antiquated machines that now clog American paper manufacture. Combinations of bankrupt mills will have difficulty in dictating prices in order that they may save themselves at the expense of the consumers. The reduction should force American papermakers to use the processes and methods which have enabled Germany to overcome adverse conditions in supplying the markets of the world. It is expected that the American papermakers, under normal conditions, will make cheaper paper than can be produced in any other country.



The latest reports indicate a downward tendency of prices. During November, 1912, two offerings of paper, comprising 25,000 tons, were made at $1.86, f.o.b. mill, and 6,000 tons at $1.87, f.o.b. mill. Recent reports have been received of offerings in Chicago at $1.83, f.o.b. mill. Offerings to smaller papers in Illinois indicate f.o.b. mill prices of $1.90. Offerings in New York City have been made on the basis of $1.84 f.o.b. mill.

The imports of news print paper for the calendar year 1912 were 85,593 tons, of which all but 940 tons came from Canada, that country having been favoured by a discrimination of $3.75 per ton under Section 2 of the Recriprocity Law. To offset those importations, the American news print papermakers shipped abroad 55,568 tons, leaving an excess of only 30,025 tons in importations over exportations, or approximately 2 per cent. of the total consumption. Some of this increase in importations is due to the failure of American mills to keep pace with the natural growth, and some of it is due to the arbitrary restriction of production. In 1912, the papermakers made 95 per cent. of their capacity, a restriction of 70,000 tons for the year. At the end of February, 1913, the paper mills had a stock of 37,834 tons of paper at the mills, or a nine-day supply for all the newspapers of the country.

Five hundred and forty thousand one hundred and forty-eight tons of wood pulp, valued at $14,903,215, were brought into the United States in 1912 to enable the American papermakers to supply their home market and to overcome the deficiencies of the domestic wood supply.

The Cleaning of Waste Paper.

In the *Wochenblatt* appears an article by Mr. H. Postl on the sorting and cleaning of waste paper. Apart from the fact that in many places it is difficult to get people to undertake the unpleasant task of sorting waste paper by hand, this kind of sorting is never so well or economically done as when assisted by suitable machinery. Before the waste paper is touched by hand it should be mechanically freed from dust, sand and all kinds of small impurities. This is best done in a hexagonal or octagonal drum 10 to 16 feet long and 4½ to 6 feet in diameter. The drum is constructed after the manner of an old-fashioned rag duster, and is covered with wire netting of 1¾ in. mesh. The papers are dumped through a hopper into the upper end of the drum, which revolves about 30 times per minute, and fall down the incline to the other end whilst being vigorously tossed about inside. The drum, of course, is boxed in, and the dust removed by means of a ventilator. The papers fall out of the delivery end of the drum upon a travelling band, along which the sorters are stationed, removing by hand whatever foreign bodies are visible as the stuff passes along. The best method of reducing the waste papers is by means of the revolving spherical boiler fitted internally with mixing spikes. The paper soaked in these is shovelled direct into the kollergangs, which stand near the boilers. From the kollergangs the pulped material is thrown into a pit, from which an elevator takes it up and feeds it into a second sorting drum, such as is employed in wood pulp mills for sorting the chips of wood before they go to the digesters. This drum has a diameter of 4½ feet and a length of 13 to 16 feet. It is covered with stout wire of a mesh of ½ to ¾ inch. It also has three longitudinal ridges about 8 inches in height, and makes 30 revolutions per minute. The stuff from the kollergangs is continuously fed by the elevator into the end of this drum and is lifted by the longitudinal ridges so that it falls down after reaching a certain height. The ground pulp is small enough to fall through the meshes of the sieve, whilst foreign bodies such as rags, strings, etc., remain in the drum and are discharged at the further end. These drums should be situated near the beating engines so that the sifted stuff can be shovelled into the latter without much trouble. The beaten pulp discharged into the stuff chest may still contain small foreign bodies, such as fruit stones, splinters of wood, etc.

These are best removed by means of an inclined reciprocating strainer such as was formerly employed for screening mechanical wood pulp coming from the grinders. This screen is arranged at the exit from the stuff chest, preferably just above the sand tables. The dilute pulp is directed in a wide shallow stream on to the perforations or slits of the strainer, through which it passes to the sand tables, whilst the foreign bodies and chips are shaken off at the end and are collected in a basket.

Mr. Postl also describes in the *Papier Zeitung* another arrangement, which by employing a dilute caustic soda solution, may be used for pulping printed papers. The pulping arrangement consists of a perforated metal drum which is filled with the papers to be reduced. The drum is slightly immersed in a bath of liquid (water or dilute soda). It is then rotated in one direction, whilst an axial shaft passing through it and furnished with heavy teeth and water sprays is revolved in the reverse direction. As the paper becomes reduced it passes through the perforations in the drum into the resounding bath, leaving foreign matters behind in the drum. In the bath is situated an agitator and a drum washer so that the printer's ink can be washed away. The washed pulp then passes through a reciprocating screen, over sand tables, and through a strainer, into a hollander, and finally to the chest.

ACCORDING to *Kemp's Mercantile Gazette* there was only one failure in the printing and stationery trades of England and Wales for the week ending Friday, May 30th; the corresponding week in 1912 showed three.

Printing Trade Unionism IN BARCELONA.

Ground as they have been for some years between the upper and nether millstones of commercial depression and government oppression, the lot of the Spanish printing trade unionists is by no means a happy one. Most of the time they have to imitate Brer Rabbit, and "lay low and say nuffin," if they would avoid trouble. The Spanish working printer is not, however, without hopes for the future, and the Committee of the Compositors' Syndicate at Barcelona has just issued the following circular for the information of printing trade unionists in other countries:—

"Comrades! Owing to the troubles experienced during the last few years in this district, our Syndicate, like all the labour organisations in Barcelona, has for many months past maintained a discreet silence, but this enforced inactivity has not led to indifference. On the contrary, it has enabled us to prepare for active and energetic movement in the future. The working printers of Barcelona always desire to rank amongst the militants of the working class, and we have profited by our silence and our repose to lay the foundation of a powerful organisation. In the meantime we are affiliating, and work under the legalised title of 'La Union Obrera del Arte de Imprimir.' Under this banner we have federated the majority of the working printers in Barcelona. La Union Obrera has instituted an active propaganda during the last twelve months. Thanks to this, it has lately been able to present to the master printers of the district a new scale for hand composition, which comprises the eight-hours day, the suppression of piece-work, a minimum weekly wage, and the regulation of apprentices and of the output of composing machines. These various betterments form the basis of that improvement of the trade which the Union has been studying during the past year.

"Comrades! We have the satisfaction of rendering you this account of our work, in the hope of seeing it obtain the success which it deserves. We have firmly decided to strive for the triumph of our aspirations, and we ask you to give the greatest possible publicity to this circular, and thus bringing our situation to the knowledge of our brethren in other countries. We also ask you to advise them not to take any notice of offers of employment here that they may receive, nor to come to Barcelona whilst our propaganda is in progress."

The negotiations with the master printers of the city are still going on, but we have not yet heard of any definite result being arrived at. Barcelona, the commercial capital of Spain, with a population of well over half-a-million, has about 210 letterpress printing establishments, and 140 newspapers and other periodical publications.

A Curious Textile Printing Process.

Batik work has been practised from time immemorial by the natives of Java, and consists in producing patterns by means of liquid wax on a bright fabric, paper or the like, which is eventually dyed. Such parts of the fabric as correspond to the pattern having been covered with hot liquid wax, the whole is dipped into a dye-stuff liquid, when the covered portions are unaffected, whereas the remainder is dyed uniformly. After drying, the same fabric (which is now parti-coloured) can again be covered with a pattern which, by the Batik process, is preserved in the former colour, whereas the background takes a darker hue, and the same operation can be repeated several times until the background has become quite dark.

After removing the wax by washing the whole piece of fabric with petrol (gasoline), the various colours are brought out most effectively on the dark background. Wonderful colour effects are thus obtained such as can be ensured by no printing process, the fabric being permeated entirely with colour, which is best appreciated on holding the fabric against the light.

The possibilities of Batik work are by no means so limited as would appear at first sight. The same process can, in fact, be applied to wood stained in several hues (or engraved), as well as to metal dyed or etched by chemicals. Especially beautiful etchings can thus be produced on copper, brass, etc.

The instrument used by the Javanese in applying the wax is some sort of small funnel fixed to a handle, with a fine opening in which the wax is heated over a coal fire. Similar attachments, or else closed reservoirs terminating underneath in a point and small opening, are used in Europe where Batik work has been introduced. In connection with all these devices, the wax must, however, be reheated from time to time (over an alcohol, gas or gasoline flame), and cools rapidly during operation. This lack of uniformity in the temperature of the wax, of course, entails a number of drawbacks. While the liquid wax immediately after heating flows out very freely and is liable to produce too thick lines or even blots, the flow soon slows down as the wax cools.

In order to ensure an absolutely uniform temperature of the wax, a German lady, Frau Gertrud Lamprecht-Gewecke, of Nuremberg, has devised an electrically-heated Batik pencil. Apart from uniformity in the thickness of lines, this ensures considerably more rapid work (the continual re-heating being dispensed with) and far greater ease and accuracy.—The *Electrical Review*.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

Printers' Managers and Overseers ASSOCIATION.

Adjourned Discussion on the Future Policy of the Association.

The monthly general meeting of the Parent Association was held at the Old Bell, Holborn, E.C., on Tuesday evening, 3rd inst., when the President, Mr. C. J. Gray, was in the chair, and there was a good attendance.

The preliminary business included the confirmation of the nomination for membership of Mr. W. J. Bagley (Amalgamated Press, Ltd., Gravesend—machine). The CHAIRMAN called attention to the joint gathering of the Association at Liverpool on 21st inst., to which over 45 members had already consented to journey from London, and mentioned the strenuous efforts that were being made at both ends for the comfort and pleasure of the members.

Mr. C. R. WARDE drew attention to the name of one of their members in the King's Birthday Honours List that day, and he moved that a letter be sent to Mr. Thomas Fisher, of the Government Press, Madras, congratulating him on having the Imperial Service Order conferred upon him.

Mr. C. MORLEY, who had worked with Mr. Fisher in the same firm in England, seconded the motion, referring to Mr. Fisher's interest in the Association, as shown by his unfailing attendance at the meetings when he visited England, and to the interesting paper he wrote on "Printing at 100 degrees in the shade," and read before the Association some years ago.

The motion was carried with acclamation.

The Secretaries.

The CHAIRMAN then read recommendation No. 16, which was as follows:—

That there should be a General Secretary and a Financial Secretary, whose duties be allocated as follows:—

GENERAL SECRETARY.—Attendance at General and Council Meetings, minutes, correspondence, conduct of business with centres, keeping accounts, payment of benefits, preparation and issue of monthly circular, annual report and balance-sheet.

FINANCIAL SECRETARY.—Attendance at General and Council Meetings, receipt of subscriptions and levies (at meetings and by post), notification of arrears, issue of Council notices, and to assist or act in the absence or indisposition of General Secretary, or as directed by the Council.

Mr. BATEMAN said he thought their present rule practically did all this. He considered they should have a secretary who looked exclusively after the interests of the London Association, and another to give his attention to the Provincial Centres. He moved that the present rule stand.

Mr. SEELEY pointed out that the object of the Special Committee was to make the Association more popular. How the proposal of turning the duties of the secretary topsy-turvey would work he did not know. Personally he thought Mr. Bateman was quite right in proposing to leave the rule as it stood, and not to tinker with it at the present time. He favoured appointing a secretary and leaving him to provide his own assistance, the salaries being united. Mr. Moyce would then be free to follow the lectures and take part in the debates, which he was not able to do under the present arrangement.

Mr. W. HERMON GILL said it was generally recognised that their present secretary had a great deal too much to do. He devoted practically all his spare time to the business of the Association, and to let the rule stand as it is would be to leave him in that position. The suggestion of the Committee was a good one, and would tend to relieve him of a great deal of the clerical work, and would permit him to sit at the Chairman's table, answer questions, and take part in any debate that might arise at the meetings. He proposed that the recommendation of the Committee as printed be adopted.

Mr. BATEMAN: I would like to point out that my paper not only advocated making the Association popular, but improving its administration.

Mr. SEELEY asked if the Secretary had any comment to make on the subject, as it affected him more than anyone else.

Mr. MOYCE said he would much rather not say anything upon the matter that night. He expressed his opinion, he thought, pretty clearly in his attempt at a reply to Mr. Bateman's paper, when he expressed the view that there was not a great deal very wrong with the Association, its working, or its administration. He then said:

Taking Mr. Wood's suggestion as to a financial secretary, this official would receive subscriptions, whilst the corresponding secretary would receive, amongst other things, claims for benefit. Then he would want the books at hand to see if the member's claim was valid. Members sending their subscription would notify changes of address. These would have to be transmitted to the general secretary, together with any enquiries sent in with subscriptions, as they frequently are. The total result would, I think, be a duplication of work, and but small relief in the direction indicated. One point I would like to emphasise, and that is that the receipt of subscriptions by the general secretary keeps him in close touch with the members, and I think that is valuable to the members and to the secretary, whether the contact is personal or by correspondence.

The history of this matter, when it was before the Committee, was that there was a proposal, laid before the Committee, similar to that outlined by Mr. Seeley. That was defeated at the Committee, and he was asked to bring up at the next meeting of the Committee his suggestion for dealing with the duties. It was pointed out to him that there might be a time when he was laid by by illness, or was removed for some other reason, and then it would be difficult for another man to step into his place right off the reel. He would say perfectly frankly, as far as he was concerned, he would much prefer things left as they are. However, the work of the Association was getting heavy, and if they found a reason for some one to follow him he would find it very heavy indeed to take up the work he (Mr. Moyce) had grown up to. There were many things he had carried in his head that a successor would have to refer to, and his work would be twice as heavy. The question of keeping in touch with the members was important, and whether the secretary could do that by sitting at the chairman's table and occasionally speaking better than by always sitting at another table and not speaking at all, was a matter the members could judge as well as himself. With reference to the growth of the secretarial work, Mr. Moyce remarked that there were 220 members when he took over the secretaryship, and now there were 569. He found it difficult when he took the work up after Mr. Gill, and another who took the work up after him would find it very heavy indeed. Therefore, he thought it time something was done to relieve the secretary of some of his duties, and upon the lines laid down by the committee, the division of the duties placed before them was the best he was able to suggest.

The CHAIRMAN then put the amendment to the meeting that the old rule stand, and it was lost. The committee's recommendation on being put was carried.

The next two recommendations were agreed to without discussion, and were as follows:—

Monies received by the Financial Secretary to be paid to the Treasurer, through the General Secretary, who shall periodically examine the books.

That the salary of the Financial Secretary be fixed by rule, and it should be understood that the remuneration be not increased by honorarium in the case of this or any other salaried officer.

Finance.

The next recommendation was:—

That a separate account, to be known as the General Fund, be kept for purposes common to the whole association. That the Parent Association and Centres should contribute in like proportion to the said fund, which may be used for payment of all benefits (except death benefit), and bear its due proportion of working expenses.

Mr. BATEMAN asked what it meant.

Mr. MOYCE, in reply, said the idea of the committee was that they should form a General Fund, or benefit fund, as it were—a fund to which the Parent Association should contribute exactly the same amount per member as the Centres, and which should be used for exactly the same purposes. They would then have the advantage of the pooling of funds, so that a weak Centre would be helped by a strong one. He considered some such division of the funds as that suggested absolutely necessary at the present time. As a matter of business, they should have a uniform payment for the whole Association.

Mr. BATEMAN said he thought the accounts of the London and Provincial Associations should be kept quite distinct. They did not want to make any profit out of the Provincial Centres; at the same time, as business men they did not want to work at a loss.

The CHAIRMAN said he did not like the idea of dividing the Centres; they should look upon the whole of the Association as one body.

Mr. BATEMAN: I suggest that the Centres have their own balance-sheets, and we do not; we have ours combined with theirs.

On the recommendation being put to the meeting, it was agreed to.

Recommendation 21 was also agreed to as follows:—

That the remainder of the subscriptions of the Parent Association shall be paid into its local fund, for the purposes of its own affairs.

Subscriptions and Benefits.

The next recommendation attracted a lengthy discussion. It read:—

That the subscriptions be raised to sixteen shillings per annum, a proportion of increase to be allotted as follows:—Pensions for aged members, increased unemployment benefit, Benevolent Fund, and general purposes.

Mr. BLUETT called attention to the suggestion of pensions for aged members, and asked them all to think long and carefully before they attempted to tackle such a thorny subject. It was one of the most difficult questions that the great friendly societies of this country had been dealing with for more than half a century, and for this Association to start an old-age pension scheme would end, he feared, in dire calamity. He thought the committee were far too sanguine when they talked about a pension of £15 per annum in five years. It would be quite impossible to establish superannuation for all members without a subscription very much larger than that recommended by the Committee. He warned them that if they attempted to touch old-age pensions they were touching something that would give them no end of trouble. He was with Mr. Dunlop when he said in his

Digitized by Google

MinorityReport: "Whilst the benefit of the scheme could only be enjoyed by a very few members, the raising of the subscriptions would make it increasingly difficult for many members of advanced age, who have lost their positions, to maintain their membership," and "whilst in hearty sympathy with the committee in their effort to tackle the problem of pensions, I cannot think the suggested scheme, if adopted, would be in the best interests of our Association." He hoped they would not touch it.

Mr. DUNLOP said he would like to pay a tribute to the chairman of the Committee and his colleagues for their uniformly courteous treatment, and to emphasise the fact that there was no personal ill-feeling about this question; there was merely a technical difference of opinion. What he felt was, that any pension which depended upon election should be voluntary. That was the main principle with regard to which he was at variance with the Committee. He might be told by some members that his concern at the raising of the subscription was somewhat exaggerated. That might be so—it was so in the case of those who retained their positions; but in the case of those members who were getting old and were unable to retain their position, the question of raising the subscription was a very serious one. What he did not want to see in the Association was anything brought about which was likely in any way to make it harder for those members to keep in the Association. (Applause.) And after all their Association did not exist primarily as a benefit association. Suggestions had been made that out of every five pensions provided two should be allocated to Provincial Centres, and in 20 years or so the Centres would have those two pensions. But he was sure it would be almost impossible for a Centre with only say a small membership to catch one of those pensions so long as the Centres with the larger membership had candidates in the field. Therefore all the smaller Centres would be practically disfranchised from this pension scheme. Finally, even in their own parent body there were many members of somewhat retiring dispositions probably who would never stand any earthly chance of getting elected, because naturally everyone voted for the people they knew most about. Therefore, he thought it would be a great mistake on the part of the Association to increase the subscription for such a very doubtful benefit.

Mr. W. HERMON GILL thought the two gentlemen who had last spoken had gone a little bit further than perhaps the Committee intended in putting forward this clause for their consideration. The increase of 4s. per year suggested worked out at practically 1d. per week. Personally, he thought it was in the minds of the Committee that the proportion to be given to the Pension Fund was more of a foundation for continuing the propagation of pensions than to seriously set about raising pensions for aged members. They all knew as business men that the sum of 4s. per annum would not go far towards raising pensions, but a certain sum would be given as a foundation which would be added to by voluntary subscriptions to raise pensions. Again this 4s. per annum was to be divided amongst three or four different objects. He thought it was not seriously meant that they should set about founding pensions. They all saw it would not be sufficient. He felt strongly that they should raise their subscription; it was very low at present. So far as being a tax on the older members, it was only 1d. per week, and that was not enough to injure them very much.

Mr. BATEMAN spoke of the large amount of time taken up by well-known members of the Association during the last two or three years, to a large extent for the benefit of about 25 per cent. of the members, and argued that if they were going to keep a periodical and raise pensions for their members they must do something for the other 75 per cent. He did not think the Association should devote its funds to raising benefits for only a portion of its members.

Mr. CURNOW said he would move that they increase their subscription by 10s. a year and allocate the whole of the increase to providing one pension a year.

The CHAIRMAN reminded the meeting that there were certain members of the Association who had to be considered. There were those who were growing old and lost appointments, and those who had no appointments to lose and were not likely to get any more. He did not see how an extra 10s. on the subscription plus the levies was going to be got out of them.

Mr. CURNOW said he would then move that it be raised by 12s. 6d. and that the odd 2s. 6d. be devoted to the relief of the old members without appointments who could not pay it.

There was no seconder to this motion, and the CHAIRMAN said he was afraid Mr. Curnow's sentiment had run away with his practicability. After some further discussion,

Mr. F. HEDGER moved that the first portion of the Committee's recommendation be adopted, and that the reference to pensions and unemployed benefit be referred back to the Special Committee. He thought they would make a great mistake if they went in for establishing pensions in connection with this Association. If they got this extra 4s. it would bring them in, on a basis of 570 members, £114 a year. It would take five years to get £570, and on that they would probably, if they were lucky, get an income of £18 a year. Not more. As soon as they went in for establishing pensions in connection with the Association they would have to go in for chartered incorporation, which would bring them under the law which provided for trustee funds, and then they would have to invest their funds in securities on behalf of trustee funds. As soon as it was known they were organising themselves as an association to provide pensions, they would find themselves approached by those who were constantly watching these things, and then they would be in the position of going in for a totally different charter. The matter wanted more consideration before they pledged themselves to forming pensions for the Association.

Mr. DAWSON said apparently the members who had spoken up to the present had only looked out of one eye; all they could see of the benefits to be conferred by an extra 4s. per year was the one little item of the pensions. They seemed to think they might not stand a chance of getting a pension, and so they wanted to stand in the way of another member getting it. ("No, no.") That was what struck him in listening to those who had spoken. They forgot the other benefits conferred by this 4s. Their secretary had shown them how the money could be allocated, how in a few years they would have one pension which they would have the sole control of themselves, and that in about five years there would be a chance for another pension, and another five years later; it would be something continually growing; and all out of this paltry 1s. a quarter extra. That might not affect all of them. But the next item they found was increased unemployment benefit. That might come home to all of them; they were not all in jobs that would last for ever. Further, there was a certain amount to be put on one side for the Benevolent Fund, which might affect all of them more or less. These suggestions had not been put before the meeting without serious consultations having been held by the Committee, and he intended to support the adoption of this recommendation.

Mr. READ said he felt that the extra 4s. a year would be usefully employed for the second and third objects named in the recommendation—unemployed benefit and Benevolent Fund.

Mr. HEDGER said he was prepared to take the whole of the paragraph, if they would leave out the question of pensions.

Mr. MOORE expressed willingness to second the amendment if Mr. Hedger would accept his suggestion that the provision of increased benefits be referred back to the Special Committee.

Mr. MOYCE said that when he spoke first on this subject, following Mr. Bateman's paper, he voiced an opinion very much on the same lines as those of Mr. Dunlop that night. As far as he was now personally concerned, he saw no reason to alter his opinion. Broadly speaking, he was averse to a compulsory subscription to any object which could not be claimed by every member as a right. Admirable as the work done with regard to founding pensions might be, it would yet remain a matter in which only a very few members could ever reach the benefit. He was still unrepentant in regard to the voluntary efforts in connection with pensions. It was said that only about 25 per cent. of the members benefitted, but not more than 25 per cent. of the members subscribed to it. So far as the work was concerned he did not grudge it in the least, and he certainly thought the Association had done good work in that direction, not only for itself but for other people worse off than the members of the Association. He thought it would be better for them to lend their energies more to the increase of a benefit which all members, who were unfortunate enough to require it, could take as a right and to give them better benefits, than it would be to give benefits to a problematical few. If they devoted the extension of subscriptions to the unemployment benefit and the Benevolent Fund they could relieve cases of distress as they came along more largely than they did now, and give more adequate benefit to a man temporarily out of employment. If they accepted Mr. Curnow's suggestion they would be taking on a very large job indeed. It was not going to be done with 12s. 6d. a year; they would want more like 2s. 6d. a week extra. With regard to the question of pensions, he reminded them that the Association did not get its membership until many of the best years of life were past, whilst the friendly societies got their membership at 20 or 21. The average age of members joining their Association was 35.

Mr. SEELEY said, as a member of the Council for several years, he had known many occasions on which they had had to scratch members because they could not pay their subscriptions. Possibly 2s. increase, which would bring in £100 a year, would meet the case. He would first move that the Association establish no pensions.

Mr. DUNLOP seconded, and the motion was carried.

Mr. SEELEY then moved that the subscriptions be raised to 14s. per annum, and Mr. HARDIE seconded. The motion was carried on a show of hands by 34 to 28.

On the motion of Mr. BLACKWELL, seconded by Mr. CURNOW, it was agreed to leave out the last three words in the paragraph, which in its amended form now reads:—

That the subscriptions be raised to fourteen shillings per annum, a proportion of increase to be allotted to increased unemployment benefit and Benevolent Fund.

Voting of Funds and Aged Members.

Recommendation 25 was deleted, and recommendation 27 was agreed to as follows:—

That any financial proposal involving an expenditure exceeding ten pounds should not be considered by a general meeting unless the member bringing the proposal forward has given notice to the Secretary in time for the motion to be placed on the agenda for the meeting.

The next recommendation considered was as follows:—

That in the case of members over 60 years of age and not less than 15 years' membership, who no longer hold positions as Managers or Overseers, the Council should have power to exempt them from payment of death levies. Payment of such levies should be made from the death benefit reserve, and the amount so paid be deducted from the sum payable at the member's death.

Digitized by Google

Mr. BLUETT moved an amendment that all after the word "reserve" be deleted, and Mr. ANCELL seconded. The motion was carried.

Mr. WARDE objected to the clause which made it necessary for members over 60 years of age and not following employment as managers or overseers to have to go before the Council to seek exemption from payment of death levies.

Mr. BERRYMAN (Chairman of the Committee) said he thought they might take it that the clause giving the power of exemption to the Council was suggested so that they might leave the onus with them as to whether the member seeking this relief was really entitled to it. It was merely an opinion. He would like to say that he was afraid the members that night were losing the spirit of these suggestions of the Committee. Their view was that they were to make certain suggestions. They were not making rules; if they had been maybe they would have gone more deeply into the pension scheme. Before a scheme like that was adopted the question would need a deeper scrutiny than the Committee were able to give. He was disappointed at the general tone in which the suggestions of the Committee had been received. They were not attempting to dictate to members in any way; they were simply making suggestions. Although the Committee had differed on a few points they were prepared to stand by their Report mainly. They had a good reason for recommending the giving of that power to the Council of discriminating as to whether a member coming before them to receive this relief was entitled to it or not.

Mr. IVES asked if Mr. Berryman, when he spoke of whether a member would be entitled to this relief, did not mean whether he would be in need of it.

Mr. BERRYMAN: In need of it.

Mr. MOYCE pointed out that unless they qualified the wording in some way, they might have a man who was thoroughly well off claiming exemption from benefit. They had got to keep their funds safe, and they would have all their work to make this Death Benefit Fund meet its requirements before they were another twenty years older. It was necessary for the Council to have discriminating power.

Mr. BATEMAN said he agreed with Mr. Bluett provided he consented to the 15 years' membership being increased to 20 years.

Mr. DAWSON said, as the proposer before the Committee of this suggestion he hoped it was going to be carried, minus the words at the end of the paragraph following the word "reserve." They paid in a certain amount on every member's decease, and every time they paid the levy for the death of a member the Association benefitted to the tune of about £25 to £30. Assuming they had 40 to 50 members who would be entitled to this exemption, there would still be £15 to £25 to go on to that fund, and so he could not see that the funds were in danger.

Mr. WARDE moved that the words "the Council should have power to exempt them from payment of death levies" be deleted.

Mr. CURNOW seconded, but on being put to the meeting the motion was lost.

Mr. SEELEY proposed, in view of the following recommendation, that it be 20 instead of 15 years' membership.

Mr. JARVIS seconded, and the amendment was carried.

With these alterations the recommendation was then agreed to.

There being five more recommendations to consider and the hour being late, the meeting was adjourned, on the motion of Mr. MOYCE, seconded by Mr. HARDIE.

THE North of South America and the district of the Panama Canal are the subject of a book that has recently been published by Messrs. Stanley Paul and Co. Mr. A. S. Forrest, the well-known artist-author, has lately travelled extensively in that country, and his impressions, both as author and artist, are recorded in this book under the title "A Tour Through South America." It has been said that Mr. Forrest goes on his travels with a pen in one hand and a pencil in the other; at any rate in this book by means of 150 drawings and 350 printed pages he has managed to give an interesting account of his tour, and at the same time an accurate description of the country and its people.

THE Summer Number of the *People's Journal* this year is excellent, and may be relied upon to put the reader on good terms with himself and in real holiday humour with the world in general. There is not a single dull page in this monster pennyworth. It is filled from cover to cover with interesting and amusing stories, articles, and pictures, and every reader stands a chance of securing a free summer holiday in Paris and Switzerland. The publishers are Messrs. John Leng and Co., Ltd., Dundee and London.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

12,192 ASMUSSEN, O., rotary machines for intaglio printing.
12,201 FLUEGEL, F., loose-leaf books.
12,269 OGILVIE, J., and HALL, R. L., paper and like clips.
12,275 ADAMS, C. C L., device to attach a sheet or sheets of carbon copying paper to writing blocks or pads carrying rolls of paper, tickets, vouchers, bills, forms, and the like.
12,279 LEE, M. W., printing attachments for rolls.
12,327 HICKSON, W. E. A., means for use in drying varnish and gum coatings on paper sheets and the like.
12,332 SEWART, A., envelopes for postal purposes.
12,360 SAPAL SOC. ANON DES PLIEUSES AUTOMATIQUES, apparatus for detaching and drawing single paper sheets or the like of rhombic shape from a stack of sheets.
12,374 HORSNAILL, H. F., process for preparing dissected post cards.
12,407 WALKER, A. E., mechanism which is principally used in covers for filing catalogues, leaflets and pamphlets.
12,408 WALKER, A. E., mechanisms of a circular form on which filed papers can be easily referred to without detachment, and which can be used for note-books and files of every description.
12,447 SMITH, E. J., means for attaching plates to printing cylinders.
12,487 JACKSON, W. J. M., manifolding sales books and the like.
12,534 PETTY, J. P., expansible files or binders.
12,540 JONES, P. H., loose-leaf binders.
12,557 MATHIESON, G. J., binding books.
12,561 BAKER, R. C., cards or the like for advertising purposes.
12,585 TELLKAMPF, A., photo-mechanical printing.
12,640 HEBENG, V., manufacture of artificial lithographic stone.
12,643 SINCLAIR, W. G., cutting apparatus for web printing machines.
12,730 RICE, G. R., pens, pencils, and similar writing implements.
12,731 LAMSON PARAGON SUPPLY CO., LTD., and EVANS, J. M., manifolding books.

Specifications Published, 1912.

Temporary binders, loose-leaf books, and the like—Wallwork and Wallwork; 11,652.
Means for attaching blocks, pads, writing pads, calendars and the like to a board, case or backing—Walker; 12,140.
Stereotypers' matrices, means for making them, and vertical moulds for casting stereotype plates from them—Printing Machinery Co., and Harris; 12,216.
Machines for folding and delivering sheets of paper—Lake; 13,254.
Addressing machines—Gore; 13,523
Machine for the manufacture of boxes of paper, cardboard and the like—Stephen; 14,245.
Envelope sealing machines—Saunders; 14,965.
Letter copying apparatus—Klaber; 16,579.
Fountain pens or other self-feeding articles of a similar character—Kaufman; 16,731.
Machines for sticking stamps, labels, and the like on articles of any description—Dornheim; 17,471.
Envelope and advertising device—Patton; 21,895.
Composition or material for making printing surfaces, matrices, and the like—Kristensen; 24 652

1913.

Manifold writing boards or tablets—Hare; 1,258.
Trip-mechanism of two-revolution offset printing presses—Linotype and Machinery, Ltd., Pearce, Parker and Wright; 4,876.

Lithographic Presswork.

Colours, their Qualities and Combinations.

In a recent issue of the *National Lithographer*, a writer says that:—Probably every pressman has theories on colours, and a consideration of the subject may be helpful. Did you ever stop to consider how much advertising is done in yellow and red? It's not because they are any cheaper than other colours, but because they are more attractive and bound to bring results. Yellow, the brightest of all colours, is used to show its full strength in daylight, while red is more attractive by artificial light. If you ever chance to be in a business man's office when the mail is brought in, watch him and you will see that he reaches for the coloured envelopes first, if there are any. Speaking of coloured envelopes reminds me of the story of a business man who inserted an ad. in the daily paper for help, the last line of which read: "Please apply by letter only." Next day his desk was swamped with mail, all answers to his advertisement. Not knowing where to begin, he tumbled them all over, and near the bottom saw a bright-coloured envelope; reaching for it, he looked it over, tore it open and read it. The outcome was that he obtained the help desired.

Did you ever notice the posters on fence or billboards? If yellow and red are used how they will attract your attention! As said before, red is more conspicuous by artificial light because yellow, being brightest, reflects more white light than any other colour, and we all know that artificial illumination has less white light; therefore yellow loses its brilliancy after sunset, and red, though not so bright, takes on a warm colour, giving it depth and strength in artificial light entirely lost in a yellow.

Here are some harmonious colour contrasts: Red with green; blue with orange; deep blue with golden brown; deep blue with pink; chocolate with light blue; chocolate with pea green; black with warm brown; black with warm green; deep red with grey; maroon with deep blue; maroon with warm green; claret with buff; yellow with violet; violet with pale green; violet with light rose.

When a purple is too deep, add to a ten-pound can of purple about eight pounds of rose or madder lake; this improves the colour immediately, gives a beautiful warm cast, and also makes it go farther. There are times when in printing a black you will notice it has a hard appearance on the sheet; now, if the pressman will take 10 lbs. of fine black and add to this 1 lb. of red, 1 lb. of yellow and 1½ lbs. of milori blue, he will find his black will have a soft appearance, and will print much smoother and at the same time will retain a fast strength of colour.

These are some tints produced by combination of colours:—

White, yellow, red and black make umber.
Vermilion and black make turkey red.
Ultramarine blue, black and white make slate.
White and milori blue make sky blue.
Medium yellow, red and white make sienna.
Orange, lake and purple make russet.
Ultramarine blue and lake make purple.
White and rose lake make pink.
White, ultramarine blue and black make pearl tint.
Medium yellow and red make orange.
Medium yellow and purple make olive green.
Lake and purple make magenta.
Red, black and medium yellow make maroon.
White and purple make lavender tint.
White and black make gray tint.
Lemon yellow and bronze blue make grass green.
Persian orange reduced makes flesh tint.
White, medium yellow and black make drab tint.
Bronze blue, lemon yellow and black make dark green.
Red, black and blue make dark brown.
English pale vermilion reduced makes buff.
Dark green and purple make bottle green.
Carmine and lake make bright pink.
Carmine and blue make violet.
Carmine and yellow make amber.
Red and green make olive.
Red and orange make brown.
Blue and black make dark blue.
Blue and yellow make green
Black, white and blue equal parts make blue black.

In my opinion, the only three colours that really rest the brain are violet, blue and blue-green. Here is a difficulty a pressman frequently encounters, and it often keeps him guessing what to use to reduce inks so they will be short or snappy, print smooth and have a good finish. Vaseline and long varnish, if properly used, bring good results; but you must use judgment or you will smear up the job. Paperhanger's paste is good, but I would advise you to make your own, for those already mixed are apt to contain chemicals, which would injure everything with which they came in contact, and cause no end of trouble. One can easily make the paste and avoid trouble by taking three lbs. of flour and adding just enough cold water to make a thick paste; after it is worked smooth add boiling water, stirring constantly until the paste is free from lumps; add one tablespoonful of alum to one waterpailful of paste; this will keep it from becoming sour.

There are times when a job calls for roughing, and that means that every colour on that job must be thoroughly dry; otherwise it will offset. This trouble comes more especially on red and black. Next time a job troubles you by offsetting on the roughing machine, just make a good block and cover it with two or three thicknesses of felt; dip this covered block into French chalk or soapstone, rub it over the parts not dry, and then you can proceed with the job. Oftentimes a pressman has trouble with the work becoming blurred, and he has tried a number of things, such as another notch of water, made his colour shorter, then added more corn starch, with no results. Just let him try this, for it helped me when I had the same trouble and all the other things failed: Curl the front or gripper edge of the sheet up a little, but do not go to extremes, and see if it does not help at once. You know there is an old but true saying, there are tricks in all trades, and let us not forget that the lithographic trade is full of them.

The Strength of Paper.

Testing Two Pieces at Once.

By SINDALL AND BACON.

Article I.

The idea of testing two strips or two sheets of paper together is by no means a new one, but very little attention has been given to the subject in the trade press. The device seems to have originated in America, where some ingenious person hit upon the plan of putting two sheets of paper in the Mullen paper tester, if he found the results obtained with a single sheet were low and irregular. It has become a common practice with cheap news and printings of low weight to test the paper by means of two sheets placed in the bursting strain machine, and to divide the result by two as a measure of the strength, or to state the test found and record the fact that the test refers to the figure obtained on two sheets tried together.

The effect of such a method of testing the paper is two-fold. In the first place the irregularities of the sheet are to some extent hidden up, the differences in a succession of tests being less noticeable. This is not altogether a desirable factor. In the second place the actual pressure readings are more correct, as the readings from 1 to 5 lbs. on a pressure gauge calibrated to a range of 120 lbs. are not at all satisfactory or reliable, but it does not follow that because the reading is more correct the strength recorded is a truer index of the strength of the paper. Papers of low strength should, of course, be tested on a machine fitted with a pressure gauge of small range so that the readings in the lower part of the scale are more dependable. The fact remains that the ordinary machine provided with a gauge of extreme readings is far more commonly used.

We have recently followed this matter up to some extent by making a few trials of an enlarged character, testing certain papers in sheet form on the Mullen machine in order to arrive at the bursting strain, and on the standard Leunig machine for the tensile strength. The figures so far obtained are of some interest, and we now publish them in the hope that a paper mill chemist or a student may carry the investigation further.

For this purpose two papers were selected, the first being a common wood pulp paper of 6-7 lbs. demy, and the second an average writing paper of substance 16½ lbs. demy, made of rag. The papers were only tested in one direction, as this was sufficient for the comparison required.

Each of the strength tests recorded in the tabulated results given is the mean of five experiments. Thus five individual tests were made first on single strips. Two strips were then placed together in the machine, and the higher weight required to fracture the two noted. This was repeated five times in order to get good average figures.

Then three strips were treated in the same way, and so on for the series. The increase in the number of strips placed in the machine at one operation naturally made it difficult to get a precise adjustment of the paper, but this proved to be mainly a question of careful manipulation, and the repetition of a number of blank tests at the commencement to acquire familiarity with the conditions.

TABLE I.

Strength Readings on Strip half-inch Wide.

Paper 16½ lbs. demy. Leunig's machine.

No. of strips in the machine.	Tensile strength mean of five tests. Lbs.	Result calculated for ONE strip.
1	7·5	7·5
2	14·5	7·25
3	20·0	6·67
4	25·8	6·45
5	35·8	7·2
6	42·8	7·1
7	50·7	7·2
8	56·5	7·1
9	61·3	6·8
10	72·0	7·2

These results taken by themselves seem to indicate that the strength readings are proportional to the number of strips. The breaking weight of the paper according to the normal method of testing one strip is 7·5 lbs., while the average of all readings is 7·05 lbs.

It is interesting to note that the gradual addition of one strip for each succeeding experiment does not appear to create any serious difficulty in manipulation as the average readings with the greater number of strips are fairly constant.

In the case of the tests for bursting strain, however, the figures obtained were different in character, the test on the single sheet being considerably lower than the average of the series.

Moreover, the results calculated for the ONE sheet as given in the last column of the table were not strictly proportional to the number of sheets.

TABLE II.

Bursting Strain Readings.—Mullen Machine.

No. of Sheets in the Machine.	Bursting Strain, Mean of Five Tests, lbs. per sq. in.	Results calculated for One Sheet.
1	22·7	22·7
2	54·6	27·3
3	86·4	28·8
4	117·4	29·4
5	137·4	27·5
6	more than	29·0*

* Machine did not register beyond 175 lbs.

THE UNITED STATES FLAG.—H.M. Consul-General at Boston has forwarded the text of a new law passed by the Massachusetts Legislature to prevent the misuse in that State of the United States flag. The law, which comes into force on November 1st next, prohibits any use whatever of any representation of the flag of either the United States or Massachusetts on any article of merchandise. The display of such flag or any representation thereof upon which are words, figures, advertisements or designs is also prohibited. A fine ranging from 10 to 100 dollars (£2 1s. to £20 11s.) can be inflicted for infringement of the law. H.M. Consul-General adds that this law apparently prohibits the use of the British and American flags crossed for designs on wrappers. The text of the law may be seen by firms in the United Kingdom at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, E.C.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

The quality of the Mersey certainly was not strained what time the Federation of Master Printers met at Liverpool last week. Mr. Turner, of Turner and Dunnett, was the guiding spirit of the Liverpool Reception Committee. Enough said. His reputation in such matters seems to have been secure before. It is now Gibraltar. His entertainment of a large company to lunch at the Grosvenor Hotel at Chester, on Tuesday the 3rd, the excursion day, was the climax of a series of notable services. His colleagues, too, all did splendidly. The visitors were unfeignedly delighted with the Liverpool men.

o o o

In no small degree the company also provided for their own entertainment throughout the visit. Take Irvine, of Derry, for instance. Or rather don't take him; leave him to us as a man whom we really can't spare, a man for whom to give Heaven thanks. He was in great form throughout; particularly in the informal little functions in odd corners of the Exchange Hotel—at hours when the day itself was not quite sure whether it was yesterday or to-morrow. They put him up to tell stories or to propose healths, or to follow his fancy whichever way it led.

o o o

Then there was Jowett, invincible in his conviction that the world consists of two sets of men, Yorkshiremen and—the other poor beggars; God's creatures all of them, and so not to be despised, but not Yorkshiremen. Patriotism thrills through every ounce of his conjectural sixteen stone. He is quite in favour of an annual celebration of Yorkshire day, here and at the antipodes; throughout, that is, the whole Yorkshire empire.

o o o

Dr. Blaikie was there, diffusing his own academic atmosphere; handing out cigars, but cultivating his own pipe; not the last to bed but not the earliest; and never failing to cap the happiest tale or reminiscence with one just a degree more happy or more apt.

o o o

It really was a very good thing for the Liverpool craft to encounter these other printers. Some printer visitors unblushingly sat down to the jovial cheer at the annual dinner evening as if printing for the great steam lines of Liverpool were an enormity of which nothing could induce them to be guilty. But they *were* sinners in that sense and knew it; and may even at other times have gloried in the sins.

o o o

Its ill takin' the breeks aff a hielander and its ill makin' a master printer greet at his ain wickedness in getting an order in fair competition; lose it who may.

o o o

The preponderance of Liverpool's most ambitious printing seems to be done out of Liverpool. Messrs. Turner and Dunnett to be sure have great name and fame and no doubt some others, and they get any amount of good work to do, but in the main Liverpool printers have failed to rise to the opportunity afforded them by Liverpool's unique position.

o o o

One of the most marked developments of the next ten years is like to be the capture by Liverpool of Liverpool's artistic printing.

o o o

And good luck to Liverpool, say I. The eyes of the fool are at the ends of the earth. The eyes of the wise Liverpudlians are on Liverpool.

o o o

The speeches at the annual banquet were few and were good. Sir Edward Russell led off with his urging of the high value of articulate statement, by the body of workers, and by the body of employers. The utterance, the programme, the ambitions of each party should be definite, pronounced, emphatic; and informed by a wide, comprehending spirit.

o o o

Colonel Bemrose presided at this Dinner; he did so because Liverpool was content "to press the bashful stranger to his food, and learn the luxury of doing good"; and was not seeking others glory. The Chairman and Mr. Meredith Whitaker and Mr. Stembridge, the new President of the Federation, and Mr. Howard Hazell, and Sir Benjamin Johnson, the Lord Mayor of Liverpool, all spoke quite admirably.

o o o

Both the chairman and Mr. Whitaker threw out vague suggestions which perhaps could hardly then and there be other than vague, as to a lead which might be given to the whole industrial world by employers in the printing craft.

o o o

To be sure, we have had some strident trumpet notes at different times and places, meant to rouse this body of employers, or rouse that, to take the lead in mastery, in insistence, in the creation of some new order of things favouring the employers' interests.

o o o

These hints of a lead, these imaginings—these feelers, shall I say?—were different. They were expressions of a hope that the same excogitating and organising power which had been manifest with such credit and effect in the costing campaign might be freed for and exercised in another campaign whose aim should be no less a thing than conciliating the discovered mutual interests and mutual goodwill of capital and labour.

o o o

Some new economic presentment was wanted, some new bodying forth of truth, some new recognitions and some new hopes.

o o o

Both these speakers, and in less degree the other speakers, avowed themselves ardently desirous of the pursuit and accomplishment of these high things.

o o o

It may seem a dream or an ideal, said Mr. Whitaker, but, he added, many things which had been but dreams and ideals of one day, had the next day been found to be practicable.

o o o

Well, it is all to the good that we should have men in positions of authority thus wishful to be "ingeminating peace."

o o o

The quinquennial meeting of the Typographical Association is being held in Northampton, so there will speedily be an opportunity for both parties to see how far they can accommodate their differences, particularly in regard to the old and vexed problem of apprenticeship. There is no question that the training of the young printer is at the moment thoroughly unsatisfactory.

o o o

Many masters have scrupulous conscience in regard, first, to the taking on of lads, that is in regard to gauging their suitability for printing before indenturing them, and in regard to training them when they are apprenticed.

o o o

There is a great deal to be done, however, before all master printers have so nice a sense of honour in this regard as is manifested by some.

o o o

The Printers' Managers and Overseers Association have told some rude, or at any rate rudimentary, truths in regard to the inadequate care bestowed upon apprentices; the incompetence and general unsatisfactoriness of the so-called training. If the apprenticeship question is to be re-opened let it be re-opened thoroughly; for upon the whole it is in about as bad a condition as it well—or ill—can be.

o o o

There would seem to be a basis of agreement, since I am assured that the employers quite recognise that the men's unions have a right to protect themselves against the overflooding of the labour market.

o o o

It should not be difficult to determine what are the number of gaps created year by year, and thus to find how many completed apprenticeships each year should show. In these notes I am assuming that the apprentice system still has vitality and a show of permanence in the provinces. In London, we have for years been talking of apprenticeship as having virtually broken down in many trades.

I buttonholed one prominent master printer and put a question to him to which I did not get any real reply. I asked if there is such a scarcity of labour in the provinces, how was it that the L.S.C. and other federated London unions were so hard hit two years ago, through a thousand men or more coming up from the provinces, and taking the places of London strikers. There were apparently no great gaps created in provincial workshops.

o o o

It looks as if provincial printerdom had not been under-supplied upon the whole, but oversupplied.

o o o

Per contra, it is no doubt true that the present apprentice regulations are of very old standing, and all things of old standing need revision. With both sides approaching the matter with open minds some good should result.

o o o

I have said there was no real answer to the question thus proposed. There was, however, a comment which I feel has much truth in it—that a good many men who are out are very inexpert. That, however, only carries us back to the consideration of the high duty of selecting apprentices with care, and teaching them with care when they are selected.

o o o

The employers and the Printers' Managers and Overseers Association and the journeymen's trade unions might appoint a Board which should deal with the particular question of the efficiency of the instruction given to apprentices. It might test a lad's training now and again during his term. The P.M. and O.A. has, I believe, counselled that something like this should be done.

o o o

A lad should not be apprenticed till he has been in an office six months; if then apprenticed the term should date back the six months.

o o o

No apprentice should be kept long doing what he can do well.

o o o

Again, no apprentice should be mainly or largely dependent on his parents in his last year. He should earn his home keep and a little more.

o o o

I find myself unmoved by the suggestion that the proceeds of *Printer's Pie* ought for all time to be wholly devoted to charity. At the same time, from a slight inside knowledge of the matter, I am rather inclined to think that the net gain, even under the altered circumstances, to its energetic founder, Mr. Hugh Spottiswoode, will be slight.

o o o

For ten or twelve years Mr. Spottiswoode or his firm, or both, have been year by year heavily out of pocket through this publication. Mr. Spottiswoode's personal labours in the matter have been very great. Moreover, the services of the artists and writers have, to put it mildly, become a somewhat serious annual tax upon them. It is not fair that one section of the public should be asked to be at so much cost towards meeting what are properly communal charges. Our actors and singers and artists and sketch writers are always expected to bear their own share of charity maintenance and other people's share as well.

o o o

It was but showing common sense; it was, indeed, but recognising the inevitable, when Mr. Spottiswoode put *Printer's Pie* upon a business basis.

o o o

Henceforth the charities of our trade and the newsagents' trade will get £500 a year from the "Pie." Five hundred a year, virtually secured in perpetuity is in truth a very substantial service. Yet it seems to me that some who may not be giving five pence themselves, nor be the cause of inducing the gift of five pence from others, are holding themselves justified in inuendoes or sly suggestions, as if they could an' they would prove that ten years ago *Printer's Pie* was started to make an income in 1913 for its originator. To me, who saw the inception of *Printer's Pie*, any such idea borders on the ludicrous.

FRANK COLEBROOK.

Digitized by Google

Trade Notes.

AT a sale of mezzotint engravings at Christie's, on Monday, a total of nearly £10,000 was realised.

SIR ADOLPH and LADY TUCK, with their daughters, have left by the "Olympic" for a six weeks' visit to the United States.

THE seventh annual Charity Sports of the Printing and Allied Trades are to take place on Saturday, 14th inst., at the Crystal Palace Track, commencing at 2.30 sharp.

BY a fire which occurred at Mudie's Library, Oxford-street, on Friday last, it is estimated that 30,000 books were destroyed. Unfortunately they were among the most valuable in the collection by reason of their rarity and age, and it is unlikely that more than a few can be replaced.

ON Monday, the deputation of Swedish editors now on a visit to London, were entertained at luncheon at the Savoy Hotel, by Mr. Frank Lloyd, to meet the editors of London newspapers. Count Wrangel proposed the toast of "King George," and the chairman that of "The King of Sweden." "The Swedish Press" was proposed by the Hon. Harry Lawson, and Mr. Rinman responded.

THE Scottish newspaper proprietors held a series of meetings in Stirling during the week-end in connection with the Scottish Newspaper Proprietors' Association, and on Saturday afternoon a civic reception was accorded the visitors by the Town Council in the Golden Lion Hotel, Bailie Buchanan, in the absence of Provost Bayne, extending a hearty welcome to the members. The annual dinner was held in the evening.

A MEETING of the Committee of Management of the Press Association, Ltd., was held, last week, at the offices, New-bridge-street, E.C., when Mr. H. J. Infield, *Sussex Daily News*, Brighton, was elected chairman of the Association for the ensuing year, and Mr. Walter Scott, *Rochdale Observer*, was elected deputy chairman. Mr. Robert Wilson, *Edinburgh Evening News*, and Mr. Meredith T. Whittaker, *Scarborough Evening News*, were appointed the finance committee.

THE *Board of Trade Journal* announces that tenders are invited by the Egyptian Ministry of Finance for the supply of 3,550 diaries (2,000 in Arabian, 700 in English, and 850 in French) for the various Egyptian State Departments, for the year 1914. Tenders accompanied by samples of the diaries it is proposed to supply, will be received up to July 31st at the Economat Central, Ministère des Finances, Cairo, whence copies of the cahier des charges may be obtained and samples inspected. A copy of the cahier des charges may be seen by manufacturers in the United Kingdom at the Commercial Intelligence Branch of the Board.

TENDERS WANTED—For printing and stationery for three years, for the Bermondsey Board of Guardians; forms of tender from Mr. E. P. Fenton, 283, Tooley-street, S.E. For the supply of stationery and for printing account books for one year for the University College of South Wales and Monmouthshire; particulars from Mr. D. J. A. Brown, University College, Cardiff. For a supply of books and other school materials, for the Manchester Education Committee; particulars from the Education Offices, Deansgate, Manchester. For printing minutes, official forms, books, stationery, etc., for the Walthamstow Education Committee; forms of tender from Mr. T. W. Liddiard, High-street, Walthamstow. For printing forms, etc., for the Tottenham Education Committee; forms of tender from Mr. W. Mallinson, clerk, Education Offices, Philip-lane, South Tottenham, N.

MESSRS. T. G. AND J. JUBB, metal manufacturers, Hunslet, Leeds, are sending out to their customers a most useful "Telephone Directory" for office use. Neatly bound in leatherette, it is about 8 by 4½ inches in size, and contains a series of indexed leaves ruled for entering the names of firms and their telephone numbers, so that by using it for customers' names a deal of time may be saved, and the required number and exchange be turned up instantly. The leaves are of stout manila, with leatherette edging, and the index letters stamped in gold, and will stand any amount of wear and tear. The inside cover contains a check on telephone calls, and the "Directory" will be found very useful in the business office, where it may be hung by the side of the telephone ready for use. Messrs. Jubb's advertisement of their type metals, leads, clumps and metal furniture is neatly blocked in gold on the front cover.

FOR the printing and supply of stationery for one year, for the Urban District Council of Dartford, the tender of Messrs. Perry and Son is recommended for acceptance.

MR. JAMES P. MORISON has retired from the staff of the *Glasgow Herald*, and his journalistic colleagues, as well as other friends, have presented him with a purse of sovereigns as a mark of their esteem.

ACCORDING to *Kemp's Mercantile Gazette* there were two failures in the printing and stationery trades of England and Wales for the week ending Friday, June 6th; the corresponding week in 1912 also showed two.

THE staff of the *Daily Chronicle* publishing department had their fifth annual outing to Brighton on Saturday. Dinner was served at the Washington Hotel, and in the afternoon the party motored to Seaford. The outing was an enjoyable one.

FIRE.—Among several outbreaks of fire in Bradford on Saturday night last, the cause of which is attributed to incendiarism, was one occurring in the printing works of Messrs. George Harrison and Sons, Ltd., a stone building of three storeys. The damage is estimated at £40,000.

THE British Museum authorities have made arrangements whereby from 12 to 1 every Saturday a guide conducts a party round the exhibits of printed books in the King's Library, explaining fully the story of the introduction and development of letterpress printing. No charge is made.

PRINTING COMPANY'S COMMISSION DISPUTE.—In reference to the case reported last week under this heading, the defendants, the Globe Printing Co., Ltd., write: 'Our case was that in agreeing to remunerate the plaintiff at the rate of 10 per cent. upon the result of his labours, we agreed to pay, and did pay him, not only the recognised—but the maximum recognised—rate of commission for printing houses who could not afford to disqualify themselves from competing for business. Our managing director did not say that the printing trade "had to allow 10 per cent.," but that for the reason above mentioned that rate could not be safely exceeded. . . . The bad debt made by the plaintiff was, as he admitted, not in 1911, but in 1912, the year of the dispute. No commission accounts were ever passed by the managing director in 1912; and the plaintiff's office work was done in the face of the repeated expressed wishes of the defendants to the contrary."

INK COLOUR DISPUTE.—In the City of London Court, on Thursday, before His Honour Judge Lumley Smith, K.C., Messrs. Bradbury, Agnew and Co., Ltd., printers, etc., 10, Bouverie-street, E.C., sued Mr. P. F. Taylor, trading as the Safeguard Label Co., 39, Hilmarton-road, Holloway, to recover the sum of £5 15s. for printing labels to their order. Mr. Langston, plaintiffs' representative, said that the dispute was as to the colour of the ink which was used on the job. Defendant said he was the patentee of the label in question. Plaintiffs had used the wrong coloured ink. Judge Lumley Smith said he observed that the label was the modern system by which the name of the sender could be seen through the top of it. Defendant said he had eight models altogether and they did not match. Plaintiffs submitted him a proof in red ink. Mr. Langston said that the defendant wanted a deep golden brown, but he never had any colour to follow. He submitted a proof on December 20th and he had received a telephone message from the defendant saying that the colour was right. He then went on with the job, and printed 5,436 sheets. Defendant did not complain until three months after delivery. Judge Lumley Smith found for the plaintiffs with costs

ON Saturday, at Bow-street Police Court, Mr. A. Moreton Mandeville, editor of the *London Mail*, and the publisher of the paper, were summoned for publishing a proposal for the sale of tickets in a lottery. Mr. Muir, in support of the summons, said that in recent issues of the *London Mail* there had appeared an advertisement headed "Great Derby Sweepstake of £5,000." The advertisement announced that the *London Mail* had been asked by the Universal Turf Society of Lucerne to recommend to its readers a sweepstake which the society were promoting. Mr. Bodkin, for the defence, said that nobody connected with the paper was in any way interested, pecuniarily or otherwise, in the lottery. The announcement of the scheme was in the nature of an editorial notice and did not do more than mention the existence of the undertaking. In a similar case against the editor of *John Bull* the late Sir Henry Curtis Bennett, without recording a conviction, ordered the payment of £10 10s. costs. The Magistrate said that he would take the same course on this occasion and order the defendants to pay £10 10s. costs.

THE late Mr. Andrew Chatto, publisher, of the firm of Messrs. Chatto and Windus, has left estate of the value of £14,054.

THE English estate of the late Mr. Joseph Pulitzer, proprietor of the *New York World* and other newspapers, is valued at £2,262.

STILL another handbook has been issued by the Great Eastern Railway Co. It is entitled "On the East Coast," and can be obtained free from the Superintendent of the Line, Liverpool-street-station, London, E.C. Prominence has been given to some less known districts in East Anglia, and to the country between the Cromer and Hunstanton Coast and the Norfolk Broads. The illustrations in colours have been made a special feature, and are most attractive and artistic in character.

TWO RESOLUTIONS that will doubtless meet with the approval of the entire trade were passed at the annual conference at Liverpool of the Federation of Master Printers and Allied Trades of the United Kingdom of Great Britain and Ireland. These were as follows:—"That the Council be instructed to press for a more liberal scale of apprentices and greater freedom in the working of machines."—"That this meeting expresses its strong disapproval of the methods of firms who supply plant and material to enable individuals to start in the printing business without sufficient capital, on the instalment system or on deferred payments thus compelling them in despair of meeting the payments to take work at ruinous prices." The latter evil is a real one, and is the cause of much price cutting.

THE International Association of Manufacturing Photo-Engravers will hold its seventeenth annual convention at Indianapolis, Ind., U.S.A., June 23rd, 24th and 25th. There will be transacted the usual business of the Convention, such as enactment of amendment to the Constitution, election of officers, etc., and in addition, the principal feature of the Convention will be the discussion and adoption of the "Basic Selling Schedule" for the photo-engravers' products submitted to the International Cost Committee. We have been favoured with a copy of the Schedule mentioned above which takes the form of a chart, on which the block is placed, and its price can be ascertained at a glance without any calculation. Accompanying letterpress gives the charges for various kinds of work, and the whole forms a useful basis of minimum prices for half-tone and line blocks.

THE HALF-TONE ENGRAVING CO., LTD., 25, Farringdon-avenue, E.C., have introduced a line in special offset plates that is worth the attention of those printers who are working that process. The plates are prepared, by an entirely new method from any photograph or wash drawing such as would give a good half-tone block, and the results obtained are beautiful in their artistic quality, and resemble fine collotypes. They are specially fine when printed on the matt or rough papers for which offset printing is so eminently adapted. A number of examples have been prepared by the firm showing the printing from these plates on various surfaces of paper, from fine surfaced to very rough, and the results obtained are excellent. We understand that the cost of the new plates is no greater than that of letterpress blocks of similar sizes, while their use calls for no more skill than is possessed by any average transferrer.

THE "TIMES'" TIME.—The *Electrical Review* says:—"We have noticed with interest that for some days the clock over the doorway of our honoured contemporary, the *Times*, has been deprived of its hands. This may be a drastic punishment for past errors, but from personal experience extending over many years we can vouch for its justice. This particular clock is—or rather has been—one of the most persistently mendacious 'time-keepers' (save the mark) with which we are acquainted, and its face ought to be as crimson as a blush rose. We trust that its present forlorn condition is a sign of coming reform. But the *Times* does not stand alone; the condition of the public clocks of London is a scandal which reflects the greatest discredit upon the capital of our Empire. The constantly varying discrepancy between the said clock and that of Messrs. Spiers and Pond close by has amused us, at the same time that it has emphasised the need of strong measures. London is dotted all over with clocks showing false time, many of them under the control of professional watch and clockmakers. Some clockmakers, however, have condescended to introduce Greenwich time—which is now so cheap that they all ought to employ it. We are glad to be able to add that we have never known the clock of St. Paul's Cathedral to be wrong, though from our position on Ludgate-hill we have it constantly under observation, and Messrs. Benson's clock close by affords a reliable standard with which to check it."

The Evolution of Printing.

Taking for his subject "Typographical Composition," Mr. John H. Long, addressed the students of St. Xavier College, Cincinnati, on the marvellous evolution, or rather revolution, in the mechanical methods employed in the printing trades—greater during the past quarter-of-a-century, perhaps, than in any other line of mechanical progress. He explained to the students the rudimentary principles of printing, and pointed out the changes in method and the improvement in mechanical appliances that have been so gradual that only by comparison can we realise what wonderful progress has been made in the printing industry. In part, he said:—

The different branches of a vocation, in which its primary attributes are similar, but its resultant products so widely differing, illustrates the art of composition in its various distinctive parts. For instance, we have the newspaper printer, the job printer, the poster printer, and the music printer. Occasionally we find one who is all of these. There are numbers who are adepts in both the newspaper and job branches, but the era of specialisation in nearly every branch of industry (machinery being the primary cause) included the printing office, and as a result the all-round man has to some extent been eliminated.

It has often been remarked, and it is generally conceded, that the best specimens of experts in typographical knowledge are those who began in a country office as devil and graduated as a pretty well-equipped newspaper man. The duties of the apprentice in the country printing office had to do with everything from sweeping the floor to mollifying an obstreperous subscriber. He had to set type for the paper, set type for job work, run the presses, help mail the edition, talk politics and religion, and discuss the social ethics and business qualifications of every one in the community worth talking about. In fact, he not only learned everything connected with typographical composition, but everything else worth while in the office and out of it. His ingenuity was taxed to produce results when the means to the end were not attainable or obtainable. The city printer has the typefoundry to draw on for his immediate requirements. The country printer draws mostly on his imagination.

The technical attributes of typographical composition cover such a wide field and the productions in each line of endeavour are so varied, that an attempt to exemplify their individual features would be about as deficient in satisfactory results as an attempted demonstration of an impossible problem. . . . . Methods change with the days and years. Every piece of work turned out bears the individual impress of its creator. Each creation differs just as each body and mind differs in its individual construction and moral aspect. The successful jobber and the successful advertisement compositor are striving always to produce something different. He who gets into a rut, who produces nothing new or distinctive, has allowed the procession to pass, and he soon drops out to make room for the more progressive, and this is especially so among printers. There is an art in composition, in typographical construction, just as there is an art in painting, in music and in literature. The artistic instinct is just as necessary to make the successful printer as it is any of these, and, as in these, the road to success is through years of study and application.

The speaker asserted that every printer has a talent more or less developed in the department in which he is employed, and in the setting of an advertisement or in the setting of a job each follows the bent of his inclination, unless circumscribed by an advertising manager or by following out the peculiar or special ideas of individuals. While the primary methods are the same and the tools practically the same, Mr. Long declared the products of the compositor are continually varying, and referred to the I.T.U. Course in Printing as a method for trying to offset some of the evils of specialisation. Of the supplemental trade education plan established by the International Typographical Union, he said:—

Another feature of the printing business to-day, another instance of progress along educational lines, made necessary by changing conditions, was the establishment by the printers' international organisation of a correspondence course of instruction, primarily for the benefit of the apprentices, but open to all, with the idea of making poor printers good printers and good printers better printers. This course differs from the ordinary correspondence school methods, in that it does not promise to teach the business of printing, nor does it guarantee to make an artist out of a street labourer, but is a purely technical course, whose purpose it is to benefit the man who already possesses the foundation, who has some knowledge of the business, and helps him to build better and stronger.

Generally speaking, the ordinary correspondence school is a delusion. They promise to teach anything and everything. To do so successfully there must be some practical knowledge as a necessary foundation. Without this foundation, advancement in any trade or profession is problematical through the correspondence route.

The primary cause for the establishment of the correspondence school for printers was the knowledge that machinery had so specialised the trade that fear was expressed that the all-round printer might soon become extinct. Supplementing rigid apprentice regulations with a course in technical training has broadened the knowledge of the younger generation and benefited many among the older members. The trade education feature has been widely commended for the benefits it has bestowed, both upon the individual and the employer.

Knowledge is imparted by a universally commended system of correspondence. In the course are taught principles of design, proportion, balance and colour harmony, the underlying principles of good typography.

In the course of his remarks Mr. Long covered in a succinct manner the various methods of mechanical typesetting and typecasting, and described minutely the workings of the most successful machines, the Linotype and Monotype.—*American Typographical Journal.*

A PROPOSED

Classified Index of Watermarks.

Some time since the *Bulletin* of the International Institute of Bibliography, Brussels, had an interesting article on "How to Classify and Catalogue Watermarks," by M. E. De Witte. The author began by pointing out the importance of arriving at an exact knowledge of the age and nationality of old watermarks, which, when definitely ascertained, serve as a guide to the antiquity and origin of ancient documents. It is necessary, however, to proceed on proper scientific lines in the proper arrangement and classification of the vast number of marks which are found in paper during a period of 500 years, from the end of the thirteenth to the close of the eighteenth century. M. De Witte's idea is that a card catalogue should be prepared, each card to bear (1) an indication of the nature of the mark, such as "bull's head"; (2) the accessory marks, such as initials, etc.; (3) the size, variety, and position of the mark in the sheet; (4) the date and nature of the document in which the mark occurs, and place where deposited or found, distinction being made between marks on documents or in printed books and those on engravings. In conjunction with the card index, M. De Witte suggests the use of a chronological chart for each mark, divided into columns of minute squares, each column representing a year, and each space, when inked in, denoting the discovery of a copy of that particular mark in a book or document dating from a given year. It would also be desirable to have a small geographical chart for each mark, denoting the part of Europe in which it most commonly occurs. This full and detailed system of classification, if started and kept going constantly and systematically by an enthusiastic band of workers for a few years, would no doubt produce valuable results. At present, though there have been many books dealing with ancient watermarks, no thorough system of classification has yet been attempted. For this reason we are mainly quite in the dark as to the provenance or allocation of the numerous marks which appear in papers and books occurring in England from the sixteenth to the eighteenth century. Spilman, of Dartford, for instance, is little more than a name to us, for none of the marks he doubtless used have yet been identified. We hope M. De Witte's suggestion will bear fruit in the near future.

THE Board of United States General Appraisers have rejected protests by the Levy and Levis Co., of New York, on narrow tape printing mechanisms for printing names and advertising matter on tapes for tieing parcels. The collector assessed 45 per cent. *ad valorem* under paragraph 199, Tariff Act of 1909, as manufactures of metal. The importers contended that the mechanisms were printing presses under paragraph 197, and dutiable at 30 per cent. Judge Fischer decided the case.

WHEN distributing the leads and slugs they should never be piled upon each other or mixed; they should be either put in the case or straightened up, the slugs in one place and the leads in another. If they are piled on each other they will bend and cause trouble in justification. If the boy is not on hand to put them away it will pay the man doing the distribution to do it himself.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C

Situations Vacant.

WHOLESALE PAPER TRADE.—A Traveller required immediately to represent an old-established house in London.—State experience, age, and salary required, to No. 13223, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13223

Situations Wanted.

MACHINE MINDER, n.s., 27, seeks situation; used to all classes of work on Miehles, Centuries, Wharfes, etc.—A. S., 43, Boundary-road, Leyton. 13217

SMART MAN of refined appearance and good address wants to represent firm who require a dogged, persistent worker; plenty of tact, grit, and personality; undoubted selling powers; highest references; thorough knowledge Stationery, Books, Fancy.—Address, No. 13214, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13214

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

HALF-TONE SCREENS for Sale; several Engraved Screens (new ones), in Rulings from 50 to 200 lines per inch, sizes 6½ by 4½ upwards; bargains; owner given up.—68, Hamilton-street, Leicester. 13216

Machinery Wanted.

STONE PLANING MACHINE wanted, to take eight Crown Stones; must be in good condition.—Send full particulars, maker's name, price, etc., to No. 13224, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13224

Miscellaneous.

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13181

Leyton Urban District Council

PUBLIC LIBRARY.

THE Leyton Urban District Council hereby invite TENDERS for PRINTING and BINDING 2,000 CATALOGUES of about 200 pages, royal 8vo.

Forms of Tender and particulars as to style of printing, size and quality of paper, binding, etc., may be obtained at the Public Library, High-road, Leyton, between the hours of 11 a.m. and 8 p.m. (Wednesdays excepted).

Sealed Tenders (in special endorsed envelopes, supplied with the forms) must be delivered at the Meeting of the Council to be held at the Town Hall, Leyton, on Tuesday, the 24th day of June, 1913, at 7 p.m.

The Council does not bind itself to accept the lowest or any tender.

Sureties will be required for the due performance of the Contract.

By Order,
R. VINCENT,
Clerk to the Council.

Town Hall, Leyton.
12th June, 1913. 14095

PATENTS FOR SALE OR LICENSE.

THE Proprietor of the Patents Nos. 24,809 of 1908, 24,811 of 1908, for "Improvements in and relating to the Treatment and Application of Cellulosic Films," is desirous of entering into arrangements, by way of License and otherwise, on reasonable terms, for the purpose of exploiting the same and ensuring their full development and practical working in this country.—All communications to HASELTINE, LAKE AND CO., Chartered Patent Agents and Consulting Engineers, 28, Southampton-buildings, Chancery-lane, London, W.C. 14084

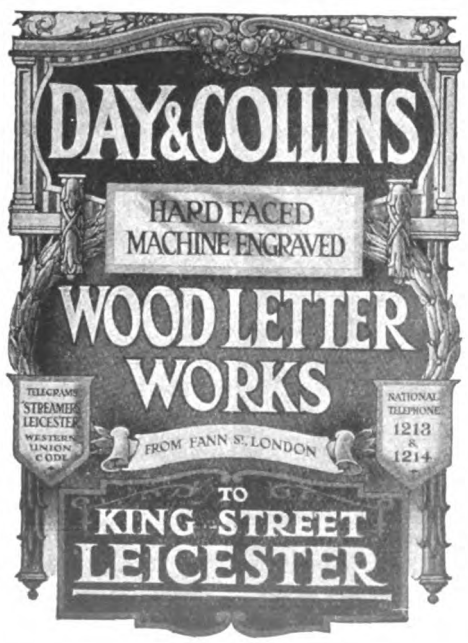
OLD TYPES.

Punches or Matrices of Letters of the Early Centuries of Typography Wanted. Send offers and proofs to J. F. 5164, c/o Rudolf Mosse's Advertising Offices, Berlin. 14,096

THE OLDEST TRADE PROTECTION OFFICE IN THE UNITED KINGDOM.

ESTABLISHED 1776.

PERRY'S Trade Protection Offices.
(W. R. PERRY, LTD.).
26 & 27, BUSH LANE, CANNON ST., LONDON.



Status Inquiries made as to the position and standing of Traders and others.

PERRY'S GAZETTE & LIST OF CREDITORS are published weekly, and are invaluable to every one in business.

DEBTS RECOVERED & PAID OVER PROMPTLY.

Particular attention is called to the fact that this is the only TRADE PROTECTION SOCIETY that possesses at its offices in London Registers containing full Bankruptcy and other Registered information, together with Status Information FOR THE WHOLE OF THE THREE KINGDOMS.

TERMS from £1 1s upwards, according to requirements. PROSPECTUS and further particulars on application to the above offices.

Rotary Type, Borders for Posters, Bills, Show Cards, etc., Wood Blocks, Figures for Almanacs, etc.

THE BRITISH & COLONIAL PRINTER AND STATIONER
FOUNDED 1878. PUBLISHED WEEKLY.

35th YEAR.—No. 1812.

An Underhand Practice.

A PRACTICE that is, happily, not universal, but that is still common enough in some quarters, is for an employer when he hears of a particularly good man distinguishing himself in the workshop of a rival, to make a bid for that workman's services, and by the offer of a few shillings a week more in wages, to endeavour to secure his leaving his job and entering his own establishment. In every way such a practice is a bad one. It is bad for the employer, it is bad for the workman, and tends to the demoralisation of both, and one should never forget that the workman that may be enticed away from someone else, may just as easily be enticed away by another from his new master. Again, when an employer secures his competitor's best hand by a promise of more pay, it is very doubtful if he will get any more work out of him than he was doing before, probably it will be less, for, conscious of his own ability, he will feel that if fault is found with him he may easily find another place. The employee who will accept an offer that is unfair to the house he is leaving, will probably be inclined to pay his enticer back in his own coin sooner or later. At the same time employers who know they have reliable and faithful men in their establishments, should remember that they are worthy of the best remuneration they can afford to pay, and so should endeavour to place them beyond the reach of the wiles of a competitor. Writing on this subject, a contributor to our excellent American contemporary, the *Printing Trade News*, says that:—"An employee who realises that his personal advancement is in ratio to the success and advancement of the business he is connected with can generally be depended upon to stick by the ship when the pirate who offers bigger pay or shorter hours draws alongside. It is this sort of men we printers are looking for—those who have the conception of ratio and proportion; who have a full understanding of the rule that good work means more business for the firm, and more business necessitates a demand for the services of the men who can turn out the good work. Men (and women) of initiative are hard to secure in this period of commercial evolution; in fact, it sometimes seems almost impossible to find even part of a force that has sufficient stamina of character to stay put—who knows right from wrong; who have the courage to stick to a good and a sure thing. True, it is a big man who is large enough to recognise little things, yet a good job with a future to it and the confidence and respect of an employer should not appear as a little thing to the man who elects to cut his path through destiny by the day labour route."

* * *

Price Cutting.

SO MUCH has been said and written recently on price cutting that it may seem superfluous to return to the subject, but a few remarks that appear in the *Boxmakers' Journal* are so apropos to the subject that they are worth reproducing. The writer is, of course, dealing with the box-making trade, but his replies will apply equally well to printers: "The ordinary price cutter cuts the price only because he has a sublime belief in himself and his superiority to others who presume to compete with him. He imagines his ideas, methods, and course of action cannot be excelled simply because he conceived them, and therefore his costs are so much lower than those of others that he can cut prices to any limit and still make a profit. He is a detriment to any trade, as he forces market prices so low that the manufacturer in his line naturally suffers while waiting for the price cutter's inevitable ruin and retirement from business." There are many also who cut prices through their ignorance of cost, but, from whatever cause, the price cutter is always a menace to his fellow printers.

* * *

Compulsory Signed Articles.

SHOULD newspaper articles be signed or unsigned is a question that has caused much discussion at various times in the history of the Press, and it is interesting to note that, in at least one of our Colonies, the signed article is compulsory. Drawing attention to this matter the *Manchester Guardian* points out that a "law requiring all newspaper articles on election issues to be signed by the writer was passed by the Australian Parliament two years ago, and was enforced for the first time at a general election last week. The Act provides that from the issue of an election writ to the completion of the election 'every article, report, letter, or other matter commenting on any candidate or political party or the issues submitted to the electors, printed and published in any newspaper, circular, pamphlet, or dodger, shall be signed by the author or authors, giving his or their true name and address or names and addresses at the end of the said article, report, letter, or other matter.' Any newspaper editor or proprietor who permits a breach of this rule is guilty of an offence under the Act. Strictly speaking, the obligation with regard to signing is confined to comment, but in some of the Australian newspapers ordinary reports of speeches were signed by the reporter, and in the case of a lengthy speech by a number of reporters. The practice with regard to leading articles differed. Thus, the *Sydney Morning Herald* decided to have no leaders referring to the election, but printed special signed articles. The *Melbourne Age* published leaders with the name of the editor and two leader-writers attached. The Melbourne *Argus* printed a foot-note to both leaders and special articles: 'Written after consultation to express the views of the *Argus* by A. B.'" Were such a measure to become law in the Mother

Digitized by Google

Country it would bring into prominence many names of writers who now labour in obscurity and with but little recompense for their work, be it ever so good.

AN excellent summer number of *Country Life* has been issued, consisting of 306 pages.

PAPER and stationery to the amount of 827,000 dollars was exported from the United Kingdom to the Straits Settlements during 1912. The amount exported from the continent during the same period was 680,000 dollars worth.

HISTORY AS SHE IS WROTE—says a writer in a well-known American printing trades journal, "when Manutius Aldus started the famous Aldine Press in Venice in 1494, . . . he was not satisfied with the roman letter which was offered him, he went to his old friend Petrarch and from his beautiful handwriting evolved . . . the italic face." Seeing that Petrarch died 120 years before (1374) it would be interesting to know how he could have been an "old friend" of Aldus, and where the latter saw him.

A Lead Poisoning Complaint.

An interesting lead poisoning case was heard, on Monday, in the City of London Court, before His Honour Judge Rentoul, K.C., and Dr. Murray Leslie, Home Office Medical Referee. A compositor and packer claimed damages against his late employers, Messrs. A. Straker and Son, Smith Brothers, Ltd., bookbinders, 4, Carmelite-street, E.C., for lead poisoning caused to him while working for them. Mr. C. Doughty, defendants' counsel, said the certificate given by the certifying surgeon under the Act was ambiguous and therefore it was not binding on the Court. Mr. Arthur May, plaintiff's counsel, said that the certificate stated as a fact that the plaintiff was suffering from lead poisoning or its sequelae. There was no appeal from the statement. The certifying surgeon had certified that Mapp was using bronze powder and lead on books and was disabled from earning his livelihood. He had earned 22s. per week. Mr. Doughty urged that the certificate could not be relied upon. Mr. May said the case was very interesting from its legal point of view as well as from the medical aspect. Plaintiff was 25 years of age and had worked for the defendants for six years. At first he was healthy in every way and then it was found that coming in contact with lead had set up lead poisoning. His speech was now seriously impaired and he could not do his former work. He had been to a sanatorium, as at first it was thought he had tuberculosis. It was now found that he had not. He now had disseminated sclerosis. Mapp was called and medical evidence was given in support of the case. Dr. Mair, the certifying surgeon under the Factory and Workshops Act for the City, was called to speak as to his certificate. The Judge said the Court would not be able to give any weight to it as it was contradictory in terms. It said the man Mapp had lead poisoning and then it went on to refer to other matters showing that the disease was not lead poisoning. The two cardinal points in lead poisoning, the wrist drop and blue gums, were both absent. He could not act on the certificate as it was ambiguous. The plaintiff could go before the certifying surgeon again and get a certificate as required. Meantime, the claim must be dismissed.

MULTIPLE MAGAZINE LINOTYPES

EFFICIENT
RELIABLE
ECONOMICAL
ELASTIC
ADAPTABLE

¶ These machines enable users to set an endless variety of Job work —high-class work— quickly and economically.

¶ As many as Twenty Alphabets may be set from the standard keyboard of ninety keys.

¶ Additional combinations of type-face may be obtained by rapid magazine change.

¶ Multiple-Magazine Linotypes are excellent composing machines for offices where frequent changes of face are necessary.

¶ The Linotype is profitable to *every* Printer

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, June 11th, 1913.

THERE was a comfortable supply of credit in the loan market last week-end, but since the amount falling due at the Bank of England on Monday was repaid the supply has been limited and rates are firm. The discount market has experienced a sharp advance, contributed to by the monetary outlook, the Balkan situation, the stringency in Berlin, and the depression on the Stock Exchange. The only bullion movement this week to date is the receipt of £5,000 from France. On Monday £800,000 came up for settlement in the open market, of which £200,000 goes to India and the balance to Germany. A slight recovery occurred in stock markets towards the close of last week, but this week dullness has returned and there was a material set back in prices yesterday. Consols have further receded, the quotations now being 73⅛ to 73¼ for money, and 73 5/8 to 73 7/8 for the July account.

In sympathy with the weakness in other markets the miscellaneous industrial market is dull and depressed, and prices have declined. In the section relating to paper and print business has been restricted, and there has been three downward movements in our list of shares. Amalgamated Press Ord. have dropped ⅛ to 6⅜—6⅝; *Standard* Newspapers Pref. have fallen ½ to 1—2, and Raphael Tuck and Sons Ord. have given way 1/32 to 1/8—15/16. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 6d. and 20s. 7½d.; in Associated Newspapers Pref. at 21s. 6d.; in Cassell and Co. at 92s. 6d.; in *Daily Express* Deb. at 57½; in *Financial News* Pref. at 15s. 6d.; in International Linotype at 76¾ and 75½; in *Lady's Pictorial* and *Sporting and Dramatic* Publishing Pref. at 52s. 6d.; in Edward Lloyd Pref. at 21s. 6d.; in George Newnes Pref. at 15s. 3d. and 15s.; in C. Arthur Pearson Pref. at 7 1s. 9d.xd.; in Raphael Tuck and Sons Ord. at 17s., 17s. 6d., 17s. 9d., 16s. 10½d., and 17s., and in the Pref. at 5; in Waterlow and Sons Pref. at 8; and in Weldons Ord. at 32s. 6d., 30s. 6d., and 31s. 9d., and in the Pref. at 20s.

COMPANY NOTICES.

UBIQUE PRESS, Ltd.

Notice is given that a meeting of the creditors of the company will be held at Portsmouth, on June 16th.

MOUNTAIN ASH and DISTRICT BILLPOSTING and ADVERTISING CO., Ltd.

At a meeting of the company, held at Windsor Office, Mountain Ash, Glamorgan, on May 14th, the following resolutions were passed; and at a subsequent meeting on May 30th, were duly confirmed:—"That the company be wound up voluntarily."—"That David W. Howell, of Windsor Office, Mountain Ash, be appointed liquidator for the purpose of such winding-up."

ARLINGTON PRESS, Ltd.

At a meeting of the company, held at London, on May 29th, the following resolution was passed:—"That it has been proved to the satisfaction of the company that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily; and that Mr. Charles Comins, of 50, Cannon-street, E.C., be appointed liquidator for the purposes of such winding-up." A meeting of the creditors of the company will be held at London, one June 16th.

BART KENNEDY PUBLISHING CO., Ltd.

Notice is given, that a meeting of the company will be held at London, on July 12th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

COMMERCIAL INTELLIGENCE.

Re JOHN FREDERICK WILSON, Printer.

This debtor, who carried on business at 115, Fore-street, E.C., under the style of J. F. Wilson and Son, attended the other day at the London Bankruptcy Court, before Mr. Registrar Linklater, for public examination upon accounts showing gross liabilities £1,048 7s.6d. (unsecured, £1,018 7s. 6d.), and assets, "bad book debt, £25." In reply to Mr. Egerton S. Grey, official receiver, the debtor stated that he had been in the printing trade all his life. For 16 years prior to February, 1911, he was employed as traveller to a firm of printers; his employers then gave up business, and he started on his own account as a letterpress and lithographic printer at the above address. He had no partner, but adopted the style of J. F. Wilson and Son, being of opinion that it sounded better than plain J. F. Wilson. He had no capital with which to commence the business. He had never been a practical printer, but obtained orders from customers and placed them with different firms to be executed. For the purpose of obtaining and supervising these orders it had been necessary for him to travel about the country a great deal; that involved him in heavy expense, for he had spent considerable sums in entertaining his customers, with the result that from the first he had lost money on the trading. Probably in some instances that expenditure was not altogether justified. Witness had paid large sums by way of secret commission to managers and others in order to procure orders from their firms. In addition, he had lived at a somewhat extravagant rate of personal expenses, a rate far in excess of what was justified by his earnings. The accounts showed that in ten months to Dec., 1911, his gross profit amounted to only £273, against an expenditure of £819. As a natural consequence witness got behind with his printing accounts. In March, 1912, being pressed for money he convened a meeting of his principal creditors and suggested that his business should be converted into a private limited liability company; that five creditors should each subscribe £25 capital and be appointed directors. That suggestion, however, was not agreed to, and the meeting broke up without any resolution being passed, but the effect was to practically stop his credit. He kept the business going as well as he could with cash payments, thinking he should be able to pull himself together by obtaining large profitable contracts, or that he would be successful in obtaining a partner with capital; the business, however, continued to decline and eventually on February 4th last, upon the landlord distraining for the Christmas rent, he closed the premises and obtained employment as a printers' traveller at a weekly salary. On March 8th last the Electric Printing Works, who had obtained judgment against him in August, 1912, for £107 16s. 2d. and costs, in respect of printing, filed the petition on which the receiving order was made against him on April 10th. Witness attributed his failure and insolvency to want of capital, bad trade, and to the excessive expenses of the business. Asked further with regard to the secret commissions, the debtor said he had filed an account of those payments. It showed that from April 13th, 1911, to April 2nd, 1912, he paid £123 to one gentleman in order to obtain orders from his firm. The Official Receiver: Have you any evidence to support that statement? The debtor: Plenty. The cash book would not show the payments, but they could be traced by the counterfoils in the cheque books. He never took receipts for that class of payment. It was true that the books of account had not been fully written up. Witness realised his insolvent condition in March, 1912. This was his first failure. By a creditor: In the case of the gentleman to whom he paid £123 as commission, the payment was at a fixed rate of £2 10s. per 1,000,000 circulars. The drawings of witness from the business were divided into two classes, one account being in his wife's name and the other in his own, the reason being to make his drawings appear less than the actual amount. The idea was originated by his clerk and witness raised no objection to its adoption. The examination was concluded. The deficiency account, dating from February 20th, 1911, shows the following items:—

	£	s.	d.
Net loss from carrying on business ...	370	17	6
Bad debt	25	0	0
Household expenses	187	10	0
Expenses of travelling and entertaining customers	375	0	0
Law costs...	60	0	0
Present deficiency	£1,018	7	6

Re C. CRUSE and CO., Cardboard Box Manufacturers.

An application for an order of discharge was made recently to Mr. Registrar Hope, at the London Bankruptcy Court, on behalf of Charles Wm. Thos. Cruse, trading as above at 11 and 13, Frank-street, Vauxhall. Mr. Walter Boyle, official receiver, reported that the applicant failed in November, 1908, with provable debts £522 19s. 11d.; the assets, valued at £98 1s. 2d., had realised £45 15s. 1d., and a first and final divided of 9d. in the £ had been paid. The bankrupt, who had carried on business for twelve years, attributed his insolvency to bad trade in consequence of which his net profits had been insufficient to meet the household and personal expenses; and to depreciation (estimated at £250) in the value of his assets as priced for a forced realisation. During the three years preceding the failure his expenditure amounted to £350, whereas the profits on the trading during the same period were only £174. On the grounds of (1) insufficiency of assets to equal in value 10s. in the £ on the amount of the unsecured liabilities; and (2) omission to keep proper books of account, the discharge was suspended for two years. Order entered accordingly.

THE JAPAN PRESS, Ltd. Liquidation Meetings.

Under a compulsory winding-up order made last April against this company which carried on business at 9, Byward-street, E.C., the statutory meetings of the creditors and shareholders were held on June 10th, at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C. A statement of affairs was presented showing liabilities £802 18s.; no assets of value, and a deficiency of £7,384 18s. with regard to contributories. The company was registered as a private company on January 27th, 1908, with a nominal capital of £7,500. It was promoted by Mr. A. J. Mitchell for the purpose of taking over his interest in the *Anglo-Japanese Gazette*, and the assets used in connection with its publication and sale. The purchase price was fixed by Mr. Mitchell at £6,000, and was satisfied by the allotment of 5,000 ordinary and 1,000 preference shares. The monthly publication of the *Anglo-Japanese Gazette* was continued until December, 1912, but the income, derived principally from advertisements, has always been insufficient to meet the expenses of carrying on the business of the company. The failure is attributed by Mr. Mitchell to insufficient working capital on its formation, and to the inability to raise further capital, which resulted in the business being carried on at a loss throughout. The liquidation was left in the hands of the official receiver. The following is a list of the creditors:—

UNSECURED.

Beaumont and Son, London	£56
Preston Bros., Ltd., London	19
Curtis, Edgar, London	43
Merritt and Hatcher, Ltd., London	24
Mitchell, A. J., London	158

Woolger and Roberts, London	13

PARTLY SECURED.

Anglo-Japanese Bank, London ... ... (Value of security—nil).	233

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

DOBSON AND ELLIS, 83, Arundel-street, Sheffield, bookbinders. Debts by H. Dobson, who will in future carry on the business at the same address. June 6th.

BRETTLE, E. and S., and BAXTER, W. and W. S., trading as The Beeston Art Printing Co., at Humber-road, Beeston, Notts, printers and stationers. Debts by E. and S. Brettle, who will in future carry on the business under the same style May 24th.

THE BANKRUPTCY ACTS, 1883 AND 1890. RECEIVING ORDER.

BUGDEN, W., 7, Quarry-road, Tunbridge Wells, newsagent, etc. Date of order and of adjudication order, May 30th, made on the debtor's own petition.

NOTICE OF INTENDED DIVIDEND.

VIGERS, T. W. and FORD, A. G. N., trading as The Standard Photographic Co., Hampden House, Kingsway, W.C., and 1, Queen Elizabeth-street, Bermondsey, S.E., manufacturers of photographic paper. Claims by June 24th, to F. W. Davis, C.A., 95-97, Finsbury-pavement, E.C.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

CLIFFORD, J., 112, St. James'-street, Brighton, bookseller, stationer, printer and librarian. Date of order, May 2nd. Discharge suspended for two years on the grounds that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities; that he had omitted to keep such books of account as are usual and proper in the business carried on by him and as sufficiently disclose his business transactions and financial position within the three years immediately preceding his bankruptcy; that he had continued to trade after knowing himself to be insolvent; and had contracted debts provable in the bankruptcy without having at the time of contracting them any reasonable or probable ground of expectation of being able to pay them.

APPOINTMENT OF TRUSTEE.

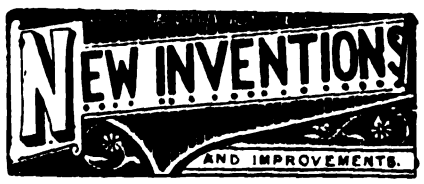
HARTNALL, A. J., The Colonnade, Ryde, Isle of Wight, newspaper proprietor. Trustee, W. C. Black, 147, High-street, Newport, Isle of Wight. Appointed June 2nd.

NOTICE OF RELEASE OF TRUSTEES.

HAWKES, P. V., Market-place, Braintree, Essex, printer. Trustees, G. M. White, C.A., 14, Old Jewry-chambers, London, E.C., and H. C. Brown, High-street, Braintree. Released May 16th.

THE COMPANIES ACTS, 1890 AND 1908. WINDING-UP ORDER.

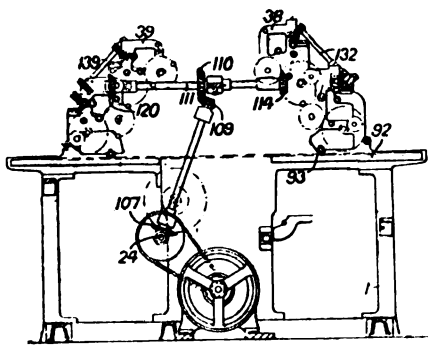
THE MULTI-VIEW ADVERTISING CO., LTD., Century House, 27, Queen Victoria-street, London, E.C. Date of order, June 4th.



DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appears in the *London Gazette* for the 6th inst. to the effect that the following companies have been, as on that date, struck off the Register of Joint Stock Companies, and thereby dissolved:—

Clarke Engraving Co., Ltd. (registered February 3rd, 1904).
Collotype Printing and Publishing Co., Ltd.
Fulwood Printing Co., Ltd.
Stringer Printing Co., Ltd.
Wright Rebuilt Typewriter Co., Ltd.

A notice also appears in the same number of the *London Gazette* to the effect that, at the expiration of three months from June 6th, the undermentioned companies will, unless cause is show to the contrary, be struck off the Register and thereby dissolved:—



Egyptian Daily Post, Ltd.
Rudd Press, Ltd.

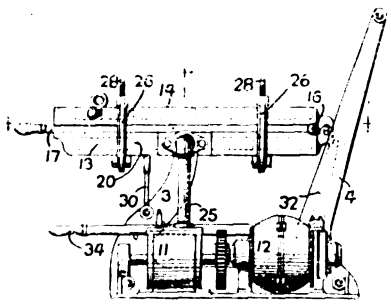
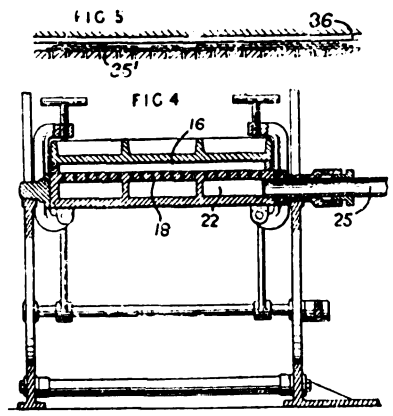
Inking Apparatus.



Multi-colour printing-presses, of the kind provided with means for driving the inking apparatus independently of the means for driving the plate and impression cylinders, and in which the inking devices are capable of being moved into and out of operative positions without disconnecting their driving means, are constructed, under a patent by the Cottrell and Sons Co., with frames for supporting the inking mechanisms which are adjustable to and from the plate cylinders, a sliding connection being provided between the inking apparatus and a countershaft operated by belt and bevel gearing from the main driving shaft. As shown applied to a multi-colour press of the kind described in Specification 17,687, 1911, two sets of inking apparatus are mounted in a frame 38, which is adjustable relatively to the main frame 1

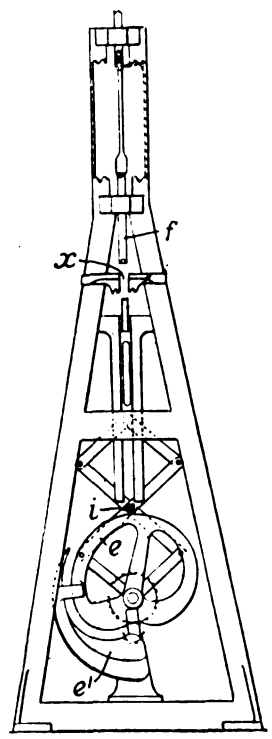


by means of a pinion 93 and a fixed rack 92, the pionion 93 being operated by a hand wheel and fitted with a locking pawl. Two other sets are mounted in a similar frame 39. The inking rollers are driven by bevel gearing 107, 109, 110 from a shaft 24, which is also geared to the printing and impression cylinders. The gear 110 is on a split shaft 111, the ends of the shaft being capable of longitudinal movement with the frames 38, 39 while still rotating. Bevel gears 114, 120 on these ends are geared to the main ink distributing rolls, which are fitted with rollers supplying ink to the printing cylinders, and are themselves supplied with ink from messenger rolls. These messenger rolls co-act with ductor rolls, which are driven by worm gearing from shafts 132, 139, driven by gearing from the split ends of shaft 111.

Stereotyping.

In apparatus for casting stereotype plates patented by the Cottrell and Sons Co., the matrix is held in the mould by suction induced in the casting box, which comprises a hollow bed 13 mounted on trunnions on the main frame 3. One trunnion is hollow and connected by a pipe 25 to a pump 11 driven by a motor 12. An overlay may be introduced between the matrix and the casting box. When in the horizontal position, the casting box rests on a strut 30 and an arm 32 on a rock shaft carrying a handle 34. The hollow bed 13 is divided by partitions 20 to prevent its warping, while the face thereof is perforated to hold the matrix by suction.

The sides of the mould are formed by three bars 16, 17, held in place by the cover 14, which is secured by screws 28 in yokes 26. Extensions 4 of the main frame form a support for the cover 14 when in the open position. Another patent by the same firm relates to the production of stereotype plates with surfaces gradated according to the printing value, by casting against a matrix supported on a reverse overlay, and consists in means for holding the matrix and the overlay by suction instead of mechanically. Figs. 4 and 5 show the invention applied in the machine described



in Specification 13,554, 1911. The matrix 36 and the overlay 35₁ are held together on the perforated bottom 18 of the mould 16 by a vacuum induced in the chamber 22, 25 by a motor-driven rotary pump. The mould is swung on its trunnions into a vertical position, and the cast made in the usual way.

Papermaking and Printing.

In this invention a paper machine is combined with a printing machine so that the paper is printed upon while it still possesses a certain amount of dampness, whereby sharply defined and permanently coloured patterns are produced, the paper afterwards passing through the final drying roller of the papermaking part of the machine. The invention is patented by Mr. L. Fiedler.

Making Paper Bags.

This invention relates to machines for making paper bags, or otherwise folding paper or cardboard, in which the paper is forced into dies or equivalent devices by means of a plunger. The invention consists in providing means by which the movement of the plunger is automatically checked if too great a thickness of material, say two sheets, be fed to the machine. In the machine for making paper bags, shown in Fig. 1, the plunger *f* which presses the paper through a

slot *x* in the table is reciprocated by a cam *e*, e_1, which is partly closed. For the greater part of the stroke, a pin *i* connected with the plunger is kept in contact with the part *e* of the cam by the weight of the plunger, and only when the latter has commenced to force the paper through the slot *x* does the pin *i* engage beneath the part e^1 of the cam, so that positive pressure is applied to the plunger. Should too great a thickness of paper be presented, the plunger will not descend far enough for the pin *i* to be engaged by the part e^1 of the cam, and the paper will not be forced through the machine. The patentee is Mr. W. E. Molins.

DR. HERMANN VOITH, of Germany, who has recently been visiting the United States, is the president of the J. M. Voith Co., Inc., of New York, recently formed to develop business in the United States and Canada in engineering specialities associated with the firm of J. M. Voith, Heidenheim-Brenz, Germany. Mr. H. F. Storrer, C.E., is the manager of the company.

Delivery Apparatus.

In apparatus for piling sheets from cutting, and like apparatus delivered either by hand or mechanically, the top of the pile *x* is kept at constant height by devices which lower the platform 2 and are controlled by a pneumatic device 30 having an orifice level with the top of the pile. Side guides 24, end gauges 21, and cam operated joggers 25 are carried adjustably by a framing 1, 8, independently of the platform 2. When the sheets are delivered by tapes, etc., they may be curved for longitudinal stiffening by rollers and guides 76, 79, and the framework carrying the tapes, guides, etc., may be raised, instead of the platform 2 being lowered. The platform 2 is supported by rods 7, and chains 5 wound round drums 4 on a shaft 3 driven through worm and chain drive from a ratchet wheel 44 turned by a pawl 43 operated by an eccentric 53 to lower the platform 2 gradually until it rests on a trolly 9, when the platform and pile is removed and a fresh platform substituted. The pawl 43 is normally lifted away from the wheel 44 by a bell-crank lever 37 and rod 35 pressed upwards by a spring 41, and connected

to a flexible diaphragm in the box 30. In the side guide 24 a hole is made, and connected by a pipe 32 with a suction pump 27, a branch 29 passing to the box 30. As the pile *x* of paper rises and begins to cover the hole, the partial vacuum created by the pump 27 acts on the diaphragm in the box 30, and allows the pawl 43 to engage the wheel 44 to lower the platform, until the hole in the guide 24 can pass more air. The guides 24 and joggers 25 are carried by frames 61, laterally adjustable by rack and pinion on a bar 62. Each jogger 25 is worked by a cam slidably mounted on a rotating shaft 68 and giving a slight oscillating movement to the shaft 26 which carries the jogger 25. The guides 21 are carried on depending brackets 22, slidably mounted on rack bars 57, and simultaneously adjusted by turning one of the wheels 60. When the platform 2 is not arranged to be lowered, the conveying tapes 14, guides 24, etc., are arranged on a frame slidable vertically on the frame 1, and are gradually lifted by a chain actuated from the before-described ratchet mechanism. The invention is patented by Mr. J. A. White.

The "Times" on Art Printing.

In a review of the first volume of the Riccardi Press edition of Chaucer's "Canterbury Tales," recently, a writer in the Literary Supplement of the *Times* said that:—"The typographical theories of William Morris and his pupils and imitators have hitherto been expressed in publications issued from presses more or less private. It has been left to Mr. Lee Warner and the Medici Society to produce books in which the main principles set forth by the poet printer have been followed as far as they are compatible with commercial exigencies. In the 'Canterbury Tales,' Volume I. of which is before us, the type is of dignified form (it was designed by Mr. Herbert P. Horne, a pioneer in what is called the revival of printing), the paper is made on moulds not dissimilar to those used for the paper of the finest of the fifteenth century books, and the pages are arranged with due regard to the proportion of margins and the spacing of the words and lines of the type. Yet the book as a whole leaves one a little unsatisfied, mainly, we think, owing to the injudicious way in which the reproductions of Mr. Russell Flint's drawings have been inserted. Placed as they are between the pages of the type with which they have absolutely nothing in common, with a leaf of thin paper bearing the quotation the picture illustrates, one cannot help wishing them away. We hasten to add that this is in no way derogatory to the drawings themselves, or to the manner in which they are produced. Instead of having been done by the ordinary three or four-colour half-tone block process, by which nearly all coloured book illustrations are now printed, Mr. Flint's drawings are reproduced by an application of the collotype process to colour, and they are far superior to any work done in the usual way. But if it were necessary to publish the pictures in conjunction with Chaucer's text, a more harmonious result would have been obtained had they been bound in a volume by themselves. It is pleasant to see this beautiful process coming into use in England, and one turns to the colophon to see if the name of the printer is there recorded. Unfortunately it is not to be found, though the acknowledgments are numerous. The drawing upon the title-page shows that Mr. Flint, if he had chosen to restrict himself to black and white, is capable of producing book illustrations whose typographical character would leave little to be desired. In 'Marius the Epicurean,' which came last week from the same house, the publisher has been content to trust entirely to the typography; consequently there is little of which even a severe critic can complain. The volumes are worthy to be placed in any collection of typographical works of art. Our only regret is that in a temporary binding it has been thought necessary to gild the top edge of the book; this and a sham head band are the only jarring notes in the composition, on which Mr. Lee Warner is to be congratulated."

Japan's Paper Trade with China.

In commencing the trade in papers with China, Japan manufacturers were prepared for anticipated losses for the first several years which were to be balanced by the profits at home. In the Northern Districts in China, where the competition of Japanese goods with the European manufactures is as keen as in Southern China, the latter has gradually been handicapped, one of the reasons being found in the fact that the European cargoes destined for the north have to be transhipped at Shanghai into smaller ones, and transferred to Tientsin, whereas the Japanese goods are dispatched direct with Tientsin. In Southern China, where the Western commodities enjoy more advantages, the marks of Japanese manufactures are recognised as well, and the results in the past few years have been on the whole satisfactory from a Japanese point of view, the exports from Kobe doubling every year. The demand for foreign papers in the new Republic is increasing in very considerable ratio, and yet, on an average, the Chinese people at present consume one-twentieth of the amount used by the Japanese. China is a gigantic nation, comprising 400,000,000 inhabitants, who are awakening and finding interest in the publications now coming out in large numbers, and it cannot but be hoped to become an immense market at length for papers.

Typesetting Machines in Canada.

The removal of the duty on typesetting and typecasting machines imported from the United States into Canada, says the *Fourth Estate*, is considered a great boon by the printers and publishers of Canada. In the past the duty has been twenty per cent. No typesetting or typecasting machines are made in Canada, so that every machine purchased since this duty was put on has been subject to a tax of from $400 to $700, according to the style of the machine. Removal of this duty will mean a saving of at least $75,000 to the Canadian purchasers of these machines during the ensuing twelve months. Another change in the tariff that was of special benefit to newspapers was the removal of the duty on photographs imported for use in newspapers. The objection to this duty was not so much to its effect on the cost of these photographs as to inconvenience caused by their frequently being held up in customs offices pending their clearance. The Canadian Press Association has worked hard for the removal of these duties during the past two years, and it is largely due to its efforts in the matter that they have been removed.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

A Discussion on Future Policy.

The monthly general meeting of this Centre was held at the Crown Hotel, Booth-street, Manchester, on Saturday last, when the minutes of previous meeting were read and passed.

Mr. Bentley Dyson, lithographic overseer, Messrs. Jas. Broadley, Ltd., Clayton-le-Moors, Accrington, was admitted to membership.

On a ballot being taken, Mr. Edward McVay was elected trustee in place of Mr. H. C. Critten, resigned.

The President (Mr. Thomas Kirkwood) hoped as many members as possible would attend the united gathering at Liverpool on June 21st next, and as the arrangement of such functions caused a lot of work and anxiety to the organisers, he trusted the members would quickly make up their minds to go for the half-day, if they were not able to get away for the day.

The Hon. Secretary said he had been approached on the question of a conference, and after discussion it was moved by Mr. F. J. HUGHES, and seconded by Mr. F. BURNETT:—"That the Manchester Centre of the P.M. and O.A. will be pleased to meet the Masters' Federation representatives on Saturday, September 27th next, at whatever time and place they fix, and to receive their views on trade matters."

The next item on the agenda was "To receive and consider the recommendations of the special committee on the future policy of the P.M. and O.A."

Vice-President F. BURNETT, in his opening remarks, said: "I consider the report as published (and which I expect most of you have read) to be all right in some respects. Taking the first item, which concerns us chiefly as provincial members, and which comes under the heading of General and Local Funds, I think it will be more satisfactory to have the general fund kept separate, and to be used only for purposes common to the whole Association. As it is mentioned, this will not cause us to think at any future time that the Parent Association are carrying out any of its own objects at the expense of the Centres. The increase in our subscriptions and the extra benefits which are put forward should certainly tend to strengthen our membership, but I cannot say that I agree with the Pension Scheme. I think this would be better left out, as in my opinion we would be starting a scheme which would not benefit us to any great extent as provincial members. Probably if the amount which has been allocated to the Pension Fund could be put towards a Death Benefit Fund, and thus reduce the levy from 2s. to whatever it might be found possible, it would meet with more satisfaction. As to limit of age for Death Benefit being raised to 50 years, with reduced payments, etc., as recommended, and to be retrospective in regard to members who have joined under previous scale—this should meet with the approval of the various Centres as a means of increasing our membership. One point I would like to suggest, and which I note has not been mentioned in the report is the forming of

A National Council

to be composed of members of various Centres as well as from the Parent Association; the representatives on this Council to be at the rate of one member for every fifty from each Centre. They could meet twice in each year, when the most important business of the Association generally would be dealt with. I think the time is now opportune, when we take into consideration the increase in the number of members through the forming of new Centres, that we should have more to do with the management of affairs generally, and thus assist the Parent Association. I believe we would get better results on important questions concerning us all, and that our business would be dealt with in a more satisfactory manner by this linking together in one body of the representatives of the whole Association.

As a full report of the various items in the Special Committee's Report appears on pages 395 and 396 of the *British and Colonial Printer and Stationer*, May 15th issue, the reference numbers will suffice for explanations in connection with Manchester's views.

ITEMS 1 TO 14.

As these applied mainly to London Centre they were passed over.

ITEMS 15 TO 18.

These appeared a little incongruous, because the titles, General Secretary and Financial Secretary, could be taken as applying to the whole membership, whereas the wording under item 16 seems to apply locally. The question arises, how are these officers to be paid for their services? Will the Parent Centre pay them a salary out of their own suggested separate fund for their local requirements, and the proposed National Council employ them for the Association work, making them a distinct grant for such services? From the local standpoint the Manchester members believed they had no right to question, but on the broad basis as officers of the whole of the Association,

Mr. F. J. HUGHES moved and Mr. F. BURNETT seconded, "That there be a General Secretary and an Assistant Secretary."

From past experience in the Manchester Centre they had found that a Secretary and Financial Secretary had, in working, caused a lot of unnecessary clerical work, owing to the indifference of members in sending moneys and queries.

ITEMS 19 TO 22.

All were agreed that the Parent Centre should have its own separate fund.

As to the total funds in hand at the end of last financial year,

Mr. JAS. E. MAYO moved, and Mr. T. RIGNALL seconded: "That the proposed National Council allocate a portion to the Parent Centre, and the rest be placed to the Imperial Fund."

ITEMS 22 TO 24.

Moved by Mr. D. WAIN, seconded by Mr. J. MCCOSH: "That the subscription be raised to 16s. per annum."

Moved by Mr. J. H. NUTTALL, seconded by Mr. J. POLLITT: "That all reference to a pension fund be deleted."

Moved by Mr. F. BURNETT, seconded by Mr. GEO. E. SHEARSMITH: "That two shillings be allotted to unemployed fund, and the benefit to be increased from five to eight weeks."

Moved by Mr. F. J. HUGHES, and seconded by Mr. J. MCCOSH: "That the other two shillings of the four shillings increased subscription be allotted as follows, viz.: One shilling to the Benevolent Fund and one shilling to local centres for working expenses."

In actual working it was found that small centres were crippled for the want of finances, and however desirous each centre was to fraternise with its sister centre, the wherewithal was the great drawback. It was all very well for the members in byegone years to draw upon their private purse to extend the usefulness of the Association, but it was thought there ought to be a more independent spirit. Manchester Centre had found it very useful on more than one occasion to immediately grant a relief out of its own fund as the necessity arose, and if it was desirous for each Centre to fraternise together there should be the finance necessary for so doing.

ITEM 25.

It was agreed that this be deleted.

ITEMS 26 AND 27.

These were agreed to.

ITEMS 28 AND 29.

Umbrage was taken at the last sentence in Item 29, one member saying that it compared with a person who joined a co-operative store so that he could have a lump sum to draw when the quarter's dividend was to be paid out, but who during its accumulation was "subbing" it two shillings at a time.

It was moved by Mr. F. J. HUGHES, and seconded by Mr. F. H. A. FRANCIS:—"That the last sentence in Item 29, which reads, 'Payment of such levies should be made from the death benefit reserve, and the amount so paid be deducted from the sum payable at the member's death,' be entirely deleted."

ITEMS 30 AND 31.

Moved by Mr. J. H. NUTTALL, and seconded by Mr. C. GOAT:—"That they be agreed to."

ITEMS 32 AND 33.

Agreed to.

ITEM 34.

As Manchester had carried out these suggestions during the past five or six years, it was agreed to.

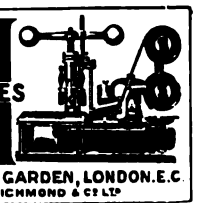
ITEM 35.

Moved by Mr. F. J. HUGHES, and seconded by Mr. JAS. E. MAYO:—"That Item 35 be agreed to with the addition of the words, 'That such expenses be defrayed out of the general fund.'"

ITEMS 36 AND 37.

It was unanimously agreed that these be deleted.

ITEM 38.



The members of the Manchester Centre appreciate the efforts put forth by the Special Committe on Future Policy.

Overlooked.

One point seems to have been overlooked, and perhaps the Commitee, who are all local gentlemen, have accidentally omitted to put forth that greatly-to-be-desired body, "The National Council." Now it requires a Council to put these suggestions into working order, and it was thought that "A Business Government" drawn from all Centres would be of great benefit to the Association, therefore

In was moved by Mr. F. J. HUGHES, and seconded by Mr. GEO. E. SHIRRA:—"That a National Council be formed of representatives from each Centre, the representation, consisting of the President and Secretary of each Centre, with an additional member for each fifty, or its fraction, beyond the first fifty members."

TRADE UNION

Bookbinders and the Employment OF FEMALE LABOUR.

The recently initiated strenuous competition among the publishers of cheap reprints has resulted in a situation that is regarded by the Trade Unionists employed in the bookbinding industry as a serious menace to the stability of their organisation. The demand for cheap literature has been accompanied by a demand for cheap production, and the consequence has been that several of the leading trade binding houses have laid down at considerable expense installations of machinery capable of meeting the demands of the publishers of this class of book. With this has come a tendency to displace the journeymen whose services have hitherto been necessary, and to substitute a grade of cheap labour, to the detriment and injury of men who have served their apprenship to the trade. Many of the popular and largely advertised books are said to be produced by the labour of girls receiving from 5s. to 8s. per week, who are engaged upon work for which a minimum standard wage of 35s. for 48 hours was regarded by a Board of Trade arbitrator as fair a few years ago.

A meeting of protest on behalf of the National Union of Bookbinders and Machine Rulers was held in the Memorial Hall, Farringdon-street, one Saturday night last month, when the chair was taken by Mr. Stubbings, of the West End Branch, who was supported by the executives of the four London Branches of the Union. After speeches had been delivered, explaining the situation, a crowded audience unanimously endorsed the following resolution:—

> That this mass meeting of the London members of the Bookbinders' and Machine Rulers' National Union hereby expresses its determination to resist to the uttermost the introduction or continuance of cheap labour in provincial establishments, as is now being done or attempted to be carried out by certain London employers. Further, it hereby authorises the federated committee to take immediately such steps as shall remove this growing evil from the trade, and pledges them its loyalty in any action it may be necessary to take.

The committee was authorised to take immediate steps to put the resolution into operation.

The above is based upon a report appearing in one of the Labour papers, but as the subject seemed to call for more extended treatment, we, with the view of obtaining further details in connection with this matter, communicated with some of the leading firms publishing cheap reprints and the popular sixpenny and sevenpenny series of novels, etc. Very few houses of this class, however, actually bind the books they issue, the majority putting their work out under contract. Messrs. T. C. and E. C. Jack, of Edinburgh, for example, give all their work out, principally to Edinburgh binders, but in some instances to London houses. Messrs. Williams and Norgate (who, by the way, do not go in for the cheap reprint branch) also put their work out, and so far as they know it is all done in London.

The writer had a chat with Mr. H. R. Dent, managing director of the well-known firm of J. M. Dent and Sons, Ltd., Bedford-street, W.C., who said that whatever foundation there might be for the statements made in the resolution, there was certainly none so far as his firm was concerned. It was true that their binding was done in the country, at their own fine new works at Letchworth, where they employed a large female staff and paid them the full London rate of wages. The descriptions of work on which they were engaged are much the same as in other establishments of the kind, *i.e.*, folding, gathering, collating, sewing, laying on and brushing off gold, etc. No change tending to displace male by female labour had been made lately, nor was it in contemplation to make any. Mr. Dent's view was that if such a state of things as that outlined in the resolution did really exist anywhere, it was probably in some of the competitive trade binding houses. His firm was not concerned with that class of work, the binding done at Letchworth being almost entirely confined to their own requirements.

A large proportion of the cased-in binding contracted for by publishers is done in the country by London firms, and one of the oldest and most important houses engaged in this branch is that of Messrs. Burn and Co., Ltd., Kirby-street, Hatton-garden. For some ten years past they have had a large binding works at Esher, where about 500 hands are employed. In the course of an interview our representative had recently with the managing director, that gentleman said his firm's female staff were paid good wages, and were thoroughly satisfied, a statement the correctness of which he was willing for us to test for ourselves, if thought desirable, by personal investigation on the spot. They did not, it was true, invariably see their way to accede to all the demands the Trade Unionists made upon them, but whenever an agreement was entered into with the Union, its conditions were loyally observed, both by the firm and its employees. They were certainly not in the habit of displacing male labour by girls "earning from 5s. to 8s. per week," and had not the least intention of doing so. So far from this being the case, some of their American-type folding machines were being operated by men, although this branch of work is almost always done by women in other binderies. Of course, whenever they found that the adoption of a certain mechanical device—they had several such at Esher of their own invention—tended to economise time and labour, then they availed themselves of it. Messrs. Burn and Co., it may be mentioned, do the binding of all the cheap books published by Messrs. Macmillan and Co., Ltd., who tell us they have no reason to believe that the hands who do this work are paid other than a satisfactory rate of wages.

Mr. Douglas Cockerell, the Controller of Messrs. W. H. Smith and Sons' bookbinding shops at Letchworth, Herts, has also assured us, on behalf of that firm, that such reprints as are bound in their establishment are produced under absolutely fair conditions, no actual "binding" being done by the girls. In this case also, the firm offered to allow one of our representatives to go round the workshops, if considered necessary, in order to convince us that, so far as Messrs. Smith and Sons' business is concerned, the conditions complained of in some country workshops do not apply. We saw no present need for this however, feeling quite satisfied with Mr. Cockerell's personal assurances on the point.

There is not, it is true, very much in the way of organisation amongst the female workers engaged in the bookbinding industry—it being notoriously difficult to organise women workers—but on the other hand, this branch of the labour employed in the trade is and has generally been singularly free from disputes of any magnitude, a fact which goes far to prove that the surroundings and conditions of labour of the women binders are mostly acceptable to them. There is no doubt good foundation for the statements made at the meeting referred to, and for some time past the trade unions have been trying to confine within strict limits the employment of women in the bookbinding trade, as witness the threatened trouble in Scotland a few months ago. The attempted limitation of overtime is another point that evidences the existence of a certain amount of unrest amongst unionists. It has been suggested to us that the recent starting, by a London firm of trade binders, of a country factory largely operated by girl labour, has assisted in bringing matters to a head. It will be seen, too, from a paragraph in the "Notes and News" printed in this week's Bookbinding Section, that a complaint about the wages paid to the female binders at McCorquodale's was made in Parliament a short time since.

Several of the trade binding houses—we think Messrs. Burn and Co. may fairly be reckoned amongst them—have numbers of female hands who have remained with them for many years, being always well treated. In one or two instances things may be different, but it must not be overlooked that for a single employer to raise the wages of his staff to a level which he personally might think a reasonable one, would be quixotic in the face of the strong competition existing just now. In such cases, the remedy lies largely with the publishers themselves; if they as a body decided to issue these cheap books only at a price which would allow of a reasonable profit, not only to author and publisher, but to binder as well, then the latter would be in a position to comply with some of the trade union's demands, and the unionists would have a certain amount of practical reasoning behind them when approaching any employer in whose shops it was held that proper conditions did not prevail. The mere difference in the selling price of a sixpenny, as compared with that of a sevenpenny cased book, might account for a good deal. The adoption of a cost system by binders will not help them much unless the basis of charging which it establishes is one that their publisher customers are willing to adopt. So long as these cheap books are produced for sale at a price which shows no profit at all until so many thousands have been disposed of, and very little afterwards, just so long, probably, shall we hear of cutting prices, and consequent labour discontent in some form or another. One well-known London trade printing and binding house, having country works, whose opinion we sought on the subject, tells us that they do not bind any 6d. or 7d. cloth-cased books, as they found, after repeated estimating for such work, that other binders were doing it at prices which were apparently below our informants' cost of production. This particular firm, however, only lays itself out for really good class work.

The Spottiswoode Club & Institute.

This club is one of the oldest, if, indeed, it is not the oldest printers' institute in the metropolis, and consequently its history is of special interest to the many clubs now existing in the realm of printerdom. The original objects of the club are the keystone to its success, for by the wisdom of its founders every scope was allowed for progression on the lines of true sociability, without disturbing the character of its charter. As is the case with most large City firms, the need was felt for an institution wherein the male worker could secure home comforts between meals without having recourse to the wiles of the public-house, and which should also provide a well-conducted as well as an inexpensive club for those of limited means. The club adopted the co-operative plan of purchasing all their requirements upon wholesale terms and supplying the same at the smallest possible price, and thus again assisting those who would most appreciate co-operative assistance. The amusements are numerous and varied, and in such games as chess and draughts the members of the Spottiswoode Club have been almost invincible.

A short time ago the Spottiswoode Club secured the splendid premises at No. 8, New-street, which was an immense improvement upon their old club house higher up the street. They secured a lease, and induced the landlord to redecorate the exterior and interior in a lavish manner. To celebrate the occasion a dinner was held last Saturday week, and, judging by the enthusiasm of those present, a successful start has been made, and a new era started in the history of the club.

The dinner was arranged by the stewards of the club, under the supervision of the energetic secretary and his wife, and the good things provided and the tasteful table decorations would have done credit to a West-end hotel. This is a worthy tribute to the committee of management whose services are so valuable on these occasions. After the tables had been cleared, harmony prevailed for the rest of the evening, for which the stewards, Messrs. G. Stacey, W. Beech, C. Bull, and C. Burchell deserve great credit.

The chair was taken by the President of the Club (Mr. Rushworth), and Mr. James H. Kent made an eloquent speech in proposing "The Health of the King."

Mr. WHITE proposed the toast of "The President." Mr. Rushworth he said, was one of the oldest and most respected members of the club. Whenever he could come to their aid he was a most willing and a most strenuous worker. The club was indeed fortunate to possess such a man. They all knew Mr. Rushworth's worth, and they would all drink to the health of their esteemed President, wishing him long life and happiness. The toast was enthusiastically received accompanied with musical honours.

Mr. GEO. SAMBELS, who was for many years the honorary secretary to the original Institute, said it gave him peculiar pleasure to be present. He had known Mr. Rushworth for many years, he being one of the old members. He could endorse the sentiments which were embodied in the toast, and would go still further by saying that it was a guarantee to him and the old members of the Institute that the good old ship was sailing a clear course, for they knew that Mr. Rushworth would never be a party to anything which would bring disgrace or trouble to the dear old "Stoot." Years ago they founded the Spottiswoode Club and Institute at No. 11, New-street-square, when Mr. Grant was the secretary. For some years he himself had the honour of being secretary, and therefore it afforded him genuine pleasure to be present to support an old "house" apprentice as the present secretary. In Mr. Will Hanscomb they would find a real friend as well as an energetic secretary. Mr. Hanscomb had been of great assistance to him in his day, and he was sure that the club had done a wise thing in selectiug him as their secretary. Mr. T. E. Young was one of the principal workers in his day, and a gentleman whom they all respected to-day. He was glad to see that the spirit of comradeship that knew no other law than genuine friendship was still the dominant factor in the club. It was a wise rule years ago that politics and personal matters should not be allowable, and he was specially pleased to find that it was still to be their platform. His feelings were somewhat mingled on the present occasion, but despite the past they could all look back upon the memories of the Spottiswoode Institute and the times when their employers were personally interested in each member of the club. It was then that they found what large hearted gentlemen their old governors were—memories that years had not been able to remove, or strenuous times and conflicts had not killed. They still retained a corner in their affections for the members of the old firm of Spottiswoode and Co.

Mr. W. HANSCOMB, in thanking Mr. Sambels, said they carried on the Institute in the name of their dear old governors out of pure respect, and they trusted to be able to maintain the fair name of Spottiswoode for many years to come. The motto of the club was "Onward," and that, he thought, was the best of all mottoes.

The PRESIDENT, Mr. Rushworth, expressed thanks for the generous way in which the toast had been received, and for the kind words of Mr. White. He was a firm believer

Mr. Rushworth,

President of the Spottiswoode Club and Institute.

in a club of this kind, and so long as the present rules were respected by the members, his services would be at their disposal. He had been a member of the Institute from its inception, and he was able to say that the progress had been steady and sure, and the membership had increased until at the present time over 300 names of the old and present employees of the King's House and of Spottiswoode and Co. were upon the books. Year by year their stock had been increased in value and in comfort until they now had in this commodious building, a magnificent billiard-room with two full-sized tables in it. They had reading-rooms and a library, a games-room, a smoking-room and various small rooms for committee and other purposes. Of course they had a large refreshment department, and a respectable sized bar, but they also had one of the largest rooms reserved as a dining-room, where they could secure a good wholesome dinner for 6d., and where they could have their cup of tea or refreshments, which was peculiarly useful when they were working late or going on the whole night. They had had a good time together in the past, and they were celebrating a red-letter day in the history of the club that augured well for the future.

Mr. ASHDOWN, in a few well-chosen words, proposed "The Health of the Visitors," coupling with it the name of Mr. H. F. Parker, who they all knew and respected as the hon. secretary of the Printing and Allied Trades' Charity Sports. Mr. Parker was now the secretary of the Lloyd Memorial Caxton Seaside Home at Deal, and they would certainly do their best to help him in carrying on the work of this magnificent trade institution.

Mr. H. F. PARKER, in reply, said that it gave him real pleasure to be present. He had attended nearly every important function in connection with the club for the past seventeen years, until many people thought he was employed at one of the Spottiswoode houses. He knew most of the old governors as well as the managers and the employees, and from long personal experience he could say that a better lot of men could not be found in the community. He took no sides in politics, because there were others to be found more gifted in that direction, but he was a strong believer in the personal element that brought the employer into direct touch with each employee. No finer action could be found than a certain director's wife seeking out the poor girl who was unable to pay for a few week's rest, and quietly sending her away and paying all expenses. This work had been going on for years unnoticed and unadvertised, and the lady would not thank him if he disclosed her name. In conclusion, he would say that as long as they made this club the pure social institute that it had been in the past he should be only too pleased to be with them. They had excelled in billiards, chess, draughts, etc., and he had often challenged all comers to chess and other games by resorting to the members of the club. He wished them every success.

Mr. F. SMITH, in giving the toast of the club, said it gave him peculiar pleasure to draw their attention to the transformation of the old club at No. 8 into the present magnificent building. There were many who said the scheme was too ambitious, and others who prophesied failure, but he was proud to have been the chairman who was responsible for bringing this ideal state about. It was a grand thing to find gentlemen amongst them to come forward and invest their money in the club without expecting any interest thereon. That was an eloquent testimonial to the quiet confidence they had in the step which they had now taken. He coupled with the toast the health of the secretary and his good lady, Mrs. Hanscomb. The toast was received with musical honours.

Mr. HANSCOMB said he was delighted with the new premises. In welcoming his fellow-members from No. 9 to No. 8, they had gone down one, but he was also positive that they had also gone up one. They could keep the club going. The membership was rapidly increasing. They had a good commissariat department, and that alone gave them a good return for their investment. Beyond that they were going to do something for their wives and children and mark the occasion by inaugurating a scheme for endowing a bed at the Deal Home. In less than three years time this red-letter day would be chronicled for all time by a marble tablet over a Spottiswoode Institute bed at the Lloyd Home.

Mrs. Wm. Hanscomb was then called upon to present the prizes for billiards, chess, etc., won during the past season, the names of the winners being Messrs. Barton, Jones, Mowlem, Garton, Rushworth, Dowling, Taylor, Davies, Walker, Spice, Stevens, Hanscomb, Labon, and Hooper. Mr. A. C. White presented a gold bracelet to Mrs. Hanscombe as a token

of esteem from the members of the Institute, Mrs. Hanscomb returning thanks in a pretty little speech. Mr. A. C. White presented a handsome clock to Mr. Bert Holmes, the assistant secretary, for long and meritorious service. They one and all wished him good health and prosperity. Mr. Hanscomb was also presented with a clock.

The harmony of the evening was entrusted to the following artistes:—Mr. H. R. Thomson sang "Come sing to Me" in a pleasing manner, for which he received an encore. Mr. W. Argent, as amusing as ever, sang "Hair, hair, hair," Mr. C. Hill sang "Love me and the World is Mine," Will Bentley gave "The Red Marine," Mr. F. Clarke sang "The Major," Mr. McFarlane was very good in his song, "Meet Me Once Again," whilst Mr. Murphy scored in "Come back to Erin." Mr. Ben Hogg was very amusing in his songs, especially the one entitled "That want's Doing." The tit-bit of the evening, however, was an original song, to the tune of "A Fine old English Gentleman," sung by the author, Mr. James H. Kent, a member of the club. In this song the principal members of "The brand new club and institute" were described in a most jocular manner, the witticisms creating roars of laughter at almost every line, the last two verses of which we print herewith:—

Though last I've kept his name, 'tis not because we think him least,
Our Sec. and Steward is the best in North, South, West, or East—
'Twas on his shoulders fell the weight of this convivial feast:
Without BILL HANSCOMB it may be this Club had e'er now ceased—
So shout his name out merrily,
The pillar of our "Stoot" to-day.

And now we'll close with honours to our jovial Sec.'s best half,
Who's ever ready with a smile, and has a merry laugh—
A pair well met—we like them both—and speak our thoughts to-night
In wishing them full many years of health and of delight—
So it's "Hats off, gentlemen," we cry,
To the Lady of our Institute.

Printing & Allied Trades Charity SPORTS ASSOCIATION.

Annual Meeting at the Crystal Palace.

Notwithstanding a threatening sky in the early morning, a favourable barometer entirely fulfilled its promise on Saturday last, when the weather throughout the day was all that could be desired for a sports meeting. Specially favoured in this respect, and in the encouragement of a "good gate" and an enthusiastic crowd of onlookers, the seventeenth annual Charity Sports, held at the Crystal Palace, under the auspices of the Printing and Allied Trades Charity Sports Association, was a pronounced success. A programme of five hours' continuous sport was provided without a hitch, and with large "fields" and close finishes the function proved a most enjoyable one. The trade events were, as usual, very popular. It is noteworthy that all of the teams which had entered took part in the mile relay race, the two miles inter-team race, and the tug-of-war, but all the four challenge trophies changed hands. The Linotype Challenge Shield was won by the Wheatsheaf A.C., who wrested it from the Amalgamated Press A.C., who had held it two years in succession.

The Championship of the London Schools Athletic Association events created a great amount of interest. It represents 581 schools in 16 districts, whilst the boys had been carefully and specially selected from 29,570 competitors trained by the Athletic Associations connected with the London Elementary Schools.

The President of the Association this year is Mr. Herbert C. Haycock, who arrived on the track accompanied by Mrs. Haycock, to whom Miss Lewis presented a handsome bouquet on behalf of the Sports Committee.

The following is a list of the patrons and officials:—

Patrons: Messrs. W. Ager, J. H. Blake, E. A. Beattie, Herbert Bolton, Mrs. W. E. Broomfield, Messrs. W. E. Broomfield, W. I. Burch, G. Buttfield, H. Carter, W. Coffey, J. Corey, Harvey Dalziel, J. M. Dick, A. Edbrooke, C. W. Emery, C. J. Fisher, T. Fortunati, Ralph Frost, H. F. George, T. W. George, J. Gibbins, T. J. Gilbert, S. Goy, A. T. Kremer, J. R. Hayman, W. H. Haycock, G. J. Harrison, J. Hastings, W. E. Hebditch, Carl Hentschel, R. W. Horne, W. Horwood, H. W. Howes, Ald. T. J. Hunt, Walter Isaac, A. W. Knapp, S. Lendrum, F. P. Lewingdon, F. W. Lewis, Frank Lloyd, E. Macintosh, L. Marler, D. A. McIntyre, H. Mitchell, A. W. Morris, J. Mortimer, Mrs. J. Mortimer, Messrs. W. Panter, W. Brett Plummer, A. D. Poulter, R. P. Rose, W. H. Skinner, Hartley Straker, G. Sharvell, C. W. Shortt, A. B. Shurey, H. S. Simkins, G. Tomkins, E. H. Walker, W. T. Welfare, A. J. Whiten, W. G. Wicken, E. T. Williamson, Philip Reid, T. E. Wills, H. J. Simkins, J. Pearson and A. Offord. Reception Committee:—Messrs. Alfred W. Paul, W. Hicks, J. Knight and H. H. Walker.

Referee—Mr. Ernest Cadle. Judges (cycling)—Messrs. J. B. Sullivan, B. Chase (C.H.), T. S. Hanscomb, "Captain Coe," F. Hedger, J. A. Wylie, T. W. Handford, W. R. Vernon, J. Stark (City Police A.C.), T. J. Lewis. Judges (running)—Messrs. C. Pearce (H.H.H.), J. A. Cottrell (C.H.), E. Vowles, E. J. Richardson (C.H.), C. W. Garnham (A.A.A.), A. Roddick, S. Lambert (H.H.), H. Burnage, A. H. Page. Ladies' Race—Mrs. Cadle. Timekeepers—Messrs. J. Ogilvie (C.H.) and Val Waterhouse. Starter—Mr. J. Beck (*Sporting Life*). Chief clerk of the course—Mr. G. Maddams. Chief steward—Mr. D. James. Umpires—Messrs. B. C. Albert, A. A. Barnes, W. E. Baulch, A. Bispham, A. E. Briggs, H. Bullett. H. W. Bye, J. Fleming, F. Gummow, R. K. Gunn, W. H. Hagon, R. B. Hardie, J. E. Hunt. Geo. A. Isaacs, A. E. Jones, W. T. Mills, L. C. Mitchell, W. Morgan, G. W. Nowell, H. J. Osborn, Arthur Paul, J. Paul, F. C. Peacock. H. Porter, A. Ritchie, W. E. Ritchie, G. Robinson (chief), J. C. Savill, J. L. Scorgie, R. Vincent. Marksmen—Messrs. J. T. Billings, W. Broomfield, G. T. Burge, J. Caney, J. R. Copcutt, A. Cousens, W. R. Crisp, J. H. Davis, W. Gardiner, H. Gallon, R. R. Gibbs, W. Goodenough, E. Hampson, W. Hanscomb, R. Henderson, W. H. Marshall, A. Patrick, F. C. Pearl, W. J. Penn, G. C. de Pont, H. N. Porter, W. J. Pruden, J. Raffield, T. Reddington, S. B. Smith, W. Spratt, A. E. Testot, H. R. Thomson, S. Tizzard, T. Walters (chief), W. H. Wicken, J. Winters, H. West. Field Events—tug-of-war officials, etc.—Messrs. A. E. Wright, W. J. Mould, and W. Blincko (umpires), C. Anderson, H. Camp, J. Couchman, A. H. Edwards, W. Everett, F. N. Flaxman, J. Groves, W. Herring (judge of tug-of-war), C. Honnor, H. J. Houston, P. McGinty, W. McGuiggion, C. Minns, G. Parker, P. Sims, W. Sparrow, W. H. Stewart, C. Thompson, F. World. Badge stewards—C. Lea, C. Fletcher, W. C. Hagon, and J. G. Codling.

School Association Officials—Messrs. W. G. Benton, F. J. Boait, A. Brewer, C. Brill, Harry Britton, A. Brixey, Dr. T. H. Clarke, C. Cook, C. E. Creese, E. Dean, B. W. R. Dodds, T. J. Duke, J. A. Duley, H. T. Edney, C. W. G. Evison, S. Ewings, W. Forsey, E. W. Haley, A. J. Hirst, F. H. Holland, J. Hollick, A. K. Horwood, A. T. Jones, W. W. Jones, R. P. Large, W. Lightfoot, W. E. Lucking, W. McTrusty, E. B. Mollett, G. T. Newton, E. C. Norris, T. C. Pear, G. A. Smith, C. H. Talford, J. G. Timms, A. Wasey, J. Wood. Stewards—Messrs. A. Austin, T. C. Barnes, F. C. Brown, J. E. Cattermole, T. G. Collier, R. Dyke, W. G. Elam, E. George, H. George, J. M. Gow. H. Gregory. J. Harris, A. E. Holmes, T. Johnson, H. Kinch, R. L. Key, A. G. Lawrence, A. J. Lawrence, J. Mabey, W. Mynott, J. Langlands, W. Hull, G. P. Mayo, W. Johnson, N. Nathan, W. B. Parker, W. F. Pratt, E. E. Robbins, E. H. Ruffett, F. Smart, J. H White, H. H. Walker, L. E. Mann.

Press Stewards—Messrs. A. W. Jones, W. F. Moore, G. W. Bott. Prize Stewards—Messrs. E. A. Lowe (chief), G. Loveland, W. Bryon, A. Watts. Programme Stewards—Messrs. J. F. Walker, E. J. Ling, G. Smith. Hon. Secretary—Mr. H. F. Parker. Hon. Assistant Secretary—Mr. W. A. Fricker. Hon. Sports Secretaries—Messrs. A. Codling and J. Codling. Dressing-room Stewards—Messrs. E. S. Kearns, W. Brownridge, and T. Kay.

For the seventeenth consecutive year the St. John Ambulance Brigade (Hospital Saturday Fund Division), under the direction of Mr. H. W. Hendon, was in attendance.

Mr. Herbert C. Haycock.

President for 1913.

TRADE EVENTS.

ONE MILE CYCLE HANDICAP (for *Illustrated Bits* Perpetual Shield).—Heat 1: E. C. Piercy, the *Sportsman* (holder) scratch, 1; C. H. Croxford, the *Times* Book Club, 120, 2; 2 mins. 14⅘ secs. Heat 2: W. A. Keen, Wyman and Sons, 150, 1; D. H. Genner, Anglo-Engraving Co., 65, 2; 2 mins. 9⅘ secs. Heat 3: A. C. Dimmock, Houghton and Sons, 140, 1; A. B. Heinz, the *Times*, 175, 2; 2 mins. 7⅘ secs. Final: Dimmock, 1, Keen 2, Piercy 3. Keen and Dimmock put up a good fight for first place, Keen leading up to the last hundred or so yards, when Dimmock forged ahead and won by a wheel; 2 mins. 5⅘ secs.

220 YARDS HANDICAP.—Heat winners: E. Gordon, David Allen and Sons, 12 (25 secs.); J. A. Gouldbourne, Sutton A.A.C. 6½ (24⅗ secs.); S. G. Gyngell, the *Times* Publishing Co., 7½ (25⅕ secs.); R. G. Lovell, the *Times* Publishing Co., 7 (24⅕ secs.); L. C. Quartly, Highgate H., 10½ (25 secs.); J. R. Martin, Gravesend, 16 (24⅘ secs.); W. J. Pruden, Wyman's, 4½ (24⅕ secs.); C. J. Weedon, Wheatsheaf, 15 (24⅕ secs.). Final: Lovell 1, Gyngell 2, Gouldbourne 3, Quartly 4. Won by two yards; 23⅘ secs.

ONE MILE RELAY RACE (Open to teams in the county of London; 880 yards walk, 440, 220, and 220 run)—Carmelite A. C. (H. V. L. Ross, A. H. Shute, H. K. Brady, and L. Shute),

Clay and Sons, 29; C Bowden, Burn A.C., 30; F. Phillips, Wyman's A.C., 31; H. Straw, Shacklewell A.C., 32; B. Abrahams, R. Clay and Sons, 33; B. Frampton, R. Clay and Sons, 34; J. S. Fitchett, Wheatsheaf A.C. (B), 35; W. Chillingworth, Wheatsheaf A.C. (B), 36; 12 yards, poor third; 10 mins. 8⅗ sec. Team Placings: Wheatsheaf A.G. (A) (2, 5, 16), 23 points, 1; Kodak A.C. (6, 10, 15), 31, 2; Burn A.C. (7, 8, 30), 45, 3; Shacklewell A.C. (4, 21, 23), 48, 4; Amalagamated Press A.C. (holders) (11, 14, 24) 49, 5; J. Dickinson and Co. (12, 18, 20), 50; Millington and Sons (3, 22, 25), 50; Wyman's A.C. (13, 17, 26), 56, 8; R. Clay and Sons, (9, 29, 33) 71, 9.

80 YARDS VETERANS' HANDICAP (for the *Tit Bits* Challenge Cup; holder, J. Betts.—Heat winners: A. Atchison, Webb and Co., 12 (9⅘ sec.), A. W. Clarke, Clarke and Co., 6 (9⅗ sec.); J. Strange, Harrod's, 10¾ (9⅖ sec.), C. Cook, Howard and Co., 8 (9⅗ sec.); A. J. Dudley, Fisher's, 3¾ (9⅖ sec.); G. M. Adams, Cassell's, 10½ (9⅖); J. Walford, Lloyds, 6¾ (9⅘ sec.); R. W. Rudd, Smith and Sons, 11½ (9⅕ sec.); W. A. Fricker, Amalgamated, 9½ (9⅖ sec.); J. E. Savill, *North Riding News*, 15 (9⅘ sec.). Second Round.—Heat 1: Strange 1, Dudley 2, Atchison 3, 9⅕ sec. Heat 2: Rudd 1, Adams 2, Saville 3, 9⅕ sec. Final: Rudd 1, Adams 2, Saville 3, Dudley 4, Strange 5, Atchison 6, 9 sec.

TUG OF WAR (light weight) "Walker-Usher" Challenge Cup).—First Round: W. H. Smith (A) beat W. H. Smith (News), 2-0; Durable Roller (A) beat the *Times* (P.R.), 2-0; Amalgamated Press (Gravesend) (holders) beat Durable Roller (B), 2—0; Shacklewell A.C. beat Haycock-Cadle, 2—0. Byes: W. H. Smith (B), Goodall's, Lloyd's, and *Daily News and Leader*. Second Round: Lloyd's beat W. H. Smith (B), 2-0; Amalgamated Press (Gravesend) beat Goodall's, 2-0; W. H. Smith (A) beat Shacklewell A.C., 2—0; Durable Roller (A) beat *Daily News and Leader*, 2—0. Semi-finals: Amalgamated Press (Gravesend) beat W. H. Smith (A), 2—0; Lloyd's beat Durable Roller (A), 2—0. Final: Lloyd's beat Amalgamated Press (Gravesend), 2—1.

LADIES' 20 YARDS 4-ORANGE RACE.—Heat winners: Miss E. Green, Miss A. Green, Miss K. Clarke, Miss Bowring, Miss Underwood. Final: Miss E. Green 1, Miss Underwood 2, Miss A. Green 3.

OPEN EVENTS.

100 YARDS.—Heat winners: L. J. Pickrell, Polytechnic H., 8 (time, 10⅘ secs.); H. Waldegrave, City of Rochester A.C., 8 (11 secs.); S G. Gyngell, unattached, 8½ (10⅝ secs.); J. Kelly, Croydon B.H., 7¼ (10⅘ secs.); W. V. D. Dewdney, Ashcombe A.C., 7¼ (10⅞ secs); W. Chapman, Woolwich Poly. H., 8 (10⅘ secs.); T. E. Gooding, Herne Hill H., 8½ (10⅘ secs.); E. Cope, London A.C., 5¾ (10⅘ secs.); W. R. Reith, Polytechnic H., 7⅓ (10⅘ secs.); H. G. Jackson, North London H., 6¾ (10⅘ secs.); R. G. Lovell, Ashcombe A.C., 7¾ (10½ secs.); P. Markham, Polytechnic H., 7 (10⅝ secs.); C. G. Mitcham, Grays C.C., 8½ (10⅘ secs.); C. D. Settle, Highgate H., 9¾ (10⅘ secs.). Second Round.—Heat 1: Pickrell 1, Gyngell 2; 10 secs. Heat 2: Reith 1, Jackson 2; 10½ secs. Heat 3: Lovell 1, Mitcham 2; 10½ secs. Final: Lovell 1, Gyngell 2, Mitcham 3; 10½ secs. A close race, inches only separating the winners.

HALF-MILE CYCLE HANDICAP.—Heat winners: W. J. Bailey, Polytechnic C.C., scratch (58¼ secs.); E. C. Piercy, Polytechnic C.C., 37 yards (58⅗ secs.); A. Alden, Kentish Wheelers, 45 (59½ secs.); T. Harvey, Paddington C.C., 40 (58 secs); J. Bywaters, Kentish Wheelers, 40 (57½ secs.); J. C. F. Masters, Kentish Wheelers, 55 (59¼ secs.). Fastest loser, G. E. Cavenagh, Imperial Wheelers, 70. Final: Alden 1, Bailey 2, Bywaters 3; 57⅗ secs.

ONE LAP (586⅔ yards) "SECOND CLASS" SCRATCH CYCLE RACE.—Heat winners: G. E. Cavanagh, Imperial Wheelers (44½ secs.); A. Alden, Kentish Wheelers (46⅓ secs.); W. A. Ormston, Polytechnic C.C. (45 secs.); J. C. F. Masters, Kentish Wheelers (46⅔ secs.); D. H. Genner, Kentish Wheelers (46⅔ secs.). Fastest loser, A. C. Hart, Kentish Wheelers. Final: Alden 1, Hart 2, Ormston 3; 42⅔ secs.

HALF-MILE HANDICAP FLAT RACE.—Heat 1: G. F. Shipway, Herne Hill H., 45, 1; G. Wilson, unattached, 60, 2; E. Leonard, Cambridge H., 60, 3; G. H. Hall, Grenville H., 62, 4; 2 mins. 2⅛ secs. Heat 2: R. D. Prior, Herne Hill H., 62, 1; J. W. Cornish, Civil Service A.A., 50, 2; J. J. Burgess, Shaftesbury H., 75, 3; R. F. R. Pausey, Ashcombe A.C., 80, 4; 2 mins. 2⅛ secs Heat 3: W. F. Strachan, Herne Hill H., 80, 1; E. Payne, Ashcombe A.C., 58, 2; H. C. Bale, Herne Hill H., 85 3; T. J. Bartlett, Highgate H., 60, 4; 2 mins. 0⅗ secs. Final: Strachan 1, Payne 2, Burgess 3, Shipway 4; 1 min. 58 secs.

ONE MILE CYCLE HANDICAP.—Final: Alden 1, Piercy 2, Hutson 3; 2 mins. 7⅘ secs.

300 YARDS FLAT HANDICAP.—Final: Moncrieff 1, Gully 2, Burgess 3; 32½ secs. Difford finished first, but was disqualified for boring.

LONDON SCHOOLS CHAMPIONSHIP
For "Daily Graphic" and "Daily Telegraph" Cups.

100 YARDS SCRATCH.—Heat winners: R. Bounsall, West London (time 12⅘ secs.); H. Danninger, South London (11⅘ secs.); A. Preston, South London (12⅖ secs.); W. Shelley, Croydon (12⅗ secs.); D. Penney, Lewisham (12⅘ secs.). Fastest loser: R. Baldwin, Willesden. Final: Danninger 1, Baldwin 2, Preston 3, Penney 4; 11⅗ secs.

300 YARDS SCRATCH.—Heat 1: H. Squire, Willesden and District, 1; H. Harding, Tower Hamlets, 2; 37⅗ secs.. Heat 2: R. Cross, Willesden, 1; S. Fox, Tower Hamlets, 2; 40⅘ secs. Heat 3: J. Howell, South London, 1; S. Dunn, West London, 2; 39⅓ secs. Final: Squire 1, Howell 2, Harding 3, Cross 4; 36⅘ secs.

880 YARDS SCATCH.—F. Adams, South London, 1; S. Waugh, Willesden, 2; A. Fisher, Battersea, 3; W. Titman, Tower Hamlets, 4; 2 mins. 25⅗ secs.

South London took the *Daily Graphic* Cup with 13 points, and Willesden the *Daily Telegraph* Cup with 7 points.

On the completion of the programme a move was made to a table on the grounds on which was a fine array of prizes, which were distributed by Mrs. Herbert C. Haycock, wife of this year's President of the Association. Previous to the distribution the Secretary, Mr. H. F. Parker, in introducing Mr. Herbert C. Haycock, said their President was an excellent employer and a good sportsman, and as a consequence his business was moving in leaps and bounds by the aid of an energetic and willing staff. Mr. Parker then called upon the President to make a few remarks.

Mr. HAYCOCK said it was a real pleasure to him and his wife, as well as his partner, Mr. Cadle, and his wife, to be present at this large athletic gathering. He was led to accept the presidency because of the good work which the Association had done in the past. It was a great thing to say that such an association as this had been able to give no less a sum than £4,000 to trade charities—money that would never have come to the cause through any other source. He considered that such gatherings as these brought about a better understanding between the employer and the employee, and moreover was the means of creating a better feeling between the departments and more friendly relationship with the employees of other firms. His experience was that by encouraging the workpeople to go in for sport they were not only doing a physical good to the workers, which, of course, made them fitter for their labours and maintained a healthier standard, but they were also bringing into existence a more cheerful spirit of co-operation, which could not fail to be beneficial to all concerned. He understood that this Association was the largest of its kind in the United Kingdom. Some seventeen years ago they were content to run a small athletic meeting once a year; to-day that athletic meeting had grown into the great gathering they were now witnessing. Steadily they had increased the scope and character of the work, until nearly every office club had joined in the movement. They had a football section which was the wonder of the metropolitan area for the results of its labours. A few years back there was only one miniature rifle club in the printing trade, and not more than 300 marksmen to be found. Now they had some 30 firms with miniature rifle clubs and over 3,000 marksmen connected therewith. They held a printers' Bisley at the Alexandra Palace which ran into a two-days' (July 11th and 12th) meeting, and generally finished up the season with another meeting at Southfields. They had also a Printer's Miniature Rifle League, which was doing excellent work. The boxing section was most efficiently supervised by the Olympic light weight champion, Mr. R. K. Gunn. The swimming section held the largest gala within the metropolitan area, and had become so unwieldly that open events had to be discontinued. Taken altogether, he thought it was quite safe to say that no trade went more thoroughly into sport than the printing trade did, and he thought they could successfully challenge any other trade for the championship of any given sport, whether in or out of doors. The Association was working for that grand premier charitable trade institution, the Printers' Pension Corporation, and they hoped to be able to give them £500 this year, and so establish a £20 pension. He would not delay them further, except to thank them for their presence, and to advise the losers not to lose heart, but to go away firmly resolved to come down to the sports next year and take away a prize.

After Mrs. Haycock had presented the prizes, three hearty cheers were given for the esteemed President's wife, and a few expressions of thanks to Mr. and Mrs. Haycock and to Mr. and Mrs. Cadle brought one of the most brilliant trade gatherings to a close.

An Early Typecasting and Composing Machine.

SIR,—The following appeared in the *Monthly Magazine* for June, 1823, p. 453, and it may be considered worth reproducing in your columns as it contains the germ of an idea which has in our own day taken practical shape:—

"Dr. William Church, of Boston, whose improvements in printing we lately noticed, is now in England, procuring the construction of his apparatus and machinery. A principal object of this improvement is to print constantly from new types, which is effected by simplifying the process for casting and composing. The type is delivered perfect by machinery, and laid as it is cast in separate compartments, with unerring order and exactness. The composition is then effected by other apparatus, directed by keys like those of a pianoforte, and the type may be thus arranged in words and lines, as quickly as in the performance of notes in music. No error can arise, except from touching the wrong key; hence an expert hand will leave little labour for the reader. The form may be worked as usual, either by a printing press or machine. It is then found less expensive, under Dr. Church's economical system of re-casting, to re-melt the types, and re-cast them, than to perform the tedious operation of distribution. The melting takes place without atmospheric exposure, by which oxydation and waste of metal are avoided. It is calculated that two men can produce 75,000 new types per hour, and in re-composing one man will perform as much as three or four compositors. In the production of types, the saving is ninety-nine parts in a hundred, and in the composition, distribution, and reading is three parts in four. In regard to presswork, Dr. Church has invented a machine to work with platens instead of cylinders, from which he will be able to take thirty fine impressions per minute. Some of these machines have been ordered by London printers. An establishment is about to be commenced in New York, in which these improvements will be applied to the reprinting of popular works and to printing in general."

The composing machine was patented in 1822 (No. 4,644), and the printing machine with platen was included in the same patent. The platen machine was subsequently improved, the new modification being covered by patents No. 4,903 (1824) and No. 5,417 (1826).

Dr. Church's improvements are also alluded to in "A Picture of Birmingham," published by Drake in 1825. He says that a certain building formerly known as "The Britannia" was occupied by "a printing concern on a new and ingenious plan, calculated to execute a vast quantity of work in a short time; while the work of the compositor is to be lessened, and the beauty of the execution increased, by the novel and bold plan of constantly casting new types instead of distributing those which have been used. A Mr. Church is the inventor of this extraordinary process."

Writing in 1824, Johnson in his *Typographia* (vol. ii., p. 545) speaks very slightingly of Church's improvements, and concludes as follows:—"Dr. C. must imagine that he can cram John Bull with anything, after the statement of his boasted machine, which was not only to cast and dress the types, but also to compose them; and afterwards print off the forms. We profess to know nothing of this boasting Theorist's plans, more than what was stated in the Public Prints; from which it would appear that the whole of these operations were to be performed in the most easy and simple manner, which would require no more exertion than that of a person playing the piano; and so expeditiously was the whole business to be performed that the types were tobe re-cast each time, instead of being distributed in the usual manner. Now, is not such an improbable statement an insult to common sense? and we wonder much that the gentlemen who conduct the Public Press should so far insult the understandings of their readers, by laying such nonsense before them; unless it was to show the folly of this American Theorist." What would Johnson have said if he could have seen a linotype or monotype machine at work?

Church was an extremely ingenious and prolific inventor, and the specifications of his patents are elaborate and full of detail. He was American by birth, and after a long residence in Birmingham returned to his native country in 1859, and died there, October 6th, 1863.

R. B. PROSSER.

75, Dartmouth-park-road, N.W.
June 14th, 1913.

A Remarkable Dividend.

The annual meeting of *London Opinion* was held last week, and the chairman, in the course of his remarks, said:—"At this, our fourth annual meeting, I think we may, without undue elation, congratulate ourselves upon the completion of a very satisfactory year's operations. Last year our profits showed an advance of £2,000 on those of the previous year, and this year's show a further increase of £3,000 on that. In October last we paid an interim dividend at the rate of 200 per cent. We propose now to pay a second dividend at the same rate, making 200 per cent. for the year, and, in addition, to distribute a bonus of 15s. per share. There will be left to credit £8,842, and of this £3,250 goes to reduction of debentures. After making these payments to-day we shall still be left with over £10,000 to the good. My colleagues on this board, Mr. Lincoln Springfield and Mr. Louis Meyer—the editor and art editor—have kept *London Opinion* up to, and even improved upon, its recognised high standard of merit—artistic, witty, entertaining, yet clean and wholesome throughout, a paper you can take home—so that it continues to find favour with the discriminating public, and therefore with the discriminating advertiser. Our actual net sales to the public, after all returns have been deducted, are now over 250,000 a week." *London Opinion* evidently intends to create a record in journalistic profits.

WE regret to record the death of Mr. William Brimelow, managing director of Messrs. Tillotson and Son, newspaper proprietors, Bolton. Mr. Brimelow was a native of Warrington and went to the Bolton district in 1861 as reporter on a local paper. In 1869 he was appointed editor of the *Preston Guardian*, but two years later returned to Bolton to take the editorship of the *Bolton Evening News*. He was joint trustee of the Newspaper Society, and for eighteen years was the hon. treasurer of the Linotype Users' Association of Great Britain and Ireland. The deceased gentleman was 75 years of age. In 1902 and 1911 he was elected chairman of the Press Association, and retired from the Committee of Management only last month, when he was elected a member of the Consultative Board.

The Anglo-German Exhibition.

Many of the exhibitors at this exhibition at the Crystal Palace have not yet got their stands in order, and it is too early to say how successful it may be as an attraction for the public. So far there is little to be seen in the machinery section, but we noticed that the P. Lawrence Printing Machinery Co., Ltd., of 57, Shoe-lane, E.C., had a stand at which was shown one of their celebrated Colt's Armory Platen Machines, and a number of appliances for printers, bookbinders, box-makers, and others.

Messrs. Hewitt Brothers, of Field-street, King's-cross-road, W.C., have an interesting show of their specialties for printers, which include frames and cases of the newest construction, presses, rule and lead cutters, chases, platen presses, wire stitchers, roller stands, etc., and adjoining this firm's exhibit is a Miehle press to which is fitted the "Slogger" Automatic Feeder, which is shown at work, and at the time of our representative's visit was attracting much attention; its working was excellent and the sheets were fed in with unerring exactitude. The "Slogger," we understand, can be loaded with a full day's work if required, the pile of paper rising as the sheets are taken off the top. It has a device for automatically tripping the cylinder if the paper is not fairly laid, and on the completion of work gives warning and pulls up the machine at the last impression. This feeder is handled by the "Slogger" Automatic Feeder Co., Ltd., 27-28, Fetter-lane, E.C.

In the same portion of the Exhibition, and adjoining the last-mentioned exhibit, there is a stand on which some of the specialties of Messrs. Linotype and Machinery are shown, but as this was not complete at the time of our visit we must refer to it in a future issue.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The famous Chetham's Hospital and Library was the trysting place for some fifty members and friends of the above Association on Saturday last, when Governor W. J. Fielden gave up his leisure time to show some of its treasures.

Chetham's Hospital is the old baronial hall of the family of Greslets, lords of the Manor of Manchester, from whose shield the heraldic device of the arms of the City of Manchester is derived. The building was protected on the northern and western sides respectively by the rivers Irk and Irwell, whilst on the southern and eastern sides there was a fosse or moat, commonly known as Hanging Ditch. The first charter of privileges to hold land was granted to the burgesses of Manchester by Thomas Greslet, the eighth baron, in 1301.

In the time of Henry VIII. (1536-1547) a wholesale destruction of the religious houses took place, but the college house escaped abuse. In Edward VI.'s time the college was dissolved, but in 1578 Queen Elizabeth renewed the charter of foundation. Soon after the civil wars Humphrey Chetham acquired the property in order to found a school and home for boys. He died in 1653, and in accordance with his instructions the trustees purchased the college and lands on August 5th, 1658. His will states that a sum of money is placed "Towards a library with the town of Manchester for the use of scholars and others well affected, to remain as a library for ever, and my mind and will is that care be taken that none of the said books be taken out of the said library at any time, and that the same books be fixed and chained as well as may be within the said library for the better preservation thereof."

Chetham's holds the proud position of being the first library in Europe to open its doors freely to all comers, and it is a veritable treasure house of literature, containing one of the most interesting and valuable collections in existence, some of the books being the rarest in the kingdom. Some of the gems which are of particular interest to the members of "The Art Preservative of all Arts" are enumerated below:—Flores Historiarum, original MSS, dated 1265; two copies of Vulgate, 1250; The Pricke of Conscience, by Richard Hanpole, an old Yorkshire monk, 1349; Wycliffe's New Testament, 1430; Alain Chartier, prayers and meditations in the handwriting of John Bradford, who suffered martyrdom in 1555; Old Sarum Missal, 1350; ancient copy of Pentateuch, written in Hebrew on scroll of tanned goatskin; Homer, first printed edition, produced at Florence in 1488; Thomas A' Kempis, liturgy of Edward VI., first edition; Tyndale's New Testament, 1534, Chetham's hold the most perfect copy of the four known to exist; Paradise Regained, Paradise Lost, first edition; Christians Awake, the original MS.; and others. There is also the finest collection of County Histories in the country, and notable editions of Shakespeare.

Of course, mischievous like, when the party arrived at the printing section, they must have a pull at the old wooden hand press, a peep at the type punches, a finger at the old type in the cases, and a demonstration with the pelts and two-handled roller. The visitors in their two hours' peregrination had no time to read any of the books, otherwise they might have been so absorbed studying the handycraft of "the good old days," that they would have been like Rip Van Winkle, and forgot to make application to the Librarian to unlock the gates and give them their freedom.

There are many interesting things written on its walls that would interest the Manchester man, but as our paper is not an antiquarian publication, we blue pencil the vivid description sent in by

WEE MACGREEGOR.

Stationers and the Shops Act.

The London County Council, in pursuance of the powers conferred upon it by the Shops Act, 1912, and after due compliance with its provisions, has made the following order:—

1. This order, which may be cited as the Stationers' (Central Area of London) Exemption Order, 1913, applies to all shops in which the retail trade or business of a stationer as hereinafter defined is carried on in the central area of London north of the River Thames, bounded as follows, the shops in the boundary thoroughfares named being included in the area:—

East.—The boundary of the City of London (from the River Thames to Holborn) and thence along Gray's-inn-road to King's-cross.

North.—From King's-cross, *via* Euston-road, Marylebone-road and Chapel-street to Edgware-road.

West.—From Chapel-street, *via* Edgware-road, Park-lane, Grosvenor-gardens, Buckingham Palace-road and Commercial-road, to Chelsea Bridge.

South—The River Thames.

2. The expression "stationer" for the purposes of this order means and includes retailers of stationery and other articles usually sold by stationers as part of the business of a stationer.

3. All shops to which this order applies are hereby exempted from the provisions of Section 4 of the Act in regard to closing for the weekly half-holiday so far as the trade or business of a stationer as above defined is concerned.

Trade Notes.

THE annual meeting of the Gutenberg Society will be held in the Stadthaus, at Mayence, on Sunday next, June 22nd, at 11.15 a.m, when an address will be given by Dr. Adolf Trounier on "Portraits of Gutenberg." All those interested in the subject are heartily invited to attend.

MR. R. A. PEDDIE, librarian of the St. Bride Foundation Technical Library, has drawn up a descriptive list of lectures and courses on a variety of subjects connected with printing and libraries. Particulars and terms may be had on application to Mr. Peddie at the St. Bride Foundation, Bride-lane, E.C.

WE have to congratulate our excellent contemporary, the *Printers' Register*, on the attainment of its half-century of existence, the current issue completing its fiftieth year. The *Register* was practically the first printers' trade journal, and it has had a successful and honourable career. Long may it flourish.

TENDERS ACCEPTED.—For printing 1,500 copies of the library catalogue, for the Rotherham Corporation, F. W. Crookes and Sons.—For supply of stationery required for one year, for the Folkestone Corporation, W. E. Cross.—For printing 3,000 copies of Section E (fiction) of the library catalogue, for the Poplar Borough Council, W. J. Hasted and Son, Mile End.

AT Liverpool Assizes, on Friday, damages of £750 were awarded to a female printing works employee. The roller of a printing machine at which the girl was working cut off her hand and arm, and she found herself in danger of being cut to pieces as she was dragged into the machine. The girl never lost consciousness, and until the machine was stopped seven minutes later she was vividly aware of all that was happening.

TENDERS WANTED.—For printing and supplying 50,000 copies of school attendance certificate, in colours and bronze, for the Kent Education Committee; particulars from Mr. F. W. Crook, Caxton House, Westminster, S.W.—For printing registers of electors for the County of Worcester for three years, for the Worcestershire County Council; specifications from the Stationery Clerk, Shire Hall, Worcester.—For printing and stationery for two years, for the Norfolk National Health Insurance Committee; particulars from the offices of the Committee, 46, London-street, Norwich.—For printing and stationery for 12 months, for the Wigan Guardians; forms of tender from the Union Offices, Victoria-buildings, King-street, Wigan.—For printing minutes of the committees, for the Stockport Guardians; forms of tender from Mr. C. F. Johnson, Union Offices, Shaw Heath, Stockport.—For printing, binding, etc., of registers of Parliamentary, County and Parochial electors for the County of Chester, for the Cheshire County Council; particulars from the Clerk to the Council, Northgate-street, Chester.

THE *Board of Trade Journal* announces that tenders are invited by the Egyptian Ministry of Finance for the supply of stationery, etc., for the use of the Egyptian Government offices during the years 1914, 1915 and 1916. Tenders, on the proper form, accompanied by samples of the articles it is proposed to supply, will be received, up to noon on July 31st, at the "Economat Central, Ministére des Finances," Cairo, whence copies of the cahier des charges and form of tender may be obtained and samples inspected. A copy of the cahier des charges, containing a list (in French) of the articles required, may be seen by manufacturers in the United Kingdom at the Commercial Intelligence Branch, 73, Basinghall-street, E.C. Tenders are also invited by the general manager, Egyptian State Railways, Cairo, for the supply of blank cards for railway tickets for the years 1914-17. Copies of the specification, containing form of tender, may be purchased, price 2s. each, from Sir A. L. Webb, Queen Anne's Chambers, Westminster, S.W. A copy of the specification, together with samples of the cards to be supplied, may be seen by United Kingdom manufacturers at the Commercial Intelligence Branch, as above.

ACCORDING to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, June 13th; the corresponding week in 1912 also showed four.

IT has been discovered that at the library of St. John's College, Cambridge, something like 300 volumes, many of them of value, have been mutilated. There appears to have been three separate outrages, and after the third a card was found hanging from the end of a bookcase bearing the words "Votes for women."

THE Post Office authorities give notice that the undermentioned places have been transferred to the London Postal Area, and the Postal Address should be Woolwich, London, S.E.; Eltham, London, S.E.; Charlton, London, S.E.; Abbey Wood, London, S.E. Newspapers for these places should be posted at the G.P.O., King Edward-building, E.C., or included in the "Town" bags or bundles collected by the official van. The latest time of posting, at the G.P.O. for newspapers for inclusion in the first morning delivery at the places named is 4.15 a.m.

THE International Association of Manufacturing Photo-Engravers will hold its seventeenth annual Convention at the Claypool Hotel, Indianapolis, Ind., June 23rd, 24th and 25th, 1913. The principal feature of the convention will be the discussion and adoption of the Basic Selling Schedule for the photo-engravers' products submitted by the International Cost Committee. A number of changes and additions will doubtless be presented, and it is expected that the convention will adopt this schedule in its amended state. The Indianapolis Convention marks the culmination of two years of active organising effort and the arduous labour on the part of the officers and the various committees of this organisation.

ON Thursday last, in the King's Bench, Mr. Pett Ridge, the novelist, was awarded £150 damages for libel against the *English Illustrated Magazine*, Ltd. The allegation was that in publishing a story entitled "A Man who had a conscience," defendants falsely represented it as having been written by the plaintiff. Plaintiff's counsel said that the story was written by a Bournemouth grocers' assistant, and defendants paid two guineas for it. If Mr. Pett Ridge had written it he would have got at least twenty guineas for it. For the defence the secretary of the magazine company said he had no idea that the story was not written by Mr. Ridge, and the editor stated that he thought Mr. Ridge was getting rid of some earlier work. It was denied that publication was false and malicious. Leave to appeal was given on condition that £100 is paid into Court within seven days.

New Companies.

NEWSPAPER SPORTING ADVERTISEMENTS CONTROL ASSOCIATION, LTD.—Registered on June 12th, as a company limited by guarantee, without share capital. For the purpose of registration the number of members is declared to be 500, and each member is liable for not more than £1 in the event of winding-up. The objects are (*inter alia*) to control the insertion of sporting advertisements in daily and weekly newspapers, and to print and publish any newspapers, periodicals, books or leaflets for the promotion of the objects of the Association. The subscribers are: R. S. Sievier, T. A. Edge, W. Lints Smith, J. E. Fyfield, J. Bickell, W. L. Goldsmith, and Geo. Laval Chesterton. The management is vested in a committee, the first members of which are R. S. Sievier, T. A. Edge, W. Lints Smith, J. E. Fyfield, J. Bickell, W. L. Goldsmith, Geo. Laval Chesterton, and T. T. Winterburn. Secretary, J. White. Registered office, 26a, Bedford-chambers, Covent-garden, W.C.

MCARA AND WHITEMAN, LTD.—Registered on June 12th, with a capital of £5,000 in £1 shares, to take over the business carried on by J. D. McAra and F. Whiteman, as the "Multi-Colour Printing Co.," at 46, Peartree-street, London, and to carry on the business of printers, newspaper proprietors, publishers, etc. The subscribers are J. D. McAra, and F. Whiteman. Private company. J. D. McAra and F. Whiteman are joint managing directors. Registered office, 46, Peartree-street, Goswell-road, E.C.

THOMAS SALTER, LTD.—Registered June 12th, with capital £2,000 in £1 shares, to carry on the business of manufacturers of and dealers in hardware, fancy goods, toys, stationery, jewellery, etc. Private company. The first directors are T. Jones and J. M. Muir. Qualification 50 shares.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

A very special value attaches to our having a good representation of British printing at Leipzic Exhibition next year. There is no time to be lost. All the omens are bad at this present. But that must be changed.

o o o

Where's the society which has been formed to promote improved relations between Great Britain and Germany? It must bestir. Here is a definite piece of work that it can fasten upon. And there is a definite step to be taken at the moment. It should set to work to persuade the Board of Trade to revoke its very unenterprising and unwise policy intimated to those who have been bestirring in the matter of the organising of a British printing exhibit.

o o o

Whereas the Board of Trade has been willing, as I understand, to take charge of British printing exhibits for the Ghent Exhibition, now being held, willing to collect them, to transport them, to take charge of them at the Exhibition, and to return them, and do all this at its own charge, it has declined to do the same in the case of the Leipzic Exhibition.

o o o

It is no disparagement to Ghent to say that it is incomparably more important that we should make a good display at Leipzic than that we should be represented at Ghent.

o o o

We have not been thinking and talking and writing about war with Belgium. Bottomley has not been fuming at the Admiralty in his *John Bull* because it did not here and now on the instant declare war on that country—as he has conjured them to strike at once at Germany, writing in the sulphurous manner of the Bottomley's spit.

o o o

We are accustomed to hear of the national aspect often assumed by some trouble or something which might be called a craft affair. When a labour controversy is the subject of discussion we are often bidden to think of the rights of the third party, the humble, necessary, long-suffering public. It is quite fit and proper that that third party should be taken into account. In truth, that third party has a way of butting in and making itself very unmistakably and very unpleasantly felt when its presence has been overlooked just a little bit too long.

o o o

If ever we should do well to consider the bearings of action or inaction upon that the third party, upon the public, surely the Leipzic Exhibition is that case.

o o o

Write to Mr. C. T. Jacobi, the managing director of the Chiswick Press. Took's-court, W.C., and you will learn from him the main facts regarding the Leipzic Exhibition, the facts I mean of the times and the terms and the conditions of space letting. He will probably be able to send you a translation of the German Circular, prepared by the Comptroller of the Exhibition.

o o o

I can the less bear to see this opportunity go by because I have observed so much of the good effects of enterprise in the way of exhibiting. I called on a good many firms as space agent for that triumphantly successful exhibition, the one held in London in May, 1904.

o o o

As space was what I had to sell on that touring, I can say that just then the great globe and I were both "travelling in space."

o o o

I've no business interest in the Leipzic Exhibition; nor is their any suggestion of any future interest. I don't know that I wouldn't throw myself into it.. I'd rather do anything within reason than witness that which at present seems likely to happen—Great Britain practically ignoring the great opportunity.

o o o

The one thing which transpired at the private business meeting of the Master Printers' Federation, at Liverpool, which I surely am at liberty to mention is the fact that the Board of Trade's lamentable blunder was regretfully reported by Mr. Jacobi, who thereupon deplored that Britain would not be represented at Leipzic in any effective or worthy manner.

o o o

The Leipzic Exhibition is on a tremendous scale. The moneys granted by various governments in Germany towards its worthy execution and fulfilment are very large.

o o o

Great Britain will play the fool if it follows up its stupid indifference to the Exhibition in Italy by indifference to this great occasion in Leipzic.

o o o

We can go on without it, I dare say. If it comes to that, our globe itself, for all I have ever been able to learn to the contrary, could go on without bothering itself about swaying and swinging and clinging to the sun. It could take its own independent line; let other planets be weakly subservient to a sun if they choose. On, on, on, through space in its own straightforward independent course it could fly for ever. But——

o o o

It would be a dead world.

o o o

Of course, it needn't produce and foster life; either of man or animal or plant. As Talleyrand told the beggar who said "I must live." "There's really no necessity." But if life is desired, then there must be acceptance of the condition of living, which in this case is acceptance of the solar sway.

o o o

Let me put two considerations to readers. First, that Germany is itself open to British ideas. Next, that we should be open to German ideas.

o o o

Though I have stated it before, it fits in to remind you here that some German publishers being intent on a pocket edition of German classics to be sold at about three marks or three shillings, came to London for guidance. They paid a good fee to Mr. Emery Walker (as he frankly tells us) for "putting the whole thing through," so far as the typographical arrangements were concerned.

o o o

He selected the type and the paper. He called in Douglas Cockerell, of the Arden (W. H. Smith's) bindery at Letchworth, to help with the binding, and a very supple, delightful leather was used. He called in Mr. Johnston and Mr. Eric Gill to assist in their respective spheres of lettering or ornamentation.

o o o

All these English names, duly and handsomely acknowledged, look out from the surrounding German wording in the first of the series, a Schiller I think it was.

o o o

At the time when some ignoramuses were wringing their hands and lamenting that, unlike Germany, we could do nothing great or fine in printing, Germany, knowing better, was bespeaking our printerian help.

o o o

We should also be open to German ideas. Some extraordinarily well executed books, particularly technical books, are just now being or have recently been produced in Germany. I find my good friend Mr. Peddie, of the St. Bride Technical Library, quite enthusiastic upon this point.

o o o

We went too far some years ago in our fears of the superiority of German printing. We needn't now in these days of large recovery of British reputation in printing go to the other extreme. There is a vast deal to be learnt from Germany by all workers in our craft.

o o o

"The wise man increaseth learning"—wise though he already be; indeed because he is wise. The best printer can wisely broaden and deepen the foundations of knowledge and of serviceable skill on which rest such reputation as he has already built up.

o o o

I hope a great many will take the opportunity to look in this week at Clifford's Inn and see the exhibition of the work of the late Mr. T. R. Way, that most talented and most enthusiastic of lithographers.

o o o

It is a great honour to our craft to have produced such a man. I was very glad, though not surprised, to hear that the Way works in Gough-square, off Fleet-street, are very busy. Though he has gone his spirit is still instinct in the business.

o o o

Like Mr. John Brown's "his soul goes marching on." I hope the exhibition in Clifford's Inn will be fruitfully suggestive to the visitor and fruitful of good to the son who is now so unexpectedly and so early called upon to take up the honourable burden of his father's high fame.

Mr. Way's work has naturally its votaries and admirers in America—I cannot doubt in goodly number. It has only to be seen, for its power and charm to make themselves felt upon the instant. The series of pastel posters he produced for the Underground Railway are as pleasant things in litho as I have seen for many a long year.

o o o

Two notifications. Next Tuesday, the 24th inst., Mr. Howard Hazell will meet what I do not doubt will be a large company of printers of the Western district of London at the Guardians' Hall, 313, Harrow-road, Paddington, at 7.30 o'clock, for yet another London costing meeting. Any printer will be welcome, but it would perhaps be well to apply for a ticket at the offices of the Federation, 24, Holborn, E.C. The Costing Committee has its own room in that building on the same floor as the other Federation offices. Mr. Hazell has been "starring in the provinces"; he has addressed in all about 4,000 printers; and this has no doubt yielded some fresh matter for his address. He should have a good audience; and the more critical it shows itself the better. If there are any really weak places in the Federation's costing system it is time they were pointed out and strengthened.

o o o

The other notification is a small personal one. I have lately been introduced to the Sheldon School of Business Science. Some men influential in the printery world have interested themselves in it, and one of them suggested to me to attend one of its discussion branches.

o o o

These take place at one o'clock in a large room of the Birkbeck Cafe, Birkbeck Chambers, Holborn, each Monday. After a reasonably quick lunch (at 1s. 6d. per head), Mr. Sheldon has weekly opened a discussion on some question of the philosophy of successful business. There has been a brief time for question or debating, but the idea is that the luncheon break shall not be too prolonged.

o o o

All this appeals to me; for I have repeatedly urged that business is not huckstering; that business is system, science, and statesmanship.

o o o

I was glad, therefore, to find that some directors or men otherwise in very responsible positions in our craft were regularly attending these talks and interchanges.

o o o

Mr. Sheldon won't be there next Monday. I am filling the gap, with a talk on "Some natural laws of costing"; and if anyone reading this cares to get his lunch there and then on Monday I will undertake to say he will be welcome.

FRANK COLEBROOK.

Illuminated Addresses:
By the Guild of
PRINTERS' DESIGNERS

The Taxation of Machinery.

THE annual report of the Council of the Machinery Users' Association is an interesting document, that, besides showing the excellent financial condition of that body, gives a summary of its work during the year. It is pointed out that within the last few years it has become more increasingly apparent that the obligations of the Government are such that the prospect of private bill legislation has fallen into a somewhat hopeless position. The Council have therefore to rely—as they can with confidence—upon the efforts of the officials of the Association to combat any tendency on the part of the rating authorities to tax tenants' machinery and machine tools until such time as the Parliamentary Committee advise the Council that it is opportune to reintroduce the bill which will put beyond dispute the exemption of machinery from rating. The bill in question merely proposes to place the English machinery user, as regards the rating of his machinery and machine tools, on the same footing as his Scotch and Irish competitors. With regard to the proposal to raise railway rates, the Council feel that the companies will, in view of the many economies they have effected, need to justify this increased burden on traders. Passing to the subject of land values, the Council state that in several instances manufacturers who had recently purchased land had to pay undeveloped land duty for four years instead of for one. It is important that the provisional valuations should be properly checked. Once these valuations are settled or allowed to go by default there is no means by which they can be reopened. Further, there is a feeling abroad that the Government have in mind some comprehensive scheme of rating in which the capital value of the land as ascertained by those valuations will be a most material factor. Whilst there has been an absence during the year of the large revaluations which have taken place in past years in some places, yet the work has been more generally spread over the country, and assessment committees have lost few opportunities of attempting to obtain some increase, however small, to which they think they are entitled as a result of any building or improvements in a manufacturing undertaking.

* * *

An Onerous Employment.

THERE is an old story, probably known to every printer, about the decent old lady who said she was going to make her youngest son a printer, "as he was not very strong and it was a nice clean trade." So it often appears to the outsider who sees something of the work done in his printed page, but who knows nothing of the onerous conditions that obtain in the actual printing office. The composition of books and newspapers is most exacting work, and no less so is that of the man in the jobbing department, even with his advantage of variety in his jobs. The task of the printer is one requiring good eyes, nimble fingers, and a physical organisation capable of sustained effort. Standing at case handling type is no fit employment for a delicate or impaired physique, but demands strength of body as well as clearness of brain power. The compositor, too, must possess a general education above that of the average working man. He should be well grounded in the grammar of his own language, a master of orthography, and an expert in punctuation. There are many authors whose names occupy prominent places on the roll of fame, who, not knowing how to properly construct sentences, trust implicitly to the compositor for the proper punctuation of their work. It behoves, therefore, the younger members of the trade to avail themselves of every opportunity to learn, even to the utilising of their leisure hours to the utmost for that purpose. Let them think and study, study and think, and as an incentive to this line of conduct, remember that a proficient printer is as a rule master of the situation ; that his services are always in demand, and that he is in little danger of being out of work, provided his habits correspond with his ability. A good workman not only commands respect, but commands good wages. His opinions are respected, and if he has the brains to suggest, the ability to design, and the hands to fashion the evidences of his skill, he is the man who will continue to be regarded as the expert representative of his craft, who need fear no innovation and for whom the automatic typesetter can have no terrors. But compositors, like poets, are born—not made—and the man who has no natural adaptation for typesetting will never be competent in the craft, and had better leave it for some sphere of labour more suited to his abilities.

* * *

A Business Men's Library.

THE City of Glasgow has always been famous for its excellent public libraries, many of them endowed by former citizens, and some now merged under the Public Libraries Act, so that it is but fitting that a scheme for a "commercial library" should have its origin in that city. At a meeting of the Scottish Library Association, last week, Mr. Robert Adams, assistant city librarian, Glasgow, said he was led by observation to think that library authorities and their staffs had not done all in their power to make the institutions under their care the perfect instruments they should be for the use of the people as a whole. Why should public libraries be made to supply only technical works which taught

Digitized by Google

how an article might be produced or manufactured? While the library had been called the working man's college it was not for him alone, unless they considered the term to apply to all who used their hands. They should place within reach of the distributor and manufacturer as well as the working producer the information whereby the fruits of the capitalists and labourers would be the most easily and speedily distributed. A commercial library must have among its chief characteristics the commercial statistics of every nation kept up to date (which would include reports of the trade and commerce of all important cities); the Consular reports of all countries; the principal official and commercial gazettes of the world giving contracts and other useful information in the commercial world; the latest works on the natural and industrial resources of all countries, also works on tariff rates, strikes, and lock-outs; the prospectuses of all new companies; directories of all the principal cities and towns; commercial magazines; collections of works on the law and jurisprudence; the patents of all countries; commercial treaties of all countries; railroad and steamship freight rates, etc. The question of how best to provide the necessary funds for establishing and developing such a library was worthy of consideration by the city fathers, by the members of the Royal Exchange, Chamber of Commerce, the Trades' House, Merchants' House, and other bodies. The chairman of the conference said that Mr. Adams' idea might be a dream, but it was a glorious dream.

THE SALE OF POST CARDS.—A Newcastle stationer was summoned at Newcastle Police Court, on Friday, on a charge of having committed a breach of the Shops Act by selling picture post cards on six days of the week. Mr. Frank J. Kirby, who prosecuted, said that defendant sold periodicals in his shop opposite the Central Station, and could keep open every day for that purpose. He also sold stationery, in respect of which he had to cease sale on one half-day of the week. Complaints had been received from adjoining shop-keepers, who dealt only in stationery and largelv in picture post cards, to the effect that while they themselves were compelled to refrain from selling picture post cards one afternoon each week, the defendant, who had a mixed shop, was selling them every afternoon to the detriment of his trade rivals. Defendant, on his own behalf, said he had claimed all along that picture post cards were periodicals. A fine of 5s. and costs was imposed.

IF THE MIEHLE WAS NOT SOMETHING MORE THAN A TWO-REVOLUTION PRESS IT WOULD NEVER HAVE REACHED THE PROUD POSITION IT HOLDS TO-DAY IN THE ESTIMATION OF EVERY PRACTICAL PRINTER

It is because it is *the* two-revolution press that the trade buys it.

Design, material, workmanship- all combine to make and keep it the premier machine.

It is built at the Broadheath Works—in itself a guarantee of efficiency.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, June 18th, 1913.

THE feeling of tension in Lombard-street in the beginning of last week relaxed as the week grew old, and now money is in ample supply, due chiefly to recent borrowings from the Bank of England, but the demand is moderate. The discount market is still under the influence of the demand for gold on German account. In the bullion market there have been no withdrawals for abroad to date, whilst the net influx amounts to £362,000. Stock markets have experienced a troubled week. Since Pay Day last Friday several failures have been announced, and although only small sums were involved, they had a disturbing influence. Markets are gloomy, and Consols have further weakened, quotations being 73 to 73⅛ for money, and 73⅛ to 73¼ for the account.

The miscellaneous industrial market has maintained a fairly firm and steady tone until yesterday, when it became weaker. In the section relating to paper and print business has been quiet, and our list shows half-a-dozen changes on the weak side. Amalgamated Press Ord. have fallen ¼ to 6⅛—6⅜; Associated Newspapers have dropped 6d. to 19s. 6d.—20s. 6d.; International Linotype are down 1 to 75—80; Linotype and Machinery A Deb. have given way 2 to 55—60; *Standard* Newspapers Deb. have fallen 4½ to 73—83, and Raphael Tuck and Sons Ord. have conceded ⅛ to ⅜—⅝. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 3d., 21s. 3d., 20s. and 21s.; in Associated Newspapers Pref. at 20s. and 20s.; in *Country Life* Pref. at 16s. 3d.; in *Financial News* Pref. at 15s. 6d. and acc. 15s. 9d.; in Ilford Ord. at 13s. 3d.; in *Illustrated London News* and *Sketch* at 3s. 3d.; in International Linotype at 75½; in Kelly's Directories Pref. at 9⅞; in Linotype and Machinery A Deb. at 57; in Edward Lloyd Pref. at 21s. 6d.; in Mansell, Hunt, Catty and Co. Ord. at 35s.; in C. Arthur Pearson Pref. at 7 1s. 10½d.xd.; in *Standard* Newspapers Deb. at acc. 73; in Raphael Tuck and Sons Ord. at 17s. 6d. and 17s. 6d., and in the Pref. at 5; in Waterlow and Sons Def. Ord. at 25; and in Weldons Pref. at 19s. 6d.

DIVIDENDS AND REPORTS.

KELLY'S DIRECTORIES, LTD.—The profit earned is £53,273, which, with the amount brought forward from last account, £16,150, makes a total of £69,423. The directors recommend the payment of 15s. per share on the ordinary shares, making, with the interim dividend of 5s. per share paid December 31st, 1912, a dividend of 10 per cent. for the year, and of a bonus of 5s. per share on the ordinary shares, carrying £7,000 to reserve, leaving a sum of £17,034 to be carried forward.

"YORKSHIRE EVENING NEWS."—Including £106 brought forward, there is an available balance of £12,019. After providing for management, directors' fees, auditors' fees, income tax, debenture interest, bank charges, etc., and writing down the outlay on plant by £1,757, the directors recommend a dividend of 7½ per cent. on the ordinary shares, leaving £993, out of which it is proposed to write off £400 from special advertising account, finally extinguishing this account, and to carry forward £593.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

TALISMAN CO., LTD.—Particulars of £1,000 debentures, created May 3rd, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £75. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

PLEYDELL, PRINTING PRESS, LTD.—Particulars of £200 debentures, created June 4th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £50. Property charged—the company's property, present and future, including uncalled capital. No trustees.

GIBBS AND BAMFORTH, LTD.—A memorandum of satisfaction to the extent of £227 9s. 6d. (being amount outstanding on July 1st, 1908) of mortgage, dated January 12th, 1904, securing £408 0s. 3d, has been filed.

REXAM, LTD.—Particulars of £5,000 debentures, created by resolutions of December 5th, 1912, and May 30th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £500. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees. Also issue on May 30th, 1913, of £200 debentures, part of a series of which particulars have already been filed.

SCARBOROUGH, FILEY AND DISTRICT BILLPOSTING CO., LTD.—Deposit of deeds, without instrument, of 6 and 7, Silver-street, Scarborough, on May 27th, 1913, to secure all moneys due or to become due from the company to Barclay and Co., Ltd., Scarborough.

LIMEHOUSE PAPERBOARD MILLS, LTD.—Particulars of £12,000 debentures, created May 15th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

COMPANY NOTICES.

THE "DAILY HERALD."

Mr. Justice Neville, on Tuesday, made an order for the compulsory winding-up of the *Daily Herald* Printing and Publishing Society, Ltd. The petitioners were creditors for £3,448. We understand that the paper will still continue publication.

PAPER SUPPLIES, Ltd.

At a meeting of the company, held at Nottingham, on June 9th, the following resolution was passed:—"That the company, being unable to meet its liabilities or continue its business, be wound up voluntarily; and that Arthur Barlow, of 1, High-pavement, Nottingham, and James N. Duncan, of B14, The Temple, Dale-street, Liverpool, be appointed liquidators for the purpose of such winding-up." Notice is hereby given, that a meeting of the creditors of the company will be held at Nottingham, on July 3rd.

COMMERCIAL INTELLIGENCE.

Re ARCHIBALD JOHN HARTNALL, Newspaper Proprietor.

At a sitting of the I.W. Bankruptcy Court at Ryde, last week, before the Registrar, Mr. A. Dashwood, this debtor attended for public examination. The statement of affairs disclosed gross liabilities, £1,064 6s.; expected to rank for dividend, £1,011 18s. 9d.; estimated available assets, £537 3s. 10d.; deficiency, £474 14s. 11d. In answer to the official receiver, debtor said it was impossible to say what the financial position of the business was when he took it over, after his father's death, but it was not solvent. In April he was pressed, and called a meeting of creditors, and offered a composition which was declined. The examination was ordered to be closed.

The Caxton Home, Limpsfield.

The Caxton Convalescent Home, Limpsfield, was the *venue* on Saturday afternoon last of a goodly company of members of the Institute of Printers, who paid this institution their annual visit. At Oxted Station waggonettes were in waiting to take the party for an exhilarating drive round the surrounding country, prior to assembling at the Home for tea, which was tastefully laid in the beautiful Gothic dining hall. Here the genial president of the Home, Mr. C. J. Drummond, presided, supported by several lady friends. The chairman, in a few words of welcome, said he felt that after they had inspected the building and well-kept grounds, they would keep a warm corner in their hearts for the work done there. Mr. Roud (deputy-chairman of the Council) reciprocated Mr. Drummond's remarks, and thanked him for the opportunity given them of visiting an institution situated in such a charming spot. Tea over, the party made a tour of the building, and expressed surprise at the number of gifts it had received. The fruit and vegetable garden, the poultry and piggery, were objects of interest, while a game of bowls on the well-kept lawn helped to while away a very pleasant evening, the party returning to town soon after nine o'clock.

The popularity of the Home as a convalescent institution for printers is evidenced by the remarkable increase in patients this year, the number that have availed themselves of a stay there having nearly doubled previous records. Subscribers are invited to pay the Home a visit during the summer months, and make themselves acquainted with the institution and its work.

The Future of the Printers' Managers and Overseers Association.

SIR,—The Special Committee appointed by the Parent Centre of the P.M. and O.A., after 19 meetings, extending over the greater part of a year, has brought in its report (which has appeared in your pages), and the members of the various Centres are now asked to consider it.

The Chairman of that Committee, Mr. Berryman, in introducing its recommendations, complained that the terms of reference had been rather vague. If he had said rather large one would have agreed with him—for was it not to consider ALL the suggestions made during the three nights' discussion introduced with Mr. Bateman's paper?

With the report of the Committee, after such labours, I am rather disappointed; and yet one ought not to be surprised. Appointed in a hurry, selected from the parent Centre only, how can one be astonished that the recommendations are almost all relative to that Centre's management and functions? Clauses 24, 25, 29, 31, 33 and 35 of the report are the only ones which concern the whole of the Centres, and the last two are of little moment. Clause 24 includes the suggestion of a Pension Fund, which has already failed to meet with the approval of London and Manchester, as reported in your columns last weak. I have an indea that the great majority of our members have other prospects of some provision in old age than even the National Pension, *if required*; I refer to their trade union.

In my contribution to the Bateman discussion I expressed the opinion that our Association carries quite enough in its objects. Rule 2, clauses (b) and (d), reads: To assist members temporarily when out of employment; to provide a sum to be paid to the widows or nominees of deceased members. Let us concentrate on these two most worthy Objects, and if our subscription is to be increased, then let it be with the intention of rendering even greater temporary benefit to unfortunate members.

I am sorry that I was unable to attend the meeting of the Manchester Centre which considered the recommendations. If I had been there I should have exercised what influence I could to prevent the adoption of a suggestion tacked on to another one which I do heartily approve. That which I support is the establishment of a National Council. That which I oppose is its suggested composition. It would be too large altogether. Manchester's proposal to include presidents and secretaries of all Centres, together with one representative for each 50 or fraction of 50 members, would for a start give us a Council of 43, and every new Centre would add at least three more. First, then, let us get a National Council approved by all our Centres—London included. Then let us discuss the representation. But I am still of opinion that my original suggestion *re* basis of Council will be difficult to improve upon: one representative for every 100 or fraction of 100 members.

I hope my London friends will not misjudge me for originally suggesting and again advocating a National Council. They have admirably managed the Association for nearly 21 years. It is only because I believe that a National Council would add to the status and dignity and influence of the Association throughout the Kingdom that I so strongly advocate its establishment. And we should only be following in the steps of the Masters' Federation and the other principal trade unions.

To bring the matter further to the front, I suggest that members holding views similar to myself should introduce the question at their Centre's meeting. The resolution proposed should for the present be one approving a National Council. The details can be discussed later.

Yours, etc.,
THOS. SHAW.

10, Sutton-road, Stockport.
June 17th, 1913.

Printers' Medical Aid & Sanatoria ASSOCIATION.

Mr. C. W. Bowerman, M.P., presided at the fifth annual meeting of the above at the offices of the London Society of Compositors, St. Bride-street, E.C., on Wednesday, June 11th, there being a full and representative attendance.

The committee's report was taken in sections, and recorded a most useful year's work. The income totalled £907 12s.; the expenditure being some £30 in excess of that sum, though at the close of the year there still remained in hand £496 19s. The heavy expenditure was attributed to various causes, including the increased number of letters issued, as during the past year no less than 1,887 letters had been issued, including 562 pairs of spectacles, 511 appliances, such as trusses, elastic stockings, belts, etc. Fifty-four cases were sent to convalescent homes, the Association's list now consisting of eight of these establishments, while twenty-seven were admitted into either of the three sanatoria contained in the list. There were now some fifty first aid boxes in use throughout the trade, and during the year the custodians of these boxes have attended to 1,400 cases of accident. Several additional boxes were to be shortly issued. The report then went on to heartily thank the various groups of workers that had assisted the Association by concerts, etc., and these included the Associated Singers, and the various auxiliaries in and around London. Mr. F. W. Bridges had again invited the Association to undertake the duties of the first aid department at the forthcoming Printers' Exhibition, to be held at the Agricultural Hall next year, and the Committee had pleasure in accepting same. The dentistry scheme for the supplying of teeth upon the deferred payment system appeared to be giving satisfaction, over thirty members having availed themselves of this benefit.

The principal item upon the agenda, however, was the placing of the office of secretary upon a permanent basis, and the Committee having laid two schemes of remuneration before the meeting, it was unanimously agreed that Mr. Arthur O'Connor be reappointed at a salary of £130 per annum. In returning thanks for the renewal of confidence placed in him, Mr. O'Connor referred to the great strides the Association had made, and hoped to make during the ensuing year. During the past week Mr. J. L. Elias had written him notifying that he had nominated the Association to receive a cheque for £25 out of the *John Bull* Derby Sweepstake, and the same day the composing chapel of the *Daily Telegraph* had sent along a cheque for £5 5s.

Mr. T. W. George, of Carmelite House, was then elected a vice-president, special tribute being paid him for his excellent work upon the philanthropic side of the craft.

The secretary read a list of the successes in connection with the examination of the members attending the first aid classes, and it was shown that out of 40 students who appeared before D. J. M. Carvell, 27 had passed. A hearty vote of thanks was agreed to be sent to Dr. Cantlie, the lecturer appointed by the St. John Ambulance Association, for his untiring efforts on behalf of the class. Mr. H. W. Howes having been re-appointed treasurer, a committee of twelve was appointed with power to add to their number in order to make it representative of all sections of the craft. Mr. Geo. Tams and Mr. E. James were elected auditors, and in replying to a vote of thanks to the chair, Mr. C. W. Bowerman, M.P., paid a high tribute to the committee and secretary for their strenuous efforts to assist the afflicted, and congratulated all concerned upon the success of their efforts.

Before the meeting concluded, a vote of condolence was passed to relatives of the late H. Oscar Giles, of the *Westminster Gazette*, late chairman of the news department of the L.S.C., and an active worker in many philanthropic channels of the trade.

CO-OPERATION OF WORKERS.—Progressive firms now realise that success is based upon their securing to a full degree the co-operation of every employee—that they owe more than wages, that their employees are entitled to clean, light and safe places to work; compensation when injured, provisions for old age and individual consideration. The business value of this proposition is seen nowadays upon every side. It is not charity—better call it welfare work, explained as applying the same principles to his employees that he applies to the rest of his business. Good welfare work pays.—Mr. Walter Z. Shafer in *Printing Trade News*.

BARNSLEY
Paper Mills Destroyed by Fire.

Damage Estimated at more than £50,000.

The paper mills of Messrs. Thomas Marsden and Sons, Ltd., at Barnsley, were destroyed by fire on Wednesday last week. The damage is estimated at over £50,000 and 250 work-people are thrown idle. Day and night shifts were worked at the mills, and the outbreak occurred during the night shift just after one o'clock. A small blaze was noticed among scrap paper in a room adjoining the main building by a young employee, who attempted to put it out with his cap. In a few minutes the main building, stocked as it was with most inflammable material, was in flames. Fortunately the fifty or so workmen who were engaged at the time all escaped. They set to work at once with the firm's fire apparatus, and the borough fire brigade were quickly in attendance. The flames, however, were fanned by a strong breeze, and it was evident that the building, which was three-storeyed, was doomed.

The flames shot up to a tremendous height, and the brigade directed attention to other parts of the works, including the large store sheds, packed with paper and pulp, which were in great danger of being involved. The roof of the main building and the machinery crashed to the basement with terrific force, sending flames in the air to be seen for miles around. The fire spread to the finishing house, and the reeler, cutting and calender stock-rooms became involved. In those departments two valuable "news" machines became almost a total wreck, and the stock-rooms were virtually destroyed. A plentiful supply of water was at hand, and after some four hours' playing on the burning building the fire was got under control, but the brigade continued at work on the smouldering *dèbris* until the afternoon. The walls of the main building, a substantial stone structure, are left standing, but the interior is a mass of wreckage, thousands of pounds' worth of valuable machinery and plant having been completely destroyed.

A large quantity of stock was saved, and a recent addition to the works—a dynamo-house and offices—was also left intact, along with a lofty chimney-stack. The damage is covered by insurance.

A Humorous Programme.

When the printer gets out a programme for his own private use he usually strives after something that is out of the way, as a change from the usual style of those produced in the course of his daily work for others. We have seen many humorous productions of this kind, and one of the happiest and wittiest is just to hand from the well-known Middlesbrough firm of photo-engravers and colour printers, Messrs. Hood and Co., Ltd. To celebrate their removal into new works Messrs. Hood and Co. this year gave an outing and dinner to their workers, and the programme of the outing and menu of the dinner at Whitby, on Saturday, 7th inst., is very cleverly put together and nicely printed on stout old-style paper. While some of the references will be better appreciated by the members of the firm, the general humour and clever manipulation of printing terminology is worth reproduction.

The toast list ran as follows:—

Mr. HAROLD HOOD—"On things in general."

Mr. J. W. SPLEVINS (oldest employee)—Will discourse on the sins (and other qualifications) of professional fault-finders.

Mr. J. M. ROSEWEIR (our newest director)—Will explain how some happiness can be attained in this world even in a printing shop, despite the disability of close association with "devils."

Mr. F. LAYFIELD—May be impressed to say even a very few words about blocks and block-heads (or head blockers).

Mr. A. POWELL (architect of the photo engraving department)—May be persuaded to suggest new fields for Hood enterprise, and is not debarred from treating the subject lightly, as befits a company of holiday makers frankly "on the loose."

Mr. J. STUART—Has our congratulations on his appointment of Master of the Cleveland Guild, and with his year of experience of the art of saying nothing in an attractive way, may be trusted to wind up for the workers; while

Mrs HAROLD HOOD (another of our new directors)—May safely be asked to answer for the firm. Whether she will answer or what she will answer—that you must wait and see!

And this was the menu:—

HARD PACKING (TOP-FEED).
Roast Beef (A-Quality).
Roast Mutton (Lay-'t-on Process).

SPACING OUT MATERIAL.

(Transparently positive) Murphies (De Luxe).
(Doubtful) 18-pt. Peas double-tone green.
(Densely negative) Truffles in Aspic Jelly.

ORNAMENTS.
Trichromatic Tarts.
(The Cherries have no imposing stones).

OVERLAY.
Custard.
(More-rush and Bolt-em's Yellow).

DESSERT.
(There is a fruit shop higher up the street).
Deserters before the speeches are to have their forms locked-up.

WINES.
All of 1914 Vintage (extra dry).
At the last moment we regret to learn that these are all by the Disa-Poynter Process, and therefore cannot be included—so therefore there are to be no Whines.

ETCHING FLUIDS.
Ginger Pop. H_2O.
Citric acid, dilute, aerated.
(Yclept sometime 'lemonade.")

"This dinner is too good for any but 'printers' or other very honest men."—Izaac Walton.

BOOKBINDING SECTION.

Bookbinding Notes and News.

In the House of Commons, a week or two since, Dr. Addison put the three following questions to the Secretary of the Treasury: (1) Whether he was aware that since October, 1911, 36,000 books, full and half-bound, have been sent to Messrs. McCorquodale and Co. to their works at Wolverton, where female labour at less than the rate of wages paid to journeymen and apprentices is employed; whether he was aware that no trade union labour is employed by the firm in question in their works at Wolverton; was he aware that the bulk of vellum binding contracts are entrusted to two firms known for conditions of labour as described; and, if so, whether he proposed to take any action in the matter. (2) Whether it is intended to put up for open tender all the eight divisions of vellum binding contracts on the expiration of the present term of five years; and whether he will take care that Divisions 2 and 3 are not allotted to Messrs. McCorquodale and Co. without competition, as in 1909. Whether, in considering the competency of firms tendering for Stationery Office contracts, he will take into account the labour conditions existing under the firms in question, as well as space, plant and other conditions of their establishments; and whether he will consult, with a view of guidance, the Fair House list of the trade unions concerned.

Mr. Masterman, in his reply, agreed to the correctness of the figures quoted, and said that all Stationery Office contractors are obliged to observe the obligations imposed on them by the fair wages resolution. Any definite complaint of infringement would receive immediate attention. As to the second question, so far as could be at present foreseen, all the vellum binding contracts referred to will be put up for open tender on the expiration of the present term. There were special circumstances in 1909, when the vellum binding contracts were submitted to competition, which, in the cases of Divisions 2 and 3, made it necessary in the interests of the public service to negotiate with Mesers. McCorquodale and Co. for an extension of the period of two contracts which they had originally obtained by open competition. With regard to the third question, the Stationery Office, in allotting contracts, takes into account the labour conditions existing under the firms in question. The Fair House lists of the trade unions concerned are constantly consulted at the Stationery Office, and the conditions of labour on Government work are governed by the fair wages question.

The air seems rather thick just now with strikes and rumours of disputes and strikes in the bookbinding trade. The bookbinders of Wigan tendered a fortnight's notice, on May 31st, because of the refusal of the employers to concede an advance of 3s. per week on the present minimum of 32s. The men were prepared to accept an advance of 2s. at once and a further advance of 1s. on January 1st, 1914. This was met by a counter proposal from the employers of an immediate advance of 1s. 6d., and a promise that the question of a furthur advance should be submitted to a joint conference between the Master Printers Federation and the National Printing and Kindred Trades Federation. Several attempts have been made by the Executive Committee of the National Union of Bookbinders and Machine Rulers to bring about an amicable settlement, but the Wigan employers refuse to alter their original offer. The increased cost of living is put forward as one of the reasons for seeking the advance. No fresh developments are reported up to the time of our going to press.

At the annual meeting of the Master Printers Federation at Liverpool at the commencement of this month, reference was made to the memorial from the Scottish operative bookbinders (see our February bookbinding number), it being mentioned that an amended memorial had at last been received, but not until after the Federation's Annual Report was drafted. The bookbinding and ruling question has engaged the serious attention of the Federation Council during the year, and was brought prominently before the private general meeting. The demarcation of labour, the manning of machines, and the general conditions, urgently require settlement, and it is hoped that those members who are qualified by experience to deal practically with such questions will devote themselves to bringing about, despite the difficulties in the way, a settlement of a satisfactory nature.

Whilst the Federation was in session at Liverpool, an alleged grievance at Aberdeen caused a number of bookbinders in that city to go out on strike, but they returned to work on the 9th inst, on the understanding that a conference would take place between the newly-formed Scotttish Alliance of Master Printers and the Scottish District Council of Bookbinders. It expected that this meeting will result in a removal of the difficulty which led to the dispute.

There was also trouble threatened at Messrs. Burn and Co.'s London works in Kirby-street, Hatton-garden. This establishment, as most of our readers know, has been conducted as a "Union house," whereas the firm's country works at Esher has always been been maintained as a "closed shop." The National Union of Bookbinders and Machine Rulers has long desired to bring the Esher place within their fold, but without success, Messrs. Burn and Co. preferring to continue its present status. The Union, in order to bring matters to a head, recently directed those of its members who were employed at Messrs. Burn's, 145 men in all, to hand in notices to cease work at the end of last week, unless the firm gave way on the point. A strike was, however, averted at the eleventh hour, as after a prolonged conference on Friday between the directors of Messrs. Burn and Co., Ltd., and Messrs. Bowerman, Holmes and Evans, representing the National Printing and Kindred Trades Federation (the secretary and president of which organisation had offered to assist in bringing about a settlement), an agreement was arrived at, so that the men resumed work as usual on Monday morning. Certain readjustments of work are to take place in connection with the Esher branch. Although certain features that were objected to by the trade society remain unchanged, it was thought that the further steps to be taken might be deferred, so that efforts to deal with them should be undertaken by means of peaceful negotiation, rather than by the adoption of hostile measures that might result in injury and loss to both parties. This is a decision that does great credit to the good sense of both sides and demonstrates the esteem in which each holds the other.

The Master Printers' Federation has issued a pamphlet, with accompanying forms, explanatory of the Cost Finding System approved at the Cost Congresses held lately in various parts of the kingdom. Bindery work is referred to, and the author (Mr. W. Howard Hazell) says that as in the binding room a large portion of the costs are recovered by charges for hand labour, a special system has to be adopted. He recommends that machines which cost less than £10 should be treated as tools, and their cost be recovered by the hourly rates for hand work. Machines of greater value should be entered on one of the forms given. The costs to be recovered by the binding machine unit consist of special machine costs only, the yearly total of which, divided by 52, gives the average weekly machine cost, which, divided by the total hour units, gives the unit value for machines in the binding-room. To this is added the wages paid per hour to the worker, and the ascertained percentage to cover the balance of the costs of the department, the product being the total cost per hour for each machine. Thus, if a cutting machine cost is found to be 4d. per chargeable hour, the operator is paid 8d., and the percentage of balance of costs is considered to be cent per cent., then work on that machine must be charged for at the rate of 2s. per hour. In the case of hand work, of course only the percentage of extra costs is added to the actual hourly wage. "If a special machine, such as a book-sewing machine, is installed, and at first is only employed, say, one day a week, you cannot charge the full cost of the machine, as, if you did, your charge per hour would be so high that you would not obtain extra work for the machine. In this case you must find the hourly cost on the assumption that the machine is running a normal number of hours, say 30 or 40, per week. You will then find a reasonable hourly rate for the machine, and you will hope very shortly to obtain work to keep the machine running the normal number of hours." Copies of the pamphlet under notice may be had from the offices of the Federation, 24, Holborn, E.C., price, 2s. 6d., and should be in the hands of every master bookbinder and estimating clerk.

The subscribers to the Bookbinders' Pension Supplement held their fifty-eighth annual meeting and smoking concert on May 30th, at the Sessions House Hotel, Clerkenwell-green. The chair was ably filled by Mr. W. G. Greenhill, and there was a good array of artists, who rendered some very excellent songs and recitations, whilst Mr. J. Newton gave a violin selection. The Report of the past year's work was read by the secretary, Mr. W. Watt, who said that though the funds had fallen short, he was pleased to say that they were able to elect to five pensions, which fell in order of ballot to the following:—Mr. W. J. Jackson, Mr. G. A. Adams, Mr. T. H. Reynoldson, Mrs. Mary Richards, and Mrs. S. Bishop. Twenty gratuities of half-a-crown each were awarded the unsuccessful candidates. Four new committeemen—Messrs. Trott, Merritt, Billings, and Bown—were elected as an addition to the standing committee. Mr. Lea was elected treasurer, and Mr. England auditor, and a few toasts brought a very pleasant evening to a close. Miss Mabel Tilbury ably officiated as accompanist, and amongst the musical friends who assisted to make the function a success were Miss De Coverly, and Messrs. Margates, Newton, Ireland, Jones, Martin, Hill, Bembo, Francis, England, and Hornsey. The Supplement, as is well known, was organised on behalf of the unsuccessful candidates for the Bookbinders' Almshouse Society's Pensions.

According to the annual report of the Norwich Public Library, the Librarian of which is Mr. Geo. A. Stephen, 1,649 volumes were rebound during the year ended March 31st, 1913, at a cost of £107 19s. 7d., giving an average price of 1s. 3¾d. per volume, which seems a low one for books which the report states have been bound in accordance with a specification which provides for sound workmanship, good materials, and leathers tanned in accordance with the recommendations of the Royal Society of Arts.

We are sorry to have to report a steady falling off in the popularity of the City and Guilds of London Institute Examinations in Bookbinding. In 1911, 132 candidates presented themselves; in 1912, only 115, and for the present year the total fell to 89. The following is a list of the various centres of industrial instruction from which the candidates came for the 1913 examination:—

Centre.	Section.			
	Forwarding.		Finishing.	
	Grade I.	Final.	Grade I.	Final.
Merchant Venturers' Technical College, Bristol ...	4	1	—	—
Central Municipal Technical School, Liverpool	2	1	—	—
Municipal School of Technology, Manchester ...	—	1	2	—
Municipal Technical School, Leicester	4	1	1	—
Various London County Council Centres	7	1	6	3
Borough Polytechnic Institute, London, S.E... ...	7	—	11	2
Northampton Polytechnic Institute, London, E.C. ...	11	4	4	1
Acton and Chiswick Polytechnic, London, W. ...	3	—	1	1
Municipal Technical College, Brighton	2	1	—	—
Municipal School of Art, Birmingham	—	1	1	—
Technical Institute, Keighley	—	—	2	—
Central Technical School, Leeds	1	—	—	1
County School, Bodmin ...	1	—	—	—
Totals	42	11	28	8

It will be noticed that no less than 62 of the candidates hailed from London. Compared with this, the three who came from Manchester and Liverpool, and the two from Birmingham and Leeds, cannot be considered as other than very inadequate representation of those great industrial centres. Another noticeable point is the fact that 65 per cent. of the can-

didates went up for examination in Forwarding, which, after all, really constitutes Bookbinding proper, Finishing being merely a decorative adjunct, the number of persons learning which seems steadily decreasing, no doubt as a result of the great extension of cased-in work in the trade.

Employment in the bookbinding trades remained quiet in London during April. It was fairly good on the whole in the provinces. There was a general improvement as compared with a year ago, except at Edinburgh and Belfast, where employment was reported as bad, and worse than a month ago and a year ago. In London, out of a total of 3,359 Trade Union bookbinders, 5·4 were without employment at the end of the month, as compared with 6·3 in March, and 8·4 in April last year. In other parts of the United Kingdom the percentage was much smaller, only 3·6 out of 3,179, against 3·1 in March, and 4·3 in April, 1912. Morocco leather workers reported employment as very bad, and worse than in the previous month or in April last year; with other fancy leather workers it was fair, and at Manchester it was better than in March, or in April, 1912.

The contracts placed by H. M. Stationery Office during April included the following:—Binding 12,000 copies Technical Instructions XVIII., 11,000 copies First Aid in the Royal Navy.—Dickens and Cooper, Ltd., 6, Newcourt, Farringdon-street, E.C. Binding 1,600 Memo. Books, 2,500 Army Books, No. 130.—Fenner, Appleton and Co., Ltd., 77, St. Johnstreet, E.C. Binding 2,000 copies D. 475 C "Skeleton Guard Book"; printing, binding, etc., 2,500 copies Record of Registered and Insured Packets; printing, etc., 6,050,000 A.G.D. 163; supplying 1,000 Portfolios "S. 140, D. 744."—Drake, Driver and Lever, Ltd., Rosebery-avenue, E.C. Supplying 10,000 Portfolios Army Book 234; 20,000 cloth cases, 9 by 8½ inches.—McCorquodale and Co., Ltd., Wolverton. Bucks. Supplying 800 "Rapid" Binders.—Bridge and Co., 92, Chancery-lane, W.C. Supplying 40,000 pads A. F. C. 2,123A.—Gale and Polden, Ltd., Aldershot. Supplying 500 waterproof covers S. 353F.—Waterlow and Sons, Ltd., Finsbury, E.C.

Owing to the late dispute in the Manchester bookbinding industry, Mr. W. Mellor, editor of the *Bookbinding Trades Journal*, has changed his position, and is now Chief Agent and Treasurer of the National Union of Bookbinders and Machine Rulers (Approved Society No. 330) Health Insurance Section, whose offices are at 312, Deansgate, Manchester.

At last month's meeting of the Light Leather Trades Federation, the secretary pointed out a case of serious misrepresentation of leather purses, which were being described in such a manner as to be misleading to the public. The committee, after duly considering this matter, authorised the secretary to write to the firm exposing these goods for sale, pointing out the fact that they were contravening the Merchandise Marks Act, and insisting that this misrepresentation should at once cease; also, as it was suspected that the wholesale vendor of the particular goods was responsible for the goods being incorrectly labelled, that the dealer in question should be asked to furnish the name of the wholesale house supplying the purses.

A finish of very high lustre, and a face resembling glass, which German manufacturers have obtained on the leather used for pocket-books, etc, especially upon crushed grain morocco and crocodile, and which has troubled British manufacturers not a little to reproduce, can be obtained by the use of collodion cotton, says Mr. M. C. Lamb, F.C.S. The goods are varnished over with a solution of nitro-cellulose, made by dissolving 8 ozs. of collodion cotton in 40 ozs. of amyl acetate, and diluting with 60 ozs. of a mixture of equal parts of benzole and industrial spirit. This solution is applied with a varnish brush of good quality to the outside of the case, and after drying the case is pressed and ironed in a press provided with a polished silver plate. One afternoon a few weeks since, Mr. Lamb, who is head of the Light Leather Department at Leathersellers' College, lectured at the Central School of Arts and Crafts, Southampton-row, on Forel, Parchment and Vellum, to the bookbinding students, the attendance also including some of the principal bookbinders in the metropolis.

About a century ago a fairly popular mode of book decoration was the painting on the fore-edges, usually before they were gilded, of a landscape or other picture in water colours. This sort of thing is usually found in company with a good binding, though the books on which it occurs are not as a rule of much literary importance. Examples of this class of decoration are now being sought after, but as they were never very numerous the "faker" has stepped in to help supply the demand. Mr Vincent, the President of the International Association of Antiquarian Booksellers, accordingly advises booksellers to examine carefully all volumes with painted "forages" before purchasing. He says he had sent to him from the Provinces two small volumes, the bindings of which date from about 1830, while the fore-edges must have been painted but yesterday. He warns booksellers that at the present time a number of such volumes are being put upon the market. No doubt the fact that good prices are usually fetched by such books accounts for this latest development of the book-faker's art. Genuine old examples are, however, still picked up occasionally for a trifle. The writer purchased a good one the other day for threepence at a bookstall.

In a recent number of *Office Appliances* Mr. Jas. S. Waterston (of the well-known Edinburgh firm of Geo. Waterston and Sons) had an article on "Scotland and System," *i.e.*, labour-saving systems in connection with business establishments. The following extract may be of interest to our readers:—"Less than a score of years have elapsed since loose-leaf ledgers began to make any impression on this side of the Atlantic, and these, more than any other appliance, have now become really popular. The 'Dade,' which I believe, was the first of the invaders, the "Cope-Chatt," 'Twin Lock,' 'Kalamazoo," many of 'Sieber and Trussell's' and 'National' lines, and latterly the 'Ludgate' (our own patent) and 'Eff-Pee' binders (both British patterns) have established a strong and increasing hold in this country. There is room for them all, and competition, though keen, is always friendly."

In connection with the recent retirement of Mr. Henry Frowde from the management of the London business of the Oxford University Press, after 39 years of active work, it has been stated that since 1874 he has brought out and distributed through the world more than 40,000,000 copies of the Bible. The skins of 100,000 animals are used annually for the covers of Oxford Bibles alone, and 400,000 sheets of gold are required for gilt-lettering.

Messrs. A. and C. Black are re-issuing their Beautiful Britain Series in cloth bindings at the price of the original edition in paper boards.

In last month's numbery of the *Treasury*, a veteran bookbinder, Frederick Rogers, has a long article reminiscent of the Bookbinders' Strike in 1891-2 over the eight-hours question. He was then foreman of the binding department of the Co-operative Printing Society, whose directors, he says, "took a sane view of the workman's position and never interfered with what I did after hours so long as I did my work satisfactorily while I was employed by the firm . . . therefore . . . I flung myself into the fray." Old bookbinding trade unionists would read this article with interest, as many of them will no doubt remember Mr. Rogers as a particularly energetic and enthusiastic member of the old Vellum Binders' Society, who helped to make what he rightly calls a revolution in the trade, though the strike in question was only a partial success.

Mr. C. D. Medley, writing on the "Printer's Lien" in last month's *Imprint*, says that "upon the bankruptcy of a publisher it is rather galling to find the binders holding a large proportion of the stock, not merely to their own advantage but to the more than corresponding disadvantage of the printers and other creditors. But this is ultimately due to the fact that the course of trade has

put the binders to a considerable extent in the position of warehousemen and that printers as a body have not found such a position compatible with the best and most profitable use of their premises." Mr. Medley thinks that the solution of this difficulty would be to make it impossible for anybody, even by contract, to obtain a general lien which can be enforced in bankruptcy.

The Home Arts and Industries Exhibition, held recently at the Albert Hall, contained many excellent specimens of leather art work, such as bags, blotters, letter and card cases, etc. The Dorset Arts and Crafts were well in evidence, and a Press interviewer was told that all their beautiful work was done on bark leather from the Romsey tannery.

A correspondent, writing to the *Newspaper Owner and World*, says:—"Can you recommend us the best material for binding our newspaper files, something that is practically imperishable, and will stand a certain amount of handling? We think that pigskin is somewhat too expensive, and we find that the leather usually used by bookbinders perishes after a number of years, owing to the fact that it is cured by means of chemicals. Perhaps you may find out from some other newspaper office what is the material that is generally used." In his reply, the editor of our contemporary recommends the use of pegamoid for the purpose in question.

The death took place last month of Mr. Samuel Waite, head of the well-known firm of ruling machine manufacturers, Waite and Sheard, Honley, near Huddersfield. Deceased was 75 years of age, and started his business life as a cabinet maker, but some time later he entered into partnership with a ruling machine manufacturer at Honley. A few years later he became sole proprietor of the business, which, since his retirement some time ago, has been conducted by his sons, Thos. E. and L. Waite.

The imports of book cloth during May amounted to 24,799 yards, valued at £603, as compared with 11,442 yards, value £272, in the corresponding month of last year, and 28,920 yards, value £719, in May 1911.

According to the report for 1912 of the Central Union of Belgian Bookbinders, that organisation had, at the end of last year, 1,178 members, *i.e.*, 842 men and 336 women. This total included 529 forwarders, 311 booksewers, 87 cutters, 30 rulers, and 16 finishers on leather work. The members who joined last year numbered 323; 348 others are members of from two to five years standing, and 331 more from five to ten years. The year's receipts were about £1,240 and the expenses nearly £1,000, so that £240 was added to the accumulated funds. The Union only dates from 1911, but is a reconstruction of a National Union founded in 1898. Its oldest affiliated branch is that at Brussels, which dates from 1885, and is also the largest, having 729 members. Wages in the Belgian bookbinding industry are still very low, the highest recorded average rate being in the capital, 5½d. per hour. In other places 2d. and 2½d. is quite common.

In the recently published Recollections of Massenet, the composer, a story is told, illustrating his passionate admiration for beautiful bindings. Not a week passed without a visit from him to his bookbinder, when he brought a new book or a new edition to be bound. In the course of time he and the bookbinder became the best of friends, and when Massenet arrived the talk was at first of everything on earth except the real object of his visit. "Look here!" Massenet would say, eventually, giving the man the volume to be bound. "Splendid!" replied the bookbinder, and then for his customer and friend he would devise some fresh wonder in the art of binding. One morning Massenet suddenly learnt that his friend was giving up business. He hurried to his shop. "Heavens! Is it true you are leaving Paris!" he asked. "Why, certainly; I have bought a charming little country house near Nantes." "What! A country house! And in the provinces!" And he added sadly: "Ah! My poor friend, I am partly responsible for that."

As we go to press, the triennial conference of the German Working Binders' Associations is being held at Stuttgart. It finishes on Saturday, and some of the delegates will then go on to Brussels, where they will be able to attend the fifteenth annual congress of the Central Union of Belgian Bookbinders on Sunday, which is to be followed by the third International Bookbinders' Conference on Tuesday and Wednesday next.

In the bookbinding works of Lüderitz and Bauer, of Berlin, a kinematograph reproduction was made recently of the whole process of work in a large wholesale bindery. From folding the sheets to putting on the covering all the processes were shown, and the representation also included gilding by hand, stamping, marbling, etc.

Lock-outs of bookbinders on wages questions are threatened in Norway and Roumania. In the former country, the workers have been building up for six months past a special fund to enable them to tide over such an event.

In New South Wales there is a Printing Trades' Women and Girls Employees Union, which includes female workers in the bookbinding business, and following upon some representations lately made by it to the Government, a Wages Board has been constituted and a definite scale of hours and wages enacted. According to this, the week's work is to consist of a maximum of 45½ hours, between 8.15 a.m. and 5.20 p.m. Monday to Friday, and 8.15 to noon on Saturday, a quarter-hour interval being allowed and paid for at 11 a.m. on all the full days. The minimum rate of wages for senior hands (*i.e.*, those with not less than four years' experience) in hand and machine sewing and quarter-binding, up to four quire, is 25s. a week, and for all other senior hands in the trade, 23s. For junior hands, 10s. a week during the first six months; 12s. for the second six months; 14s. for the third six months; 16s. for the fourth six months; 18s. for the third year; and 21s. for the fourth year, after which they become seniors. Overtime is paid for at the rate of time and a-half for the first three hours afterwards, and up to 10 p.m., double time: and subsequently at the rate of 5s. per hour or fraction thereof, in addition to 9d. for tea money if working after 5.30 p.m. Work done on public holidays (of which there are nine in the year), Saturday afternoons, or Sundays, is always to be reckoned as double time. Not less than four employees are allowed to work overtime after 6 p.m. After being employed for three months, seven days notice must be given on either side. Members of the Union above referred to are to have the preference when employers are engaging fresh hands. These conditions apply to Sydney, Maitland, Newcastle, etc., and are to remain in force for two years.

The trade announcement of Wm. Detmold, Ltd., of Melbourne, one of the oldest Australian binding firms, contains the following passage, which has points worth thinking over:—"Do not refuse an order for bookbinding because you have not the necessary plant. The refusal of one job often means the loss of others that you are in a better position to execute. We can do the work for you at a price that will leave you a good margin of profit. We guarantee first-class workmanship and the utmost secrecy with respect to trade orders. When next you have an enquiry for bound books, send full particulars to our nearest branch, and we will send you an estimate by return post."

The United States House of Representatives made no change in the proposed reduced import tariff on bound books (see our last Bookbinding Number), but the American binders are hoping that the Senate, which has to pass the

Bill before it becomes law, will do something in their interest. Books for libraries, colleges, universities and other educational institutions are, under the present Tariff, admitted free of duty, and the booksellers are well aware of this fact. Some of them, however, according to the New York correspondent of the *International Bookbinder*, are so unscrupulous as to take unfair advantage of this knowledge, and import books from England having the seal of some college or university, ostensibly for the use of that particular institution, stamped on the back in such manner that it can be easily removed, and they escape paying any tariff by such subterfuge. "Within the past year two instances of this kind, perpetrated by an important firm of booksellers of this city, have come to my knowledge. One book having the seal of Cornell University and the other Columbia University, were sent to a shop where I was employed to have the imprints obliterated, to enable the bookseller to sell them to any prospective purchaser. Another favourite trick of 'beating the tariff,' is to have twenty-year or older date titles printed and inserted in valuable books that were probably printed and bound within the current year." Those provisions of the Bill that imposed duties on bookbinders' calf skins, tanned but unfinished morocco skins, and finished ditto, have been struck out by the House of Representatives. It is to be presumed, therefore, that these goods will come into the free list.

At the Thirteenth Annual Convention of the American Booksellers' Association at New York last month, Mr. E. D. North, of that city, read a paper on "Fine and Rare Books as an adjunct to the Retail Book Business." In the course of his remarks he said:—Let me call briefly to your attention the great and varied changes in taste in the last forty years on the subject of what constitutes a perfect covering for a book. There are men before me who will remember when a book bound in calf or tree calf with marbled edges was considered the height of elegance, and the old stamped leather in which Bibles, prayer books and annuals were bound was considered the acme of taste. One word about fine binding. Perhaps there is no such thing as a settled standard in any branch of art, but it has come to be accepted by the fastidious that a perfect book, be it fine or rare or both, should be bound in levant morocco as the best medium for artistic decoration and the most lasting cover for decoration. Special clubs, such as the Grolier Club of New York, the Bibliophile Society and the Club of Odd Volumes of Boston, the Rowfant Club of Cleveland, the Caxton Club of Chicago and the Carteret Club of Newark have done much to establish a high standard of binding and typography among the book makers of this country. We live in the age of imitation—imitation leather, poor paper, poor paste, poor linen thread, not to mention the wire stitching and all those short cuts which make the difference between cheapness and elegance, and between high standard and low imitation. Library schools throughout the country have lectures on bookbinding, etc., but no attempt seems to be made to educate the bookseller in this way.

By the March-April number of the American journal, *Bindery Talk*, just to hand, we gather that the editor has regarded as "excellent" the article on "Some Patent Methods of Sewing," which Mr. Geo. A. Stephen contributed to the March Bookbinding Supplement of the *British and Colonial Printer and Stationer*, and has reprinted the whole of it. The number also contains a further instalment of the reprint of the long article on "Bookbinding: Methods and machinery," which Mr. Stephen contributed to the Printing Supplement of the *Times*; the sixth instalment of Mr. W. E. Reavis's articles on "Bookbinding for Libraries," which is concerned with rounding and backing; an article on "Guaranteed Leather," which shows that the Americans are at last moving themselves to supply acid-free leathers tanned in accordance with the recommendations of the Royal Society of Arts; and some miscellaneous items.

Mr. A. P. Sovey, of St. Louis, has been elected President of the International Brotherhood of Bookbinders, in succession to the late Mr. Glockling. He has already filled the office of vice-president of the organization, and being a man of energy and resource, it is it is hoped that he will be able to place the Brotherhood on a firmer foundation than its present one. The accounts of that body, for the year ended April 30th last, showed that whilst the receipts totalled up to about £6,200, the expenditure reached upwards of £8,000, so that the balance in hand, £3,500 a year ago, has been reduced to about £1,500. The deficit is due the heavy expense of organization, £4,000, which brought in only £1,000.

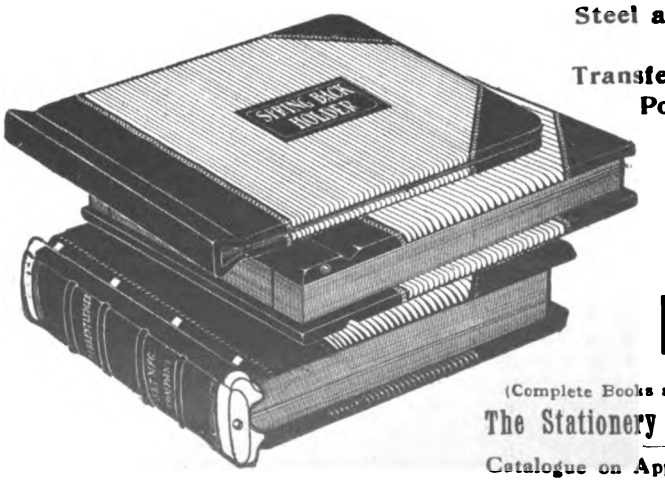
One of the best-known art binders in America, Mr. Otto Zahn, has just retired from business, and thus severed his connection with the firm of Toof and Co., Memphis, U.S.A. He was a pupil of Matthews, of New York, the London binder who first popularized art binding in the States. Mr. Zahn does not seem to think that this branch of binding has much prospect of success in America to-day. Two other German art binders have made a name for themselves in the States, viz.: A. Oldach, jun., of Philadelphia, and L. Schwarz. The latter was for some time a collaborator with Zahn, but subsequently went to the Roycroft Bindery.

In an article on the Hoe Library sale in the *Bulletin du Bibliophile*, the writer says what appears to have attracted Mr. Hoe the most, when getting together the great collection recently dispersed, was fine bindings. Of some works he purchased four or five copies, sumptuously bound. Side by side with the numerous old bindings were thousands of modern ones, often displaying more gorgeousness than good taste. The direction of the "Club Bindery," which Mr. Hoe founded in New York, was confided to an excellent French binder, M. Maillard, who had long worked for Gruel, Cuzin and Mercier. Although so famous a collector himself, Mr. Hoe mixed little with others of like tastes and was rather distant in his manner to owners of libraries whose collections were not to be counted by thousands. Most of the copies of his beautifully illustrated catalogue of bindings, selected from those he owned, were still in his possession at the time of his death, instead of having been distributed amongst his friends, as would have been the case with other and less haughty bibliophiles.

At Buffalo, in New York State, U.S.A., the master binders recently agreed to put a new minimum scale of wages into force on June 1st. The highest rate is of course to be paid to gilders and finishers, £4 3s. 4d. per week. Then come rulers and first-rate forwarders, £3 19s. 2d.; ordinary forwarders, and cutters, £3 15s. Experienced bindery girls will get 27s., and beginners 18s. 9d. The 48-hour week is in force in the town.

The Windisch Co., bookbinders, Detroit, U.S.A., lately completed a handsome souvenir to be sent to the Emperor of Germany. It was made to the order of the Borussen Gesellschaft, an aristocratic German society at Detroit, and is in commemoration of the twenty-fifth anniversary of Kaiser Wilhelm's accession to the throne. It is in the form of a beautiful portfolio, containing a letter of congratulation, and press notices of the foundation of the society and its remarkable progress. The letter is written and the clippings tastefully mounted on folio parchment bearing the society's arms, the imperial eagle embossed in black, white and red. The portfolio is made of morocco in red, white and blue, with 48 stars, and lined with heavy moire antique silk in black, white and red. On the cover the society's arms are emblazoned on a gold medallion. The contents are secured by means of black, white and red satin ribbons, finished with tassels and pendants of gold bullion. The letter is signed by the various members of the society. The album has been on exhibition in the town, and attracted great attention.

A well-known American binding authority (Mr. J. J. Pleger), says that printers' bookkeepers and clerks rarely possess sufficient knowledge of ruling to prepare copy which will meet all requirements with the least possible cost. Novices cannot be expected to prepare copy which can be as economically followed as if superfluous lines were eliminated, or perhaps stopped at a convenient point for the ruler. It is erroneous to presume that the man who orders the work knows what he wants, because such a man has no knowledge of the intricacy of the ruling machine, and may unwittingly compel the ruler to put a job through the machine a second, third, and possibly a fourth time, because of the iron-clad rule to unquestionably follow copy. When suggestions have been made to customers regarding the stopping of a few lines at the foot line instead of on the line above, they invariably remark: "But the longer line will make it cost more." That is, lines are made to stop because the opinion prevails that the longer the line the more ink used and the greater the cost. Men who know should be consulted before copy is submitted or suggestions requested, which would reduce the cost, and then actual requirements can be the guide. In ruled work the drops and lifts, the number of times a sheet is run through, and the intricacy of the patterns, are all factors that determine the cost.



The annual report of the Trustees of the Public Library of Boston, U.S.A., for the year 1912-13, states that the following bookbinding work was executed in the library bindery during the years 1911-12 and 1912-13:—

	1911-12.	1912-13.
Number of volumes bound, various styles	42,398	42,492
Volumes repaired	2,494	2,644

The report states that in addition to this work, a large amount of miscellaneous has been done, such as the making of periodical covers, portfolios, and pouches, the stitching of magazines, mounting of cards, blocking of paper, etc.

A few months ago we published some extracts from a pamphlet on leather preservation by Mr. G. E. Wire, the deputy librarian of the Worcester County Law Library, U.S.A. In the fifteenth annual report of this library the following information is given regarding the library binding, which is interesting as showing the kinds of materials used and the cost of binding. "During the past year our bindery turned out 113 volumes in three-fourths leather and cloth sides, either East India goat or sheep, at $1.15 a volume; 197 volumes in Holliston buckram, or cloth at $1 a volume. These had all been sewed before and were forwarded and finished in the summer and early fall. Each book is sewn all along with Hayes Irish linen thread on linen bands, or hand casing is employed. . . . The cloths used are Holliston cloth and buckram, and the leathers are India goat and sheep, Niger goat and a small quantity of morocco. During the past year there have been 1,488 volumes vaselined, and 393 volumes vaselined and varnished. It has been brought to my attention that I am indebted for the use of vaseline on leather books to Mr. William J. Nagel, of 7, Ashburton-place, Boston, Mass., who used it on some of his books almost ten years ago. I gladly make this correction and confess to Mr. Nagel and give him the credit due him for the idea and the start on which we have done so much work." Vaseline, in this country, has been used as a preservative for more than ten years. In Mr. Douglas Cockerell's book on "Bookbinding and the Care of Books," published in 1901, it was stated that vaseline answered fairly well, and we think we have seen even earlier references to its use.

It is stated that there is a strongly increasing demand for leather and leather goods in China, especially in the free ports. The colours required are black and brown, there being little sale for fancy colours. The bags, portfolios, etc., used by the foreign residents are all imported, but the natives prefer to buy goods made in the country from imported leathers. These are cheaper in price, and appeal more to the native taste as regards appearance.

According to statistics lately published by the local Chamber of Commerce, there are 300 men and 500 children regularly employed in the bookbinding trade at Osaka, Japan.

The New American Ambassador
AND THE BOOKBINDERS.

At its May delegate meeting, the London Trades Council, popularly regarded as the Parliament of Labour in the Metropolis, registered a protest against the appointment of Dr. H. S. Page as United States Ambassador to England. It did this, it is explained, on the strength of a letter received by one of the members of the executive.

The resolution, moved by Mr. W. Coffey, of the National Union of Bookbinders and Machine Rulers, and seconded by Mr. Collis (L.S.C.), was as follows:—

> That the London Trades Council, representing 50,000 working trade unionists of the British metropolis, strongly resents the appointment by President Wilson to the Court of St. James's of an Ambassador who is a bitter opponent of organised labour in his own country, and requests President Wilson to recall his appointment of Mr. H. S. Page and to substitute for him one who will more truly represent the opinions of the working classes of the United States, and who will be more acceptable to the organised workers of the the United Kingdom. The Council also urges Sir Edward Grey to protest against receiving Mr. Page as United States representative to this country.

A copy of the resolution has been sent to President Wilson and Sir Edward Grey, and in asking every trades and labour council in the United Kingdom to take similar action the London Trades Council state:—"It is necessary, in order to maintain the international solidarity of our movement, that the capitalists, on either side of the Atlantic, shall not be allowed to flout or ignore the opinion of trade unionists without a strenuous protest being made; and by passing such a resolution your council will be establishing a valuable precedent."

The letter referred to was dated from the office of the Allied Trades Council of Greater New York, and signed by Chas. L. Conway, Secretary of the National Brotherhood of Bookbinders. It stated that "Mr. Page is a member of a firm bitterly opposed to organised labour. The only department that forced recognition from a union standpoint was the bookbinders, but they are now on strike, and have been for the past twelve months, being forced out, as it was the policy of the firm to replace men with boys. . . . . Further proof of the conditions that prevail in this establishment are that even the help they secured to take the striker's places rebelled and struck without the aid of any organisation."

The Ambassador was a member of the New York printing, publishing and bookbinding firm of Doubleday, Page and Co., but his connection appears to have been chiefly with the literary side of the concern, and of course during his term of office as Ambassador he will not be able to keep up his business relations with the firm.

According to the *Daily Chronicle's* New York correspondent, the officials of the American Federation of Labour, the Printers' Union, and the New York Trades Council all publicly repudiate Mr. Conway's action, and hastened to assure President Wilson and Mr. Bryan that the attack on Dr. Page was not inspired by any authorised body in the United States of America and that they do not sympathise with the protest.

The New York correspondent of the *Daily Telegraph* lately interviewed Mr. Thos. Carroll, the President of the Allied Printing Trades Council there. He said that "the report that we communicated with the London Trades Council is absolutely untrue. No man with authority to utter a word for this Council has communicated with the London Council. If we had wanted to protest we would have gone to President Wilson or to Dr. Page himself." Mr. P. J. Brady, secretary of the Printing Trades Council, declares that the protest was made by "an outside organisation which is repudiated by the American Federation of Labour, and that it was absolutely unauthorised by the printing trade." He proposed to write letters to President Wilson and Dr. Page, explaining that. He adds that "whatever may be the conditions in the firm of Doubleday, Page and Co. with regard to union labour, my organisation does not desire to embarrass the administration by any such tactics as those employed by Mr. Conway." Representatives of 30,000 members of the Allied Printing Trades' Society, at a meeting held recently in New York, passed resolutions asking the American Federation of Labour to approach President Wilson with

the request that he will cancel Dr. Page's appointment as Ambassador in London, on account of the bitter opposition to the appointment by trade unionism.

Replying to questions put by the *Daily Telegraph* representative, the manager at Doubleday's stated that Dr. Page was one of the founders of the firm. He had not the figures before him, but felt justified in saying that the average remuneration paid by Doubleday, Page and Co. was actually higher than the union scale. "We have never attempted," he said, "to reduce our workers to a uniform level as regards remuneration, but have paid according to individual merit."

On the other hand, we understand that Mr. Coffey, the mover of the resolution which has caused so much comment, is quite satisfied that the statements made about Dr. Page's firm are largely, if not fully, justified. If the contrary should be proved, then both he and the London Trades Council are prepared to make the fullest apology for having assisted to give them publicity.

The National Brotherhood of Bookbinders is a comparatively new organisation, having only been formed some nine months back, as the result of a dispute between the International Brotherhood of Bookbinders and some of its New York branches. The circumstances attending its formation were set out in our Bookbinding Number of October last.

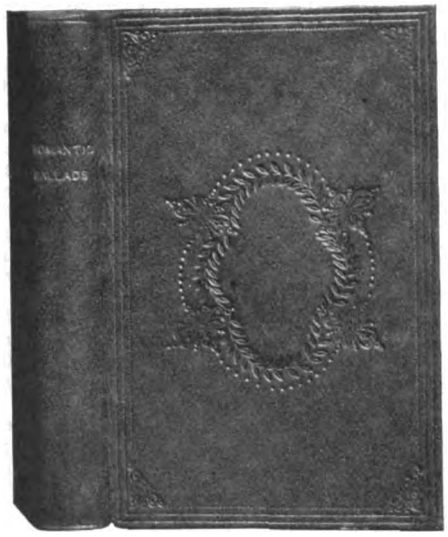
TECHNICAL
Instruction in Bookbinding.

XIV.—At the Central School of Art, Leeds.

This well-known Yorkshire institution for industrial teaching includes, amongst its numerous classes, one for instruction in Bookbinding, which has up until lately been under the care of Mr. Walter Spink, a First Class Honoursman in the subject. It is held on Tuesday and Friday evening, from 7 to 9 p.m. Forwarding and Finishing are taught in Letterpress binding, commencing with the pulling of books and the various methods of doing sewing, and going on to edge-gilding and the decoration of book edges, cloth and half and full morocco bindings. There is a Design Class, which students of binding are also able to attend for the one fee of 10s. 6d. This fee, especially for apprentices, seems too heavy, and its future reduction ought to receive the attention of the Education Committee. Students also complain of the exorbitant fee charged for the Bookbinding Examinations of the City and Guilds of London Institute, 3s. 6d. being thought far too much, seeing that one can enter examinations in other Craft subjects for 1s. 6d., though students of binding are no richer than those in other classes.

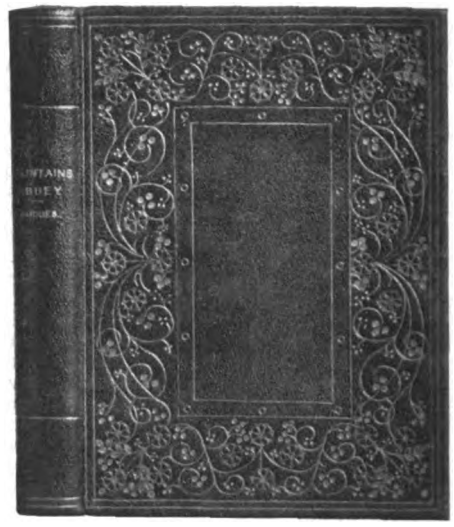
No. 1.

An Example of the Work of the Students of the Bookbinding Class at the Central School of Art, Leeds.



Great interest is taken in the decorative work which figures so largely in bookbinding. The class-room is well fitted up in every way. The old plough and press have been done away with and replaced by a 20-inch guillotine. There seems to be a very prevalent opinion just now that some of the rather antiquated methods which enter into the syllabus of the bookbinding class might very well go the way of the old plant. A well known Instructor of Binding said to us the other day "Why all this cant and piffle about 'Cutting a book in board'? Why shouldn't a Craft Class at a School of Art be brought up-to-date, so as to compare with the modern workshop? It is of no use whatever teaching obsolete methods with obsolete appliances." With these sentiments we think most students who desire to be abreast of the times will cordially agree. A little wholesome revision on these and other similar lines would be very serviceable in many centres of technical instruction. At present, however, we can only deal with these matters as we find them. Through the courtesy of Mr. Spink*, we are able to illustrate herewith some examples of work executed by students of his class.

No. 1 is a piece of work intended for a pulpit fall or frontal, and is of purple morocco inlaid with a white cross. The idea is Mr. Spink's own, and the design was drawn and executed by a student named Dean Lister. This was sent up for the National Art Competition.



No. 2 was bound in pale blue morocco by Miss Wood, and the tooling, though made up of the repetition of only a few simple forms, is far from being ineffective.

No. 3 is bound in green morocco and inlaid in red. This is the work of a student named C. Ruddock, aged only 15 years, and has also been sent up for the National Art Competition. He is to be congratulated on the efficiency attained at so early an age. The general appearance of the design suggests some of the English bindings of the forties, though the details are superior in taste and arrangement to many found on those.

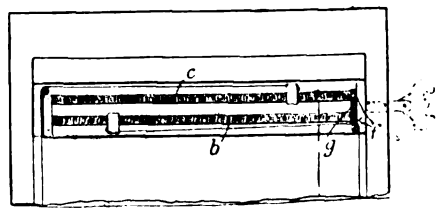
Students of the class under notice learnt with regret, during last session, that Mr. Spink was resigning his post as Instructor in Bookbinding, having decided to go out to New York. He sailed for that city on May 17th, taking with him, we have no doubt, the best wishes for his future success of the many past and present members of his class who owe their knowledge of the craft largely to his painstaking care and attention. Mr. Spink is a talented designer and expert bookbinder, and we expect to hear more of him from the other side of the Atlantic in the near future.

No. 2.

No. 3.

Examples of the Work of the Students of the Bookbinding Class at the Central School of Art, Leeds.

* It may be interesting to point out that Mr. Spink's father is a member of the firm of Spink and Thackray, Leeds, whose work in connection with art binding was referred to and illustrated in our bookbinding number of December last.



Should a Printer Manage a Bindery?

SIR,—Your question in the current bookbinding issue touches the weak spot that seems to escape the notice of those who are most seriously affected. It is common knowledge that many large and important printing firms have laid down expensive binding plant from which no profitable result has accrued, simply because the bindery has been superintended by a printer who, whilst having practical knowledge of his own line, is quite without that practical experience of the technicalities of binding so necessary to success and the turning out of good work. If the heads of such firms could only recognise that the bindery is something more than a mere subsidiary department that anyone can manage, one may venture to predict that it would not only be the output that would improve, but the style and class of work, as well as the status of the workman, and what is also of importance, the reputation of the firm itself would be greatly enhanced and benefited.

Yours, etc.,

N.U.B.M.R., W. COFFEY.
1, Gough-square, E.C.

An invention by Mr. F. James relates to loose-leaf binders of the type described in Specification 27,115, 1909, and also of the type in which two threaded spindles are mounted in one of the clamping bars, each spindle carrying a nut attached to a leaf-engaging

flexible cord connecting the two clamping bars. The invention consists in mounting the two spindles *b*, *c* in one of the covers and actuating them by one member, the actuating mechanism shown by way of example comprising a spur-wheel *f* on each spindle *b*, *c* engaged by an intermediate wheel *g* operated by a key.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

[REGISTERED AT THE GENERAL POST OFFICE AS A NEWSPAPER FOR TRANSMISSION IN THE UNITED KINGDOM.]

THIRTY-FIFTH YEAR.

VOLUME LXXII. NUMBER 27.

LONDON: JUNE 26, 1913.

EVERY THURSDAY. PRICE TWOPENCE.

Printers' Managers and Overseers ASSOCIATION.

Joint Meeting at Liverpool.

On Saturday last over 300 members, with their wives and lady friends, paid a visit to Liverpool, and were accorded a civic welcome at the Town Hall by his Worship the Lord Mayor (Mr. J. S. Harwood Banner, M.P.). The visitors included representatives from all parts of the kingdom, every Centre sending delegates.

A good send-off to the day's event was the inspection in the morning of several of the large Atlantic liners, thrown open by the courtesy of the Cunard and White Star Steamship Companies.

At one o'clock the guests were received by the Lord Mayor in the Council Chamber.

His LORDSHIP said:—Mr. Vice-President and Secretary, and Ladies and Gentlemen,—I think I need not apologise for Liverpool weather. I hope you have had a pleasant trip on your visit to the liners. You are still waiting for your President and party who are visiting the "Mauritania"; but time and tide wait for no man, and I hope you will all apologise to him for proceeding in his absence. Another thing I have to apologise for is that I did not know that ladies formed a portion of the P.M. and O.A., and therefore I did not ask the Lady Mayoress to accompany me. My duty on behalf of the City is to give a welcome to all of you gentlemen and ladies from the different parts of England, Ireland and Scotland. I see that in matters relating to the printing business there is cohesion and working together. You do not want to have separate establishments for each nationality. I see that you have a very large number of members, and that you have collected a very considerable amount of funds, which are used for exceedingly good objects — to assist members in temporary need and to provide funds for the widows and nominees of deceased members. I am sure you will be glad to know Liverpool is doing very good business for printers at present, due to the royal visit to take place in July. It is always a pleasure to the Lord Mayor to welcome guests who belong to this great nation in all classes of business, and especially when we know, as we in Liverpool know, that those who follow your business are men who have acquired a very high standard of ability and shown the world what good work the printers of this country can do. All-round excellence is a matter which we all admire in this country of ours, and excellence is a matter which employers cannot obtain unless those who are overseers and heads lead and show the way. Those who have acquired that position have done so by showing that they take the lead and have that ability above their fellows; they are the gentlemen who really are the leaders of the movement, and, with the help of capital provided by the employer, turn out that excellent work which we have the pleasure to see and admire. I am very pleased indeed to see you all; very glad to offer you reception and light lunch. I extend to you a most hearty welcome and wish you every success in your annual gathering. (Applause.)

Mr. GEO. WATSON (Vice-President, Liverpool) said: I must apologise for the unforseen detention of our President, who would have been delighted to be present at this welcome. We all knew that we would be received with a good heart, and I am sure I am speaking for all when I say we are delighted to be addressed by your Lordship, and we all very much appreciate your kindness.

Mr. W. STEPHENSON (a past-president of the local Centre) said: I thank your Lordship for extending to us this excellent reception and for providing such a fine day. Of course we all consider ourselves at the top of the tree. Indeed ours is the art preservative of all arts and I don't think the commercial industries of the country could very well get on without it. I thank your Lordship for entertaining us to-day.

A very enjoyable afternoon was spent in a three hours' cruise up the river to Eastham and back to New Brighton on the specially chartered ferry boat "Claughton."

At 6.30 the company sat down to an excellent tea provided by the management of the new Midland Adelphi Hotel. After tea, a pleasant half-hour was spent in viewing the truly magnificent appointments and fittings of what is claimed to be at the present moment the finest hotel in the world.

In the course of a most successful social evening, including an acceptable musical programme, the following speeches were made:—

Mr. HARRY FIRTH extended a hearty welcome to Liverpool to all the members of the several Centres and their lady friends. It was indeed a pleasure to him to see so many well-known faces, for, although he could not always remember names, he could invariably remember faces, and to him it was a pleasant thought to know that wherever there was a P. M. and O. A. Centre, there also was to be found members of the Association who would be only too glad to welcome him and show him round. It was a very great pleasure to him to express a hearty vote of welcome to all the members there gathered together, and he hoped to see many such assemblies in the future.

The first to respond was Mr. C. J. GRAY, the president of the Parent Association. He said: I feel somewhat embarrassed to-night because I find a song which is to follow me is called "Idle Words." I do not know whether it applies to the few remarks I am to make; nevertheless, I am going to speak, although I feel somewhat in the position of the mother who had eight sons, and never quite knew which one to fix the blame on, as I find there are eight members of our Association to reply to this speech, and presumably you are doing what the mother did by putting the eldest one up first to make the biggest show. On behalf of the Parent Association and the members of it, we thank you heartily for the welcome you have given us, and we also appreciate the efforts you have made to add to our enjoyment while we have been here. Up to the present it has been all that could be desired, and if the concluding part is as good, we shall all go back full of enjoyment and anecdote. I was afraid Mr. Firth would to-night have rather got on to the glories of Liverpool. At Nottingham I had to listen to a speech on the history and glories of Nottingham; at Manchester, also, to the historical part of the wonderful city. I am surprised to-day that Mr. Firth has not said something about the glories of Liverpool. On those two occasions on which I had to reply, so to speak, I found, and I have always felt on each occasion, that I ought to apologise for coming from that small village called London. But I do feel proud to-day that an Association like ours was born there, and that we as the parents are proud to see that you as one of our offshoots have done so well in giving us this reception. (Applause.)

In the absence of Mr. T. Kirkwood (Manchester), Mr. BATES kindly responded in his stead. He said: I do not know whether Mr. Kirkwood has absented himself purposely or not, but I feel that before such a magnificent audience as this it will take me all my time to recover my nerves and gather myself together. I did get lost on the "Mauritania" this morning, and I should like to have been lost for about another half hour now. I think I shall be expressing our President's desire and also the whole of the Manchester Centre's, in saying to Liverpool how pleased we are with the reception you have given us this afternoon. Whilst I do not come from the little town of London, yet we have a small town called Manchester, of which I feel quite proud, and there is some relationship between Manchester and Liverpool in more senses than one. I was surprised this afternoon at the Liverpool Mayor's reception that it was not impressed upon him that Liverpool was the *first* provincial centre. Ladies and gentlemen, I never like to come to Liverpool unless I can feel that I have been impressed in that way; nevertheless I always enjoy my visit to Liverpool. The friends one meets are always hearty in their reception, and the interesting river, I think, compares in colour very much with the river Thames. Another point that I have noticed during my visit to Liverpool is that, whether intentionally or not, Liverpool was again scorer in regard to our London friends' badges. I think that in the future they should be known as the Puritans; at any rate the colour of their badge lends an apparent responsibility to them which they might not have realised had they possessed any other colour for those badges. Altogether, I think we have had a very good time. We shall carry away from Liverpool happy recollections of the hours we have spent, to which I also add (and this is in parentheses) that you will not forget before you leave each other, to drop a hint to each other with regard to the future of the P. M. and O. A.

Mr. ELLIS, replying on behalf of Yorkshire, said: I feel a little bit in the same position as my friend from Manchester. I would sooner be lost on the "Mauritania." All I can say is that we are very pleased to be in Liverpool, and on behalf of Yorkshire, I beg to thank the Liverpool Executive for what they have done—in short, I say ditto to Manchester, and wish success to the P. M. and O. A.

Mr. BIRCH (in Mr. Lane's absence) replied for the Birmingham Centre. He said: Mr. Gray referred to speeches by several sons. It seems to me that one of the sons is not here. If he will accept me as a stepson, I will say a few words. I must say on behalf of Birmingham that we are very thankful to the Liverpool Centre for inviting us here together. I had rather hard work to get a saloon party here. We are a bit backward in coming forward in Birmingham. One thing the Manchester and Liverpool Centres are always in conflict over is—which was the first. Now, on behalf of Birmingham, I would say

Digitized by Google

Birmingham was the first — to start these united meetings. And I am sure it has been a time we have all looked forward to ever since. Last year we had a good time in Manchester —this year in Liverpool. It is an old saying in Birmingham, that when seasides were at a premium and could only be got to at considerable expense, we had to be satisfied with the reservoir. I can tell you that it is a treat for us Birmingham people to get to the sea, and I have had such a treat I shall not forget in a hurry. I am indebted to the Liverpool people for keeping a place on the "Mauritania" for my wife and myself. I thoroughly enjoyed my visit to the boat, and I shall go back with recollections of the wonders of that vessel. I can only thank you one and all for the reception you have given to our Birmingham members, and I trust this is only one of the many united meetings we shall have together.

Mr. GILL (Glasgow) said: In the absence of the Glasgow President I am obliged to be before you. I was very nearly lost on the "Mauretania" to-day, and in the present position I wish I had been. It has been said by some one "you should never prophesy unless you know." If I indulge in a little prophesy, I hope you will forgive me. I think we might "hitch our waggon to a star," and the time is not far distant when we shall have palatial offices for the P. M. and O. A. in Piccadilly, and even see the name of our general secretary in print—"E. C. Moyce, M.P." Short speeches have been the feature of the evening, so I won't detain you any longer. I will just ask the Chairman to convey to the Liverpool brethren the thanks of the Glasgow Centre — and may the Liverpool Centre prosper as it deserves.

At this juncture Mr. Firth read a telegram from the Nottingham President:—"Hearty good wishes for a most successful meeting. Sorry not able to be with you.—Yours, Budden."

On behalf of Dublin Mr. D. LAFFAN said: It gives me great pleasure as the sole representative of the Emerald Isle to thank the Liverpool Centre for giving such a splendid outing. I did not come here to make a speech, because Mr. King was expected to be present, but unfortunately in one sense I had to take his place, although it is an honour in another sense. However, I just jotted down last night, when I could not get any sleep on the boat, a few troubles of the printer's life. Of course we must agree that the life of the printer is one made up of vicissitudes, fortunately tempered with a little philosophy, and like the rest of mankind, he finds it full of errors and temptations. He comes into the world without his own consent and goes out of it against his will, and the trip between is exceedingly rocky. If he is poor, he is a bad manager and does not know the "costing system." If he is rich, he is dishonest. If he needs credit, he cannot get it, but if he is prosperous everyone wants to do him a favour. If he is in politics, he is out on the make, and if he is out of politics, well—he is no good to his country. If he does not give largely to charity he is a stingy beggar, but if he does, it is only for show. Should he be actively religious, he is a terrible hypocrite, and if he takes no interest in religion he is a hardened old sinner. Then when he comes to die young, his friends say there was a great future before him; but if he lives to an old age, he surely missed his calling by following printing as a profession. However, owing to the social intercourse provided by meetings such as this, it enables printers to look on their existence with greater freedom and to say that the P. M. and O. A. is the one institution to remove dull care from the printer's path, and I wish it long life and success in its good work. (Loud applause.)

Mr. MOORE, on behalf of the North Midland Centre, said: I am pleased to tell you that we think it a great treat to be with you this evening. We have had a right jolly good time—and we are comfortably tired, so I know you will excuse me from saying much. We appreciate all you have done. We are going along as far as we can to emulate the other Centres and we hope to be able to add some little to the programme which the P. M. and O. A. has laid before its members. We are trying to get close to the top, and we are out to do our very level best for the cause. I thank the Liverpool Centre very much.

Thanks to the Liverpool Centre were moved by Mr. E. C. MOYCE, General Secretary, London, who said: After the speeches which you have been listening to during the evening you will find that my speech has a distinct novelty, but I have to claim officially that these are the real thanks, of which all others are colourable though excellent imitations. I'm very proud, equally with all members who have accompanied our party from London yesterday, to be with you to-night, and to say how much each and every one of us has enjoyed himself in your company, not only the company of the members of the Liverpool Centre and the ladies, but the members of all the other Centres around here to-night and united in this magnificent gathering. Now, Sir, like my friend Mr. Gray, I come from London. Rather different from him also; I also come from Manchester, Birmingham, Leeds, Glasgow, Edinburgh, Nottingham, and some day I am going to Dublin —I hope. That is to say as general secretary of the Association. I have in some sort a right to voice the sentiments and general thanks of the whole assembly to Liverpool for the hospitality extended to us this evening. This Association is growing into a large one, and one of the great values of this kind of gathering is that it tends to counteract the loss of comradeship which follows the enlargement of the sphere of an Association like this. It very frequently happens that as an Association grows there is a loss of that intercommunication between its members which it enjoyed when it was quite a small one. Let us have this gathering, let it become an annual event, and we shall help to stave off that day, and possibly prevent it ever occurring, when we shall be too large to be friendly with each other. I think we should keep this in the forefront, and therefore it should be one of our aims and objects to see that we have once a year gatherings of this kind. And next year I hope you will try to come to London. We in London are anxious—London is ambitious to celebrate the twenty-first year of the establishment of the Association by having a great gathering in London, at which all the centres, as well as the Parent Association, should be thoroughly represented. I can assure you that we in London shall do our best to give you as good a time as you have had to-day. I do not think I can go any further than this, for everything here to-day has been of the most superlative excellence. I did not think they were to throw in a trip part of the way to America—but we went. And I must apologise to the Lord Mayor for not being able to attend his function. I must apologise also for the whole of the party who were detained on the "Mauritania" by force of circumstances, which kept us away from one of the most interesting parts of the programme. It was our loss, and we regret it was an unforeseen matter, which no one could have prevented. Now, we have come down to you from the little village called London—wearing the white badge of a blameless life—and I won't say anything further, except that I notice Manchester are wearing a yellow one, and I know with our friend Poole there was a little bit of jealousy because we were not so numerous at Manchester last year. I was, unfortunately, not able to be one of the party, but I believe that had the circumstances been as favourable last year as this we should have mustered as strong a party for Manchester as to-day for Liverpool. I hope Manchester does not think because we have turned up here in strong force that it was a slight on Manchester. Unfortunately at that time there was a big strike of coal miners, and we could not make any terms with the railway companies. So at the finish we had to delegate a few of our members to go down there, and everyone who didn't go was envious of those who did. I was simply disgusted—but I shall go there some day. Mr. Bates threw out a strong hint to talk about the future of the P. M. and O. A. I'm not going to talk business at such a gathering to-day. My firm belief is there is nothing the matter with the P. M. and O. A. We are a united body, and a body which is becoming stronger and stronger every day. We are doing useful work—more useful every year, and we shall have to continue to work for the benefit of a class which has too long been satisfied with being isolated; and for the benefit of not only ourselves, but the trade in general. I am full of hope for the future of the P. M. and O. A. When anybody says "What is the matter with the P. M. and O. A.?" I say "Nothing"—and remember this, when an institution which has worked so long as this has done, you want to be very careful that what changes you make are good changes. Well, we are going warily to work. I think that it is a good sign that the interest that the members show in the reception of the report of the committee takes the form of a good deal of criticism. Criticism is good for all of us—the mere fact that the report is being criticised shows that the members are taking an interest and we shall come out all right in the future. In conclusion, I should like to voice the feeling of all of us, and that is a word of thanks to Mr. Poole and the stewards of this gathering for the hard work they have done, and the way in which they have carried it through for us all. I am sure the detail has involved a vast amount of thought and work, and I am expressing what is in the minds of everyone when I say that we have had a jolly good time, and if we can give you a better one in London we shall do exceedingly well. (Applause.)

Replying on behalf of the Liverpool Centre, Mr. JAS. N. POOLE, said: As the author of that famous phrase—The First Provincial Centre—my fame like that of Winston Churchill, with his phrase "terminological inexactitude," has been blazoned all over the country. I have frequently heard it said that we were not the *first* Provincial Centre, but I have it on the word of the general secretary to-day that *we are the first* Centre. Now we come to apologies. I am requested by the Lord Mayor to express his regret that we did not have a proper view of the Town Hall owing to the redecorations and renovations for the royal visit in July. The Liverpool Centre's gathering was the first gathering that has been held in the Town Hall for some time. The City Council have had to meet in St. George's Hall. We have been the first people to use it. Mr. Corkhill, the Lord Mayor's secretary, also wishes me to express his regret he is unable to be with us here to-night. Nothing would have given him greater pleasure. Really it is the preparations for the Royal visit in July which keep him away to-night. With regard to Mr. Gray's speech, he expresses surprise that Liverpool has no historical associations. There is an old proverb, "Good wine needs no bush." With regard to Liverpool, we let people take it as they find it. We are proud of the city, at least I am. Mr. Moyce, in returning thanks, I notice, put my name prominently—I am only one. If everyone knew the work that my council, my officers, and the ex-officers, have put in they would accord them their share of the praise as well as me. (Applause.) As for the members, they told me what to do, and I did it. Several members of the Council have asked me (and it is a great honour to be on the Liverpool Council), when this meeting was over, would I give them a seven years'

relief from attending Council meetings. We have done our best—we can do no more. If you are satisfied—we are satisfied, and that's about all I can say. (Applause.)

Mr. SEELEY (London), in proposing a vote of thanks to the President of Liverpool Centre, said: A very pleasant task has fallen to my lot to-night owing to the absence of other gentlemen. The programme has been full of surprises. It suggests the man who bought eight carnations at the market with tickets attached to them, and when he got them home, found they were wrongly labelled. So far the speeches have been like the carnations—only three have been true to name. All the speakers have expressed great approbation of the work done by the Liverpool Centre. Mr. Poole has truly said that the work has not been all his; a large amount has fallen to the hands of the worthy President. All connected with the Liverpool Centre have united to build a splendid superstructure and the climax to-night is the fine edifice of which this gathering is the outcome. I have been to many gatherings, but I do not know of any which has been so successful as this, and much must have rested on the worthy President. I move a hearty vote of thanks to Mr. Firth.

Mr. CATLING supported the vote of thanks and said: I have very great pleasure in seconding all that Mr. Seeley has said. I am sure it has given me much pleasure to be here to-night. We shall all go away with feelings of unmixed pleasure.

Mr. GEO. WATSON (Liverpool) said: I have very great pleasure in proposing a vote of thanks to the ladies for their attendance to-day in such strong numbers. I am sure their presence always adds greatly to the success of the gatherings, and I hope that they will continue to favour us on future occasions.

A vote of thanks having been accorded to the vocalists (Miss Edith Stone, Mr. A. B. White, Mr. J. Fogg and Mr. Billy Bennett) and the accompanists, whose welcome and much-appreciated services were all voluntary, a most successful gathering was brought to a close with the hearty rendering of "Auld Lang Syne" and the National Anthem.

Peterborough Printers' Cost CONGRESS.

The persistent efforts of Mr. J. Cooke, the president, and Mr. J. Wood, secretary of the newly-formed Master Printers' Association of Peterborough and District, secured an attendance of fifty printers at a Cost Conference held, the other day, at Peterborough, many of them coming distances of thirty to forty miles.

Mr. Cooke, in opening the proceedings, alluded to the decision to extend the operations of the Peterborough Master Printers' Association to the surrounding district, and said that the attendance that day indicated a readiness to co-operate in matters of mutual interest. Mr. R. A. Austen-Leigh spoke with his customary earnestness and lucidity on the necessity for the general adoption of an accurate cost-finding system. He traced the history of the movement, and gave a brief *résumé* of what had been done since the London Congress, and said that the interest aroused throughout the country had been most remarkable. It was also quite certain that the full benefit of correct costing would not be obtained until a better understanding prevailed amongst printers. He congratulated the local friends on the splendid work they had been able to accomplish in so short a time.

The "Costing System" was then fully explained by Mr. A. E. Goodwin, with the aid of the diagrams which he said now showed signs of their extensive tour of England, Scotland, Ireland, and Wales. In demonstrating that the principles of the system could be applied to a business however small, Mr. Goodwin instanced the case of a printer who said that when he found a job was taking longer to complete than he had estimated it should, he took off his coat himself and worked late in order to make the job pay!

The only questions asked at the conclusion had reference to the machine hour rate, and how to arrive at the rate for machines purchased at different periods, and as to the depreciation problem.

Mr. Cecil B. Johnson gave an interesting address, in the course of which he said that they spent some time in preparing a system, which need not now delay anyone, as the system they had heard propounded was a thoroughly practical one. They took a fortnight to put the system into operation, and since then it had worked like clockwork, and given the principals more time to attend to important matters, instead of dealing with a mass of details. He strongly urged printers present to face the difficulties which a change of book-keeping would involve, and expressed the firm conviction that no one would ever regret installing the system now recommended.

Mr. R. J. Lake, secretary of the Master Printers' Federation, expressed his great pleasure at the evidence evinced of a keen desire to reap the advantages which must come from closer co-operation, and asked the printers in outlying districts to show their appreciation of the self-denying efforts of the local secretary and president in organising so successful a conference.

Employment Agents.

SIR,—May I be allowed space in your columns to criticise a practice which is spreading from other business circles to the printing trade—I refer to the filling of posts through "Employment Agents"—to the detriment of all concerned except the middleman in question.

A recent experience of mine will illustrate: Being desirous of making a change, although not disengaged, I answered an advertisement for a manager, inserted in a daily paper by an agency. In response to a letter fixing an interview I called at the office, and my qualifications were considered to be so far satisfactory that the negotiations were advanced a stage. But I was then quietly informed that before any definite engagement could be arranged I must agree to pay the agents 5 per cent. of my first year's salary. On my replying that, although I had no objection to any employer utilising their services, I objected to its being done at my expense, I was at once told to consider the negotiations at an end.

It comes to this—presumably the agents were expected to secure the best man available at the figure offered, but they were, in fact, only securing the best man *who would pay £10 to obtain the post*, probably a different result altogether.

The presumption is that the agents draw a fee from both employer and applicant, but if the employer was *not* paying the agents, the system is all the more reprehensible. Why should the applicant be expected to remunerate the agents for saving the employer time and trouble in sifting the applications, etc.?

In any case I fail to see how a firm can hope to secure by such means anyone who is not on the rocks and almost in despair. No self-respecting man who desires to secure a post on his merits alone would agree to such an impost. Besides, the possibilities of fraud this system opens up are such that one can but hope that it will never become general in the printing trade, and surely it only requires to be brought into the daylight of publicity to be unanimously condemned.

Thanking you in anticipation, I enclose my card, and beg to subscribe myself,

"ONE AMONG MANY."

June 20th, 1913.

About Press Register.

An American contemporary recently pointed out that when a pressman has carefully looked after the proper adjustment of the feed guides and tongues, the grippers, cylinder bands, etc., he has not by any means provided for positive success in register work. A good deal has been said and written to aid the uninitiated in this class of printing, but the subject is quite inexhaustible. For instance, he is advised at the very outset to get the tongues down close to the cylinder—just clearing it nicely when the press is tripped—so that the grippers may take a sheet without causing any "buckle." Now this precaution should be followed religiously, as it is a valuable one so far as it goes, but the matter needs still further attention. There is scarcely a feedboard in the country that is not susceptible to weather conditions. They may shrink or swell according as it may be cold or warm, or dry or moist. When they shrink they raise very perceptibly, and when they swell they lower—even to the extent of allowing the tongues to drag on the top-sheet. One can see, then, how these changes alter the register greatly.

Usually the change can be noticed most plainly in the morning upon first starting up. Frequently a pressman runs in a few sheets of the previous day's work, and noting a variation, starts in to move the guides up or down. In this he commits a grave mistake. What he should do is to see that the tongues are in the same relation to the cylinder that they were yesterday, and then other things being correct, he will obtain an accurate register from the sheets fed through twice.

In this same connection it is imperative that the successive colours of a job should be worked in the same relation as to time as was the previous colour. That is, the stock that was worked first and last in, say, yellow, should be handled first and last on the red, blue, etc. Very few houses pay heed to this, which surely accounts in no small measure for a pressman's hair-curling summersault specialty in the short space between the guides and the delivery board. It stands only to reason that whatever change took place in the position of the feedboard during the running of the previous colour crept in gradually. Consequently the sheets should follow in the same sequence on each press. It is regrettable to see a man thoughtlessly take two trays of printed stock, worked hours apart, and undertake to get decent results from them on a second or third colour.

British and Foreign Paper.

Five Years' Paper Import and Export Figures.

The annual statement of the trade of the United Kingdom with Foreign Countries and British Possessions for 1912, as compared with the four preceding years, has just been issued. The total values relating to paper stand as under:—

IMPORTS.

	From Foreign Countries.	From British Possessions.	Totals.
1912	£6,698,813	£535,624	£7,234,437
1911	6,166,282	408,268	6,574,550
1910	6,059,274	354,444	6,413,718
1909	5,423,276	224,161	5,647,437
1908	5,566,122	232,543	5,798,665

EXPORTS.

	To Foreign Countries.	To British Possessions.	Totals.
1912	£1,346,582	£2,212,735	£3,559,317
1911	1,296,403	2,014,563	3,310,966
1910	1,220,792	1,901,907	3,122,699
1909	1,011,509	1,547,862	2,559,371
1908	873,940	1,441,027	2,314,967

RE-EXPORTS.

	To Foreign Countries.	To British Possessions.	Totals.
1912	£77,431	£107,100	£184,531
1911	95,117	113,647	208,764
1910	128,767	103,545	232,312
1909	111,758	82,438	194,196
1908	81,648	67,373	149,021

Compared with 1908, the increases last year were:—Imports, £1,435,772; exports, £1,224,350; and re-exports, £35,510. In 1912 the value of the imports exceeded that of exports by £3,675,120.

Papermaking Materials.

The British imports and exports of papermaking materials during 1912 and four preceding years were of the undermentioned values:—

IMPORTS.

	From Foreign Countries.	From British Possessions.	Totals.
1912	£5,349,489	£217,507	£5,566,996
1911	4,589,377	160,144	4,749,521
1910	4,767,623	204,864	4,972,487
1909	4,204,280	295,001	4,499,281
1908	4,313,831	297,166	4,610,997

EXPORTS.

	To Foreign Countries.	To British Possessions.	Totals.
1912	£882,358	£45,310	£927,668
1911	768,842	49,738	818,580
1910	694,090	50,188	744,278
1909	634,890	43,159	678,049
1908	520,932	23,045	543,977

RE-EXPORTS.

	To Foreign Countries.	To British Possessions.	Totals.
1912	£241,669	£95,792	£337,461
1911	157,388	90,781	248,169
1910	143,798	44,607	188,485
1909	114,381	3,297	117,678
1908	67,544	1,443	68,997

ON Monday the *Financial News* issued its annual "Holiday Number," consisting of 36 pages with coloured cover, the contents being, as usual, devoted to descriptions of holiday resorts, of which there is a very complete list. Half-tone illustrations of many of the places are given, and the number will be found most useful to all who are in search of a suitable spot for an enjoyable holiday. Attractively got up and well printed, its production is a credit to all concerned.

"MODERN TYPE FACES."—We have before us a little volume by Lorenz Reinhard Spitzenpfeil, of Kulmbach, entitled "The Basic Forms of Modern Type,"* published by the Verlag des Deutschen Buchgewerbevereins (Leipzig, 1912), being No. 7 of the Book Trade Monographs issued by that firm.

The first part seems less interesting to our English readers, though it deals with a question which is vital to Germans just now, *i.e.*, whether preference should be given to the old Gothic or to modern Roman type. Though not altogether competent to judge this matter from a purely German standpoint, it seems to us, as in most matters of controversy, that there are as many points (and also people) for as against either contention. From a practical point of view, modern type does seem preferable and simpler for everyday use, and from an artistic point of view also, taking simple style as a starting point, we would certainly give preference ourselves to modern type, which is clear cut, and restful to the eye, so that attention is not drawn away from the reading matter, which after all ought to be of more interest than the age of the style of type used in a book, no matter what its historic importance may be.

To us it seems more a matter of sticking to an old tradition of the German nation not to part with their antique-faced type, although every other nation is using modern faces for everyday work. Much in the same way we English folk like to stick to our pounds, pints and inches, although everybody else is using the metric system.

The little volume under notice gives an insight into how gradually, from the earliest forms of type, the different styles have been developed in the many varieties we know nowadays, and see in the specimen books. In Latin or Roman type, as we now find it, the original form always remains, so that although a particular type may be a decided variation thereof, it is always easily recognisable. In old German type, however, it would often be difficult to recognise three or four different faces as being based on the same original.

When comparing modern with antique lettering, we find that in the capitals fourteen are very much the same in both cases, but that the other twelve differ. For the lower case letters, we find that twelve are the same, or nearly similar, and fourteen differ. Herr Spitzenpfeil further deals with Greek and Russian type, and finds that in these cases there is very often a disturbing factor, as the character is written the same but pronounced differently (*e.g.*, Greek P sounds U, Russian B sounds W). Such disturbing conditions do not, however, exist in ordinary antique as compared with modern type. This goes evidently to prove that even if a given condition is bad, one can always find a condition which is even worse, and no doubt to many people this is a consolation, although it does not help matters much.

The book compares letter by letter with many existing type forms by means of a long series of interesting diagrams, but it would lead us too far to treat of this in detail.

Although the subject matter of this little volume is difficult to deal with in the small compass of this notice, it is certainly of considerable interest to all associated with types of printing, and those of our readers who have mastered the German language sufficiently would do well to secure a copy. At the present time the tendency in Germany seems to be largely to adopt a middle course, *i.e.*, use a semi-Gothic type, representing a compromise between the old and the new style. This pamphlet contains examples of a number of founts of this class, lately put on the market by various German type founders. In conclusion, it may be of interest to point out that the German Society of the Book has decided to create a museum of caligraphy at Leipzig, which will be opened in August next, under the direction of Dr. Schramm, head of the well-known Museum of the Book in that city. The new museum will comprise historical and mechanical sections, an exhibition of typewriting machines, a library, etc. Herr Spitzenpfeil has given considerable attention to this subject, and is the author of a couple of books upon it, viz., the "Art Lettere" and "Lettering in Art and Trade." A study of works of this kind is always of value to type designers, poster artists, "ad" writers, and others whose occupations take them into the by-paths of lettering, ancient and modern.

*Die Grundformen neuzeitlicher Druckschriften.

For the Bibliographer.

One of the most interesting features of the recently published Part 17 of M. Wouter Nijhoff's "L'Art Typographique dans les Pays-Bas, 1500-1540" (an interesting work to which we have referred on previous occasions), is the series of facsimile illustrations from early Dutch and Flemish editions of the New Testament, round about 1525. It was just at this time that Tyndale was preparing for the press the first edition (1526) of his English New Testament, and although this is generally supposed to have been produced at some place on the Rhine—Worms, Mayence or Cologne—there are many striking points of typographical resemblance between the type ornaments used in the earliest vernacular Testaments of the Low Countries and those of Tyndale's famous English version. Indeed, so strong are these—as the reproductions in the Part under notice testify—that it has been thought by some bibliographers that several of Tyndale's works, though nominally produced at "Marlborough, in the land of Hesse," were really printed at Antwerp, from which town most of the facsimiles in this Part are derived. One of them, by the way, is a fine wood-cut, probably of English origin, of the Arms of Henry VIII., from a Bible of 1525, printed at Antwerp by Hans van Ruremunde. Most of these books were in a small, cramped black letter, but Cornelis Henriczoon, of Delft, produced in 1530, a fine Latin folio Psalter, in a large missal type in red and black, of which there are reproductions of a page and a number of handsome woodcut initials in two sizes. Many other initials, some of a very elaborate character, are also figured in this Part. As only a small edition of this work is being printed, those who are interested in the subject it treats of would do well to apply to the printer, M. Martinus Nijhoff, Bookseller, The Hague, for particulars.

THE EDITOR'S WORK.—Of interest to editors and others, as thought out by the St. Louis *Post-Dispatch*: Seat yourself in front of a roll-top desk, rest your feet on the side, light a cigar, and read the papers. If there is any work to be done, make the reporters do it. Looks easy, doesn't it? And so it is. The difficult part is getting the job.

New Companies.

WATERMAN AND SPRIGGS (1913), LTD.—Registered on June 11th, with a capital of £2,000, in £1 shares, to take over the business carried on at 2, Garvan-road, Fulham, as "Waterman and Spriggs, Ltd.," and to carry on the business of stationers, printers, lithographers, stereotypers, photographic printers, engravers, etc. The subscribers are W. Mumford, Mrs. I. L. Waterman and A. C. Waterman. Private company. The number of directors is to be two; the first are W. Mumford and A. C. Waterman.

WOOD AND CO. (Printers), LTD. — Registered on June 12th, with a capital of £5,000, in £1 shares (3,500 preference), to adopt an agreement with Ann M. Wood and V. Wood, for the acquisition of the business carried on by them at St. Helens, Lancs, and to carry on the business of stationers, printers, typefounders, lithographers, etc. The subscribers are Mrs. A. M. Wood, V. Wood and W. Wood. Private company. The number of directors is not to be less than two nor more than four; the first are Mrs. A. M. Wood, V. Wood and W. Wood.

THOMAS SALTER, LTD.—Registered on June 12th, with a capital of £2,000, in £1 shares, to carry on the business of manufacturers of and dealers in hardware, fancy goods, toys, stationery, jewellery, etc. The subscribers are T. Jones and J. M. Muir. Private company. The number of directors is not to be less than two nor more than five; the first are T. Jones and J. M. Muir. Qualification 50 shares.

LOTT GADD, LTD.—Registered on June 11th, with a capital of £1,000, in £1 shares, to carry on the business of stationers, dealers in fancy goods, toys, jewellery, photographic and artists' materials and appliances, phonographs, cinematographs, and bioscopes, etc. The subscribers are L. Gadd, E. E. Gadd, and W. A. Gadd. Private company. L. Gadd is the permanent managing director, subject to holding 10 ordinary shares.

KEPPEL (BOOK FOLDERS AND BINDERS TO THE TRADE), LTD.—Registered on June 10th, with a capital of £1,000, in 1s. shares, to carry on the business indicated by the title. The subscribers are J. F. Shilton and W. Doyle. Private company. Table "A" mainly applies. Registered office, 252, Old-street, E.C.

KINEMATOGRAPH AND LANTERN WEEKLY, LTD.—Registered on June 6th, with a capital of £10,500, in £1 shares, to take over the newspaper known as the *Kinomatograph and Lantern Weekly*, and to adopt an agreement with E. T. Heron. The subscribers are E. T. Heron and J. L. Warren. Private company. E. T. Heron is governing director for five years. Remuneration according to profits. Registered office, 11, Tottenham-street, Tottenham-court road, W.

GEORGE F. HEALY AND CO., LTD.—Registered in Dublin on May 31st, with a capital of £6,000, in £1 shares, to acquire the business of a lithographer, printer, stereotyper, etc., carried on by G. F. Healy, at 23, Lower Ormond-quay, Dublin. The subscribers are G. F. Healy and Mrs. D. Healy. Private company. The number of directors is n t to be less than two nor more than five. The first are G. F. Healy, Mrs. D. Healy, and T. Campbell. Qualification, 100 shares. Registered office, 23, Lower Ormond-quay, Dublin.

CIVIL SERVICE AND MERCANTILE GUILD, LTD.—Registered in Edinburgh, on June 6th, with a capital of £1,000, in £1 shares, to carry on the business of advertising contractors and commission agents. The subscribers are G. Sim, J. H. Ballantyne, J. MacDonald, G. Ballantyne, A. King, and P. Courtney. Private company. The first are G. Sim and J. H. Ballantyne. Qualification, £50. Registered office, 74, York-street, Glasgow.

F. S. COCKS, LTD.—Registered on June 7th, with a capital of £100, in £1 shares, to carry on the business of proprietors and publishers of newspapers, magazines, and books, advertisers, agents, printers, etc. The subscribers are J. E. Pickles and W. H. Matthews. Private company. Table "A" mainly applies. J. E. Pickles signs documents as "director." Registered office, 4, Bloomsbury-square, W.C.

CORNER AND CO., LTD.—Registered on June 9th, with a capital of £5,000, in £10 shares, to acquire from T. Koerner the lithographic drawings and stock-in-trade used in connection with the business of a transfer manufacturer and dealer and luminous and glass sign-maker, carried on at 83, St. Paul's-churchyard, E.C., as Corner and Co. for £4,930 in shares, and to carry on the like business and that of engravers, stationers, printers, etc. The subscribers are A. Muller, R. Proctor, C. Grombach, T. Koerner, R. Peuser, M. Lehr, and A. E. Stone. Minimum cash subscription, £10. The number of directors is not to be less than two nor more than five. The first are A. Muller and C. Grombach. Remuneration as fixed by the company.

PORTSMOUTH PUBLISHING AND PRINTING CO., LTD.—Registered on June 19th, with a capital of £5,000, in £1 shares, to carry on the business indicated by the title, and to adopt an agreement with D. W. Ackery. The subscribers are A. G. W. Anderson and C. F. H. Thorn. Private company. The directors are to number not more than five. A. G. W. Anderson is permanent director and chairman, subject to holding 100 ordinary shares. Qualification of ordinary directors 50 shares. Registered office, 35 and 37, Fratton-road, Portsmouth, Hants.

MEDICAL WORLD, LTD. — Registered on June 19th, with a capital of £3,000, in 2,999 ordinary shares of £1 each, and ten founders' shares of 2s. each, to take over the business of newspaper proprietors and publishers in connection with the journal for the medical profession known as the *Medical World*, and to adopt agreements with the State Medical Service Association, Dr. W. Malden and W. F. Taylor. The subscribers are F. L. Dodd, Jane H. Walker, W. F. Taylor, W. Malden, E. Whitley, G. A. Wyon, and C. A. Parker. Minimum cash subscription half the shares offered to the public. The number of directors is not to be less than four nor more than seven. The first are F. L. Dodd, Jane H. Walker, W. F. Taylor, W. Malden, E. Whitley, and C. A. Parker. Qualification, £25. Remuneration as fixed by the company. Registered office, 19, Hanover-square, W.

PREMIER LINOTYPING AND PRINTING CO., LTD.—Registered on June 18th, with a capital of £1,000, in £10 shares (50 6 per cent. cumulative preference), to carry on the business indicated by the title. The subscribers are T. W. Newham and H. W. King. Private company. The number of directors is not to be less than two nor more than five. The first are T. W. Newham and H. W. King (both permanent). Qualification 10 shares. Remuneration as fixed by the company.

TITAN PATENTS, LTD.—Registered on June 18th, with a capital of £4,000, in £1 shares (1,000 10 per cent. cumulative preference), to carry on the business of mathematical instrument makers and factors, stationers, stationers' sundriesmen, printers, stampers, engravers, platers, screw and pencil holder manufacturers, etc. The subscribers are W. R. Bertram, S. Cornelius, F. Jackson, Miss E. Wiskin, D. Houston, Mabel Jackson, and P. Burstinghaus. Private company. The number of directors is not to be less than two nor more than five. The first are W. R. Bertram and F. Jackson. Remuneration as fixed by the company.

FALCON PRINTING CO., LTD. — Registered on June 28th, with a capital of £3,000, in £1 shares, to carry on the business of printers stationers, lithographers, photographic printers, engravers, die sinkers, etc. The subscribers are W. Johnston and W. H. Hadfield. Private company. Table "A" mainly applies. Registered office, Garnett-street, Lower Hillgate, Stockport.

"NEW FREEWOMAN," LTD.—Registered on June 13th, with a capital of £1,000, in £1 shares, to carry on the business of proprietors and publishers of newspapers, journals, magazines, etc. The subscribers are Miss Harriet S. Weaver, Miss Rebecca West and Mrs. Rachel Keeling. Private company. The first directors are Miss Dora Marsden, Miss Harriet S. Weaver, Miss Grace Jardine and Miss Elizabeth Heyes.

PORTLAND PRESS, LTD.—Registered on June 9th, with a capital of £4,000, in 1,000 preference and 3,000 ordinary shares of £1 each, to carry on the business of newspaper and magazine proprietors, newsagents, journalists, literary agents, etc., and to adopt agreements (1) with L. Vincent and (2) with T. W. Grise. The subscribers are L. Vincent, A. H. Vincent, T. H. M. Howe, A. St. John Adcock, L. A. Clarke, W. I. Morgan and W. A. Haskett. Minimum cash subscription 15 per cent. of the shares offered to the public. The number of directors is not to be less than three nor more than five; the first are L. Vincent (governing director), A. H. Vincent and T. H. M. Howe. Qualification £5. Remuneration as fixed by the company. Registered by Loxdales, 85, Gloucester-road, S.W.

KIRK PUBLISHING CO., LTD.—Registered on June 14th, with a capital of £1,000, in £1 shares, to take over the business of publishing the newspapers known as the *South Notts Echo*, the *Beeston and West Notts Gazette and Echo*, and the *Nottingham and Notts Local News*, together with the advertising agency, publishing and printing business carried on by R. Kirk, of 9, St. Peter's-gate, Nottingham. The subscribers are R. Kirk and L. Richmond. Private company. The number of directors is not to be less than two nor more than five; R. Kirk is first permanent director. Qualification, £50. Registered by C. Doubble, 14, Serjeant's-inn, E.C.

BURNLEY EXPRESS PRINTING CO., LTD.—Registered on June 14th, with a capital of £20,000, in £1 shares, to take over the business of a newspaper proprietor, printer and publisher, carred on by Lawrence Brotherton as the Express Printing Works, Burnley, and elsewhere, as the Express Printing Co. The subscribers are L. Brotherton, W. P. Brotherton and J. H. Brotherton. Private company. L. Brotherton is governing director, and may retain office while holding 1,000 shares.

AVIATION WORLD PUBLISHING CO., LTD.—Registered on June 16th, with a capital of £1,000, in £1 shares, to carry on the business of publishers, printers, stationers, bookbinders, engravers, etc., and to adopt an agreement with E. J. Mapp (as agent for and on behalf of the Richmond Hill Printing Works, Ltd.), and F. P. Hearn. The subscribers are E. P. Mapp and F. P. Hearn. Private company. The number of directors is not to be less than two nor more than five, the first are P. M. Bright, F. P. Hearn and E. J. Mapp. Qualification, £5. Remuneration as fixed by the company. Registered office, Richmond Hill Printing Works, Bournemouth.

ELYSIAN PRESS, LTD.—Registered on June 16th, with a capital of £4,000, in 3,000 cumulative participating preference shares of £1 each, and 20,000 deferred shares of 1s. each, to take over the copyright of the journals, the *Throne* and the *Onlooker*, and to adopt an agreement with S. Hill-Wood, M.P. (for himself and on behalf of Illustrated Journals, Ltd.), J. E. H. Terry (for himself and on behalf of the Bowe Press, Ltd.), J. S. Elias (for himself and on behalf of Odhams, Ltd.), Harry Samuel and E. G. Taylor. The subscribers are S. Hill-Wood, M.P., E. G. Taylor, Odhams, Ltd. (J. S. Elias, director), and Henry Samuel. Private company. The number of directors is not to be less than three nor more than five; the first are S. Hill-Wood, M.P., Henry Samuel and J. S. Elias.

PIERSON AND PARK, LTD.—Registered on June 17th, with a capital of £10,000, in £1 shares, to take over the business of wholesale stationers carried on by W. E. Pierson, and C. H. T. Park, as "Pierson and Park," at 56-60, Southwark-bride-road, S.E. The subscribers are P. Creswick and T. J. Park. Private company. The number of directors is not to be less than two nor more than seven; the first are W. H. Pierson and C. H. T. Park. Registered office, 60, Southwark-bridge-road, S.E.

THE funeral of the late Mr. William Brimelow, whose death we announced in our last issue, took place on Saturday, and was attended by a great number of mourners, there being forty-five carriages in the mournful procession. Among those present were:—Messrs. John L. Tillotson, J.P. (chairman), J. Lever Tillotson, and F. L. Tillotson, J.P., directors of Messrs. Tillotson and Sons, Ltd. Messrs. Tillotson and Son, Ltd., heads of the various departments.—Messrs. G. Petty, F. Waterhouse, E. A Fairhurst, G. Harris, C. W. Vinden, F. Dykes, R. Sheppard, R. Rushton, F. Holland, T. Worrall, W. Edge, and W. H. Armstead. The Newspaper Society, London.—Mr. Walter Scott, J.P., president *Rochdale Observer*. Press Association—Messrs. J. S. R. Phillips, J.P., president *Yorkshire Post*, and E. Robbins, manager. Linotype Users' Association.—Messrs. Meredith T. Whittaker, J.P., president *Scarborough Evening News*, and E. T. Thomlinson, secretary. Lancashire Newspaper Owners' Association. — County Alderman J. J. Riley, J.P., president (*Darwen News*).

Trade Notes.

IT is announced that Mr. Meredith Nicholson, the novelist, has been appointed United States Minister to Portugal.

THE death is announced of Mr. William Thomas Langlands Hutcheson, late commercial manager, *Dundee Advertiser*.

THE Bucks County Education Committee have agreed to make a grant of £20 for books as the nucleus of a library to certain schools.

THE L.C.C. recommend that the tender of Messrs. Dent and Sons, Ltd., 10–13, Bedford-street, W.C., for the supply of reward cards (Item 1), be accepted.

A LONDON manufacturer of card games wishes to arrange for their sale in Canada. Particulars may be had on application at 73, Basinghall-street, E.C.

THE death is reported from Bloemfontein, Orange Free State, of Mr. F. W. Blake, a well-known South African journalist, and one of the delegates to the first Imperial Press Conference held in London four years ago.

MR. R. DENNIS, 4–5, Pilgrim-street, Ludgate-hill, E.C., informs us that he has for some time supplied his well-known "Pilgrim" grade of wipes to the New South Wales Government for use on their relief stamping presses, and has had considerable repeat orders.

THE promotion of Lieutenant Gilbert Scott (elder son of Mr. Walter Scott, J.P., proprietor of the *Rochdale Observer*) to the rank of captain in the 6th (Rochdale) Battalion Lancashire Fusiliers (Territorials) was announced in last Friday's *London Gazette*.

IN a libel action heard before Mr. Justice Horridge and a jury, the plaintiff, Mr. Percy Edward Shelley, of Herne-hill, sued the *Brixton Free Press* for alleged libel in a report of a divorce case. The defendant paper denied that the words referred to plaintiff. After a hearing, the jury returned a verdict for the defendants, and judgment was entered accordingly, with costs.

THE competitions that have been arranged for the Printers' Miniature Bisley at the Alexandra Palace, on July 11th and 12th, include a contest for the championship of the printing trade, in which 30 prizes are offered, and any member of the printing and allied trades may enter. Particulars may be had from the hon. secretary, Mr. H. W. Walker, Windsor House, Bream's-buildings, Chancery-lane.

FOR printing the assessor's list of persons entitled to vote in the election of members of Parliament for the burgh of Aberdeen (north and south divisions), and the separate list of male voters in Torry Ward and females entitled to vote in election of town councillors for the burgh; the Parliamentary register of electors to the burgh (north and south divisions); and the municipal register of electors of the burgh, for 1913–14, for the Aberdeen Town Council, the tender of Messrs. J. Avery and Co., Ltd., King-street, Aberdeen, has been accepted.

AT the Mansion House, last week, Mr. A. W. Woodbridge, editor of the *Sunday Chronicle*, was fined £5 and £10 10s. costs, and W. Scott, a newsvendor, 1s. Scott was summoned for "unlawfully publishing a certain proposal and scheme for the sale of certain chances in a lottery called 'Bounties.'" Mr. Woodbridge was summoned for aiding and abetting Scott. Mr. Gordon Hewart, K.C., for the defence, submitted that there was no evidence upon which the Court could properly convict. "The fine would have been heavier," said the Alderman, "but I quite recognise Mr. Hewart's argument that he has only been doing what many other papers are doing, apparently with impunity." He consented to state a case.

IN the passing of Mr. Arthur Middleton Barnhart, late president of Barnhart Bros. and Spindler, the American type founding industry has lost one of its oldest exponents. He was born in Hartfield, Chautauqua County, New York, February 17th, 1844. In 1868 he removed to Chicago, entered the advertising business and soon after he, with his brothers, bought the struggling little foundry of Toepfer Bros., changed the name to Barnhart Bros. and Spindler (Mr. Spindler being the practical founder), and combining it with an advertising business began to go ahead rapidly, so rapidly that the advertising connection was soon dropped entirely. The growth of the business from that time was steady and rapid, until in May, 1911, after 43 years of achievement and of active devotion, the Barnharts sold their interests and left the work to be carried on by their former partners. Mr. Spindler remained a stockholder.

THE death is announced of Mr. Thomas Allibone Janvier, the American author.

ACCORDING to *Kemp's Mercantile Gazette* there were four failures in the printing and stationery trades of England and Wales for the week ending Friday, June 20th; the corresponding week in 1912 showed three.

MR. J. HYSLOP BELL (coroner for South East Durham) and Mrs. Bell celebrated their golden wedding on the 24th inst. Mr. Bell was the founder of the *Northern Echo*, and for many years owned that paper. At the time of his appointment as coroner he was on the editorial staff of the *Evening News*, Newcastle.

MESSRS. FRANK HORSELL AND CO., LTD., Victoria-road, Holbeck, Leeds, have issued a neat booklet, which, under the title of "A Reminder," gives particulars and prices of many of the firm's specialties for the lithographic printer, including inks, colours, varnishes, rollers, skins, transfer papers, blankets, etc. A copy of this useful booklet will be sent free to members of the trade on application to Messrs. Horsell and Co., as above.

MR. J. M. LE SAGE, managing editor of the *Daily Telegraph*, has completed fifty years' membership of the editorial staff of that newspaper, and was entertained to dinner by his colleagues at De Keyser's Royal Hotel on Saturday night. The Hon. Harry Lawson, M.P., presided, and presented Mr. Le Sage with a silver salver, on which were inscribed in facsimile the signatures of his colleagues, and a silver inkstand and candlesticks.

LOOSE-LEAF METALS.—A new catalogue of loose-leaf metals is issued by the Debecey Wholesale and Manufacturing Co., of Oldbury, Worcestershire, that gives illustrated particulars of the excellent specialties in this line of goods that are made by the firm. The loose-leaf ledger business has become an industry, and, as the firm says: "The bookbinder or manufacturing stationer who disregards loose-leaf is nailing down his own coffin lid. Likewise, the manufacturing stationer who merely acts as an agent for a loose-leaf house is not far-sighted, and furthermore, he is passing profit which rightly belongs to him." The Debecey line of metals makes it easy for every bookbinder to go into the loose-leaf business properly. Those interested should apply for a copy of this catalogue.

MR. KINGSLEY WOOD, speaking at East Ham on Saturday, said the recommendation limiting the publication of divorce reports was correctly interpreting public opinion in this country. The method by which it would be effected needed careful scrutiny. The *dictum* of a London police magistrate that the Press were present at a certain case only as a privilege was perhaps technically correct. It pointed, however, to the conclusion that secret inquiries might be much worse than undesirable publication of the details of certain cases. Public opinion, moral suasion, and the discretion of the editor were often more important factors for good than legislative restriction. The freedom of the Press generally meant free play for public opinion, and was certainly in the publication of divorce cases often a deterrent.

CITY OF LONDON PRINTERS' MUSICAL SOCIETY.—This most useful and influential society having endowed one of the Homes of the Printers' Almshouses at Wood-green, the Lady Mayoress (Lady Burnett), who will be accompanied by the Lord Mayor, Sir David Burnett, will, on Saturday, July 5th, at 3.30 p.m., unveil the tablet for this Home in memory of the late William Crespin, one of, if not the pioneer of, the City of London Society, which for a number of years held its regular meetings at the "Falcon" Hotel, Gough-square, E.C. Latterly, however, it has found a new habitation at Anderton's Hotel, Fleet-street, where, under the guidance of Messrs. J. E. Shaw, T. W. George, George Tams, W. Watts, G. W. Jones, and similar strenuous workers, a deal of money is periodically gathered on behalf of the Printers' Corporation. After the unveiling ceremony an open-air concert by the Palmers Green Orchestral Society and numerous vocalists, under the direction of Mr. Horace Ward, will be provided.

THE July number of the *Windsor Magazine* contains a large instalment of Gertrude Page's new novel of Rhodesian life, "The Pathway," which carries the story far enough to show that it is going to be one of its author's most powerful and fascinating books, and the other new series, "The Fortunes of Virginia Bright," reaches a very amusing stage. A further complete episode in Halliwell Sutcliffe's romance, "The Open Road," is as picturesque and charming as any of its predecessors, and there is a notable array of good short stories. Prominent among the articles are a new Nature study by Charles G. D. Roberts, a survey of "The Problem of Mars," accompanied by some interesting illustrations, and a valuable estimate of "The Practical Outcome of Ruskinism," by A. E. Fletcher, which is full of interesting details as to the influence and results of Ruskin's teachings in the direction of social reform, as manifested in English life to-day.

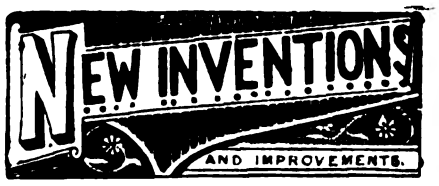
LINOTYPE operators at Los Angeles get wages from £5 to £7 per week and stenographers £10 to £20 per month.

THE summer double number of the *People's Friend* contains holiday stories located at popular places of summer resort. There is also a delightful children's story, and articles on "The Pic-Nic Basket—How to Manage an Open-Air Feast," "Camping Out," "Summer Holiday Fashions," as well as a large number of illustrated jokes of a most laughable sort. The publishers are Messrs. John Leng and Co., Ltd., Dundee.

THE 1912 report of the Austrian Bookbinders' Union shows that the number of members is 4,310, of which 1,983 are females. The Vienna branch alone comprises 70 per cent. of the total, *i.e.*, 1,580 women and 1,440 men. The subscription varies from 3½d. to 7d. per week for women, and from 7d. to 1s. 2d. for men. During 1912, the receipts were about £6,135, and the expenses £121 more. The funds in hand at the end of the year amounted to £1,628. It is a curious fact that there are more members (270) aged 19 years than of any other age. On the other hand there are 63 aged 60 or upwards of which two are 75, two 76, and one 78. In the course of last year, 108 binders from foreign countries were enrolled as members.

THERE passed away suddenly, on Friday, an old Newcastle-on-Tyne printer, in the person of Mr. Luke Bell, at the advanced age of 71. For some years Mr. Bell was associated with the firm of John Bell and Co., Railway Bank, Pilgrim-street, in that city, which consisted of three brothers, who carried on the business founded by their father; but after a few years Mr. John Bell became sole proprietor, the deceased gentleman acting as overseer till his retirement a number of years ago. Mr. Bell, who resided in the sister borough of Gateshead, had been in ill-health for some time past, and while in the London City and Midland Bank, Gateshead, on Friday, became worse and died immediately afterwards.

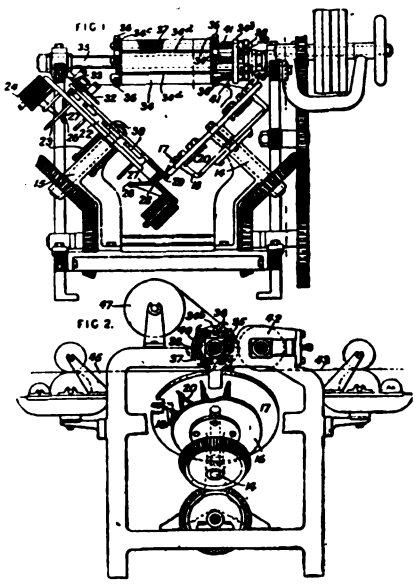
WHILE business in typewriters last year was good in Germany, it was undoubtedly handicapped considerably by a feeling of uncertainty and uneasiness, apparent throughout commercial circles, caused by the Balkan war. A point of especial interest to exporters, and one that should receive careful consideration by them, is the fact that German typewriters are rapidly coming to the front, and are likely to take control of a large part of the trade that has hitherto been held by the American machine. The superiority of American products in certain respects is still acknowledged, but there are two very strong factors favouring the German machine. The first of these is the growing feeling throughout the Empire that home products should receive preference over foreign unless the latter be so overwhelmingly superior as to preclude legitimate competition. The second factor, and one of decided practical value, is the great difference in price between the German and American machines. The leading American typewriters that are sold in the United States for $100 bring $119 to $125, whereas the German competitor sells for $83.



THE North-western branch of the Library Association held its annual summer meeting at the Rylands Library, Manchester, recently, when Mr. Charles Madeley, the librarian of Warrington Library and Museum, presided. Mr. Guppy, of the Rylands Library, delivered a lecture on the relation of the library and the librarian to literature. Mr. Guppy pointed out the existence of two factors in modern life—the library, for one, whose books, as human documents and as a means of communicating ideas, could hardly fail, he said, to play a larger part in history day by day; the other, the working class, endowed with leisure by the legislation of the last fifty years, but ignorant, in many cases, of how to use it, and standing in need of guidance. It was of little use, he said, to build libraries and to accumulate books unless the books were made accessible to readers. The ruling principle was not now alone the preservation of books, but the diffusion in the wisest and the most effectual way of the contents of the library. The living, vitalising link between the books and the readers was the librarian. It was his mission to bring into operation, on the lives of those for whom libraries were established, the refining power of literature.

MR. L. DE MARTINO, a Malta journalist, who as the special correspondent of the *Daily Chronicle* accompanied the British fleet to Sicily and Calabria after the disaster of 1908,

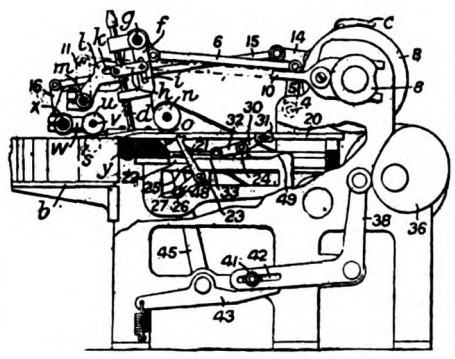
Digitized by Google



has received through the Italian Consul in Malta the commemorative medal and diploma given by the Italian Government in recognition of his services.

TENDERS WANTED.— For the supply of millboard and wood boxes, etc.; particulars from the Controller, H.M. Stationery Office, Westminster, S.W. For printing and binding the parliamentary register, burgess roll, and parochial register for the county borough of Salford; particulars may be obtained at the Town Clerk's Office, Town Hall, Salford. For the supply for three years of printing minutes, agenda papers, and other urgent work; general jobwork printing; account books, registers, and general bookbinding; for the Metropolitan Water Board; particulars from the central office of the Board, Savoy-court, Strand, W.C. For the supply of printing, stationery, etc., for the Devonport Guardians. Forms of tender from Mr. A. Gard, 19, St. Aubyn-street, Devonport.

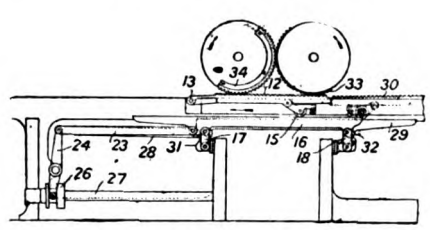
A Tag Making Machine.



A machine for forming tags of the kind having one or more strings interposed between layers of paper or like flexible material, is patented by Mr. C. B. Tewksbury, and is provided with a rotatable carrier for interposing the strings in a taut condition between webs or strips from which the layers of the tags are formed. The flexible material may be severed close to the edge of the other material, and the sheet of reinforced material so formed need not be cut up into tags. The reels 24, Fig. 1, of string, tape, wire, metallic ribbon, etc., are held on posts 23 secured to the underside of a disc 22 which is fixed to a rotatable shaft 15. Each pair of reels is provided with an arm 27 through the eye 26 of which the string passes to an eye 28 and thence through tensioning springs 30 to a double eye 29. The disc 17, fixed to the rotatable shaft 14, is placed as shown, and is provided with a series of pivoted levers 18, the upper arms of which are kept in contact with the upper surface of the disc

17 by springs 20 except when the levers are actuated by the cam plate 16, Fig. 2, secured to the frame of the machine. The cam 16 is so shaped that the levers 18 grip the free ends of the string when in their lowest position, and do not open to release the string until it has been carried round to the gripping fingers 36, in which position it is severed by knives 32, 33. The gripping fingers 36 are carried by shafts 37 which are revolubly mounted in a cylinder 34 and in a flange 34^b secured thereto. The cylinder 34 is fixed to the rotatable shaft 35 and is provided with grooves 34^d and with roughened ends 34^c. One end of each shaft 37 is formed as a crank 38 and carries a roller 39 which bears against a fixed cam plate 40. The fingers 36 are pressed against the ends 34^c by springs 41, but, as the cylinder 34 rotates, the shafts 37 are rocked at the required time by the cam 40, and the fingers 36 are opened and closed. The strips of paper 43, 45 pass between cementing rollers to the underside of the cylinder 34, and the string, etc., is laid on the cemented surface of the strip 45 and forced into one of the grooves 34^d. The strips are pressed into contact by an adjustable roller 42, and run over a drum 47 to a drier. The strip is then cut transversely and longitudinally to form tags.

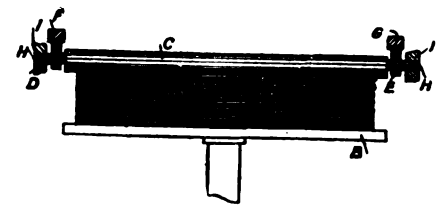
Feeding Envelope Blanks.



In a machine, the invention of Mr. J. Logan, for separating envelope blanks from a pile and feeding them, for example to a rotary printing machine, the pile of blanks is supported on a rising table *b*, and the blanks are separated singly and fed forwards by pairs of rollers arranged at each side of the separator and a little in advance of the blank. The separator is shown as a suction pipe *d* which engages the front triangular flap and slides in bearings in a frame *f*, mounted on a shaft *g* oscillated by a link 6 from a lever 5 on a shaft 4 which is rocked by a cam on the shaft of the cylinder B. A plate *h*, clamped to the pipe *d* and carrying a pin engaging a slot *i* in the frame *f*, prevents the separator from turning in its bearings. The plate *h* also carries a roller, engaging in a slot *k* in a lever *l*, which is mounted on a shaft *m*, rocked by a crank 11 and link 10 from a cam 8. Fingers *y* project over the front edge of the pile to prevent

more than one blank from being raised at a time. At each side of the leading triangular flap in front of the end flaps are two rollers *s* with which engage rolls *u* on a shaft V carried by arms *w* on a shaft X, oscillated by a crank 16 and link 15 from a lever 14, rocked by a cam on the shaft of the cylinder B. The sheet, having been lifted and carried slightly forward by the sucker *d*, is fed by the rolls *u*, *s* into the bite of the continuously running rollers *o*, *n*, which pass the sheet on to a feeding device comprising stops 31 on arms 30 and fingers 25, both of which are carried on rock shafts in a sleeve 21 sliding on guides 22. The sleeve 21 is reciprocated from a cam 36 by means of a bell crank 38, which carries a roller 41 adjustable in a slot 42. The roller 41 bears on one arm of a lever 43, the arm 45 of which is connected by a link to the sleeve 21. The shaft 24 carrying the arms 30 carries also an arm 32 and a roller 33, which is adapted to run on to an incline 49, so that, at the end of the feeding stroke, the stops 31 drop below the rails 20 and allow the sheet to pass to the grippers C of the impression cylinder B. At the other end of the travel of the sleeve 21, the roller 27 on the arm 26 of the shaft 23 runs down an incline 48 and so swings the fingers 25 below the rails 20 out of the way of the advancing sheet. The fingers 25 and stops 31 are adjustable to accommodate blanks of different sizes.

Cylinder Machines.



An invention by Mr. J. Derriey relates to cylinder printing machines, and consists in the provision of means for driving the bed and cylinder in correct rolling contact. In the perfecting machine shown in Fig. 3, the cylinders carry segments 33, 34, which gear respectively with racks 12, 30, pivoted at opposite sides of the bed on pins 13. Each rack carries a roller 15 adapted to run on rails 16, 29 supported from the main frame on parallel links 17, 18, and 31, 32. These rails are connected by links 23, 28 to a lever 24, which is rocked by a cam 26 on the shaft 27. The racks 12, 30 are thus raised and lowered

alternately into engagement with their respective segments. The cylinders and bed may be driven in addition by the usual driving gear. In a modification the pivoted racks carry a roller which runs on a stationary rack, having at the end a pivoted extension supported by a spring. This extension is formed with a depression which serves to turn the arm carrying the roller over from one side to the other at each end of the stroke. Each rack is thus held elevated in one direction of the bed and depressed in the other.

Sheet Delivery Apparatus.

Mr. G. Spiess has patented an apparatus for piling paper sheets for use in sorting or like machines provided with a pressing device formed of a series of eccentrics or eccentrically mounted bars or shafts, which press each sheet on to the pile as delivered, and drive out any air collected between the sheets. The

sheets, as they pass to an automatically lowered table B, are acted on by a presser formed of a number of cylindrical bars C which are provided with eccentric pivots H journalled in bearings I. The pivots H are rotated by concentric pinions D, E and reciprocating racks F, G, so as to allow the sheets to pass under the bars during delivery, and then to press the sheets down.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C

Situations Vacant.

TO PRINTERS.—Capable WORKS MANAGER desires change; wide experience in all branches; best references.—Address, No. 13229, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13229

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos. —Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

MONOTYPE "D" KEYBOARD for Sale; as good as new; satisfactory reasons for disposing of same.—Address, No. 13228, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13228

Machinery Wanted.

WANTED, a large size Two-Colour Modern Machine, capable of doing Half-Tone Work. —Address, No. 13227, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13227

Miscellaneous.

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13181

METROPOLITAN WATER BOARD.

Printing, Bookbinding and Stationery.

THE Metropolitan Water Board hereby invite Tenders for the execution, for a period of three years from the 1st September, 1913, of :—

(1) Printing Minutes, Agenda Papers and other urgent work.
(2) General Jobwork Printing.
(3) Account Books, Registers and General Bookbinding.
(4) The Supply of Stationery.

Samples may be inspected, and all particulars and Forms of Tender obtained, on application at the Central Office of the Board, Savoy Court, Strand, W.C., from Tuesday. 1st July, to Wednesday, 9th July, 1913, between the hours of 10 a.m. and 4 p.m. (Saturdays 12 noon).

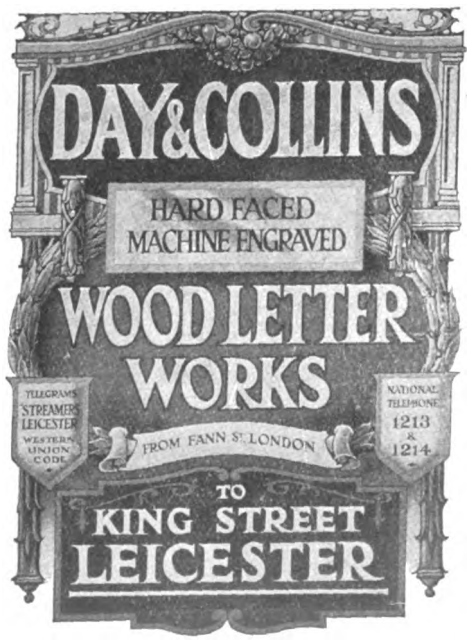
Tenders endorsed "Tender for ———*," must be sent in sealed envelopes to the Clerk of the Board, Savoy Court, W.C., not later than 10 a.m. on Monday, the 14th day of July, 1913.

* NOTE.—Description of Tender to be inserted.

Savoy Court, W.C.
17th June, 1913. 14107

PATENTS FOR SALE OR LICENSE.

THE Patentee of Improvements in Printing Machines using Intaglio Plates, No. 409, of 1908, is desirous of making arrangements by licence or otherwise, on reasonable terms, to ensure the working of this Patent in the United Kingdom.—All communications to be addressed to Mr. Reginald W. Barker, Patent Agent, Vulcan House, 56, Ludgate-hill, London, E.C. 14108



THE Proprietor of Patents Nos. 14,088 of 1907, 13,346 of 1908, for "IMPROVEMENTS IN TYPE-SETTING AND CASTING MACHINES," and "IMPROVEMENTS IN AND RELATING TO TYPE-SETTING AND CASTING MACHINES," is desirous of entering into arrangements by way of license and otherwise on reasonable terms for the purpose of exploiting same and ensuring their full development and practical working in this country.

All communications to :

The Education of the Apprentice.

A CONFERENCE took place the other day at Hull between the representatives of the local engineers and other firms and the Education Committee on the development of a scheme of national education for apprentices, and as this is a subject that is at present of interest to the allied trades it should be interesting to know some of the proposals that were brought forward. The scheme provides that in so far as the regulations covering each trade permit it, all apprentices should be taken at or about the sixteenth birthday, and that the following educational requirements should be demanded by the employers in every case :—Attendance at a secondary school or technical school until the sixteenth birthday, and, for boys who have left elementary schools at or about the fourteenth birthday, the full-course certificate of the branch evening technical schools. Another proposal is that pressure should be brought to bear on all apprentices, requiring their attendance at the evening courses of the Technical College, and that employers should give relief from overtime after 5 p.m. to all apprentices under 18 and to others so far as the exigencies of the workshops permit. Employers, it is suggested, should give a definite understanding that, in general, promotions will be given only to those boys who hold a good workshop record and Technical College record in evening classes. A further proposal is that a small number of openings should be available yearly for three years' apprentices who have attended the full-time engineering course in the Technical College till they have reached 18 years of age. It is also suggested that employers should give certain selected apprentices the advantage of day-course instruction, and that apprentices attending evening classes should be given time off. The Education Committee is in sympathy with the scheme, and the chairman of that body pointed out that the success of German manufacturers was greatly due to their co-operation with the technical colleges in that country.

Printers' Eyesight.

THE greatest physical asset of the compositor is his eyesight. He may suffer from many ailments and yet be able to keep on at work, but instantly his eyesight deteriorates it handicaps him greatly, and in many offices the use of glasses when the eyes begin to fail is equivalent to asking for dismissal. It is therefore necessary that every care should be taken of the eyes, and, so far as possible, to see that the lighting conditions under which the work is done are not of such a character as to injure the sight. In many printing offices but little attention is paid to the lighting, but to preserve the men's eyes should be one of the principal objects attended to. To save a man's eyes from undue strain should be the chief consideration. No unnecessary strain should be thrown on the eye muscles. With the improvements that have taken place within the past two score years in lighting systems the dirty and ill-smelling office is not so common as it was of yore, and the introduction of mechanical composing machines has reduced the strain on the eyes, but there still remains much to be done to ensure ideal illumination, and with so many good lighting systems offered nowadays it should not be a difficult matter to install one that will not only give greater comfort to the men, but also intend to increase their output.

Competition.

"COMPETITION is the life of trade" is all right in its own way as a hackneyed saying, even although in some instances it proves itself anything but "life" for the man who through competition has to go to the wall. Too often, too, the phrase is only used as an excuse or cloak to cover unworthy methods of business, and it is sure to be found in the mouth of the man who undercuts prices until he gets down to such a starvation point that neither himself nor his fellows can possibly exist longer, and so the bankruptcy court—which has no competitor—steps in here too. We are all competing for something, and will go on competing, but for goodness sake let it be in a fair fashion, without wronging others, and without injuring our own business. Competition is a struggle in which it is each man for himself, but at the same time there is no need to financially kill, not only the other fellow, but yourself also.

A New "Flash" Calculator.

Another of the useful series of "Flash" calculators has been issued by Messrs. Gall and Inglis, London and Edinburgh ; this time it is a bank interest calculator, and it is most ingeniously constructed so that the required figures can be obtained simply and quickly. In the "Flash" Bank Interest Calculator, instead of turning over the pages of a book, the figures on the page are mounted on slides, and simply by moving the three series of factors—number of days, amount, and rate per cent.—the answer is automatically shown. No figuring or mental calculation is necessary, and as the figures are all set out in the one series of tables, the answer is quickly obtained. The work is specially suitable for deposit receipts, prepayments of calls, and bill discounts ; and anyone wanting to figure these out without trouble, will find this book extremely quick and handy. One is often deterred from using reckoners because of the time wasted in hunting through the books to find what is required, but the feature of this

Digitized by Google

new system is the simplicity with which calculations are made, and sooner or later it is bound to come into extensive use. It is amazing how rapidly the answers are exhibited. The price of the Calculator is only 2s. 6d. net, and it will return its cost in time saved in a day or two.

Printers' Claim for a Proof.

In the City of London Court, on Friday, before Mr. Registrar Wild, a claim was made by Standidge and Co., Ltd., printers, 36, Old Jewry, against Mr. A. E. Hill, 116, Bayonne-road, Hammersmith, W., for the sum of £1, goods sold and delivered and work done. The plaintiffs' representative said that the defendant called upon him, producing a specimen card he required printed and asked that a proof might be made. This was done and the sum now sued for was the price for the work which had been done for the defendant. The defendant said he asked the plaintiffs to give him a quotation for certain printing and produced a specimen card. He never asked the plaintiffs to set up any type nor to give him a proof. The Registrar, after hearing the evidence, said he would like to hear any outside evidence there might be as to what took place when the contract was made. He could quite understand if the defendant ordered the plaintiffs to print a proof and then placed the order for printing elsewhere the defendant would have to pay the plaintiffs for the cost of getting up the proof. Unfortunately the defendant swore he never gave the plaintiffs any order and that he produced the specimen card in order that the plaintiffs might give the quotation. Neither party, however, had any witnesses. The plaintiffs' witness admitted receiving the card from the defendant and said it was to serve as a guide as to the kind of work to be done. That had been set up. The Registrar said he did not see the object of that. The plaintiffs' witness said it was often done in the trade. The Registrar: It is often wrong then. If I come to you and give you certain words on a card and say, "I want it done in this way," you ought to know what it will cost. What was the object of sending on a proof? The witness said it was tantamount to an order. The Registrar thought the defendant's story was a probable one. If the defendant wanted to know the cost and had shown the plaintiffs' witness a card which was to be printed and the way it was to be done he did not see what the object was of the defendant having a proof. The defendant: I did not ask him to set it up or do the printing. The Registrar said it was oath against oath He was not going to say who was telling a lie. He would non-suit the plaintiffs and leave them to bring another action if they liked.

MR. CORNELIUS FORD, of Hoboken, New Jersey, is announced to be the new Public Printer, or head of the United States Government Printing Office. He succeeds Mr. Samuel B. Donnelly, of New York, and the salary is $5,000 a year. He is a practical printer, having been for many years in the chapel of the *Hudson Observer*.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	**Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)**
Alignment.	**Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.**
Justification.	**Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.**
Quality of Product.	**The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.**
Ease of Make-up.	**The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.**
Electrotypes and Stereotypes.	**The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.**

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, June 25th, 1913.

BORROWINGS at the Bank of England have been pretty heavy this week, and it is expected to continue. Money was in ample supply in the loan market up to the end of last week, the demand being small, but this week it has become very strong, particularly for loans over the end of the month, for which rates have stiffened. The discount market keeps fairly firm. Bullion movements have not been heavy this week, there being a net influx of gold into the Bank to date of £59,000. The Balkan trouble has hung heavily over stock markets this week, but more reassuring news yesterday brought a timely rally, prices improving and the general tone being more cheerful. Consols have recovered some of their lost ground, the quotations being 73 to 73⅛ for money, and 73 1/16 to 73 5/16 for the account.

The miscellaneous industrial market has been quiet and dull during the past week, and has not yet shown signs of sharing in the improved tone of other sections of the Stock Exchange. There have been a few small movements both ways in our list of printing, newspaper and publishing shares, whilst business in this section has been very quiet. Associated Newspapers fell last Thursday 1/32 to 31/32—1 1/16; Cassell and Co. have dropped ⅛ to 4¼—5¼; Ilford Pref. have risen 1/32 to ⅞—1; Lanston Monotype Corporation have fallen 1/16 to 5/16—9/16; Linotype and Machinery B Deb. have given way 2 to 40—45; and Raphael Tuck and Sons have improved 1/32 to 27/32—31/32. Business has been done during the past seven days in Amalgamated Press Pref. at 20s. 3d.; in John Dickinson and Co. 2nd Pref. at 100⅞, and in the Deb. at 100½; in Ilford Ord. at 14s., 14s., and 14s. 6d.; in *Illustrated London News* and *Sketch* Ord. at 3s. 6d.; in International Linotype at 75; in Raphael Tuck and Sons Ord. at 18s. 1½d. and 17s. 6d., and in the Pref. at 5; in Waterlow and Sons Def. at 25⅝ and 26¾; in Waterlow Bros. and Layton Pref. at 7 1/16 and 7; in Weldons Ord. at 30s. 7½d.; and in Wyman and Sons Pref. at 14s. 4½d.

DIVIDENDS AND REPORTS.

SPICER BROS., PAPERMAKERS. — The net profit of the past year, after paying £5,850 in debenture interest, was £49,499, and £42,265 was brought forward, making £91,764 available. They propose to put £4,000 to the general reserve and £10,000 to new premises account, pay a dividend on the ordinary shares, making 7½ per cent. for the year, and carry forward £43,164. The preference dividend (5 per cent.) takes £17,500 and the ordinary dividend £11,250. In 1911-12 the net profit was £50,993, the amount brought forward £32,622, the ordinary dividend 10 per cent., and the addition to the reserve £3,000. In 1910-11 the net profit was £48,929, the amount brought forward £30,293, the dividend 12½ per cent., and the addition to the reserve £4,500. The profit in 1909-10 was £48,685, the dividend 11 per cent.

JAMES KEITH and BLACKMAN, ENGINEERS.—The report states that the business done during the past year exceeded that of any previous year. After providing for debenture interest and making allowance for depreciation and reserves against doubtful debts, the accounts show a net profit of £22,624, which with the balance brought forward makes £25,056. A dividend on the ordinary shares of 10 per cent. per annum, tax free, absorbs £6,801, £9,000 is transferred to reserve account, and £3,550 is carried forward. For 1911-12, 8 per cent. was paid, for 1910-11 6 per cent.

FINANCIAL NEWS.—The directors of the *Financial News*, Ltd., announce an interim dividend at the rate of 10 per cent. per annum, less income-tax, on the ordinary shares for the half-year.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

HEREFORD TIMES, LTD. — Particulars of £15,000 second debentures, created March 25th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £10,000. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

FIRTH, JACKSON AND CO., LTD.—Debenture dated June 2nd, 1913, to secure £68 13s. 6d., charged on company's property, present and future, including uncalled capital. Holder, Rev. J. L. U. B. Joyce, 39, Grange-road, South Norwood, S.E.

HEREFORD TIMES, LTD.—A memorandum of satisfaction in full on May 16th, 1913, of debentures dated October 8th, 1912, securing £5,000, has been filed.

AEROPLANE AND GENERAL PUBLISHING CO., LTD.—Particulars of £2,000 debentures, created May 30th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the amount of the present issue being £1,000. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

C. G. RODER, LTD.—Particulars of £25,000 debentures, created May 17th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £5,000. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

LYNWOOD AND CO., LTD.—Mortgage dated June 13th, 1913, to secure £200, charged on the company's property, present and future, including uncalled capital. Holder, A. V. Christ, 6, Estreham-road, Streatham-common, S.W.

PASSENGER CO., LTD.—Mortgage debenture dated June 4th, 1913, to secure £2,000 and further advances, charged on company's undertaking and property, present and future, including uncalled capital. Holder, S. G. Vernham, 85, Shaftesbury-avenue, W.C.

DUTCH PAPER PULP CO., LTD—Mortgage created outside the United Kingdom, dated May 20th, 1913, to secure 172,000 Dutch florins (approximately £14,300), charged on mill buildings, stores, premises, garden, houses, land, sheds, etc., in Dussen, Holland. Holders, Amsterdamsche Bank, Amsterdam. Also second mortgage, created outside the United Kingdom, of even date to secure 116,000 florins (approximately £9,600), and collateral to the security created by trust deed dated November 19th, 1895, securing an issue of £12,000 debentures, of which only £9,600 were outstanding at date of this return, charged on above-mentioned property. Trustees, A. E. Reed, Mayford, Surrey; and A. R. Reed, Kent House, Kensington-court. Memorandum of satisfaction to the extent of £2,400, on May 20th, 1913, of first mortgage debenture, secured by trust deed, dated November 19th, 1895, securing £12,000, also notified.

WILLIAM GILL AND CO. (PRINTERS), LTD.—Particulars of £1,000 debentures, created May 5th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £600. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

SPORTS AND SPORTSMEN, LTD.—Particulars of £1,500 second debentures, created by resolutions of May 20th and June 3rd, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital, subject to £2,500 first debentures. No trustees.

COMPANY NOTICES.

ARDEN PRESS, Ltd.

Notice is given that a meeting of the company will be held at 79, Lichfield-street, Wolverhampton, on July 25th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

UBIQUE PRESS, Ltd.

At a meeting of the company, held at Portsmouth, on May 29th, the following resolution was passed:—"That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and that the company be wound up accordingly: and that Mr. Robert Frank Salter, 103A, London-road, Portsmouth, be appointed liquidator."

BEABLE'S ADVERTISING AGENCY, Ltd.

Notice is given, that a meeting of the company will be held at 3, Lincoln's-inn-fields, W.C., on July 22nd, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

ROTALITHO, Ltd.

Notice is given, that a meeting of the company will be held at 33, St. Swithin's-lane, E.C., on July 22nd, for the purpose of having the liquidator's account, showing the manner in which the winding-up has been conducted and the property of the company disposed of, laid before such meeting, and of hearing any explanation that may be given by the liquidator.

ILLUSTRATED JOURNAL, Ltd.

Notice is given, that a petition for the winding-up of the company was, on June 18th, presented to the Court by Henry Huber, Arthur Wardill William Gilbert, and Henry Reinhardt, carrying on business in partnership at 12 and 13, Upper-Thames-street, E.C., paper merchants and agents, creditors of the company; and that the said petition is directed to be heard before the Court at London, on July 1st.

AMATEUR SPORTS PUBLISHING CO., Ltd.

At a meeting of the company, held at 353, Strand, W.C., on May 22nd, the following resolutions were passed; and at a subsequent meeting on June 12th, were duly confirmed: "That the company be reconstructed under Section 192 of the Companies (Consolidation) Act, 1908, by the sale and transfer of its property, assets, and liabilities to a new company upon the terms of the scheme of reconstruction now submitted to the meeting and identified by the signature of the chairman."—"That with a view to such reconstruction:—(a) The company be wound up voluntarily; and (b) That Mr. Charles L. Sims, of 353, Strand, W.C., be appointed liquidator for the purpose of such winding-up."

COMMERCIAL INTELLIGENCE.

Re ALICE HANDLEY, Stationer.

At the Birmingham Bankruptcy Court, on Monday, before Mr. Registrar Lowe, this debtor, residing at 250, Stratford-road, Sparkbrook, and until recently carrying on business as a stationer and fancy goods dealer, at 133, Stratford-road, came up for public examination. The debtor's gross liabilities amounted to £384 19s. 9d., of which £357 14s. was expected to rank for dividend. The assets were set at £66 19s., leaving a deficiency of £290 15s. Referring to the official receiver (Mr. A. S. Cully), the debtor, who stated that the businesses at 133, Stratford-road, and The Cotteridge, King's Norton

Digitized by Google

were formerly carried on by her brother, who executed a deed of assignment. On July 24th, 1907, she purchased the businesses for £270 from the trustee. She had no capital of her own, but she borrowed £280 from a brother-in-law, to whom she gave an undertaking to discharge a debt of £320 due to him by her brother. She, therefore, became liable to her brother-in-law in the sum of £600, of which, she said, she had paid £450. The businesses were not successful, and in August, 1911, she disposed of the one at The Cotteridge for £130, out of which sum she repaid her brother-in-law £50. The examination was closed.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

BAYLEY, A. P AND R., trading as Bayley Bros., at Red Lion-square, Newcastle-under-Lyne, printers, booksellers and stationers. Debts by A. P. Bayley, who will continue the business under the same style. June 14th,

MATTHEWS, T. W. S., and Triggs, C. W., trading as Matthews' Advertising Service, at Staple-Inn-buildings, Holborn, London, E.C., advertising agents and printers. The business will in future be carried on by T. W. S. Matthews. March 31st.

COLGROVE, J., and ROGERS, G. F., trading as Hall and Son, at 3A, Queen-street, Oxford, printers. April 24th.

DISTRIBUTION OF ASSETS.

IN THE MATTER OF A DEED OF ASSIGNMENT for the benefit of creditors, executed February 20th, by E. H. and C. E. Neatherway, Station-road, and The Haymarket, Tunstall, Staffs, news-agents, etc. Claims by July 10th to R. E. Clark C.A., 17, Albion-street, Hanley, the trustee.

LEWIS, H., late of 23, Wallasey Village, Wallasey, and formerly of 10, King-street, Egremont, Cheshire, stationer, etc. Claims by July 14th, to Peace and Darlington, 8, Cook-street, Liverpool, solicitors for the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDERS.

TIGWELL, G. A., trading as F. W. Tigwell and Co., High-street, Leatherhead, Surrey, stationer. Date of order June 16th, made on the debtor's own petition. Date of adjudication order June 20th.

VAILE, P. A., 9, Southampton-street, Holborn, and 19, Nassau-street, London, journalist. Date of order June 19th, made on a creditor's petition. First meeting of creditors July 4th, 11 a.m., and public examination of debtor July 29th, 11 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

FIRST MEETINGS AND PUBLIC EXAMINATIONS.

EINSEY, H. J., 92A and 258, Mill-road, Cambridge, stationer, etc. First meeting June 30th, noon, at the official receiver's office, 5, Petty Cury, Cambridge. Examination July 16th, 11 a.m., at the Guildhall, Cambridge.

RAWLINGS, H. W., 13, Wellington-street, Luton, Beds., stationer. First meeting June 28th, noon, at the official receiver's office, The Parade, Northampton. Examination July 17th, 11.30 a.m., at the Court House, Luton.

GOOSE, F. H., 16, Bishop Bridge-road, and 6, Brigg-street, Norwich, bookseller and stationer. First meeting June 30th, noon, at the official receiver's office, 8, King-street, Norwich. Examination July 16th, 11 a.m., at the Shire Hall, Norwich.

NOTICES OF INTENDED DIVIDENDS.

DAVIES, E., 14, Bridge-street, Llanfaes, The Bulwark and Lion-street, Brecon and the "Times" office, Merthyr Tydfil, printer and stationer. Claims by July 4th, to E. Owen, official receiver, St. Catherine's-chambers, St. Catherine-street, Pontypridd.

BRUNTON, J. E., lately trading as Brunton and Williams, at 1 and 2, Ivy-lane, Paternoster-row, London, E.C., printer. Claims by July 8th, to E. H. Hawkins, 4, Charterhouse-square, E.C.

GRAHAM, J. D., lately of 47, Oxford-street, now 145, Gray's-inn-road, London, W.C., journalist. Claims by July 10th, to A. H. Partridge, C.A., 2, Gresham-buildings, Basinghall-street, E.C.

APPLICATIONS FOR DEBTOR'S DISCHARGE.

WHITE, M. R. L., 44, Bedford-row, London, W.C., lately trading at 145, North End-road, Croydon, publisher. To be heard July 15th, 11 a.m., at Bankruptcy-buildings, Carey-street, W.C.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

SMITH, E. B., Mayfield, Brighton-road, Croydon, printer. Date of order, May 22nd. Discharge granted, subject to bankrupt consenting to judgment being entered against him in the County Court of Surrey, holden at Croydon, by the trustee for £800, together with £1 10s. costs of judgment. The grounds named in the order for refusing an absolute order of discharge were proof of facts mentioned in sec. 8, subsec. 8 (A.), (B.) and (F.) of the Bankruptcy Act, 1890.

APPOINTMENT OF TRUSTEE.

HARDING, S. D., trading as Harding and Son, 14' Kinderton-street, Middlewich, Cheshire, printer Trustee, R. E. Clark, C.A., 17, Albion-street, Hanley, Stoke-on-Trent.

THE COMPANIES ACTS, 1890 AND 1908.

WINDING-UP ORDER.

THE "DAILY HERALD" PRINTING AND PUBLISHING SOCIETY, LTD., Victoria House, Tudor-street, London, E.C. Date of order, June 17th.

NOTICE OF DIVIDEND.

THE ALGERNON PRESS, LTD., 3, 4 and 5, Gunpowder-alley, Shoe-lane, London, E.C. First and final dividend of 4s. 6¾d., July 3rd, or any subsequent day (except Saturday), between 11 and 2 at the official receiver's offices, 33, Carey-street, Lincoln's-inn, W.C.

Photographing on Zinc.

A process has been devised by a writer in the *Printing Art* that has proved very satisfactory, and has to do with the photographing on a medium rough ground zinc plate. It has been found very difficult to develop an albumen print on rough zinc on account of the ink settling down in the small but deep interstices which cause the roughness. This may be fully overcome by first making up the following solution :—

Ammonium Bichromate	...	300 grains
Albumen, desiccated ...	...	2 oz. dry
Le Page's glue ...	...	1½ oz.
Water ...	...	40 oz.

After mixing this in the usual way and filling, coat the plate, whirl till dry, and print according to the density of the negative. Then take the print out of frame and instead of rolling up with ink, wash it out with asphaltum or Mogul varnish, fan dry and then roll up with a leather roller using one-half crayon and one-half good black printing ink, thinned out with a small amount of O varnish. This treatment pulls out every particle of unexposed solution and ink, caused by the tremendous suction of the grained leather roller, and leaves the dot clear, hard and square stencilled on the zinc with an asphaltum base, which will stand the roughest kind of treatment and enables one to pull many more impressions from the plate than by the old way of developing with a cotton wad. There are several establishments using this process with the greatest success, but this is the first time it has been published so far as the writer knows.

A Jubilee Dinner.

The firm of Jordan and Sons, Ltd., has now been established fifty years, and a special celebration of the jubilee year was held on Saturday last, when nearly one hundred members of the staff entrained for Worthing, where the day's proceedings began with a substantial luncheon at the Railway Hotel. The party then journeyed by various modes of conveyance to Brighton. A second contingent of the staff—those who had remained at the offices in Chancery-lane to deal with the more urgent letters of the morning post—was here met with. In the afternoon a photograph of the directors and staff was taken, after which an adjournment was made to the "Old Ship" Hotel, where dinner was served. Mr. William Jordan, the senior managing director, a gentleman who has been the head of the firm almost since its inception, and to whose unflagging energy and ability so much success is due, presided. His son, Mr. Herbert W. Jordan, who is also a managing director, and has been connected with the firm for nearly thirty years, was vice-chairman. Mr. Jesse H. Davenport, director, and Mr. J. Clifford Freebody, printing and binding works' manager, were also present. Amongst the guests were Mr. Stampa W. Lambert, J.P., Mr. A. R. Rudall, barrister, Mr. F. J. Crowther, Parliamentary agent, and Mr. J. Fitzpatrick, F.C.A. After dinner, various speeches were made, and some capital music rendered.

The toast of "The Firm" was proposed by Mr. J. Crouch, the head of the patents and trade marks department, who directed attention to the wonderful virility of Mr. William Jordan, the varied phases of the growth and expansion of the firm, and how from a comparatively small beginning in 1863 the name of "Jordan" had become world-widely known. The chairman, in responding, mentioned that in the early days, under the Companies Act of 1862, the firm registered about one company in a month, but that now the yearly registrations were considerably more than one thousand.

Robert H. Ruddock,

Auctioneer, Valuer and Fire Loss Assessor

TO THE

Printing Trades.

Valuations for Fire Insurance and other Purposes.

71, FLEET STREET, LONDON, E.C.

Mr. Herbert W. Jordan gave the toast of "The Staff," with whom he very generously shared the credit attaching to the firm. He said in effect that for a company to be successful the directors should be supported by trained men, in whom they might place implicit confidence, and that was undoubtedly one of the secrets of the continued prosperity of Jordan and Sons, Ltd.

A highly enjoyable day was spent. It should be noted that an attractively illustrated booklet, giving a historical sketch of the firm, was presented to those at the dinner. This souvenir of the occasion had been printed and bound in leather at the company's works in Bishop's court, Chancery-lane, W.C.

QUALIFIED.—Two men were hotly discussing the merits of a new book. Finally one of them, himself an author, said to the other: "No, John, you can't appreciate it. You never wrote a book yourself." "No," retorted John, "and I never laid an egg, but I'm a better judge of an omelet than any hen in the State."

ONLY two cases of lead poisoning were reported from the printing trade last month, one being from a litho transfer works, the first of its kind reported this year. The total for the five months ended May 31st is only seven, as compared with a dozen in the same period of last year.

IN Corfu, Greece, there is only one lithographic works.

THE head offices of *South Africa* have been removed to 83, Bishopsgate, E.C.

To Practical Printers.

An excellent opportunity is offered to competent gentleman in old-established Printing Office in a British Colony capable of development.

Half interest may be acquired for £1,200. The incomer would become Managing-Partner with salary of £208 a year with bonus and share of profits. One knowing thoroughly the making of Process Blocks and experienced in the production of a high-class weekly paper preferred.—Address, in confidence, "X.L.N.T.," No. 14110, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I do not make many personal references in this column save as matters mentioned have a printerian connection.

o o o

That reticence is not due to lack of personal topics on which I think interesting notes could be made. It is maintained out of regard to the known disinclination of some respected readers to find anything in this column but what absolutely smells of printers' ink. Nothing must be admitted except on business.

o o o

Now a marriage is not a business. If I had dared to hint to the editor that I wanted to mention a marriage—anybody's marriage—I should have seen that most ruthless pencil of his—(for heaven's sake don't set it, "that most truthless pencil")—rising instantly on end, and looking blue.

o o o

But you see I have not told him. I am leaving him to discover as an accomplished fact, mention of the marriage of a young bearer of a very honoured and unforgotten name in the craft.

o o o

I casually see in a north London paper an intimation that Mr. Charles Hubert Reed has entered the ranks of the Benedicts. He is grandson of Sir Charles Reed, the famous typefounder, the first Chairman of the old London School Board, and a Member of Parliament for a west of England seat.

o o o

Here's to the young bearer of that good name. He has himself been a worker in our craft for several years, and is now and has for some years been a director of Intaglio Patents, Ltd., of Upper-ground-street and Stamford-street, in that region of South London which the near neighbourhood of the London County Council's palace is to invest with a new dignity and fame.

o o o

Meantime Intaglio Patents, Ltd., are doing no little themselves to make it famous. There has been nothing in the printing world for many years past more interesting, and very few things so interesting, as the public runs they have given in their Stamford-street works (an old chapel turned workshop) of absolutely the only rotary photogravure printing machine in the whole of the United Kingdom which the craft public have been freely invited to come and see. There are very few of such machines anywhere in our borders. More power to them and prosperity to the rotary photogravure printing which they, as spirited and able pioneers, are now executing for publishers or printers or other customers galore.

o o o

All the now very many who know Mr. Reed either in old University connection or in his business life, will be confident that the good old name of Reed has suffered no derogation through him and will suffer none. May every happiness attend him and his new partner (proper business term) in the life which thus opens so interesting a new chapter.

o o o

It is a long time since I read a more informative and more interesting narrative than that which Mr. Daniel T. Powell has contributed to the Jubilee number of the *Printers' Register*. Mr. Daniel Powell is second son of Mr. D. M. Powell, the founder of that journal, and brother of Mr. Arthur Powell, K.C., the present proprietor.

o o o

Mr. Powell writes very modestly. "I am afraid," he says, "this is a poor effort, for I fear though in my fifty-eighth year I . . . am not old enough to do justice to the subject." He speaks, too, of the short time since he was asked to undertake the task.

o o o

I imagine, however, that there is no man in the kingdom who could have done so well as Mr. Powell in this matter. His review of "Fifty years of jobbing machinery" has that touch of vitality and human interest which results from his personally having been in contact, in some slighter or greater degree, with a good proportion of those whose names he mentions.

o o o

It is an encouraging record, in this sense particularly, that there is really no need on the review of printing machine developments in the half-century to conclude that British brains are lacking in inventiveness.

o o o

I have often spoken of the early anticipation in British printing machinery, of the Miehle, Century and the Cotterell, and in doing so I had mainly in mind the old Napier. Mr. Powell I find saying, "The two-revolution is merely the improvement on Napier's first effort."

o o o

He adds, "Then we have the single revolution machine with its big cylinder of early type, half a perfecting machine—only the reproduction of the Cowper, Myers and one or two others, contemporaneous." Apparently Ross, of Leith, made a two-revolution machine, a thing which if I ever knew, I had forgotten. Mr. Powell reminds us of it.

o o o

He thinks the Conisbee machines are still working in a few offices. Certainly I worked occasionally on one of the old Main's Tumblers twenty years ago. I have encountered, too, Ingle's machines. Mr. Powell recalls the Sector, invented by Ingle in 1858; "so called because the bed movement was a quadrant which by steel bands gave motion to the type bed, rocked by crank motion from a spur wheel and rod connection." The Ulverstonian, another to which he refers, was invented nearly sixty years ago; a machine in which the type bed was stationary, and cylinder and rollers were propelled to and fro over the form. "I heard only a short time back," he writes, "that one of these was still in a printing office at Hanley,"

o o o

Enough to indicate the nature and variety of a really very valuable contribution to the literature of our craft. Short though it be, in its five and a half columns.

o o o

I am sure that I may pause to congratulate Mr. W. L. Field upon his long editorship of the *Printers' Register*, and congratulate the *Register* upon its anniversary. It was a nuisance to have to get it out in 1863; it was one of those vexations which one is able to look back upon very philosophically after a while.

o o o

The only little publication extant which carried advertisements of printing machinery throughout the craft was issued by a rival to Mr. D. M. Powell, he being a very energetic printers' supplier. Nettled by a rebuff when this sheet declined to issue an advertisement of his own because it did not care to do anything towards furthering his success, Mr. Powell decided on issuing this sheet, and out it quickly came as a four-page quarto—an off size, curiously, as it remains.

o o o

The only machine which happened to be available to print it, a "Little Diamond," by Duncan, would not take a demy sheet or anything larger than the *Register*.

FRANK COLEBROOK.

THE Management Committee of the General Federation of Trade Unions, in their fourteenth annual report, regret that for the third year in succession the expenditure on federation benefit has far exceeded the income from contributions. During the five years ended March 31st last the total income from contributions has been £220,233, while the amount returned direct to the societies affiliated has been £365,619, or an excess of benefits over contributions of £145,386. A consideration of the figures for the past five years shows that on the average approximately 10 per cent. of the membership has received dispute benefit at an annual cost per head of 27s. 7d. and to meet such expenditure would require an annual aggregate contribution of £111,411. Referring to the Insurance Act, the committee say the experiences of the year have aroused a feeling that it will be better to eliminate medical and sanatoria benefit altogether, and destroy the inefficient and expensive machinery created in connection with these benefits. Medical and sanatoria benefits as at present administered are not worth one-eighth of the money now being spent on them. The sooner the present farce is ended and a public service instituted the better for national health, for national honesty, and for national dignity.

AT the annual dinner of the Associated Booksellers, held at Torquay, on Saturday, Mr. Hall Caine said that the 7d. book had been devised in order to master the passion which the British public had for reading books without buying them. But the 7d. book was not an article of commerce which could stand by itself and give a living wage to everybody concerned in producing it. It was the higher priced book that enabled the 7d. book to live. Now the position of the bookseller in regard to the 6s. book had grown worse since the 7d. book began, for within a few months of the appearance of a 6s. book there was a 7d. edition on the market. Booksellers must have a much longer time in which to sell the 6s. book before they were asked to sell a 7d. edition—say a clear two years.

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the current month, employment in the printing trades was fairly good in May. It showed little general change compared with a month ago, but an improvement compared with a year ago. (See Table).

In London, employment was good, and better on the whole than a month ago and a year ago, though at the end of the month the percentage of Trade Union compositors unemployed showed some increase as compared with the end of April.

In other centres, employment with letterpress printers was fair generally, not so good as a month ago, but better than a year ago. At Edinburgh, however, it was good, and better than a month ago. It was good also at Sheffield, Leicester, Oxford and Bristol, but slack at Leeds and Nottingham.

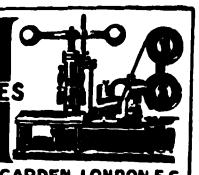
With lithographic printers employment was good, and better than a month ago and a year ago. At Edinburgh, however, it continued slack.

The following table shows the percentage of Trade Union members unemployed in the various districts of the United Kingdom :—

Districts.	No. of Members of Unions at end of May, 1913.	Percentage Unemployed at end of			Increase (+) or Decrease (—) on a	
		May, 1913.	April, 1913.	May, 1912.	Month ago.	Year ago.
London	21,186	4·5	3·7	7·5	+ 0·8	— 3·0
Northern Counties and Yorkshire ...	5,739	3·7	2·7	4·6	+ 1·0	— 0·9
Lancs. and Cheshire	7,196	4·1	4·6	6·1	— 0·5	— 2·0
East Midland and Eastern Counties ...	2,800	2·6	2·2	3·7	+ 0·4	— 1·1
West Midlands	2,729	3·3	2·4	5·3	+ 0·9	— 2·0
S. and S. W. Counties and Wales ...	4,027	3·1	2·0	2·5	+ 1·1	+ 0·4
Scotland	5,771	3·5	3·5	4·9	— —	— 1·4
Ireland...	2,569	7·3	7·2	5·5	— 09	+ 0·8
United Kingdom	52,017	4·1	3·6	5·9	+ 0·5	— 1·8

FOREIGN.

From France, it was reported that employment declined in the printing trade during April, particularly at Paris. In Germany, however, it improved, the percentage of unemployed trade unionists, out of a total of 64,310, being 2·2 at the end of the month, as compared with 3·4 in March, and 1·6 in April last year. In Norway, trade fell off, the percentage of unemployed being thus 2·0 out of 1,997, against 0·4 in March, and 0·9 in April, 1912.



NORWEGIAN Wood Pulp and Paper Mills.

The following report on the Norwegian pulp and paper industry has been supplied by Mr. Charles A. Holder, the United States Consul-General at Christiania :—

"At present there are nineteen Norwegian factories making cellulose, with a yearly output of about 250,000 metric tons, valued at $9.916,000. Nearly all the cellulose is exported chiefly to England and the United States. The year 1912 can hardly be classed as a good one for manufacturers, as the price of lumber was higher than it had ever been, and although higher prices were obtained for sulphite cellulose, there was a disproportion between the cost of raw material and selling prices that persisted during the year. At the beginning of the year the local market price for sulphite cellulose, after having been low for several years, rose to $40.76 per ton for light bleached and $37.71 for strong bleached, c.i.f. London. Prices continued to rise throughout the year, finally reaching $46.23 and $44.41. The market for sulphate cellulose, comparatively little of which is manufactured, was not so satisfactory, and prices as usual were subject to wide fluctuations. During the second half of the year the market became steadier, and prices rose to $41.97 per ton, a very satisfactory mark.

"There are about 100 Norwegian wood pulp factories, many of which have their own paper mills. In 1909, the latest year for which statistics have been gathered, they produced 709,177 metric tons of wood pulp, valued at nearly $7,000,000. Part of the output is consumed in Norway in making paper, and the rest is exported, chiefly to England, but also to the United States. As the mills use water-power almost exclusively, the unusually dry summer and autumn of 1911 caused many to shut down and curtail production. Partly owing to this fact prices for wood pulp at the end of 1911 and beginning of 1912 advanced, reaching $10.72 per metric ton for the moist, but dropped during the second quarter to $8.84, where they remained some time. During the third and fourth quarter prices again advanced, but all through the year manufacturers felt keenly the disproportion between the high cost of lumber and the selling price of wood pulp. Imports of Russian lumber decreased, largely owing to very high freight rates, and this also had the effect of making the cost of raw material very high. The year must be classed as below the average both in production and prosperity.

"There are forty-one Norwegian paper factories. The output for 1912 is estimated at about 150,000 metric tons, valued at about $8,000,000. About 80 per cent. of the total production is exported, chiefly to England, with smaller amounts to the United States, Germany, and other countries. Until a year or so ago only wrapping and printing paper were manufactured, but one mill is now successfully manufacturing note and letter paper, and these products will undoubtedly be increased. The year 1912 was not very satisfactory to manufacturers, owing to the high price of raw materials and to the scarcity and high price of coal which followed the strike in England. The industry, however, has grown rapidly in the past and will undoubtedly continue to grow."

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country :—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.

The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

Printers and Co-Operation.

At an address at a dinner given in New York recently, under the auspices of the Order of Pica and the Printers' Supply Salesmen's Guild, Colonel Philip T. Dodge, president of the Mergenthaler Linotype Company, and also of the International Paper Company, gave the printers some advice on co-operation and advised them to pattern after the German Master Printers' Association, the 5,000 members of which are working together as a unit for the improvement in quality of printing and prosperity of the trade in that country. Colonel Dodge said in part:—"The greatest ambition of my life has always been to be a master printer. It was with me when I was young; it was with me as I grew older, as I got to the time when I had occasion to pay bills, to give maximum cheques for minimum packages of printing which the boy retained until he got the cheque—I have always had an ambition to be a master printer, and it is my ambition to-night sitting up here with the anointed and among the elect.

"I came into the printing art at a tender age; my father was the publisher of a country newspaper. I began, as I remember, by sweeping the floor, and then as my intellect was developed my interest in the craft increased and I was advanced to a point where I was permitted to wash the forms occasionally, and then on Saturdays and holidays, as a special treat, I was permitted to stir that old kettle of blue molasses with which the country offices in those days moulded their rollers.

"I think that this association of men in our trade is of inestimable value. It breathes the spirit which dominates this age; the spirit of fraternalism, the spirit of helpfulness, the spirit of brotherhood—not one of antagonism and animosity. It is a thing which is sweeping over the world, and it is one of the things which in different places and in different forms is making the world a better place to live in, and is lifting mankind up out of the position—particularly the labour-class—out of the position they occupied a century ago. My old father, who is eighty-five years old—as active as I am—told me only a few days ago that in his time it was the universal custom for workmen in the State of New York to work from sunrise to sunset. The majority of them, even the skilled men, went barefooted in the summer. If they wore anything they wore hob-nailed boots, and they had one pair of calfskin shoes which they kept for Sunday occasions and which lasted them during a lifetime, but, thank God, we have passed beyond those conditions. The whole tendency of the times is to be helpful, to assist one another, to help one another up the scale. We see it not only in America, but the world over; we see it not only among individuals and in the trade organisations, but we see it in national matters as well.

"And now there is no place in the world after which the Americans can pattern better than after Germany.

"In Germany they have a Master Printers' Association of 5,000 members, representatives of every portion of the printing trade, in which all of them take a very active part. They get together in the conventions nationally and in their local conventions, and there exchange ideas; they do everything they can to help each other. Every man communicates all that he knows to every other man. All the secrets of the German office are given freely to the entire craft, and they do a number of things which it would behove you to imitate in this country. They have trade schools, they have libraries, they have a splendid apprenticeship system, a system under which the boys are taught every branch of the printing trade.

"Now, you find among the German printers that they are compositors, and skilful compositors; that they are pressmen, and that they know colour printing; that they know type printing, lithography — all the things that enter into that trade. It is a fact (and it is an admission Americans do not like to make) that the average printer of Germany is a more intelligent man, a more thoroughly educated man, a better all-round printer and a more competent printer than the average man that you find in the American office.

"Now, that is a condition of things which should be emulated in this country. It is for the printers of this country, through your organisations, to study those questions and develop them in this country—to train young men to be thoroughly skilled in the printing art. It is no longer a craft—it has become an art. And as we advance in every direction the printing trade of to-day is as far superior to the printing of fifty years ago as that which we will have fifty years hence will be superior to that of to-day.

"Typography is improved, presses are improved, there is constant increases of new methods, and bigger presses are being built. There will be a marvellous development inside of the next ten years.

"The air is charged with these things which are as yet in an experimental stage. I know myself of no less than half-a-dozen things which will be revolutionary in the printing art in the course of the next ten years. It rests with you to encourage, to develop these things, to educate these young men so that they will be abreast of the times, and will know the best of everything.

"There is another thing in which you may well emulate the German and the Europeans in general, and that is in having an efficient and reliable cost system. If you will go into the offices of Europe (and particularly the German offices) you will find that the cost of their product is not a matter of guesswork; it is not a matter of theory; prices are not based upon incomplete and inaccurate facts or figures.

"I believe that one of the greatest troubles of the printing industry of this country to-day is that you do not get sufficient money for your work, and it is your own fault that you do not get it.

"If you adopt this spirit of co-operation—if you will act in that spirit; if you will stand together and maintain your prices; if you will fix your prices where they ought to be, so that you can have an adequate return for your labour (the public must have the printing, and it will pay for it), then will come to the trade a great prosperity and it will be your fault—you men in the organisation—if you do not bring this about.

"It is because of unfair competition, because of prices made in ignorance, because of prices made not in a brotherly and friendly way, but in a spirit of rivalry, that you are failing to get the money you should have for your product."
—*Printing Trade News.*

Government Contracts.

Those placed by H.M. Stationery Office during May included the following:—

Printing, binding, etc., 10,000 Army Books 57, 2,500 Books "D. 315," Fenner, Appleton and Co., Ltd., 77, St. John-street, E.C.; Printing, binding, etc., 6,000 Books S. 398, 4,000 Books S. 467, 7,000 Army Book 69, 1,400 Army Book 281, 1,500 Army Book 284, 2,500 Counter Balance Books, 1,500 Delivery Receipt Books, 1,500 Books "London No. 8," 1,000 Linemen's Tally Books, 1,000 Books "L.E. and U.I. Accounts," 1,250 Maintenance Exchange Requisition, 2,000 Books Telephones No. 36, 1,000 Delivery Note Book, 1,000 Army Book 182, 2,925 Ledger Summaries, McCorquodale and Co., Ltd., Wolverton, Bucks; Printing, binding, etc., 3,000 Savings Bank Ledgers, 10,000 Lineman's Diary, 500 Record of Abnormal Correspondence, 10,000 Lock Label Books, 1,500 Engineers' Correspondence Books, 10,000 Books Army Form N. 1507, 1,850 Books, D. 30, Waterlow and Sons, Ltd., Finsbury, E.C.; Printing and binding 1,000 Army Book 158, 7,500 Books Postmasters No. 176, Drake, Driver and Leaver, Ltd., Rosebery-avenue, E.C.; Printing 40,000 copies Nomenclature of Diseases, J. Truscott and Son, Ltd., Tonbridge; Printing Insurance Contribution Cards (England), Barclay and Fry, Ltd., Southwark, S.E.; Harrison and Sons, St. Martin's-lane and Hayes; Printing Insurance Contribution Cards (Scotland), Morrison and Gibb, Ltd., Tanfield, Edinburgh; Printing, etc., 500 pads each of 32 sorts L.E. 68, 500 pads each of 32 sorts L.E. 70, Waterlow Bros. and Layton, Ltd., Broken Wharf, Upper Thames-street, E.C.; Printing, etc., 500 pads each of 20 sorts L.E. 69, 500 pads each of 20 sorts L.E. 71, Charles and Dibble, 4, Emerson-street, S.E.; Printing certain Lists for the Public Record Office, Harrison and Sons, St. Martin's-lane, W.C.; supplying 100,000 copies Recruiting Pamphlet, Gale and Polden, Ltd., Aldershot; 50,000 copies pamphlet "How to Join the Royal Navy," R. Lloyd and Son, Princip-street, Birmingham.

THE compositors and letterpress machinemen in Selkirk recently asked that the minimum rate of wages should be raised from 25s. to 29s. per week, and that their hours should be reduced from 54 to 50 per week. The men were offered 28s. per week and the reduction in hours asked for, and these terms they have accepted. The new conditions came into force on June 16th.

THE late John Alexander Callander Ross, for over 30 years a leader writer on the *Times*, has left estate of the value of £13,193.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

13,234 GAYDON, G. F. J., combined account form and envelope or cover, also applicable for circulars, advice notes, statements, advertisements, and the like.

13,256 GOSS PRINTING PRESS CO. (OF ENGLAND) LTD., printing press.

13,297 ATKINSON, H., envelopes and the like.

13,339 OLIVETTI, C., typewriters.

13,344 EUKER, K., advertising or sign-displaying apparatus.

13,369 BENNETT, J., mechanical advertising machine.

13,383 JACKSON, T., BENTLEY, P., AND JACKSON BROS., LTD., loose-leaf books and folios.

13,424 HARTOG, A., process of exposing chromate colloidal films for screens for intaglio printing and apparatus therefor.

13,467 BRANSON, J. C. S. and A. M., apparatus for recording general memoranda, notes, appointments, engagements and the like.

13,473 BRANSON, E. F. M. and J. C. S., apparatus for recording general memoranda, notes, appointments and the like.

13,477 McGREGOR, J. A. K., means for displaying advertisements or the like.

13,486 HILL, W. F., loose-sheet holder or binder, applicable chiefly for holding wrapping-up paper.

13,506 STROH, S., AND LUNGER, I. AND CO., LTD., clip for marking canvas bags and the like, which may also be used for binding papers and the like

13,559 RICHTER, F., pencil and like cases and holders.

13,658 BLATTER, J. G., card cabinets and the like.

13,723 PINDIKOWSKY, A., printing, more especially applicable to decoration.

13,812 HUNTER, J H., quoin for printers' use.

13,828 MARTIN, E., paper-registering machines.

Specifications Published, 1912.

Process of and apparatus for printing lithographically—Hayes and Hayes (Universal) Printing Machinery, Ltd.; 5,410.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

THE PROGRESS OF THE French Printing Machine Trade.

By Theodore Birch.

The printers' engineering trade in France has been undergoing a remarkable evolution during the past few years. The raising of the Customs Tariff on imported machinery seems to have given an impetus to the home-made presses, which have also been considerably improved.

In lithographic machinery the firm of Voirin has made itself pre-eminent with its enterprise. Although noted for its excellent flat-bed litho machines, realising the merits of plate printing Messrs. Voirin designed and made a capital fast rotary aluminium press. Then Mr. Voirin, ever on the alert, turned his attention to the offset method and built a very creditable offset printing machine, adapted to local requirements, which is giving satisfaction. But the firm's latest exploit is the most interesting, for it has just put on the market an offset perfecting press. The advantages of this machine are so obvious that it is unnecessary to say more than that the litho printing trade will shortly be revolutioned. The firm of Voirin possess extensive works at Montataire, with repairing shops in Paris.

It may be added that Monsieur Jules Voirin was recently President of the Association of French Printing Machinery Makers, which doubtless is an acknowledgment of the services rendered to his profession by this energetic and clever engineer. This honoured position was previously held by Monsieur Edouard Lambert, who is also an engineer of great ability. Mr. Lambert came into prominence by making multi-colour letterpress printing machines, which have been adopted by the Bank of France and various foreign government printing offices for the impression of bank notes. A few years ago Mr. Lambert patented a new bed movement, known as the "Elby" perfector, for increasing the speed of perfecting machines, and has been very successful in converting old, slow-running presses into new machines. But just in the midst of a busy season the works of Edouard Lambert and Co. were burned down last year. Undaunted by this disastrous loss, Mr. Lambert lost no time in finding a fine piece of land in the northern St. Denis suburb, just outside the Paris Gate. A suitable building was erected and the most up-to-date plant was laid down for the rapid production of the "Elby" fast perfecting machine which will shortly invade England. The British agency of the firm is in the capable hands of Messrs. A. Sauvée and Co., the well-known engineers, of Park-street, Southwark, London. British printers have been unpardonably slow in appreciating the value of perfecting machines, in the making of which the French excel.

These machines are very much in vogue in France and produce a huge quantity of good class work. Millions of illustrated publications and catalogues are economically produced on perfectors, at a single impression, whereas that class of work is usually printed in this country on ordinary flat bed presses with proportionately a smaller production. Every new type of French perfecting machine is now made with or without the self-feeding from the web attachment.

Only a very few of these machines have been sent to England during the past twenty years. But a beginning has been made. That veteran, Mr. Jules Derriey, who is better known to us as the inventor and maker of rotary presses, has already sent to England several of his improved perfecting machines which, I understand, have in every way come up to expectations, and, no doubt, we shall hear more of the Derriey machines in the near future.

About a year ago the old-established firm of Alauzet was taken over by a company under the management of Monsieur Boileau, who as chief engineer at the works of the *Petit Parisien* had for years given proof of his professional capacity and initiative. A new era of activity, after a period of lull, overtook the Alauzet works at Montrouge. Mr. Boileau's first care was to design a new pattern of fast perfecting machine which is not only much heavier but superior to anything which had hitherto been attempted by this firm, and several installations have been made which appear to have quickly rewarded the Alauzet company with repeat orders—the best testimony that can be given by the customer. And now Mr. Boileau has turned his attention to the making of two-revolution presses. Considering the number of foreign-made machines sold every year in France it has been a wonder that French engineers have not taken up this class of machine which has become very popular. Alauzet and Co. are now building a two-revolution press which, it is claimed is equal to any competitive machine on the market, and although I have great faith in French engineers (for everyone of them has to go through both practical and technical studies and pass stiff examinations before receiving his diploma), time and actual experience will tell us if a real blow will be struck to this class of imports.

The famous house of Marinoni are too well known all over Great Britain to need any introduction. It is sufficient to say that the name Marinoni stands out conspicuously in the newspaper world as the versatile makers of perfected and thoroughly reliable rotary machines for all kinds of publications. It is a firm which always keeps abreast of the times and has turned out a prodigious number of printing presses of every description. The interests of the firm in England have been for years well looked after by Messrs. A. Sauvée and Co.

Another French firm which is favourably known here is the Etablissements Foucher. They make type-casting machines of such utility that they are in universal use. One typefounder in England alone employs no less than forty of these machines! Messrs. Foucher, who also build improved electrotyping and stereotyping plant and paper cutting machines are represented by Messrs. Edler and Co., of Bath-place, Rivington-street, London, E.C.

Messrs. Brissard et fils (London agent, Mr. H. Hyde, 49, Newcomen-street, Borough, S.E.), celebrated for their perfected self-fed disc ruling machines, have lately put on the market an automatic paper feeding apparatus for printing machines. The principle of the machine is extremely simple—the outcome of long years of practical experience in the making of the feeders for the ruling machines—and free from suction pipes and pump. Good accounts are given of this latest feeder, and we may expect to see it at work in London at no distant date.

North-West London Cost Congress.

An Exposition for the Small Printer.

At the request of some of the printers of the West and North-West London districts, the Costing Committee of the Federation of Master Printers and Kindred Trades held a meeting in the Guardians' Hall, Harrow-road, Paddington, W., on Tuesday evening, June 24th, to explain the system as applied to the smaller houses of the trade. Mr. J. R. Burt (Morton and Burt, Ltd.) was in the chair, with Mr. W. Howard Hazell (Hazell, Watson and Viney) and Mr. E. Taylor Thomlinson (joint Federation secretary) on either side, and the meeting was well attended.

The Chairman, having apologised for the absence of Mr. R. J. Lake, who had been announced to attend the meeting, and having read a letter from him regretting his inability to be present, stated that at the Costing Congress at Kingsway Hall four months ago there were members present from this district who were so impressed with what they heard that they came away fully intending to put their house in order. Not that they thought they were going to die, but rather that they thought it was time enough they started to live. They gathered together a few of their neighbours and afterwards they called together one or two others from the surrounding district, and the result of those meetings was that they decided that nothing serviceable and lasting could be done unless they got into social touch with one another. It was thought that the best way to go about that was to arrange this costing congress, though they hardly expected they would have the good fortune of having Mr. Hazell with them to expound the cost finding system and give them the benefit of his knowledge and experience. They were very grateful to him, and he tendered him a sincere welcome on behalf of the printers present.

Mr. Hazell then gave an exposition of the cost finding system as applicable to the smaller houses, making use of specially prepared diagrams and charts. He said he was speaking from practical experience of what he had found in his own works, and he could enthusiastically recommend this system alike to large and small printers. They should

Begin with These Axioms:

That they should find the hourly cost for each process in their works; that it should cover all expenses of manufacture in that process; then they should know the cost of each job on that basis, and finally from time to time and very easily they should be able to check their hourly cost to see whether they were working on a correct basis. It was very necessary that they should have some uniform costing system, of such a character as the one he was showing, in use all over the country. He felt sure that when they were convinced of the advantages of the system they too, like others, would become missionaries and do what they could to educate printers less fortunate than themselves. Mr. Hazell then explained in detail the use of the various forms.

ch job. Daily also transfer the total num-
ber of chargeable hours to the Value of Pro-
duction Form, and at the end of the week the total number of hours multiplied by the hourly rate is transferred to the Statement of Cost of Production Form, to see whether you are covering your costs or the hour rates are correct. He thought they would find that every printer had some form of work docket, daily or weekly, in use in his works, and some firms kept a record of each job. After they had obtained their hourly cost, there was very little to do in order

To Start the System.

It was only necessary that the dockets should come down daily to transfer the costs, so that the work did not accumulate at the end of the week. Experience showed that a clerk—not a skilled clerk, but a lady clerk—will spend from three to five minutes a day in transferring the times from each docket. It depended, of course, on the number of jobs taken up. If for three minutes per chargeable worker they could find out all these valuable costs, he was sure it would be the best time spent in their works. If they had a small business the printer could do the work himself. Mr. Hazell then spoke of the results of the working of the system in different parts of the country, the accounts he had received being most satisfactory. One of the partners in a firm in the North of England drew £700 more profit at the end of the first financial year after adopting the system, and attributed it almost entirely to increased knowledge of their business and finding out which were the paying and which were the losing jobs. Another printer in the North of England, who said he thought he knew what the compositor hour was, five times added a penny on to his compositor hour, and it was not until he had increased it by 5d. that he found he was recovering his costs. It seemed that they had been walking in a vain show in regard to costs. The more important side of their business was

The Labour Side,

And they had not known its actual costs. He was afraid they had too often been paying for composition at 1s. 10d. or 1s. 11d. an hour and thinking they were very clever in selling it at 1s. 6d., and then not understanding why their composing-room was not paying at the end of the year. There was evidence that this system would suit any size or character of business, it being in use in a small one with only three departments, and in a large business with a turnover of a quarter of a million a year. When most of the printers had adopted this system he was confident the printing trade would be in a better condition than it is now. (Applause.)

Mr. E. TAYLOR TOMLINSON then addressed a few remarks to the meeting to allow Mr. Hazell a rest before replying to questions and describing the hourly rates and machine units. Regretting Mr. Lake's absence, he spoke of his very thorough knowledge of the subject, and then referred to his own experience of the small local printers all over the country, and the difficulty of getting them to understand the undoubted benefits of the cost system in their own case, and the weak spots it enabled them to put their fingers on. He was happy to say, however, that there was decided improvement in this respect among the master printers of the country, especially the small men, since the principles of the cost system had been placed before them. Small printers in the smaller towns, who would not have looked at a cost system a few years ago, were getting together, and had already justified the course they had taken.

The CHAIRMAN: It is one of the drawbacks of the printing profession that we mistrust one another, and I am very certain it is simply because we have not taken the opportunity of going to our next door neighbour, shaking hands with him and asking him for some information which I am sure from my own experience he would be only too glad to give. There is plenty of printing in London and in this country to keep us all going and give us a good living.

The Small Printer's Salary.

Questions having been invited, one was asked as to whether a master working at frame or machine would charge his time as if he were a compositor, in addition to the salary Mr. Hazell suggested he should take?

Mr. HAZELL, in reply, said if the principal in the business was producing any work he must work out a daily docket and put in his time as chargeable and non-chargeable. When setting, his work was chargeable time; when seeing a customer it was non-chargeable. The time he spends setting should be charged to the jobs and that portion of his salary or wages should be debited to the composing-room, if he is working in that department. It would be correct for the master to have a time-sheet.

The next question had reference to increasing the charges to customers, and Mr. HAZELL said the cost system did not increase the charges in all departments to the customer, but if the printer found in the composing-room that he was keeping an hourly rate which was too low, the jobs which had been taken on contract—the old jobs which they could not alter the price of—would have to be charged at the old prices. But when estimating on new prices they charged these at the new hourly rate.

Losing Low-Priced Jobs.

The Questioner: Would you reckon to lose many jobs on the new basis?

Mr. HAZELL: Certainly. If you charge below cost you can get as much work as you want. We prefer to do little work at good profits. If we were to give an estimate at a compositor hour, say, of 1s. 4d., we should get a good many of our estimates and be busy. We prefer to estimate on a correct hourly rate. Then we have to hustle round and get more work, and those customers we do get we find give us much better profit.

Another question was asked with regard to the compositors' hour charge. Should apprentices' time be charged at full journeymen's time?

Apprentices' Time.

Mr. HAZELL: Let us assume that the hourly rate in the composing-room is 1s. 10d. An apprentice does not cost 1s. 10d. because he is drawing lower wages. He occupies the same amount of floor space as the journeyman, and uses a good deal of material that is not costing less. If you have good apprentices, in the last two or three years they may turn out as much work as journeymen, and therefore they should be charged as though they were journeymen. There are two ways of doing this: At the beginning of each year say that the apprentice is worth a fraction of a journeyman. One year he is worth one-third of a journeyman, and that year charge up his hours at one-third of a journeyman's rate. The next year he has improved, and is worth, say, a half of a journeyman's rate, and the next year he is worth three-quarters of a journeyman's rate. Fix a certain price per hour according to the charge. Another way is to take the daily docket, ignore the job, and write down the number of hours a journeyman would have taken on it. Either way is satisfactory. The apprentice may get a difficult job and not do the half time, or whatever the fraction of a journeyman he may be worth, and so it is better for the overseer to go through the work and put down a number of hours as a basis for a fair charge on what a journeyman would have taken.

Standing Forms.

Replying to a query about charging for standing forms, Mr. HAZELL explained that these should be dealt with by the compositor, but he should mark them standing. He added parenthetically that it was to be hoped the customer did not know the form was standing; any advantage that might accrue from a standing form should belong to the printer, and he should never use the term "standing form" when talking to a customer. The cost of standing forms is shared by the hourly rate on all the jobs.

Repairs and Renewals.

In the matter of repairs and renewals to plants, Mr. HAZELL, replying to an enquiry of the Chairman's, said a question was raised at one of the cost meetings as to whether a renewal to a machine should be put down as a working expense. He defined the difference between the renewal of an existing part and a new machine. If they put in a new machine, that was an addition to the capital value of the plant. But if they put in a new part or repaired an existing machine, it was not improving the capital value of that machine; it was only maintaining it in that position. But if they improved the machine by adding flyers to an old-fashioned machine say, or by adding a feeder that it did not previously have, that was a material improvement, a material alteration in the machine, and that expense should be treated as an addition to the capital value of the plant.

Mr. HAZELL then proceeded to explain the hourly rates, pointing out the importance of keeping the composing machines separate from hand-work, so that it was better to have two separate departments for this, and he also described the unit system for the machine-room, remarking on the small number of hours in the week they would find their machines were really producing work.

Labour-Saving Machinery and Prices.

Answering a questioner on the subject of selling lino or mono work more cheaply than hand-composition, Mr. HAZELL said he was afraid printers looked at this question too much in the light of, not "How much can I charge my customer," but "How cheaply can I do it." Salesmanship came in here. They should see how much they could reasonably and justifiably charge to their customers, and not the moment they put in some labour-saving machines see how cheaply they could do the work and undercut their competitors. If there was any advantage it should be kept by the printing trade as long as possible. Ultimately the economy and advantages of labour-saving machinery does go to the consumer. When linotypes and high-speed two-revolution machines are introduced the cost of production is reduced, but the mistake printers made was—before they knew the hourly rate—to cut prices because they thought the costs were so low. It was essential to make a separate department for composing machines and then find what was the amount produced in that department and what the cost was. But because they found linotype composition cost 10d. or 1s. a thousand, why should they sell it to the customer at that price? Why talk linotypes to him at all? "Sell to him at as high a rate as you possibly can," added Mr. Hazell; "we have been too anxious to work for love. This

system is to help printers to work for profit for themselves."

"Old Crocks" and Undercutting.

The subject of the under-cutting by the printer with old machinery, or "old crocks," as they were termed, was brought up, and Mr. HAZELL said his experience was that if a printing works was run with "old crocks" they were always breaking down; they got on better with modern machinery. There was a drawback if some of the machines were new and some were old, as the old ones would be at a lower rate, and when they put in a new machine in the place of an old one the rate of that machine automatically jumped. In the case of "old crocks," it was not that printers were under-cutting because they could produce so cheaply, but because of their crass ignorance of what costs were.

Overtime.

Speaking of overtime, Mr. HAZELL said: If you work much overtime your hourly rate will go up, and in a week with much overtime you will probably have a deficit. The way I look at it is this: a certain amount is necessary in the printing trade, with its busy and slack seasons. When busy, work overtime, and keep working overtime on the job, not because the customer wanted it in a hurry, but because you are busy generally. You cannot blame that customer more than anyone else; therefore the expense of the average overtime should be borne by all the customers alike. Every period of overtime is covered by getting the average rate spread over the whole year. When a customer specially asks for overtime for a job he wants in the morning, then he should pay for that overtime. When you have talked it over to him, he will probably think your costs are quite correct.

The Flat Rate.

The possibility of a flat rate for machines and composing was the subject of another inquiry, to which Mr. HAZELL replied that it was almost impossible. He pointed out that all the machines had varying rates. The Arab platen was worth probably 1s. an hour, the double demy 1s. 3d., and the compositor 1s. 10d. per hour; how could they possibly have a flat rate which was anything like a scientific or correct rate? If the Costing Committee had thought such a position possible they would have suggested it. The idea of a flat rate for the composing and the machine-room was entirely fallacious.

Answering another inquirer, Mr. HAZELL said the Committee had made arrangements for an expert to help printers to put in the system. Mr. Arthur C. Roberts, the accountant to the Federation, could go into any office and advise them how to get the hourly rates according to the size and character of the business, and they had also engaged Mr. Goodwin, a printer and accountant, who was giving the whole of his time to organisation and the work of the Costing Committee. The idea was that he would be at the service of the trade to attend small meetings and talk over the forms and dockets and the job cost sheets, and advise printers in any way possible.

Resolutions.

Mr. F. SCARSBROOK (Baines and Scarsbrook) deplored the printers' lack of courage in estimating, and advocated the getting together of the printers of west and north-west London and joining a local association, when they would get to know one another better, take each other into their confidence, and thus be able to eliminate some of the losses they had suffered from in the past. He moved the following resolution:—"That the Cost System as advocated by the Federation Costing Committee is believed by this meeting to be suitable for adoption by the printers of west and north-west London, and that it cannot but prove beneficial to all working under it."

Mr. S. SIDDERS (S. Sidders and Co.), in seconding the resolution, spoke of the costing campaign as one of the most valuable movements he had been acquainted with since he had been connected with the printing profession, now well on to half-a-century.

The resolution was carried unanimously.

Mr. ALFRED LANGLEY (Langley and Sons, Ltd.) then proposed, and Mr. C. GIBSON (the Westminster Press) seconded:—"That this meeting tenders its best thanks to Mr. W. Howard Hazell for the service he has rendered to the printers of the district by his able exposition of the System this night," and the motion was heartily carried.

Mr. HAZELL, in replying, said the most tangible form in which they could express their thanks to him and the Committee was to put the system into their businesses. He had travelled over 4,000 miles since February to explain it in different parts of the country, and he was very pleased with the results. They heard on all sides of printers putting it in, and everyone who did so was reaping great advantages.

The meeting closed with a vote of thanks to the Chairman, on the motion of Mr. W. J. FOWLER (Cricklewood), seconded by Mr. S. J. KING (Ealing and Uxbridge).

British Imports of Paper.

Relative Supplies from Foreign Countries and British Possessions.

Values for 1912 Contrasted with those for 1908.

According to the annual statement of the trade of the United Kingdom with Foreign Countries and British Possessions, the imports of paper, etc., for 1912 reached the high figure of £7,234,437 as against £5,798,665 in 1908.

IMPORTS FOR 1912.

Some Typographical Tortures.

The noble art of rule twisting flourished greatly half-a-century ago, and some of our older readers may remember a fine example of it that was for a long period exhibited in a shop window in Fetter-lane. In these cases, however, it was almost entirely such accessories as rules, ornaments, etc., that were used to produce an alleged pictorial result, but occasionally the long-suffering compositor has been called upon to manipulate type in much the same way. Usually this is due to a freak on the part of some modern writer, but at least one ancient classical author—Simmias, of Rhodes, to wit—arranged his writings in the graphic form which they have always since retained. Simmias flourished about the third century B.C., and published a collection of poems in four books, of which only a few fragments have come down to our day. The

Simmias, included in the "Poetae Graceae minores," printed at Cambridge in 1652 by Buck, the University typographer.

extant remains of his work include, however, some examples of a curious style of poetry, which consisted in so arranging verses of different length as to represent an egg, an altar, an axe, a pair of wings, etc., the several verses making up a poem. These venerable poetic curiosities, of which there have been numerous printed editions from the sixteenth century downwards, are usually found in the in the same volume with the works of Theocritus, Bion, etc., and although it is comparatively easy to write them out in the peculiar form the style of versification demands, it is far more difficult to put them into type. Indeed, some of the old-time compositors must often have cursed the memory of Simmias, whose copy had to be set up in such extraordinary fashion, particularly, as in most editions a Latin translation of the Greek original appears on opposite pages, so that the work had to be done twice over. One poem, "The Egg," had to be set with lines of increasing length from the beginning to the middle, and then of diminishing length to the end. The joys entailed by setting "The Axe" can be gathered from the facsimile given herewith from Winterton's edition of

TRADE PRINTING—Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a specialty.

Things I Don't Like.

A printer of our acquaintance, who runs a fair-sized office has a dislike to many little traits shown by his employees, and discourses on the matter as follows:—"I don't like to see a workman a quarter-on-an-hour or twenty minutes after his time in the morning, and then enter in a jaunty, defiant, independent style. I don't like to see him punctual in going to, but the reverse in coming back, from his meals. I don't like to see the same individual uneasy in his mind five minutes before leaving-off time. I don't like to see a man as the clock strikes drop his work as though it burnt his fingers. I don't like to see him, after habitually coming late to his work, unwilling to devote one precious minute of his own time to his employer's service. I don't like to see an apprentice hastily resume work the instant he hears his master's footsteps, nor do I like his nonchalance in coolly turning to his work when accidentally discovered gossiping in the time he has to be paid for. I don't like to see a ''stab' hand invariably loiter over his work, yet ever ready at the paytable. I don't like to see an employer always dissatisfied on principle. I don't like to see an employer doing the work and his man looking on and laughing in his sleeve. I don't like to see a workman entering into an engagement to do his best, never think of carrying it out, except in receiving his remuneration. I don't like to see an employer make familiar companions of his workmen one day and act the tyrant the next. I don't like to see an employer tell the whole of the office his business concerns. I don't like to see a compositor one day 'sticking up for his trade,' and the next secreting sorts from his companions, or surreptitiously getting a look at the copy so that he may manœuvre that the fattest portion shall fall to his own share. I don't like to see a man spend a shilling's worth of time rather than cut up a farthing lead, nor do I like to see him mutilate material rather than give himself a little trouble. I don't like to see a man stay away from his work or get intoxicated when there is a rush or pressure of work, and yet always at his post in slack times, when he would serve his employer by losing time. I don't like to hear a man say he works for a mutual advantage but all the time with a mental reservation. I don't like the man who can see his employer defrauded and not have the moral courage to declare it. I don't like to see a man after a full week's work want an advance at the beginning of the next. And, lastly, I don't like to see a printer use the tail of an old shirt to dry his hands to save buying a sixpenny towel."

Appreciation of a Paper House.

Appreciation of printers' organisation work is gratifying in all cases, but particularly so when a supply house will so unqualifiedly endorse it as did the Western Pennsylvania Paper Co., of Pittsburg, recently in an open letter to the Pittsburg trade. Such a stand is of great assistance to a local association, doing much toward attracting to the latter those shop owners who have been backward in co operating and doing their share of the uplift work. This particular paper house is a close worker with the organised printers, and it is a pity there are not more like it. The Western Pennsylvania's letter follows:

It seems as though we should make our position in regard to the Typothetae and its activities clear, for our salesmen are constantly questioned as to why we support it and serve on committees.

We do so:

Because the Typothetae members discount their bills, and

Because the Typothetae represents the only concerted educational factor for the improvement of trade conditions.

Because it stands for increased efficiency and study of printing troubles.

Because it is through the allied industries endeavouring to better conditions by establishing uniform prices—by promoting the "one price" system.

Because it is working to cut down the percentage of lost accounts from which every printer suffers, through its credit and collection department, and they are generous with such information as has been collected (if you want to know whether a new customer is a dead beat call up the Typothetae; they can probably tell you).

Because it promotes good fellowship, spreading the knowledge that the other fellow is seldom as black as he is imagined.

Because the cost for membership is so low as to be infinitesimal when the benefits are considered.

Because through the cost system and estimating sessions it is increasing the prosperity of the printing business, on which our prosperity depends.

Because in advocating the purchase of printing in Pittsburg, the purchase of paper in Pittsburg follows.

Because of the better conditions that now exist through things accomplished.

Because of the increasing friendly attitude competitor has for competitor, and for supply houses caused by better understanding of each others' troubles, and the knowledge that we are all one circle necessary to each other's good, and that there must be a community of interest feeling so we may all profitably serve the consumer of printing without friction. Whether the question of our interest in the Typothetae has been stirred up by out-of-town houses we do not know, but we are perfectly frank in saying that a large part of our willingness to subscribe time and money is selfishness, and while you may not feel that you should join the Typothetae, you certainly will see that our position is reasonable and indirectly or directly serves your own best interest too.—*Printing Trade News.*

A GIGANTIC advertising convention has been held in Baltimore, Maryland, U.S.A., which brought about 12,000 men interested in advertising to that town.

THE Postmaster-General announces that he is advised that no copy of a publication registered for transmission at the halfpenny inland newspaper rate is entitled to pass at that rate if it encloses any document which is intended to be used for separate purposes. An almanack comes within this description, but the Postmaster-General has directed that for the present a copy of a newspaper containing an almanack sent at the newspaper rate of postage shall not be surcharged provided that the almanack is in other respects admissible as a supplement.

To Practical Printers.

An excellent opportunity is offered to competent gentleman in old-established Printing Office in a British Colony capable of development.

Half interest may be acquired for £1,200. The incomer would become Managing-Partner with salary of £208 a year with bonus and share of profits. One knowing thoroughly the making of Process Blocks and experienced in the production of a high-class weekly paper preferred.—Address, in confidence, "X.L.N.T.," No. 14110, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

The Judgment in the Miehle Case.

After an interval of several weeks since the hearing of the action brought by Linotype and Machinery, Ltd., against the Miehle Press and Manufacturing Co., of Chicago, and the Miehle Printing Press and Manufacturing Co., Ltd., Lord Justice Swinfen Eady has delivered his judgment, and dismissed both claim and counterclaim. His Lordship finds that the plaintiffs claimed, as the assigns of certain agreements made between the American Miehle Co. and Robert Miehle, on the one hand, and the plaintiffs' predecessors in title, on the other hand, to restrain the defendants from selling Miehle printing presses, or other similar single-cylinder presses, in competition with the plaintiffs in the United Kingdom, and from soliciting the former customers here of the American company, and from competing with the plaintiffs here in respect of an invention relating to the sheet delivery mechanism of printing machines, and from selling machines, not being the goods of the plaintiffs, as Miehle presses, and from otherwise passing off goods not being the plaintiffs' as and for the plaintiffs' goods. The American company counterclaimed for a declaration that, by reason of certain conduct of the plaintiffs, the plaintiffs were not entitled to enforce against such defendants the agreements in question, and also asked for an injunction to restrain the plaintiffs from using the term Miehle in relation to presses not manufactured by the American company, or at all events in relation to presses not within the agreements. A printing press was now being sold in this country the sale of which the plaintiffs contended was contrary to the deed of assignment to them. The defendants disputed that the press was "a similar single-cylinder press" within the meaning of the deed, and if it was, they said that the sale was made by the American company in America, and not within the prohibited territory, and that any re-sale within the prohibited territory was made by the English company, who were an independent company, were not parties to the deed of covenant, and not bound by it or under any restriction whatever. The American company further said that the plaintiffs cannot enforce the deed of covenant against them, as although the plaintiffs might be assigns of the benefit of the covenants, they had rejected the burden and refused or omitted to comply with the provisions of the deed where onerous to them, and had repudiated all liability under it on the ground that they were not parties to the contract and could not, therefore, be made liable in damages to the American company for any breach of it. The first question which arose for decision was whether any and which of the presses dealt with in the evidence were "similar single-cylinder presses" within the agreement. Although they differed in some of the details, the old and new Miehle were practically the same arrangement, and his Lordship accepted Mr. Swinburne's evidence on that point. In his judgment, the new Miehle was "a similar single-cylinder machine" within the meaning of the agreement. The "Perfector" and the two-colour machines were not, in his judgment, single-cylinder machines and were not within the agreement. Although the new model Miehle was within the agreement, the American company said that they were not selling it within the prohibited area; they sold and delivered it at Chicago, and any importation into this country or the colonies was made by the English company, who were not under any restrictive obligation. With regard to the English company, the plaintiffs alleged that it was promoted by the American company and was the mere agent and nominee of the American company; that its operations were conducted by the officers and servants of the American company and for the benefit of that company, and that the promotion of the English company was a fraudulent device of the American company to avoid its obligations to the plaintiffs under the agreements. But although formed in the manner and for the purpose which his Lordship had stated, the English company was not only a separate entity in point of law, but it was not in any sense the agent of the American company, nor had the American company, as distinguished from some of its shareholders, any interest in the English company. It had been proved, with great particularity of detail, that in every instance the sale and delivery by the American company to the English company of Miehle presses took place in America. The result is that a sale within the prohibited territory by the English company is not in law a breach of contract by the American company. It was now necessary, in connection with the other claims in the action and counterclaim, to consider the circumstances which led up to the formation of the English company and the institution of those proceedings. The plaintiffs did not confine their sale of Miehle presses to the United Kingdom or the colonies, but sold on the Continent, and there came into competition with the American company, which also sold there. The presses sold by the plaintiffs on the Continent were not, however, described as Miehle presses, but as "L. and M." presses (that is, "Linotype and Machinery" presses), or as "L. and M. presses, new model." They were, in all material respects, identical with the Miehle presses sold by the plaintiffs in this country, but there were some slight marks of difference. The American company complained of this invasion of their territory, and of the competition, but down to this point the plaintiffs were not doing any wrong. The plaintiffs and their predecessors were entitled to make these Miehle presses, and there was not any provision in any agreement, either expressed or, in his opinion, implied, preventing the plaintiffs or their predecessors from selling on the Continent the presses manufactured by them. Whether they could have sold them there as "Miehle presses" was another matter, as they had never claimed the right to do so, nor had they done so, except perhaps in one instance by accident. But upon acquiring the British patent for the sheet delivery mechanism the Printing Machinery Co., Ltd., covenanted with the American company not to sell the inventions which were the subject of the patent, and not to enter into any competition with the American company in respect thereof within the territory of the American company. This territory for this purpose included the Continent of Europe and Argentina. It was not now disputed that this covenant against competition was not limited in point of time to the life of the patent. Notwithstanding this covenant, and in breach of it, the plaintiffs, after December 17th, 1910, when the British patent expired, began to sell on the Continent the presses, with the complete alternate delivery, the subject of the patent of 1896, or of the improvement upon it, No. 13,449 of 1903. Their view then was that, as the foreign patents had expired, they could sell on the Continent without infringing patent rights, and that they had nothing to fear from the covenant, as it was entered into by their predecessors and not by them, and they were not bound by it. Moreover, their view also seemed to have been that the plaintiff company had succeeded to all the separate rights of its predecessors, that its predecessor, the Linotype Company, Ltd., had not entered into any covenant restricting its trading on the Continent, whatever the Printing Machinery Company might have done, and that the plaintiffs, as successors of the Linotype Company, Ltd., could still do whatever that company might have done. Acting upon this view, the plaintiffs sold on the Continent, and elsewhere within the American company's territory, presses with the delivery mechanism of the 1896 patent or the 1903 improvement. The position between the Printing Machinery Co. and the plaintiffs was that the plaintiffs had covenanted with the Printing Machinery Co. that they would observe all obligations imposed upon the Printing Machinery Co. by (*inter alia*) the contracts between the American company and the Printing Machinery Co. Under the agreement between the plaintiffs and the Printing Machinery Co. the latter received a fixed rent and half profits; so that the Printing Machinery Co., who were not themselves doing anything to break their contract, and therefore not incurring any liability, received half profits accruing from the breach of the contract by the plaintiffs; while the plaintiffs could not be sued by the American company, as there was no contract between them. It was under these circumstances that the English company came to be formed, so that the advantage of sales being made in breach of contract by a non-contracting party might not be limited to the plaintiffs. In his Lordship's opinion, that conduct of the plaintiffs was sufficient to debar them in that action from obtaining any injunction to restrain the American company from acting in breach of the agreement, if they were otherwise entitled to an injunction. Another part of the plaintiffs' claim was for an injunction to restrain the defendants from selling or offering for sale Miehle presses or other single cylinder presses (not being the goods of the plaintiffs) as or for such goods by the use of the said name or otherwise. He had already disposed of so much of that claim, as related to "Perfector" or two-colour machines, as they were not single-cylinder machines, and, therefore, not within the agreement. With regard to the new model Miehle, which he had decided was a single-cylinder press within the meaning of the agreement, it was clear that the English company had never offered, or claimed to offer, any single-cylinder two-revolution machine as a "Miehle" press. On the question of passing off, the plaintiffs' evidence wholly fails. The result was that the plaintiffs had failed to establish any title to relief against either the American company or the English company, and the action was dismissed. Then there was a counterclaim by the American company, in which they allege that the machine, which they knew as the new model Miehle, was a new and distinct type, and that the plaintiffs were not entitled to apply the term "Miehle" to presses of the new type which were not of the manufacture of the American company, and they asked for an injunction to restrain the plaintiffs from using the term "Miehle" in relation to presses not manufactured by the American company. He had already decided that the new model Miehle was a similar single-cylinder press within the agreement of March 2nd, 1899. That agreement was part of one bargain, under which the American company on parting with the patent of 1896 received £20,000 in cash and shares. The American company did not offer to return the £20,000. In his judgment the grant to the Printing Machinery Co., Ltd., of the sole and exclusive right to manufacture and sell the Miehle press, as aforesaid, remains in full force, and has not become void, and the plaintiffs were entitled to apply the term "Miehle press" to the new model Miehle, which was, in fact, being made by the American company at the date of the agreement of 1899. Although the plaintiffs were not entitled to relief in that action, it did not follow that the agreements were not binding between the parties, and might not be enforced with reference to future transactions. The plaintiffs had not shown any intention of repudiating the agreements, so as to release the American company from the same. They acted for a time under a mistaken view of their rights and of their legal position. The American company also in his opinion were acting under a mistaken view of their rights in insisting that the plaintiffs were not entitled to sell the "L. and M." machine on the Continent, although without the double delivery. The counterclaim of the American company therefore failed, and was dismissed. He was of opinion that the proper order so far as the American company was concerned was to dismiss both action and counterclaim without costs. There remained the question of the costs of the English company. Under all the circumstances of the case, he was satisfied that justice would be done by dismissing the action against the English company also without costs.

Five Years' Imports of Printed

BOOKS.

The following figures show the imports of printed books into the United Kingdom during 1912, compared with 1908, five years previous:—

	1908.	1912.
	£	£
Germany	104,454	89,843
Netherlands	8,963	26,796
Belgium	8,258	16,872
France	54,227	85,671
Switzerland	1,410	2,974
Austria	2,940	1,166
U.S.A.	129,500	187,403
Other Foreign Countries	6,700	7,534
Totals...	316,452	418,259
British India	1,854	2,047
Australia	4,467	2,194
Other British Possessions	2,024	3,621
	324,797	428,121

The exports of printed books and other printed matter reached £1,175,076 to foreign countries in 1912, compared with £780,916 in 1908; and £1,607,470 to British Possessions, compared with £1,236,996 in 1908—a total of £2,782,546, as against £2,017,912 in 1908.

A NEW material to take the place of the wax paper commonly used in the preparation of circular matter, is now being introduced on the American market. It is of fibrous construction, and after being moistened is placed in a typewriter and written on without the intervention of the ribbon. The stencil thus made is ready to put on the cylinder of a duplicator. The stencil can be used a number of times.

Picture Post Cards

The high standard of Messrs. Raphael Tuck and Sons' card publications is more than maintained in their latest issues. "Fire in the Forest" is the title of a remarkably well produced series of "Oilettes," a glance at which immediately transports one

into the mystery and weirdness of the blazing forest fire. "Horses' Heads," by Hilda Walker, is an exceedingly clever series. "Among the Heather" in the Sweet Nature series effectively depicts the purple beauties of the heathered moorland. Another pretty packet in the Sweet Nature series is called "The Rosary," and will delight garden lovers

and all who worship the Queen of Flowers. "Forget-me-nots" is a highly artistic series of studies of these pretty little flowers in vases. In the Photographic Connoisseur series "In Maiden Meditation Lost" is the title of a beautiful and expressive set of studies of draped ladies' figures, and "Queen of Roses" is an exquisite dainty hand-coloured "Real Photograph" series of figure studies, the colouring being exceedingly soft and pleasant.

EPITOME OF NEW PATENTS.

Copyright Compilation for the BRITISH AND COLONIAL PRINTER AND STATIONER. Further information concerning the following Patents may be obtained by Subscribers upon application to the Editor. Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be Endorsed "PATENT DEPARTMENT," Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 5s, Shoe-lane, London. Telegrams:—"STONHILL, London."

The Editor does not necessarily endorse the statements contained in the following abstract of specifications, which are condensed from official documents. He holds himself responsible only for the erudition and explanation which is considered desirable in regard to certain of the Patents.

4,622 (1911)—**Improvements in Printing Presses.**—SAMUEL EDWARD DITTMAN (America). Accepted July 20th, 1911.

Relates to mechanism for raising or lowering the cylinder of cylinder printing presses, and to the cylinder tripping means for preventing the operation of such mechanism at the option of the pressman when it is desired to have the form pass the cylinder during the impression strike without contacting therewith. The primary object of the invention is an improvement for the use of a single cam on one side of the press, rigidly connected to a lifting device on the other side, in that form of presses in which the space below the bed is completely or substantially occupied by other mechanism. An improved cylinder-tripping mechanism, efficient and simple in construction and operation, is another object.

7,193 (1911).—**Improvements in Machines for Composing and Casting Lines of Type.**—FRANZ SCHIMMAL (France). Accepted June 8th, 1911.

This invention provides an arrangement by means of which supplementary matrices, each bearing several characters, are automatically brought into the required position in the line carrier by means of the keyboard of the machine. The compositor has only to drop the required matrix into the machine without troubling about the position it may be in, and then to strike one of the finger pieces of the keyboard in order to automatically bring the matrix into position. In this case the finger pieces of the keyboard are marked with double indications or signs corresponding respectively to the ordinary characters and to the supplementary characters.

22,114 (1910.)—**Improvements in or relating to Type Line Casting Machines.**—DAVID PETRI PALMEDO (America). Accepted April 27th, 1911.

Relates to moulds adapted for use in line casting machines in connection with an assembled line of matrices for casting type lines. The object of the invention is to provide an improved mould in which may be produced hollow type bars. A recess is provided in the rear face of the mould, into which a laterally extended tail piece of the core fits and is secured, the rear face of the core and its tail-piece being in the same plane with the rear face of the mould.

2,640 (1911).—**Improvements in or relating to Printing Machines.**—BENNO KENECHT (Germany). Accepted June 8th, 1911.

Relates to the class of machine capable of producing print similar to typewritten matter, in which individual lines of type, carried by suitable type carrier frames, are automatically and periodically fed to the form, thereby enabling circulars or like matter with uniform type in the text but with different type for the headings or other parts to be easily printed. The invention more particularly relates to that class of printing machines in which an impression roller is moved to an fro over a flat type surface, and its special object is to provide means whereby the known automatically and periodically feeding of the invidual lines of type to the form can be effected during the backward and forward movement of the impression roller over the type surface, whereby the number of prints with varying text to be produced, and consequently the efficiency of the machine are considerably increased.

The British Empire Trade Mark
PROPOSAL.

The critics of the policy of the British Empire Trade Mark Association, whose objections were referred to in our last issue, have been replied to in a letter to the Press by the hon. secretary of that body (Mr. C. Freeman Murray). In the course of his letter he repudiates the statement that "the Association's inspectors are to visit works and manufactories in order to ascertain the proportion of purely British ingredients contained in any goods intended to bear the trade mark." In a circular issued by him as hon. secretary of the Association to each member of the Provisional Council, the following paragraph occurred:—"It has never been contemplated, as has been suggested in some quarters, that representatives of the Association should be appointed to inspect goods in the course of manufacture. A fraudulent declaration of origin on the part of a manufacturer or merchant using the mark would render him liable to very serious penalties. It must also be remembered that licences will only be granted to manufacturers or merchants under the regulations of the Association." The objects of the Association are:—(1) To denote goods manufactured or produced within the Empire; (2) to enable the public to buy British goods and to support British industries and British labour; (3) to prevent the sale of foreign goods as British; (4) to provide a remedy for excessive unemployment; and (5) to develop the Empire's trade and thus to promote closer union between the Mother Country and the Dominions beyond the Seas.

Application in Technical Education.

In technical education, as in most other things (says the *Dublin Typographia*), results can only be obtained by following and sticking to it closely until doing so becomes a habit. An interest will then be awakened that was not previously known, and that interest will continue to grow as it is fed. To the compositor the poster on the hoarding become something more than a mere advertisement sheet, and he finds himself criticising or approving (possibly both) and, maybe, mentally rearranging it.

Having gone so far, he will not wish to turn back, but will be eager to go on. This will lead on to designing and planning work to be set up, to the study of type faces, of harmony, balance, proportion, colour combination, and all that enters into good printing. No longer a mechanic working in a mechanical way, he has become an art-craftsman, desiring to know the why and wherefore of everything which he does: a state of mind in which work becomes a pleasure, and no longer a necessary drudgery.

This applies with equal force to all branches, and indeed to all trades. The machine man (letterpress or litho) finds his interest not confined to the putting of ink on paper: he becomes inquisitive as to the making of the paper and ink, and the different things that affect them in working; he gets curious about makes of machines that he may have been previously unfamiliar with, and wants to know more of process blocks, or litho stones and plates, and other surfaces from which printing is done and the methods of using them; the conditions that affect inks, rollers, and paper also claim attention, and these alone will provide abundant material for the enquiring mind.

The extended outlook here suggested could be continued indefinitely, but sufficient has been mentioned to show the way in which application will awaken or increase interest in one's work, and this will no doubt be readily recognised by those who have passed through the earlier stages of technical education, and have discovered what a large field there is for prospecting in.

Retail Newsagents' Conference.

On Monday the annual conference of the United Kingdom Federation of Retail Newsagents, Booksellers and Stationers, was held at Liverpool. The annual report stated that since the Federation was formed five years ago, 56 branches had been formed, and there were now over 3,000 members. Among important matters dealt with last year were the newsagents' Christmas Day holiday, which had been successfully achieved, and the question of the jury system, on which representations had been made to the Royal Commission in favour of the payment of jurymen engaged in small trades. Mr. A. H. Herries, of Newcastle-on-Tyne, was unanimously elected president for the ensuing year.

In returning thanks the new president said he highly appreciated the honour. As busy business men they all knew that the days of individual effort were past and gone. Local newsagents associations in various towns in the country were organising to their mutual advantage and protection, and thus it was now necessary for their trade to have a federation for their common aims and objects. The signs of the times were that the business they were interested in would probably assert itself as a business in demanding fair dealing from those who supplied the material for their business. It was necessary for newspaper combines and organisations which were going on in the country to be met by organisations on the agents' part. No doubt their federation had grown rapidly during the past year, and with more practical help and sympathy it was bound to grow stronger as the country was ripe for linking up all associations into one great ideal, a really united United Kingdom Federation.

A discussion took place on the Betting Inducements Bill, and the following resolution was introduced by Norwich: "That the Federation strongly opposes the Betting Inducements Bill, believing that whilst it would fail in its avowed object to stop gambling, it would cause series loss to a large number of small traders."

Mr. Fred Easton, secretary, pointed out that the Bill, if passed, would vitally affect their trade, as, among other things, it sought to make the newsagent responsible for the circulation of printed matter containing betting announcements. He could not possibly pretend to examine for such announcements all the newspapers that passed through his hands. He suggested that if circulation were to be an offence, the Postmaster-General and his staff throughout the country would be liable for announcements going through the post. The resolution was carried.

At the close of the sitting the delegates were entertained at the Town Hall by the Lord Mayor of Liverpool.

TRADE WITH CANADA. — Mr. Charles F. Roland, industrial commissioner in Winnipeg, says that last year Canada imported over £120,000,000 worth of manufactured goods, buying over two-thirds from the United States. This he attributes to the well-organised service of 76 United States Consular agents now operating in Canada. "British manufacturers," he says, "must adopt a more progressive policy, maintain warehouse stocks here, adopt Canadian currency in their advertisements and catalogues, and advocate the appointment of Government agencies in every Canadian trade centre."

THE late Mr. John Bass, for many years connected with the business of Waterlow and Sons, Ltd., has left estate of the value of £273,451.

Digitized by Google

Trade Notes.

DURING 1911 the United Kingdom imported printers' ink of the value of £15,557.

THE death is announced of Mr. George Grandison Millar, of the firm of Millar and Lang, printers and Christmas card manufacturers, Glasgow.

ON and after the 9th inst. the well-known theatrical paper, the *Era*, will be published on Wednesdays, and the price will be reduced from sixpence to one penny. There will be no alteration in size.

ACCORDING to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, June 27th; the corresponding week in 1912 showed five.

THE late Mr. A. H. Harman, of Haslemere, the founder of the Ilford Photographic Plate Co., and one of the pioneers of the photographic dry plate at popular prices, has left estate of the value of £333,739 gross.

THE death is announced at Bloemfontein of Mr. Frank Blake, one of the best-known of South African journalists. Mr. Blake was for some time a writer on the *Standard*. In 1902 he assisted in founding the *Rand Daily Mail*, and in 1905 he became editor of the *Bloemfontein Post*.

THE Secretaries' Association, Ltd., 70A, Basinghall-street, E.C., has issued in book form "Verbatim Reports of Lectures, Session 1912-13," in which a number of interesting addresses on matters of importance to all holding secretarial positions are reprinted in a handy form. The book costs one shilling net.

WE regret to record the death of Mr. Edward Daniel Joseph Wilson, for many years one of the principal leader-writers of the *Times*. Mr. Wilson died on Saturday, after a lingering illness, at his home in Camberwell. He was a native of Ballycrana, Middleton, County Cork, where he was born in 1844.

THE Circulation Department of United Newspapers, Ltd. (*Lloyd's News* and the *Daily Chronicle*, etc.), held their annual dinner last Friday night, at Anderton's Hotel, Fleet-street, E.C., when Mr. J. H. Parham, circulation manager, occupied the chair, and members of the staff were present from all over the country and enjoyed a pleasant evening.

NEWSPAPERS BY AEROPLANE. — Last week successful cross-Channel flights were made by Mr. Grahame-White and M. Guilbert, carrying copies of *Le Matin* for presentation to M. Poincaré in London. A splendid non-stop flight was made to Hendon, passing over Dover heights at noon, and reaching the aerodrome at 2.30. On arrival at Hendon a motor car delivered the papers to the French President at York House.

THE "Lloyd" Memorial Home at Deal was visited on Saturday by Countess Bathurst and a party from London, who journeyed down for the purpose of opening two beds recently subscribed by the several staffs of the *Morning Post*. The Countess, who was accompanied by Earl Bathurst and the Hon. Lancelot Bathurst, was received by a number of the committee of the Home, and conducted on a tour of inspection over the institution and grounds.

TENDERS ACCEPTED.— For supply of books, stationery and other school materials, for the Colchester Education Committee: Philip and Tacey, Ltd.—For printing, stationery and books, for the Holland County Council (Lincs.): T. Wing, Boston, stationery; Lincs. Printing Co., Boston, printing.—For printing a catalogue of books in the Kirkdale Branch Library, for the Corporation of Liverpool: Lyceum Press, Hanover-street, Liverpool (recommended for acceptance).

WE learn with regret that one of our oldest contemporaries, the *Press News*, has been discontinued, after an existence of nearly half-a-century. With the exception of the *Printers' Register* (which has just completed its fiftieth year), the *Press News* was the oldest British periodical appealing directly to the printing trades, having been started at the commencement of 1866 by the late Mr. Wm. Dorrington. Like the *Printers' Register*, it has always been issued in the size decided upon at the start, but the date of publication, at first in the middle of the month, has been for many years the 28th. The disappearance of this familiar blue-paper covered journal, which has been among our exchanges ever since the start of the *British and Colonial Printer and Stationer*, will leave a gap that it will be difficult to fill.

MR. ROBERT M'CLURE, "Ye Auld Buik Shop," Glasgow, who sent a copy of "Mary, Queen of Scots, and the Prince, Her Son," transcribed from a contemporary Venetian manuscript in Latin, to the French President, has received a letter of thanks. Mr. A. J. Balfour and Mr. Bonar Law have also accepted copies.

M. HENRI ROCHEFORT, the notorious French politician and journalist, has died at Aix-les-Bains at the age of 83 years. M. Rochefort acquired political fame as the editor of the *Lanterne*, in which he advocated advanced revolutionary views, and smote Governments hip and thigh. He was often imprisoned, and was once sent to New Caledonia, but managed to escape from that island. In his periods of compulsory exile from France M. Rochefort lived for a considerable time in London.

THE staff of the house of Cassell celebrate their annual wayzgoose on Saturday, July 12th, when they journey by special train from Liverpool-street-station to Clacton-on-sea. Mr. Arthur Spurgeon, J.P., the general manager, has kindly promised to preside at the dinner, and Mr. J. Hugh Edwards, M.P., has expressed his intention of being present. The trade are notified that the premises at La Belle Sauvage will be closed on that date and that delivery of weeklies usually supplied on Saturdays can be obtained on Friday, 11th inst., between 3 and 5 p.m.

A NEW issue of stamps made its appearance on Monday. For their latest 2s. 6d., 5s., 10s., and £1 stamps the Board of Inland Revenue have reverted to the old process of line engraving, as used in the preparation of the once familiar dark red Victorian issue, discarded so long ago as 1878. Compared with the surface printing method in vogue in connection with the lower value stamps, the older process enables the engraver to deal more justly with the artist. The stamps, which are rectangular in shape, supply an entirely new head of King George, a small profile occupying a medallion in the upper left-hand corner of the picture. The design is repeated in the four issues, the half-crown stamp being in brown, the 5s. crimson lake, the 10s. blue, and the £1 green. The artist who made the design was Mr. Bertram Mackennel, A.R.A., and the printing was done by Messrs. Waterlow Bros. and Layton; they are the first that have been printed since 1880, when the surface printing method was adopted.

TENDERS WANTED.—For printing minutes, agenda papers, and other urgent work, general jobwork printing, account books, registers, and general bookbinding, and the supply of stationery, for the Metropolitan Water Board; particulars from the Central Office of the Board, Savoy-court, Strand, W.C. —For the supply of printing for three years from October, 1913, for the Deptford Borough Council; form of tender from the Town Hall, New Cross-road, S.E.—For supplying stationery, books, etc., required for the institutions at Craw-road, Auchentorlie and Riccartsbar, and for the outdoor departments, for one year or three years from August 1st, for the Parish Council of Paisley and Paisley District Lunacy Board; particulars from Mr. J. M. Campbell, Parish Council-chambers, Paisley.—For printing and binding the Parliamentary register, burgess roll and parochial register for the Salford County Borough for one, three or five years, for the Corporation; particulars from the Town Clerk's Office, Town Hall, Salford.—For the supply of books to the schools under the Dumbarton Board; forms of tender from Mr. Alex. Roberts, clerk to the School Board, Dumbarton.—For the supply of school stationery and needlework materials for three years, for the Morley Education Authority; forms of tender from Mr. R. Brown, Education Offices, or the Town Clerk, Morley.

LIABILITY FOR COMPANY PROSPECTUSES.— In the City of London Court, on Thursday last, before his Honour Judge Rentoul, K.C., a claim was made by J. G. Hammond and Co., Ltd., printers, 32, Fleet-street, against Walter F. Trow and Co., chartered accountants, 6a, Bedford-square, to recover the sum of £9 17s. 6d., for printing the prospectus of the Anglo-Oklahama Oil Corporation, Ltd., which it was said was promoted by the Anglo-Tropical Estates Co., Ltd. Mr. L. P. Clay appeared for the plaintiffs, and Mr. Danger for the defendants. Mr. Danger said Mr. Trow acted as secretary of the company in question, and as an officer of the company he was not responsible for the prospectuses, which no doubt were supplied. Evidence was given by the plaintiffs to show that in October an order was given to them to print prospectuses by a representative of the defendant firm, whose name was not known. An invoice was sent to the defendants, to whom credit was given. Mr. Danger said the plaintiffs had sent in an amended invoice to the company itself instead of to the defendants The company had its offices in the defendants' offices. Bull, plaintiffs' cashier, said they never dealt with anybody except the defendants who probably dealt with many companies. Mr. Danger urged there was no case to answer. Mr. Clay contended that as the defendants did not repudiate the invoice sent to them they were liable. Judge Rentoul, K.C., said many people did not repudiate invoices sent to them. Of course it ought to be done, but it did not make a man liable. Somebody sent him some concert tickets, which he regarded as impudent pushing. He took no notice of them, and, in fact, threw them away, but afterwards the man wanted him to pay for them, which of course he did not do. The plaintiffs had made out no case. Judgment for the defendants.

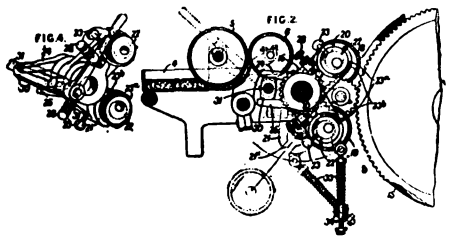
"IF you ask me as an author whose opinion of my books I would rather rest my fortunes upon—yours or your wives'—I tell you frankly it is the opinion of your wives," said Mr. Hall Caine at the dinner of the Associated Booksellers at Torquay the other day. "If you want to know what the great, wide public is going to say about a book (especially a novel), try it on a woman," he added. "I do. I always have done. And when I have had success it has been from women that the first fruit of it has come to me."

THE TRADE BOARDS ACT.—A memorandum was issued on Monday night setting forth what has been done under this Act since it came into operation in January, 1910. Trade Boards have been established in the four industries specified in the Act, one of which is paper box-making, and 16 district trade committees appointed. The fixing of minimum wages in the box-making trade has been undertaken, resulting in the following time rates: Great Britain—females, 3d. per hour, males, 6d. per hour; Ireland—females, 2¾d per hour, males 6d. per hour.

A Ruling Difficulty.

A correspondent asks us why he cannot get ruling ink to work satisfactorily on hand-made papers, and asks for the name of the best substitute for ox-gall. We have submitted this query to an expert who says that with some papers it is almost impossible to get a perfect ruling as the ink, no matter how it is doctored, will not "take" properly but gives broken and beady lines. Ox-gall as it comes from the butcher, such as our correspondent uses, should not be tried, but the prepared ox-gall as sold by any reputable firm of binders' suppliers, and should be used in a proportion of one to two tablespoonfuls of gall to the quart of ink, increasing the quantity if the paper is hard or greasy. The flannel over the pens, too, must be kept perfectly cleaned by being washed in warm water with a little soap. Care must also be taken that the pens are pressing equally or the result will be that some of the lines will be beady or broken. Our correspondent should see that his ink and other materials are of the best, as there is always a likelihood of trouble with inferior plant or materials.

Employer's Liability in the U.S.



A new Employer's Liability Law that has come into effect this month in the State of Massachusetts abolishes the rule of contributory negligence — negligence of fellow-servants and the assumption of risk laws and court rulings. It allows a person half his regular earnings for a maximum of 300 weeks if he is totally disabled for work by any such accident; adds from $4 to $19 a week to his allowance for 100 weeks if he loses both hands, both feet, or 10 per cent. of sight of both eyes; makes this additional allowance for 50 weeks if he loses one hand, one foot, or 10 per cent. of sight of one eye; furnishes him with the added compensation for 25 weeks for the loss of two or more fingers, thumbs or toes, and for 12 weeks for the loss of one finger or one toe; prevents exploitation by exorbitant fee charges by lawyers or doctors under any and all circumstances; exempts such sums of money as may be due him for damages from attachment for debt of any kind or description; sets his half-pay allowance at a minimum of $4 a week and a $10 maximum, with $3,000 limit for total disability; in case he is killed gives his dependent relatives the equivalent of this half-pay for 300 weeks, and if he has no dependent relatives allows $200 for his funeral expenses. This law will, with the exception of domestic servants and farm labourers, cover all cases where accidents occur to wage-workers of both sexes while at work for their respective employers.

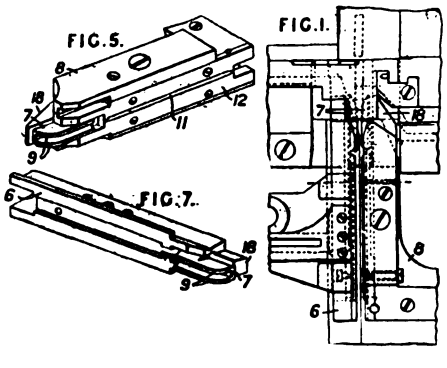
NEW INVENTIONS AND IMPROVEMENTS.

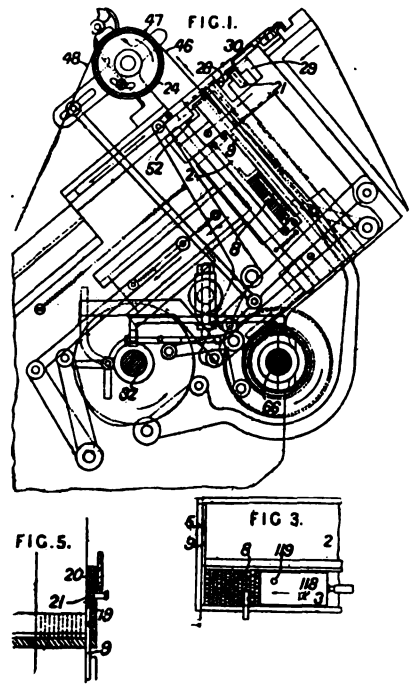
Damping or Inking Apparatus.



Damping or inking apparatus for lithographic or other presses is, under this invention, so constructed that the transfer rollers, which effect the actual damping, etc., are arranged in separate arms pivoted about the axis of the distributing roller, and so arranged that they can be simultaneously tripped out of operative position, but during the normal running of the press they can move independently to and from the plate cylinder without effecting the tripping means. The transfer rollers can also be adjusted while the machine is running; and they can be removed from the press and returned to the same adjusted position relatively to the plate cylinder. As shown, the transfer rolls 18, 19 are mounted in eccentric bearings 22, fitted in circular openings in arms 20, 21 freely mounted on a fixed sleeve 10, in which is mounted a distributer roll driven from the plate cylinder 15, and receiving water, etc., from a pan 4, roll 5, and vibrating ductor roll 6. The bearings 22 are formed with milled edges, so that they can be rotated by hand to adjust the rollers 18, 19, and when so adjusted screws 23 secure the

bearings in position. A stop 23*a* on the bearing 22, and adjustable stops 23*b* secured to the arms 20, 21 enable the bearings to be returned to a given position after they have once been removed. The bearings 22 can be removed from the arms 20, 21 and the journals of the rollers can then be drawn through slots 21× in the arms. The position of the arms 20, 21 is controlled by means of screws 28 in the arms which contact with abutments on levers 24, 25 controlled by a cam 30 on a hand-operated shaft 31. In the position shown in Fig. 2 the rolls 18, 19 are tripped out of contact with the cylinder 15, but by rotating this cam the arms 20, 21 move so as to bring the rollers 18, 19 into operative position. By adjusting the screws 28 the positions of the rolls 18, 19 can be altered during the working of the press. The arm 20 is pressed towards the cylinder by gravity or by gravity and a spring, and the lower arm is preferably pressed towards the cylinder 15 by a rod 34 controlled by a spring 33. The patentee is Mr. W. J. Burch.

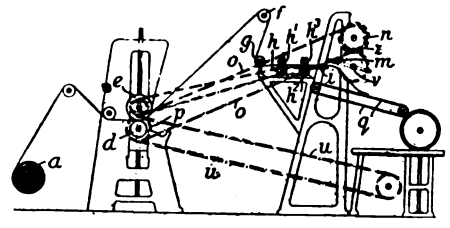
Composing Machines.



Messrs. J. S. Bancroft and M. C. Indahl have patented an invention that relates to means of the kind described in Specification 8,981, 1901, for guiding and supporting successive types as delivered from the type-carrier to the channel in which the line is set up previously to its transfer to the galley. The housing 8, Fig. 1, at one side of the line-channel is grooved to receive a bar 12, Fig. 5, carrying on one face the nick rib 11, the inner face of the bar being grooved to re-

ceive the shank of one of the type-sustaining jaws 7. The housing 6, Figs. 1 and 7, on the opposite side of the line-channel has a recess on its face to receive the shank of the other jaw 7. The jaws are each formed of a straight strip of spring metal having at one end parallel symmetrically disposed type-sustaining ribs 9, and secured at the other end to one of the housings 6, 8. Guards 18 on the housings prevent damage to the jaws 7 by a displaced type.

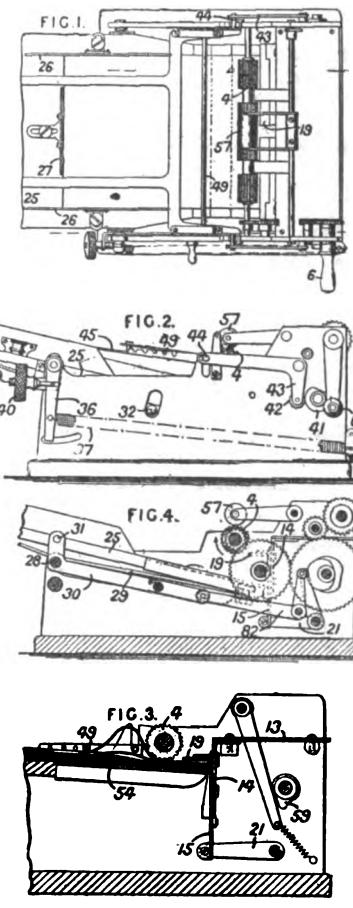
Type Distributing Machines.



Mr. R. Dacheux has patented an invention that relates to means for feeding type from a galley to distributing apparatus. The type 8 is contained in an inclined galley 2, and is pressed by a spring-actuated slide 3, Fig. 3, against the end wall 5 of the galley. The first line is raised by a plate 9, which passes through an opening in the bottom of the galley into a feed channel formed by two bars 19, 20. Fig. 5. A spring-actuated slide 21 pushes up the line in the feed channel until it abuts against a reciprocating feed-bar 24. A recess in the feed-bar engages the first type of

the line and carries it past a spring-pressed pawl 28, which prevents its return, into the first compartment of a feed slide 29 by which the types are successively presented to a series of selecting devices or controllers 30. After the line in the feed channel has been distributed, the plate 9 and the slide 21 are retracted to engage a new line. The slide 21 is connected by a cord 46 to a pulley 47 which is connected by a cord 48 to a spring drum. To prevent the removal of more than one type by the feed bar 24 owing to friction between the types, the upper types of the line are held back by a lever 52 which is pressed against them by a spring during the removal of a type and is then retracted by a cam. The pressure of the slide 21 is also suspended during the removal of a type, by ratchet mechanism connected to the pulley 47 and operated by a cam. The plate 9 and the slide 21 are retracted by cams on a shaft 32, which is driven through a one-revolution clutch from the main shaft 66. When the galley is empty a projection 118 on the slide 3 prevents the closing of the clutch and the operation of the line-separating devices. A pin 119 on the slide 3 engages a fixed stop to prevent the slide from passing over the plate 9. The slide 3 may be employed in known manner to stop the whole of the distributing mechanism. Specification 6,617, 1910, is also referred to.

Rotary Machines.



A rotary machine, the invention of Mr. J. Jacobs, for printing on a web of the type in which there is a frictional drive between the printing and impression rollers, is fitted with a transverse cutting device driven from the printing roller, the web being forwarded from the printing rollers by means of feed rollers driven slightly faster than the printing rollers by gearing from the impression roller

The cut sheets may be fed from the cutting device to a second machine for printing one or both sides of the sheets, and this printing machine may be driven from the printing roller. As shown, the web passes from a roller *a* through a printing roller *d* and impression roller *e*, and then over guide rollers *f g* and through feeding rollers *h h*¹ *h*² *h*³, driven by chain gearing from the impression roller *e*. The web is then cut by a rotary cutter *m* coacting with a fixed knife *i*, the knife *m* being driven by a chain gearing *o p n* and gearing *v z* from the printing roller. The sheets are delivered by a conveyer *q*, or are fed by this to a second printing machine driven by a chain *u* from the printing roller *d*.

Feeding Sheets.

Under an invention by the A. B. Dick Co. sheets are fed from a pivoted spring-supported pile table by a rotating fluted feed roll coacting with a dropping roller above, and acting to withdraw the top sheet from below a flange on a stop and buckle it against a cross bar, the flanged stop and the support being cam operated so as to allow any sheets buckled with the top one to straighten out again. A fluted rubber roller 4, acting in conjunction with a spring supported feed board 25 and rotated in one direction only by gearing from a handle 6, withdraws the top sheet from a flanged stop 19, buckles it towards an adjustable cross rod 49 until the free end comes over the top of the roller, and finally feeds it forward between its upper surface and a top roller 57, which is raised by a cam 59 as the sheet is taken by the machine

to be fed. The feed board 25 is provided with side guides 26 and rear guide 27, and is supported on a rocking frame comprising strips 29 secured to a rod 28 carried from pivots 31 on the side frames by bars, one of which is formed as a bent lever 30. The front end of the feed board is normally pressed up against the feed roll 4 by a spring 37 fixed to the frame and to a lever 36 secured to one of the pivots 31, the tension of the spring being adjustable by means of a nut 40 bearing on a bent over end of the lever 30 engaging a screwed rod 39 secured to the lever 36. The board is tilted by a handle 32 on the lever 30 to admit of a pile of sheets being laid on with their front edges under the flanged stop 19 formed on a vertical spring raised member 15, slidably mounted on a vertical flange 14 of the plate 13. A slight initial buckle is given to the pile of sheets by a curved cross strip 54 secured to the feed board. The rear part of the pile is held down by a presser plate 45 having trunnions 44 at its forward end engaging cam controlled levers 43, and a cross bar 49 is arranged in one of a series of holes or slots in flanges of the presser plate, according to the stiffness of the sheets being fed, to limit the length subjected to buckling. On rotating the feed roll 4, the top sheet is withdrawn from the flanged stop, buckled and carried over the roll to be nipped by the roller 57, at which stage a cam 41 acts through the lever 43 to lift the presser plate with bar 42. The second sheet is partly buckled by the feed roll while the front of the first sheet is carried round, but its complete withdrawal is prevented by means of a cam actuated bell crank 21 acting to depress the flanged stop after the top sheet is withdrawn. Then, as the top sheet is fed forward, the feed board is tilted clear of the feed roll by a cam actuated bell crank 82, and the partly bucked second sheet is straightened out again.

Corporation of Dublin.

SCHOOL OF PRINTING AND BOOK PRODUCTION.

THE Technical Education Committee of the Corporation of Dublin invite applications for the post of CHIEF or PRINCIPAL TEACHER of the proposed SCHOOL OF BOOK PRODUCTION in connection with their School of Printing. The person to be appointed must give evidence that he is competent to select the equipment and direct the operations of every branch of the work of the School, and must have a thorough practical and theoretical knowledge of Photo-Mechanical Process Work, with some training or qualifications in Art in its special application to the Book-producing trades.

The salary offered is £300 for the Session, and the person appointed shall give his whole time to the duties of the post.

The appointment will be subject to the approval of the Corporation of Dublin and the Department of Agriculture and Technical Instruction.

Applications, with copies of Testimonials, will be received by the undersigned not later than the 6th of August, 1913.

L. E. O'CARROLL,
Secretary.

Newspaper Competitions.

FROM the start of the gambling form of newspaper competitions, about twenty years ago, this paper has stedfastly opposed all forms of guessing in which the competitor has to send in with his effort a postal order or other fee, holding that such competitions are but our old friend the sweepstake in another and more seductive form. It is therefore with pleasure that we note that the Executive Council of the National Union of Journalists, which met in Manchester last Saturday, unanimously passed the following resolution:—"The Executive Council of the National Union of Journalists have heard with great satisfaction that it is proposed to introduce a Bill to prohibit guessing competitions in newspapers in which a fee or coupon is made a condition of entry, and they cordially approve the object of the Bill. They believe that these competitions degrade journalism and cause widespread public demoralisation. Their support of the Bill is strengthened by a knowledge of the fact (brought home by a recent prosecution) that where the present competitions are held to offend the laws, the odium of a conviction falls not on those by whom the profits are received, but on working journalists who, except in a technical sense, are in no way responsible." There are at present a number of journals, which, if such competitions were made illegal, could not continue their existence unless they set themselves a much higher literary standard than they have at present, as their circulations depend not on the merit of their reading matter, but upon the gambling propensities of their purchasers.

* * *

Progress of the Cost Movement.

WITH the report that appears in our columns this week of the meeting at Paddington, the Costing Committee of the Federation of Master Printers and Allied Trades have now held three costing congresses in London, and numerous other meetings have been held all over the kingdom. In London they have made three distinct appeals: First it was a national one, and was enthusiastically responded to in a phenomenally large gathering of representatives of the printing industry from all the important centres of the British Isles at Kingsway Hall; secondly, there was the appeal to the managers and overseers, that important body which wields so much influence in the conduct of our larger businesses, and as a sectional meeting it was no whit less successful; and, thirdly, there was the appeal to the small printer of west and north-west London, which also in its way was quite a success, bringing out many interesting points, and like all the gatherings in the provincial towns was characterised by a remarkable awakening of interest and a desire for practical information. Mr. Howard Hazell, that doughty champion of the movement, who tells us he has travelled over 4,000 miles since February expounding the approved cost-finding system in various parts of the country, speaks of the results already achieved in most gratifying terms. Printers are putting the system in on all sides, and many accounts are coming in to the promoters giving high testimony to the advantages of the system. One of the speakers at the Paddington meeting, Mr. S. Sidders, said he had been shown by Mr. Hazell and others how cheaply he had been doing his work, and he decided to put up the cost of his composition on every possible job he could, because he felt every job he did should bear its cost. As a consequence, he said: "I lost in some ways, but my turnover since I started putting up my cost has never gone back; it has gradually gone up since that time, and I am very pleased to say I am very much better off as a result." To achieve an uplifting effect on the industry and to remove the many disabilities that it has suffered from in the past, which has been the prime object of the Costing Committee, the system must become practically universal, and so much being staked on that, the rapid progress that has been made in little more than three months gives great encouragement for the future.

* * *

Last Year's Imports of Paper.

DURING 1912 the total value of paper of all kinds, including boards, imported into the United Kingdom from foreign countries was £6,698,813, compared with £6,166,282 in 1911, and £5,566,122 in 1908, whilst the supplies from British possessions reached £535,624, an increase of £127,356 over 1911, and £303,081 over 1908. Analysing the details of the imports we find that "paper for printing or writing on reels," which increased to £1,451,005 last year from all sources is still very extensively purchased from Scandinavia, although a growing competitor is Newfoundland. A noticeable falling off is discernible in the shipments from the United States, France, the Netherlands, Germany, and Russia, when compared with 1911. On the other hand Norway, Belgium, Austria-Hungary, and of course Sweden, show considerable improvement on the year's trading. In "paper not on reels," which is valued at £836,468, our supplies increased during 1912 from the U.S.A., Austria-Hungary, France, the Netherlands, Norway, and Russia, whilst

Digitized by Google

a decrease is observed in the imports from Sweden, Germany, Belgium and Japan. Paper under this heading, however, is gradually dwindling down in the imports, the difference between 1908 and last year showing a decrease equal to £657,075, which, perhaps to some extent, is due to re-classification. Hangings last year were valued at £144,831 compared with £142,402 in 1911, and £173,819 in 1908, the only country showing any considerable improvement in supplying the British market during the past five years being Belgium. Printed or coated papers show a declining importation, with the exception of France, and a slight increase in Belgian trade; there was an all-round decrease comparing 1912 with 1911—the figures being £273,962 and £292,960 respectively, as against £416,483 in 1908. Packing and wrappings have made great headway during the last five years, the values increasing from £1,648,479 in 1908 to £2,586,027 last year, the highest yet reached. Sweden, Germany, Norway, Russia, the Netherlands and Belgium have greatly improved their trade with this country.

* * *

The Merchandise Marks Acts.

WITH a view to the giving of greater facilities to manufacturers and traders to put a stop to the producing and selling of goods under false trade descriptions, the Board of Trade has issued new regulations in connection with the carrying out of the Merchandise Marks Act, and these regulations, having received the approval of the Associated Chambers of Commerce, are to be put in force at an early date. Under the new procedure the Board of Trade will itself initiate prosecutions in cases which affect the interests of the country or a section of the community or a trade. In order to cause the Board to bring an action it will be necessary for an aggrieved person to supply a statement in writing of the nature and circumstances of the case. The Board has also framed rules to protect itself in certain circumstances, and may ask an applicant to provide security for costs. It will also decline to carry through a prosecution where there appears to be no prospect of its being successful.

ON Saturday last the *Halifax Evening Courier* celebrated its majority, it being 21 years that day since the *Courier* was born. In noticing the event, the proprietors draw attention to the fact that on the staff are five men who together have rendered an aggregate of 184 years' service in the office. One has a record of over 50 years, two over 40, two over 30, and 14 over 20. The veteran, Mr. Hiram Pickles, of Ovenden, who began work on the staff in March, 1857, is still in the firm's employ, and Mr. John H. Walsh, who has the control of the composing department, has the second longest record of 45 years.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.

WEDNESDAY, July 2nd, 1913.

AS the end of the month approached the demand for money grew in strength, but there was plenty of credit owing to the large borrowings from the Bank of England. On Monday, the last day of the month, there was a considerable displacement of cash, calls and dividends being heavy, and yesterday being the 1st of July disbursements were very large. Credit was more plentiful, and there being a falling-off in the demand, rates were easier, and the amount falling due at the Bank was comfortably paid. Discount rates have somewhat weakened. Bullion movements for the week have resulted in a net influx to date of £410,000. In stock markets the arrangement of the settlement passed without further trouble, but the uncertainty of Balkan affairs still depresses markets. Consols have receded since last week, the quotations last night being 72⅞ to 73 for money, and 73 1/16 to 73 3/16 for the account. Other high-class stocks are steady at previous levels.

A firm tone has been maintained in the miscellaneous industrial market this week but business has been on a restricted scale and yesterday dullness set in. In the section relating to paper and print business has been very limited, and there have been several downward movements in our list of shares, and only one upward. Associated Newspapers Ord. have fallen 6d. to 22s. 6d.—23s. 6d.; Cassell and Co. are down ¼ to 4—5; Waterlow and Sons Def. Ord. have given way ½ to 25—27, while Weldons Ord. have risen 3/32 to 1 7/32—1 11/32. Business has been done during the past seven days in Associated Newspapers Pref. at 18s. 9d.; in Cassell and Co. at acc. 8 1s. 10½.; in *Country Life* Pref. at acc. 17s. 9d.; in John Dickinson and Co. 2nd Pref. at 101½; in Ilford Pref. at 19s. 3d. and 17s. 9d.; in International Linotype at acc. 75½; in Linotype and Machinery A Deb. at acc. 57½; in Edward Lloyd Pref. at 21s.; in Mansell, Hunt, Catty and Co. Ord. at acc. 38s. 9d.; in Spicer Bros. Pref. at acc. 9¼; in Raphael Tuck and Sons Pref. at 5 3/8, and in the Ord. at 18s. 6d.; in Waterlow and Sons Def. Ord. at 25⅛; and in Weldons Ord. at acc. 31s. 9d. and 31s. 10½d.

DIVIDENDS AND REPORTS.

KELLY'S DIRECTORIES, LTD.—At the annual meeting of the company, held last week, Mr. Festus Kelly, the chairman of the company, in the course of his remarks said:—There is very little in the balance-sheet calling for attention. The balance standing to the credit of the profit and loss account shows an increase as compared with the previous year of £7,600 odd. That is at present our record figure, and represents an immense labour on something over 100 annual publications. We are proposing to increase our distribution by 1 per cent. increase of dividend and 2s. in the shape of bonus. Therefore I propose:—"That the directors be authorised to pay a dividend of 5 per cent. on the cumulative preference shares for the three months ended March 31st, 1913, and an interim dividend on the same shares of 5 per cent. for the three months ending June 30th. 1913; and, further, that the directors be authorised to pay a dividend of 15s. per share on the ordinary shares, making with the interim dividend of 5s. per share paid on December 31st, 1912, a dividend of 10 per cent. for the year, and to pay a bonus of 5s. per share on the ordinary shares; that £7,000 be placed to the reserve, leaving a sum of £17,034 0s. 3d. to be carried forward. Mr. J. Richards Kelly seconded the resolution, which was carried unanimously.

LANSTON MONOTYPE.—The directors of the Lanston Monotype Corporation, Ltd., have resolved to pay an interim dividend for the half-year ended March 31st last of 2½ per cent.

RAPHAEL TUCK AND SONS.—The directors of Raphael Tuck and Sons, Ltd., recommend a final dividend at the rate of 7 per cent. per annum for the six months ended April 30th last, making, with the interim dividend already paid, 6 per cent. for the year. £10,000 is transferred to reserve and £5,502 remains to be carried forward.

EDINBURGH EVENING NEWS.—The report of the Edinburgh Evening News, Ltd., for the year ended May 31st last, states that the profits for the year were £14,669, to which must be added balance brought forward £711; together, £15,380. The directors recommend a dividend on the ordinary shares of 6 per cent., leaving to be carried forward £4,380. The directors report another satisfactory year's business. An increased revenue has, however, been neutralised by increased expediture, principally due to the larger papers which it has been found necessary to publish. The acquisition of the adjoining properties at the corner of Cockburn-street and Market-street has now been completed. In order to meet some of the necessary expenditure on alterations, the directors recommend that after paying the preference dividend and restricting the ordinary dividend to 6 per cent., the balance of £4,380 be carried forward.

HEYWOOD AND CO., LTD.—The 25th annual meeting of Heywood and Co., Ltd., was held on Monday, Mr. Walter Judd presiding. The chairman congratulated the shareholders on the increased prosperity, the balance-sheet presented being the most satisfactory one since the establishment of the company. He stated that their progress had been slow but certain, and considered their success was due to "their infinite capacity for taking pains." He further stated that they had had a very distinguished honour conferred upon them, having been asked by the general council of the Pharmaceutical Society to publish their great and progressive official publication, namely, the *Pharmaceutical Journal and Pharmacist*, which was established in 1841, and which was certainly one, if not the most, important trade paper in the world. Mr. Heywood congratulated the directors and staff on the marked improvement in the position and the healthy advance which all the publications of the firm appeared to have made.

NEW COMPANIES.

ARTHUR AND CO. (LONDON), LTD.—Registered on June 20th, with a capital of £1,500, in £1 shares, to carry on the business of music publishers, lithographers, printers and general publishers, etc., to acquire the lithograph plates, copyrights, etc., of the business carried on at 12, St. Anne's-chambers, Ludgate-hill, E.C., by A. Wilcock, as "Arthur and Co." The subscribers are A. Wilcock and H. Wilcock. Private company. The first directors are not named.

"LIMIT" PRINTING AND PUBLISHING CO., LTD.—Registered on June 23rd, with a capital of £2,000, in 1s. shares, to carry on the business indicated by the title. The subscribers are C. Lapworth and George Lansbury. Private company. The number of directors is not to be less than two nor more than three; the first are not named. Qualification, £1. Registered office, 19, Tudor-street, E.C.

CO-OPERATIVE PATENT ENVELOPE ADVERTISING CO., LTD.—Registered on June 21st, with a capital of £10,000, in 9,000 preferred participating shares of £4 each and 20,000 founders' shares of 1s. each, to carry on the business indicated by the title. The subscribers are W. A. Gaedertz and G. Stephens. Private company. The subscribers are to appoint the first directors. Qualification one share. Remuneration as fixed by the company. Registered office, 115, High Holborn, W.C.

HEWSAMS, LTD.—Registered on June 24th with a capital of £1,000, in £1 shares, to carry on the business of advertising agents and contractors, etc. The subscribers are D. Roseway, A. H. Smith and C. A. Samuels. Private company. The number of directors is to be three. The first are D. Roseway (chairman), A. H. Smith and C. A. Samuels (all permanent). Registered office, Berwick House, 139, Oxford-street, W.

VACUUM TRANSFER SYNDICATE, LTD.—Registered on June 25th, with a capital £15,000, in £1 shares to carry on the business of printers and lithographers, etc. The subscribers are G. Rowson and H. M. Cordrey. Private company. The number of directors is not to be less than two nor more than five. The subscribers are to appoint the first.

BROMLEY AND WEST KENT NEWSPAPER CO., LTD.—Registered on June 26th, with a capital of £2,000, in £1 shares, to take over the copyrights of the publications known as the *Bromley Chronicle*, the *Beckenham Chronicle*, the *Bromley and West Kent Telegraph*, the *Bromley Record*, and the "Bromley Local Time-Table," or some of them, together with the printing business attached thereto, and to adopt an agreement with C. E. J. Porter. The subscribers are E. Beer, W. R. Richardson, A. Wright, F. Griffith, J. Veness, C. E. J. Porter, and A. F. Walbrook. Minimum cash subscription, 100 shares. The first directors (to be not less than two nor more than five) are to be appointed by the signatories. Qualification, £50.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

SUSSEX PUBLISHING CO., LTD.—Debenture dated June 16th, 1913, to secure not more than £100, charged on the company's property, present and future, including uncalled capital. Holder: Mrs. K. Monelle, 10, Upper Montague-street, W.

GEORGE CHURCH AND CO., LTD.—Memoranda of satisfaction in full (a) on May 10th, 1913, of first debentures dated April 25th, 1910, securing £2,000, and (b) on April 15th, 1913, of second debentures dated January 22nd, 1909, securing £2,000 have been filed.

P. D. EASTES AND CO., LTD.—Issue on June 9th, 1913, of £250 debentures, part of a series of which particulars have already been filed. A memorandum of satisfaction to the extent of £250, on June 9th, 1913, of debenture dated April 28th, 1909, securing £3,000, has also been filed.

BENN AND CRONIN, LTD.—Issue on June 2nd, 1913, of £75 debentures, part of a series of which particulars have already been filed.

COMPANY NOTICES.

ILLUSTRATED JOURNALS, Ltd.

At a meeting of the company, held at London, on June 9th, the following resolution was passed; and at a subsequent meeting on June 24th, was duly confirmed:—"That the company be wound up voluntarily; and that Mr. Andrew N. D. Smith, of 26, Shaftesbury-avenue, W., be appointed liquidator for the purpose of such winding-up."

CHARLES J. FORWARD and SON, Ltd.

At a meeting of the company, held at London, on June 25th, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily. That Mr. C. H. Dommes be appointed liquidator for the purpose of such winding-up." Notice is given, that a meeting of the creditors of the company will be held at the Chancery-lane Safe Deposit and Offices Co., Ltd., Chancery-lane, W.C., on July 14th.

COMMERCIAL INTELLIGENCE.

ALEXANDER MURRAY, Bookseller and Stationer.

A meeting of the creditors of this debtor, of Aberdeen, was held last week for the purpose of considering the state of affairs in the trust estate. The statement showed liabilities amounting to £5,354 15s. 11d., and assets £2,214 9s. 4d., bringing out a deficiency of £3,140 6s. 7d., sufficient to pay the creditors 8s. 3d. in the £1, subject to realisation and other expenses. It was agreed that the estate be wound up under the trust deed.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

FALKNER, F., G. F., F. and R. N., trading as G. Falkner and Sons, at 170, Deansgate, Manchester and 181, Queen Victoria-street, London, E.C., lithographers and printers. Debts by F., G. F., and R. N. Falkner, who will continue the business under the same style. June 30th.

FENN, V. V., and ROWLES, J., trading as J. Rowles and Co., at 2 and 3, Quay-street, Cardiff, printers and stationers. Debts by V. V. Fenn who will continue the business under the style of V. V. Fenn and Co. June 13th.

DISTRIBUTION OF ASSETS.

IN THE MATTER OF A DEED OF ASSIGNMENT for the benefit of creditors, executed on May 1st by J. Stait, 10, Woodstock-street, London, stationer. Claims by August 11th to J. W. H. Byrne, C.A., 81, Gracechurch-street, E.C., the trustee.

THE BANKRUPTCY ACTS, 1883 AND 1890.

FIRST MEETING AND PUBLIC EXAMINATION.

TIGWELL, G. A., trading as F. W. Tigwell and Co., High-street, Leatherhead, Surrey, stationer, etc. First meeting, July 9th, 11 a.m., at 132, York-road, Westminster-bridge-road, London, S.E. Examination, July 24th, 11 a.m., at the County Court, Scarbrook-road, Croydon.

NOTICE OF DIVIDEND.

SCHLOESSER, F., Gumley Cottage, Kew-green, Surrey, journalist. First and final dividend of 20s. and 4 per cent. interest, July 15th, at the Official Receiver's Offices, 132, York-road, Westminster-bridge-road, London, S.E.

APPLICATIONS FOR DEBTOR'S DISCHARGE.

BIDDULPH, L. S., 10, Hampton Court-road, Hampton Wick, Middlesex, journalist. To be heard July 29th, 10.30 a.m., at the Court House, Kingston.

NOTICE OF RELEASE OF TRUSTEE.

DAVIDSON, J., 78, Station-road, Westcliff-on-Sea, stationer and newsagent. Trustee, C. Mercer, official receiver, 14, Bedford-row, London, W.C. Released January 27th.

It is a great deal easier to get a bad account on the printer's books than to find the way to remove it. Hence, customers should be closely watched in order to prevent such trouble. Taking an order for printing is like lending money, and the security should be safe or the risk be declined.

"Printing: A Treatise on the Art of Typography," fifth (revised) edition. By Chas. T. Jacobi, of the Chiswick Press, examiner to the City and Guilds of London Institute, 1892-7. Small post 8vo., boards, price 7s. 6d. London: G. Bell and Sons, Ltd.

This new issue of an excellent text book, besides being brought up to date, includes the examination papers for the City and Guilds of London Institute up to 1912, and also those for the last three examinations for clerks in H.M. Stationery Office, which are given by the permission of the Controller of that office. The various samples of paper, with the detailed information given in "Printing," should help the student to a much greater knowledge of his craft, and prepare him for any examination work. Illustrations in plenty elucidate the text, and the book will also be found very useful by literary people in obtaining an insight into the technique of printing.

We have been favoured with an advance proof of a Special Supplement that is to be issued with the July number of the *Chamber of Commerce Journal*, entitled "Trade Products of the British Empire," which deals with the exports and imports of almost every product in which trade is done, the products dealt with being those that are already the subject of commerce between the United Kingdom and British Possessions, of which are capable of becoming the subject of such trade. The Supplement is well worth the study of all engaged in business.

"Low's Handbook to the Charities of London, for 1913," is in its 78th year of publication, and contains as preface a very interesting account of the Homes for Working Boys, and the magnificent work they are performing in turning helpless and homeless lads into good citizens. As frontispiece there is a portrait of the Hon. T. H. W. Pelham, C.B., treasurer and hon. secretary, Homes for Working Boys in London. This useful guide gives the objects, date of formation, office, income, expenditure, invested funds, bankers, treasurers and secretaries of over 1,200 charitable institutions, revised according to the latest reports, and is published at one shilling, bound in red cloth.

The Linotype Operator.

The following humorous skit on the Linotype operator appeared in a recent issue of our American contemporary, the *Printing Trade News*:—"The Linotype operator is a low-browed insect which has the disgusting habit of pulling down more real coin of the realm for the amount of labour expended than any other necessary evil in the business. The operator takes a piece of copy, looks at it and pats around a bunch of keys and calls that work, but none of the species has yet been known to refuse to take money for such monkey-doodle business.

"The chief duties of the operator consists of following copy, calling the machinist and turning in overtime. For consistently doing things wrong this particular varmint has no equal. The operator will joyfully follow copy if its own grandmother's name is spelled backwards. From Alpha-avenue to Omega oil, from soup to cigarettes, from e pluribus unum to *vice versa*, if it blows through a window and two miles of sewer the operator will follow copy. The guy who said 'Be sure you are right, then go to it' had the Linotype operator in mind at the time, but the operator will not believe this.

"The one great and only lasting and continuous amusement of the operator is the Linotype machinist. If anything goes wrong it calls the machinist. If it thinks perhaps something might get wayward sometime in the future it calls the machinist. If that patient and long-suffering individual does not respond immediately or sooner, the operator proceeds as follows:—

"Wiggles the lever, looks up the channels and calls the machinist; turns off the light, looks down the channels and calls the machinist; rolls a cigarette and calls the machinist; drops a pig on the keyboard, stirs up the metal and calls the machinist; walks around the chair three times to the right, two times to the left and calls the machinist; says 'Ho, hum,' looks bored and calls the machinist, ad infinitum, et cetera with variations.

"The operator never feels wholly right unless it hands the well-meaning proof-reader at least thirty knocks each eight-hour shift. If it takes a day off the operator tries to run in a few extra kicks when it returns to the job, just to show the proof-reader he isn't being neglected.

"If you ask the operator who Mr. N. Webster was, the operator will roll another cigarette and tell you it thought the gentleman was a tramp printer working around somewhere on the gas belt, and a query on newspaper style will net you merely a stony stare of spissitude.

"Whether it's a wrong fount or a pi line, turned slug or leave-out, transposition or a repeat the innocent operator can never understand why it is at fault, and its one great sorrow is that the proofreader is not compelled to humbly beg its pardon and request permission before marking an error."

The Stimulant of Advertising.

The clever little *Never-Sleep Gazette*, of the Regan Printing House, Chicago, says that:—There is no quality that we are capable of displaying which wins success like the display of persistence. Persistence, after all, is but a link in the chain of perseverance, that tendency which we so much admire. In starting a publicity campaign, the immature seeker after trade may feel satisfied that one or two ill-digested announcements of his wares should be sufficient to attract an army of patrons, but the average faculty is not moved by this means nor are we often moved by the first contact. It is generally necessary to keep pounding, striking blow after blow, in order to gain the prospect's attention, and then we must hammer home the truths that are uttered. It is at this point that the advertiser either fails or wins the race. If he halts he loses, but if he perseveres he may win the prize.

While advertising in one form or another is an ancient institution it is within the last quarter-of-a-century that it has come to be regarded as a science, with its professors and text-books, its schools, cults and what-nots. Distributing the needs of the race represents the world's activity and we can see at a glance that the people who do the bulk of advertising are the ones who have the firm clutch on business.

As a self-evident proposition it may be stated that money invested in promoting the sale of spurious goods or any effort made to palm off inferior grades for standard qualities is wasted. Flamboyant language and extravagant pictures now and then may induce nibbles, but in order to get the big fish hooked, perseverance in the advertising end will be found necessary.

Spreading printing ink on paper is the secure foundation upon which advertising success can be constructed, and while there is an infinite variety of sprouts that in time may grow into the merchantable tree, the most direct and surest return will come from intelligence directed through this channel. Thousands of dollars are wasted every day in efforts put forth to attract attention, the mediums being worthless in their inception, but the investment that will return in multiples of four to one is the one which is put into the printer's products.

Imports of Printing Type in 1912.

The following figures show the imports of printing type into the United Kingdom during 1912, compared with the four previous years:—

	1910. £	1911. £	1912. £
Germany	1,864	3,646	3,201
U.S.A.	5,953	5,525	5,573
Other Foreign Countries ...	752	1,197	842
Total	8,569	10,368	9,616
From British Possessions ...	36	1,325	—
	8,605	11,693	9,616

EXPORTS.

The following were the exports for the same period:—

	1910. £	1911. £	1912. £
France	4,639	5,677	4,368
U.S.A.	3,310	1,744	3,152

Modern Type Faces.

SIR,—Your interesting notice of Herr Spitzenpfeil's "Modern Type Faces" points out how in Greek and Russian type a character having the same form as in Latin type often stands for a different sound. Curiously enough, one of the examples quoted illustrates the presence in the Latin and Gothic alphabets of the same disturbing factor in the case of W, which in German has the sound denoted in English, French, etc., by V. There is no character in Russian having the sound of *English* W. B had already come to have the value of English V in the Greek tongue when Greek missionaries brought their alphabet to the Russians.

May I point out also that the Greek (and Russian) character P sounds R, not U as printed in your notice.

Yours truly,
P. Z. ROUND.

The Working of Cost Systems.

SIR,—The trade journals have published much lately of the installation of cost systems. We have had the first Congress, and generally speaking the trade knows more of their possibilities than formerly.

Many masters know their cost per chargeable hour; the output per hour of their presses, etc., but do they know everything a cost system in thorough working order could tell them? Are not too many managers, overseers, foremen, and clickers allowed to be the actual workers of the Cost System? You have a cost clerk, but he ascertains the cost of jobs as given him by the individuals in whose interests the statements and various results of the system must be "satisfactory." The cost clerk, who is in touch with each employee, knows how these satisfactory results are obtained. For the master to know also he should let no one come between him and his cost clerk, not even a manager, for to him two orders, one with a £10 deficit and one with a £12 surplus is not so satisfactory as two with a £1 surplus, and all the time the cost clerk is under any supervision other than the master there will always be the job which will have a dozen or more hours which could not possibly be chargeable but to clearing or distribution, and if these headings be high that week they must belong to some other order which must of necessity be "fat."

Also let your cost clerk know the results of his work, he can tell you that he takes hours off men's docks and charges them at a rate on work tickets, but he does not know how these rates are arrived at, or the per cent. of non-chargeable time in the composing and other departments, or which of those departments pay their way and which do not.

These statements are in most cases prepared by an old and respected servant (cashier or office manager) who does not care to trouble much about this "new fangled system of ours." What's the good of it? The old one has sufficed for the last (so many) years, etc., etc.

To briefly summarise let your cost clerk work your cost system from A to Z; his added interest will be tenfold if you let him know that he is responsible to you alone for its success and that his "undoctored" returns will not be immediately termed ridiculous by the man who knows, but on investigation be found to afford an additional eye-opener.

ALFRED D. HULL.

Stockton-on-Tees Cost Conference.

The Costing movement is going strong in the North, and yet another conference—marked by keen interest and earnest discussion—has to be chronicled as being held in Stockton on June 24th. Mr. W. H. Thomas (Middlesborough), President of the North Yorkshire and Durham Master Printers' Association, presided, and in his opening remarks he indicated the necessity for following up the work after such meetings, before enthusiasm and interest had evaporated.

He pointed out that there were many indications seen throughout the country that those in the printing industry realised what a great opportunity they now had to place their business on a more sensible footing. Their object that day, he said, was not to determine the prices to be charged nor the profits they were to make, but to learn how to acquire more peace of mind.

It was surely time that all printers adopted a reliable method of ascertaining their cost, so that all customers would be treated alike, and a fair and just profit obtained from every job. He wondered if printers fully realised the impression made in the minds of their customers when they received estimates varying by 50 per cent. for any printing orders they had to place. It was certainly not creditable to the printer. The general adoption of the system devised by the committee would do much to improve the status of the trade, and he strongly urged even those who had an efficient costing system to bring same into line with the one recommended.

Mr. Harry Cooke was the exponent of the system at the afternoon session, and his lucid and practical talk was much appreciated.

Quite a score of questions were fired at him, all framed not in any critical spirit, but with the evident desire to learn how to overcome some real difficulty.

Mr. Salton (Hartlepool) raised the question as to whether it was fair to charge a customer for the time a machine was waiting for the return of proofs, and there was no hesitation either with Mr. Cooke or the audience in deciding that the charge should certainly be made, even if there were no other job ready for the machine and men could be employed elsewhere. The importance of uniformity in this was strongly urged.

Mr. Cooke said that it was twelve years ago since he first took a serious interest in the problems of cost systems, and he envied the printers of the present day who had before them a system ready to hand and willing helpers ready to advise them, as he thought of the time spent in experimenting with various methods of cost finding.

There was no mistaking the hearty appreciation of Mr. Cooke's services by his fellow north countrymen as voiced by Councillor Martin (Mayor of West Hartlepool) and Mr. J. R. Gardner, the energetic secretary of the Alliance.

At the evening session, which was well attended, Mr. A. E. Goodwin, the organising secretary of the Federation Costing Committee, gave a further exposition of the system and explained more fully how it could best be put into operation. He emphasised the main feature of the system, that the hourly rate arrived at in each department covered the *whole* cost, and in that it differed from so many methods he had seen at work in various parts of the country.

Mr. Appleyard (Middlesborough) proposed the resolution approving of the system—strongly recommending it for adoption in the district.

As a member of various local authorities Mr. Appleyard said he had opportunities of seeing tenders for all classes of work. It was rarely that building estimates varied more than 4 per cent. and scarcely ever more than 10 per cent., whilst he read out a list of recent tenders for printing where the differences were 200 per cent. in some cases. There would no doubt be differences even when costing systems were in universal use, but certainly not to that absurd extent.

Mr. Dresser (Darlington), Mr. Salton (West Hartlepool), Mr. T. W. Rapp (Saltburn), Mr. M. Wilson (Thornaby), and Mr. R. Bell (Stockton) also spoke in support of the general adoption of the system.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

That old yarn about George Washington and the cherry tree we now know to have been the invention of some wretched schoolmaster who wanted to make dollars out of printing the sort of book that parents or teachers would buy. Whatever Washington was, he was no prig.

o o o

In place of it I will embody a story which is genuine, and which has a timeliness. Washington was most exact and business-like in his accounts, and in his matter of fact observations. He has left it on record in his diary that it "took his grist mill 55 minutes to grind four pecks of corn." But he was surprised to find that it made five pecks of Indian meal. He has left, too, his observations as to the way his slaves worked; for though in mature life he was broad minded enough to be against slavery, and by his will he freed his own slaves at his death, he accepted slavery early in life as a convention which he found established, and which was approved as quite the proper thing.

o o o

But I am only concerned at the moment with Washington as a costing expert, and as a precisian in money matters generally. As a young man he stood for the Virginia House of Burgesses. It cost him, he tells, £39 6s.; the election necessities including "a hogshead and a barrel of punch, 35 gallons of wine and forty-three of strong beer and cider."

o o o

"Bottled 35 dozen cider," we find entered on another day. You see he was not above details, great-hearted and far-viewed man as we know him to have been. Here he is ordering from London, just after his marriage, "fine flowered lawn aprons, women's white silk hose, and two pairs of satin shoes . . . a fashionable Hatt or Bonnet, kid gloves, kid mitts, knots, breast knots, woven silk lacings (for stays), red minikin pins, and hair pins, perfumed powder, Scotch snuff and Strasburg snuff, and Phillippe shoe buckles."

o o o

I haven't got his price for these, but Mrs. Washington's "salmon-coloured Talby of the enclosed pattern, with satin flowers, to be made in a sack and coat: one cap handkerchief and tucker and ruffles, to be made of Brussels lace or point," were to cost twenty pounds."

o o o

I dwell on these not for their interest as a sidelight on a man and on a period (though they have such interest for me), but because of the implied suggestion not to be above petty and particular pains; nor to be above the study of petty and particular pence, not to say pounds.

o o o

And not to segregate men in our judgment into the ranks of those who can attend to great things but not to small; and those who can attend to small things but not to great. This man could attend to both.

o o o

Washington was not a genius. He was an honest patriotic cautious, very cautious, very determined man. He had few original ideas; read next to no books; apparently ordered none; was in no sense "viewy"; had no "social theories" to speak of; was just a practical man of great personal force and uttermost self-abnegation in the time of trial, though no ascetic nor hermit in time of peace. A great social entertainer in fact.

o o o

His grandfather, his father and he, won the independence of the United States by the careful way they costed their tobacco and cider and other crops or other product.

o o o

Their work enabled Washington to offer at the crisis in 1775 "to raise and subsist a thousand men," and to serve as commander-in-chief without salary; and even make to an outlay of £13,000 during the war to be recouped at the peace signing.

o o o

Washington would have been dismissed or replaced almost certainly during the earlier part of the war but for the fact that if they could have as leader one who was also a substantial man, it would be enormously convenient. I don't say they would have been wise to cashier him; but in the dark days of their early disasters they would probably have done it.

o o o

A word of the printer Franklin's, his great contemporary, fits in here. "I have always thought," said he, "that a man of tolerable abilities may work great changes, and accomplish great affairs among mankind, if he first forms a good plan and makes the execution of that plan his sole study and business."

o o o

Now I mention these things to impress on the memory in a "two-pence coloured" sort of way, to impress with the aid of the personal object lesson of a life, the indirect advantage it will be to many printers to be more successful in their affairs; to have more leisure in which they can set about some work in the interest or for the dignity of the whole craft or some public work.

o o o

There is so much to be done. The way to qualify for such a sphere is to be as Washington was, minutely careful in little things. Franklin, too, was that; and he too could spend freely at the proper time. In the old phrase he too knew how to suffer want and how to abound.

o o o

Mr. Thomas, of Middlesbro' is right. This present movement in printerdom has in it the potency of lifting the whole craft on to a higher plane.

o o o

This is just a thought which I must leave, even while I state it.

o o o

I will end these notes for this week with two passages from a book I've just been dipping into. I cannot write now of its main argument. Its self-revealing title is "Pyschology and Industrial efficiency," by Hugo Münsterberg. (Constable's, 6s.) I find Münsterberg writing on one page:—

The World's Paper Trade Review.

THE RECOGNISED MEDIUM FOR

Papermakers, Wholesale Stationers, Paper Stock Merchants, Mill Furnishers, and Engineers.

FEATURES.

RELIABLE MARKET REPORTS, AND STATISTICS of IMPORTS OF ALL RAW MATERIALS USED IN PAPER MANUFACTURE.

"In the case of a well-known type-setting machine, thousands of which are in daily use, I had the impression that the rapidity of the performances was dependent upon the quickness of the finger reaction. The managers, on the other hand, have found that the most essential condition for speed in the whole work is the ability to retain a large number of words in the memory before they are set.

o o o

"The man who presses the keys rather slowly advances more rapidly than another who moves his fingers quickly, but must make many pauses in order to find his place in the manuscript and to provide himself with new words."

o o o

I select, too, another passage, in which he refers to some observations by Mr. Frederick Winslow Taylor, M.E., Sc.D., past president of the American Society of Mechanical Engineers, and author of "Shop Management" (meaning workshop management) and "The Principles of Scientific Management." Münsterberg writes:—

"Mr. Taylor made a study of the pig iron handlers of the Bethlehem Steel Company. He found that the gang of 75 men was loading on the average about 12½ tons per man per day. When he discussed with various managers the question of what output would be the possible maximum, they agreed that under premium work, piecework or any of the ordinary plans for stimulating the men an output of 18 to 25 tons would be the extreme possibility.

o o o

"Then he proceeded to a systematic study of the fatigue in its relation to the burden, and of the best possible relation between working time and resting time. His first efforts to find formulas were unsuccessful, because he calculated only the actual mechanical energy exerted, and found that some men were tired after exerting energy of ⅛ h.p., while others seemed to be able to produce the energy of ½ h.p. without greater fatigue.

o o o

"But soon he discovered the mistake in his figures. He had considered only the actual movements, and had neglected the period in which the labourer was not moving and was not exerting energy, but in which a weight was pulling his arms and demanding a corresponding muscular effort.

o o o

"As soon as this muscular achievement was taken into account, too, he found that for each particular weight a definite relation exists between the time that a man is under a heavy load and the time of rest.

o o o

"For the usual loads of 90 pounds he found that a first-class labourer must not work more that 43 per cent. of the working day, and must be entirely without load 57 per cent. If the load becomes lighter the relation is changed. If the workman is handling a half pig, weighing 46 pounds, he can be under load 58 per cent. of the day, and only has to rest during 42 per cent.

o o o

"As soon as these figures were experimentally secured Taylor selected fit men, and did not allow them to lift and carry the loads as they pleased, but every movement was exactly prescribed by foremen, who timed exactly the periods of work and rest.

o o o

"If he had simply promised his men a high premium in case they should carry more than the usual 12 tons a day, they would have burdened themsefves as heavily as possible, thus completely exhausting themselves after three or four hours of labour. In spite of such senseless exaggeration of effort in the first hours the total output for the day would have been relatively small.

o o o

"Now the foreman determined exactly when every individual should lift and move the load, and when he should sit quietly. The result was that the men, without greater fatigue, were able to carry 47½ tons a day instead of the 12½ tons. Their wages were increased 60 per cent."

That was good business for the firm. It was some advantage to the men too; always assuming that that statement about no greater fatigue is valid. I doubt it. But for what it's worth there's the record.

FRANK COLEBROOK.

AMERICAN
Imports and Exports of Paper, etc.

The imports of paper, etc., into the United States, and exports therefrom, during the periods mentioned, were of the following values:—

Imports.

April—	1912.	1913.
Printing paper ...	$223,062	$669,095
Paperhangings ...	84,096	100,420
Photographic paper ...	81,484	89,011
Coated paper	48,412	53,940
Wrapping	73,920	63,434
All Other	195,622	223,269
July-April—	**1911-12.**	**1912-13.**
Printing paper ...	$2,043,162	$4,619,162
Paperhangings	723,642	895,402
Photographic paper ...	694,127	1,050,903
Coated paper	449,687	504,023
Wrapping	692,737	612,151
All Other	2,067,384	2,340,618

The following figures show the imports of printing paper into the United States during April from the countries mentioned:—

	Pounds.	Dols.
Belgium	4,719	136
Germany	65,268	2,242
Netherlands	128,139	6,017
Norway	20,270	800
Sweden	50,581	1,632
England	126,898	10,222
Scotland	53,344	2,911
Canada (free)	26,391,477	508,617
Canada (dutiable) ...	7,092,204	136,518
Totals	33,932,900	669,095

Exports.

April—	1912.	1913.
Printing Paper	$214,455	$162,842

July-April—	**1911-12.**	**1912-13.**
Printing Paper	$2,111,253	$2,080,844
Writings and envelopes	966,855	1,102,590
Playing cards	232,047	253,940
Hangings	334,488	397,245
All Other	4,009,263	2,859,946

A Few Trifles.

The men who have made a careful study of the problems of business, says a writer in the *Printing Art*, have found that it is the little things that largely, if not altogether, influence success or failure. The smaller items that are carefully thought out and looked after often save the large losses, while the little neglects often prevent big successes. So here are a few "little things" that the printer might overlook:—

In the composing-room time and money can be saved by having some one person placed in charge of the distribution, and held responsible for filling the right case at the proper time, and reporting to the foreman any lack of sorts through the tying of them up in standing jobs. One good distributor will do more towards keeping an office going than twenty "comps" working under the old plan of an hour a day for "dis," even when all work together for the first hour in the morning or the last at night. He does not have to get ready for it or clean up after; he is always ready, and he becomes expert in the work, and is able to select his lines so that he does very little running from case to case. With a little coaching, one distributor who is "onto his job" will make more money for the boss than is possible with the weekly "clean up" or the spasmodic "all on dis" when copy is shy.

In the press-room it pays better to keep one person gathering up the small jobs and jogging them up than it does to let the pressman or feeder do it, as he or she will soon acquire a skill that makes for speed and less spoilage than when done by each one occasionally. If the pressroom is of any size it pays to run it right up to quitting time and have someone paid to work late and wash all the rollers. The effect of the discipline alone is worth the price.

In the bindery it will pay to have all sheets for pamphlet and booklet work of any kind, except the most ordinary, trimmed so as to fold by edge, though at first you would be apt to decide that folders were cheaper than cutters. Try it, and keep check on the cost, if you doubt it, and care for quality.

In the delivery department it will pay to have a competent inspector and counter, and experienced wrapper, rather than to trust these operations to the tender mercies of the delivery boys or press-room hands who may not be particularly busy.

In the office it pays to have a competent order clerk who is sufficiently familiar with the technicalities of the work to enter orders always in the same terms for the same things so that they may be readily understood in the work-rooms; also a skilful lay-out man who can so arrange the work as to save from 15 to 25 per cent. of the compositor's time over the old haphazard way of sending the copy to the composing-room just as the customer sent it in. And, above all, it will pay you to make frequent trips through your plant and look for places where the systematising of the work will give each individual more of the same operation and less variety of work. Constant repetition gives skill, and the greater the skill the greater the productive output. You can afford to pay for skill if you are wise enough to use it right.

A Uniform Poster Unit Size.

An American Movement.

In the interest of uniformity and for the greater benefit of all concerned, an agreement has been entered into between the Poster Advertising Association and the National Association of Employing Lithographers, whereby a uniform size of posters is established. It has been further agreed that rain-lapped posters will not be accepted unless pasted together in sections.

The agreement reached at a recent conference is important for many reasons. It will conduce greatly to the uniformity of poster advertising structures everywhere in this country. It will obviate the mathematical problems that erewhile have embarrassed the billposter with the various shapes and sizes of posters; it will tend greatly towards simplicity, and it will enable the Poster Advertising Association to carry out its plans for the improvements of the plants along definite lines that will refer to all parts of the country without exception.

Directly the agreement grew out of the panelled system of poster structures that has developed lately. The desire was that each panel should represent the frame for a picture, and that the poster should be centred in it. Hence the necessity for uniformity, not in the size of panels, since that would have been easy enough, but for the size of posters. Indirectly, of course, the need for uniformity has been felt ever since the system of blanking was first adopted. In view of these facts, the members of the two Associations agreed that the standard size of most practical utility and adaptability would be based on the 26 by 39 inch unit work size per sheet.

The conclusions were arrived at on the following grounds:—

"We find that the standard of 26 by 39 printing surface per sheet is now already used by several houses, and is found very practical in many ways, that any other size not in proportion to 1 by 1½ printing surface will not serve."

Recommending the 26 by 39 work size, and 28 by 41 paper size, the joint committee decided that every stand would be in height four times 26 inches, plus the one-inch white margin top and bottom, and in length would be, in an 8-sheet, twice 39, or in a 24-sheet, six times 39, plus in each case the one-inch white margin all around.

Therefore, the size of the various stands would be as follows:—

3-sheet, 106 ins. high by 41 ins. wide,
8-sheet, 106 ins. high by 80 ins. wide,
16-sheet, 106 ins. high by 159 ins. wide,
24-sheet, 106 ins. high by 236 ins. wide,

and so on.

These sizes are recommended for lithography, block and type work.

There will be no difficulty about the adoption of this uniform size of posters, because it will only apply to new work. The plates and blocks on hand will be used wherever reprints are required, and the printing establishments will continue the old paper size until the old plates and blocks become obsolete. For instance, where a house has been using 26 by 40 work size, it would change on all new work to 26 by 39 work size, but still continue its 28 by 42 paper unchanged until no longer necessary. It will be some years before the old sizes die out, but the ancient order will eventually be swallowed up in the new.—The *Poster*.

'Phone: HOLBORN 2288.

146, FLEET STREET,
LONDON, E.C.

July 1st, 1913.

To Any Printer,

Dear Sir,—

I have now personally attended 11 Costing Congresses in London (3), Edinburgh, Dublin, Newcastle, Leeds, Liverpool, Portsmouth, Swansea and Bristol.

After so much study I think I may offer my opinion. I would instal the system, both adopting and adapting it. I would talk it over with my staff; telling them that this is "not directed against labour but only against labour in vain." Pass on Mr. Howard Hazell's warning that it is not meant for speeding up and setting man against man, and that anyone so using it, or abusing it, is looking for trouble.

Make a complete plant inventory if you have not one. To quote Mr. Hazell again: "If you have no plant inventory, it is a great disadvantage." (Bristol Congress.) Can I help you there? The Congresses have yielded some fresh guidance regarding plant depreciation. Income-tax surveyors are sometimes complained of, but they are reasonable men as a rule, and have given assent to reasonable requests by printers who had taken steps to be thoroughly well assured regarding the value of their plant.

The costing system is flexible; particularly in such matters as special overtime, special travelling or carriage costs, infrequent use of expensive machines, the division of the year by 50 or 52 weeks; standing-matter usage, working small jobs on large machines, "washing up," extra proofs, or charges for paper handling.

Its exponents continually repeat that in many applications each printer must decide for himself just how to apply its essential principles.

Practically they only impress that he shall instal this system to get his hourly cost for each process, to get the *whole* cost of that hour—important adjective!—to work out each job cost on that basis, and weekly to check, by the simple balancing method embodied, so as to see that his hourly cost is right. This check affording a fine barometer all the while of the state of the business.

You are not asked to adopt certain selling prices. You are not asked to add a definite profit. That is all left to your judgment.

Although the system "turns on the pivot of a central costing clerk," it may not cost any more than your present system as it takes clerical work off your highly paid technically skilled workers.

You cannot start it properly without a correct Inventory of your Plant.

Can I make that Inventory?

Yours very faithfully,

FRANK COLEBROOK,

Printers' Valuer.

Twelve Kinds of Printers.

An American printer, Mr. Charles F. McElroy, in the course of an address before the second Ohio cost congress, introduced his hearers to twelve different kinds of printers, as follows :—

THE KNOW-IT-ALL PRINTER.—He argues: "The other printers are all blockheads. I am the only one who knows how to run a printing plant. I don't see why I should join your club, because you haven't a member who could give me pointers. If the other printers can't prosper, that is their look-out and not mine. Why should I contribute to teach others how to make money? Let them find out for themselves, as I had to find out for myself." Do you recognise the Know-It-All Printer? He is in every city.

THE SUSPICIOUS PRINTER.—This one asks: "What do you want me in the club for, and whose business is it what my cost is? Why do you wish to know how many employees I have? Why are you anxious to have me come to your meetings? You fellows are trying to find out what you can so as to take advantage of me. I don't think your intentions are honourable. I prefer to let the other printers alone, and I'll thank them to let me alone." Are you acquainted with the Suspicious Printer? His name is legion.

THE ALLEGED SPECIALTY PRINTER.—This printer says: "I am in a division by myself. Your club is all right for those who are doing all kinds of printing, but I feature a class of work of which I have made a study, and no one can touch me on that. Of course, I take jobs of commercial printing sometimes, just to please regular customers whom I can't turn down, but I never have to compete in such cases. I get high prices because my customers are fond of me and no ordinary printer could get that work if he offered to do it at half my price. When I find two or three of the everyday garden variety printers bidding against me on a job, I withdraw, as I do not want my customers to see me in such company. So you see the club would mean nothing to one who is on such a high pedestal as myself. In fact I could hardly afford to associate with printers who go after ordinary jobs." In reality he is keen to bid on printing of all kinds, and through lack of familiarity with it his prices often are the lowest of all. Have you listened to the Alleged Specialty Printer? He is numerous.

THE EMBITTERED PRINTER.—This printer once joined an organisation which fizzled out. The memory of that awful period will go with him to the grave. He tells the sad story thus :—

"Printers' organisation! Never again! We had one ten years ago, and the fellows made loud promises that we would stick together and raise prices, and be brothers, and all that talk. But did they stick? No. It hadn't lasted two months when one of the cowards took a job of letterheads at $3.75 for which we had agreed to charge $4; next week one of them bid $5 less than I did on a $50 job. That proved they were all pikers (not picas), and I brought my prices down to 25 per cent. less than they were before, just to show that they couldn't put anything over on me. So instead of getting any benefit I was worse off than before. The others wouldn't stick, and I don't believe they every will stick. In fact I wouldn't believe one of them on oath. They have all got chicken livers and spines like slippery eels. I never could feel right to go to a meeting and call one of them brother again. So count me out."

THE VINDICTIVE PRINTER.—This one is not so much interested in improving his own business as in keeping his competitor down. He and I have a dialogue in this style: "You want me to join your organisation so that the printers can get better prices?" I answer:

"Yes, I think printing prices ought to go up all along the line."

"Well," says he, "then I would make $5 a week more than I do now, would I?"

"Why, yes," I reply, "at least that much. You ought to make more in the long run."

He ponders and says: "Well, now, let me see. Are Nutting and Quadders going to join?"

"I hope so."

"Then if I make $5 more a week, would they make $5 more a week too?"

"Yes, I hope all the printers in town would make at least that much more."

"Well, then, not for me. I won't help to boost the game of Nutting and Quadders and my other competitors. I can sleep on a cot here in the office, cook my meals over the gas jet, and get along on $6 or $7 a week and make the other printers keep their prices down. I am not going out of my way to make money for the others." Strange our intelligent trade should have such as he, but we have the Vindictive Printer.

THE SCARED PRINTER.—This printer does not speak loud but whispers in the secretary's ear: "If I put in a cost system I would lose every job I've got. As it is now I can figure that composition costs 60 cents an hour and job press work 40 cents an hour. So I can sell my composition at 75 cents and press work at 60 cents and think I am making money. But if I had a cost system and figured in interest and depreciation and a salary for myself it would raise my cost to $1 an hour on composition and 80 cents an hour on job press work. But I couldn't get those prices. My plant would stand idle, and I would have to sell it for junk."

"But," I say, "you don't have to raise your price just because you find that your cost is higher than you thought; you can sell at a loss if you prefer. But there is no law to prevent head work in raising your prices up gradually to the point where you can show a profit above your cost."

The Scared Printer replies: "If I knew my cost was $1 an hour I would not sell for less than $1, would I?"

"Probably not," I answer.

"Well," he continues, "if I tried to sell it for $1 or more I would not get another order. I am better off to believe my cost is 60 cents, because I can sell printing on that basis. If I had a system which put the true cost before my eyes in black and white, it would give me so much nerve that I would ask the higher price. But since I could not get it I must not take liberty with my nerves." There are many Scared Printers but not many can be made to put their line of reasoning into words, but instead are speechless.

THE TOO-BUSY PRINTER.—This printer believes that organisation is good for people who have the time. His story runs like this: "I get to my office at 6 o'clock in the morning and seldom leave before 9 or 10 at night. I work Saturday afternoons and often half a day on Sunday. I haven't time to read trade papers nor your literature, and when 10 o'clock comes in the evening I've got to get home and get some sleep. I can't come to meetings nor estimating classes because I think I ought to attend to my business instead of chasing out to be a good fellow at association doings. If you could have the day consist of thirty hours I might talk to you."

THE ECONOMICAL PRINTER.—"A printers' organisation," says he impressively, "like salvation, ought to be free. You ask me to pay $3 a month dues. That makes $36 a year, $360 in ten years, $720 in twenty years, and $1,800 in fifty years. If I put this money into the bank and let it draw compound interest, in ten years it would amount to $500, in twenty years to $1,500, and in fifty years it would provide me an income of $54 a month. As it happens I haven't any money in the bank and haven't had for some time; but see how much better it would be if I could spare $3 a month and put it in the bank instead of throwing it away on an organisation. It takes all the money I can scrape up to meet my pay roll and paper bills. I haven't discounted a bill for years because I'm so hard pressed. If I joined the club the dues would have to come out of my own pocket, and Lord knows I draw little enough out of my business now!" Can you identify the Economical Printer in your town?

THE EXPANDING PRINTER.—The Expanding Printer is also economical but for a different reason. "I can't afford to pay the dues, because," he explains, "as soon as I get one press nearly paid for, I always get another and let the payments go on. For the last fifteen years I have never had less than two presses to be paying for at one time. The only way to run a printing business is to buy new machinery all the time. You have to grow to attract attention. Of course, part of my presses are idle most of the time, and most of them a great deal of the time, but I mustn't throw any of them out because it would look as if I were going back. I have to keep putting in more stuff to prove that I am progressive. So

you see, to pay dues into an organisation would interfere with my policy of expansion." Have you run across the Expanding Printer? He is numerous.

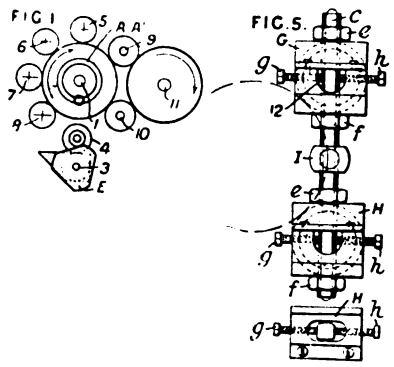
THE DISCOURAGED PRINTER.—A large per cent. belong to this class. Often it is the man who is getting on in years and has given the best of his life to the business, but has almost nothing to show for it. He is to be pitied, and I do not wish to caricature him. I find him usually in a small shop, and when I leave I am trying to swallow something that never went into my mouth. He is a good workman. He has been a good citizen and a kind neighbour, and enjoys the respect of all who know him for his personal—but not for his business—qualities. His handshake is limp and his head droops as he says: "No, I don't think you can ever improve matters for us small printers. The big concerns that have money seem to be able to make more, but we little fellows are down to bed-rock and we are going to stay there. Conditions could not be worse, yet I don't see how you can make them better. We are all afraid of one another, and we have to be. We have to meet one another's figures because we must have work or starve. If we could afford to let our plants stand idle occasionally rather than take work below cost, we might accomplish something; but as it is we must have the money when we can get it, and if we can't get the job at a fair price we have to take it at the other printer's price. I think you mean well, but you are only for the large shops. You can't help the small ones." Have you heard the wail of the Discouraged Printer?

THE INDIFFERENT PRINTER.—His slogan is: "Oh, what's the use!" It does not make any difference to him one way or the other, whether he belongs to the organisation or not; if he does join it makes no difference to him whether he pays his dues and comes to the meetings or not. When I bring up the subject he answers: "Every time I got the notice of a meetihg I thought I would come to the next one, but when the time came I didn't feel like it. Why, haven't we paid our dues yet? You don't mean to say we are six months in arrears? Well, well, I will speak to the book-keeper. Each month I laid out your bill and intended to pay it, but when it appeared we were running close I let it go another month. I will take care of it some time." Do you bump into the Indifferent Printer? I do, and I would like to bump him hard.

THE SATISFIED PRINTER.—This printer has for his motto: "Please go 'way and let me sleep." "I have a cost system," says he, "which I devised twenty years ago and it comes near enough to the truth to answer my purposes. There is too much new-fangled nonsense in your talk of knowing exact cost, and learning to estimate accurately. I have my own methods, and while they may be peculiar, I don't see any use of learning all over again. I don't care to belong to your organisation, for I wouldn't consider making any changes in my way of doing business."

As as offset to the twelve printers referred to, the speaker said that there were three kinds of printers that built up the trade. These were:—

THE PRINTER WHO WOKE UP.—One printer said to me:—"I am past middle age, and have been in the printing business over thirty years. At one time I did a great volume of work and believed I was on the road to fortune, but for some reason my business went back. The more I did the less I had. I joined the Ben Franklin Club, and learned that my trouble lay in selling below cost. To-day my eyes are open. I have thrown out most of my equipment, and at middle age I am starting all over again with a small shop. But this time I shall make good. Now I know my limitations. I believe in the printing business, and with the help of the Ben Franklin Club I am going to make a success of it." I hope you know the Woke-Up Printer. He stimulates me.



THE WARM-HEARTED PRINTER.—He greets another printer with a handshake, a smile, and a light in his eyes. He believes that his competitors are good citizens like himself, all trying to make an honest living just like himself. The bond which unites him to his fellow printers is made of heartstrings. He rejoices if his competitor prospers, and feels regret if the other meets reverses. Sometimes, for good reasons, he cannot take up the active work of the club, but he tells me:—"You are on the right track. I have no desire to rise by kicking anyone else down. I want to see us all go up in the scale together. You will receive my dues right on the dot each month, and if you need any assistance besides, call on me." Get in touch with the Warm-Hearted Printer. He cheers you on your way.

THE BOOSTER.—A certain printer actually told me:—"I never miss a meeting of the Ben Franklin Club. I never have a previous engagement. I never am detained at the office, nor prevented by visitors at home. I will go any distance in any kind of weather to be at the meeting. I talk Ben Franklin Club to every printer I see, and always try to bring a non-member with me to the meeting or estimating class. You can double my dues, and double them again and double them again, and I will pay them gladly, because I have learned to make them a part of my cost of doing business, and still have greater profits than I used to have before I joined. I'll gladly call on any other printer in the interest of the club, and I will serve on any committee you name, and give you the best I've got." Do you know this printer? I do. I can give you his name.

The Woke-Up, the Warm-Hearted and the Booster printers are filling the printing business with sunshine, and are accomplishing results which benefit even the man who pulls back. Is it fair for these to bear all the burden? —*Printing Trade News.*

Inking Apparatus.

Mr. P. Martin has patented an invention that relates to improved means for oscillating the messenger roll, reciprocating the ink-distributing drum and mounting the inking-rolls in a rotary printing press. The ductor roller 3 is fitted at the ends with triangular cams E which alternately raise a messenger roll 4 into contact with a distributing drum 1 and allow it to fall into contact with the roller 3. The drum 1 is reciprocated longitudinally by the engagement of oppositely inclined surfaces A, A^1 at its ends with ball bearing surfaces carried by the machine frame. The drum 1 is fitted with distributing rollers 5 . . . 8, and with rollers 9, 10 which

effect the inking of the printing surface 11. The rollers 9, 10 are mounted so as to be capable of vertical and horizontal adjustment as shown in Fig. 5. The rollers are mounted in grooves 12 in blocks G, H adjustably secured by nuts *e*, *f* to a vertical rod *c* formed with four flat surfaces. The rod *c* is carried by a boss I on the machine frame. The horizontal adjustment is effected by screws *g*, *h*. Specification 17,974, 1910, is referred to.

THERE are 1,628 persons employed in printing and bookbinding in Richmond, Virginia, U.S.A., says the British Consul in his annual report on the 1912 trade.

THE Board of Trade *Journal* states that H.M. Consul reports that tenders are invited by the Egyptian Ministry of Finance at Cairo for the supply of printing materials (black letterpress ink and roller composition) required by the Egyptian Printing Department during the years 1914 and 1915. Tenders will be received up to noon on August 23rd, by the Director, Printing Department, Cairo, whence copies of the specification and form of tender may be obtained. A copy of the conditions of contract and form of tender may be seen by manufacturers in the United Kingdom at the Commercial Intelligence Branch of the Board of Trade, Basinghall-street, E.C.

Some Useful Up-to-Date Appliances.

To most people in the trade the firm of Messrs. Flothmann, Düsseldorf, Germany, who have supplied the best make of machinery for treating paper, should be well known, and it may be interesting to note that Mr. Joseph Renger, machinery manufacturer, also of Düsseldorf, some years ago bought this business.

Mr. Renger is one of those in the trade who have dealt longest in this kind of machinery. He has greatly improved the appliances of the firm of Kellner and Flothmann, and with long experience obtained in the course of years has put several prominent novelties on the market. We not only find these machines in the largest houses in England and the Continent, but also in other parts of the world. The glueing machines form a specially new branch of this industry, which is perhaps not yet known to many printers and bookbinders, and believing it may be to the advantage of our readers, we give particulars of the construction of some of the firm's machines.

In drawing attention in general to the glueing machines, which serve for glueing paper, calicoes, etc., in an even, clean, and economical way, as, for instance, may be noticed on the back of sheets of postage stamps, it may be especially interesting to lithographers to know that these gummed or lacquered papers do not leave a dry border, as is sometimes the case when using rotary gumming and lacquering machines. In addition, it is not at all necessary to change the machine when working different sizes, and auxiliary work, such as underlaying, etc., is not required, and large and small pieces of paper can be passed through the machine one after the other without any difficulty. The machine only costs about one-third of the price of a rotary gumming and lacquering machine. These machines are specially useful for album makers, letter-file makers, prayer-book printing offices, cardboard makers, account book makers, bookbinders, printing offices, lithographic establishments, papermaking industries, gumming factories, pasteboard and paper factories, fancy box factories, etc., and should be among the plant of any of those industries where gumming is part of the daily work, or where labelling is carried out, as, for instance, in tape factories, biscuit factories, breweries, chemical industries, cigar and cigarette factories, preserve factories, bag, label and paint factories, woodwork, lemonade, sugar, and matches factories, etc.

Mr. JOSEPH RENGER.

In the large selection of machinery offered by the firm we find gumming machines for small as well as large labels, and also machines with automatic delivery and feeding, that is, machines which take the gummed pieces of paper automatically from the gumming roller and conduct the gummed sheets on an endless band along the work table. When doing this the gummed papers do not touch the feeding belt, as the gummed side is always upwards. The gumming of pasteboard by means of these machines is rendered easy. They can be recommended for large as well as small firms, skilled working girls not being necessary.

In addition to these machines for simplified gumming, we may draw attention to machines for covering, and especially to a sheet sticking machine, which serves for placards and sticks sheets of paper on sheets of pasteboard automatically. This machine is provided with an automatic apparatus for feeding, and therefore the handling of the machine has been reduced to simplicity. The girl operating the machine has only to place the paper sheet on the paper feeding table and the pasteboard sheet on the pasteboard feeding table and the rest is done automatically by the machine. If two girls are employed, one would put the paper on the paper feed table and the other one the pasteboard on the pasteboard feed table; these two girls would obtain an output of about 3,000 placards per day. This is called the Sheet Upon Sheet Lining Machine.

Another valuable machine is the Lining Machine that covers the pasteboard with paper from the reel. The machine has been provided with an automatic pasteboard feed and the output is about 5,000 to 6,000 pasteboards per day. If desired the machine can be provided with drying apparatus. This machine at present is not only used by pasteboard-covering factories, but also by large cardboard factories.

Our readers will know that nowadays paper in reels takes a prominent place in many industries, and so gumming machines have been introduced for the working of this class of paper. Thus we find in the varied collection of the firm the well-known bordering machines which stick together the bordering strips coming from the reel. The operators have therefore always a gummed strip ready in hand, and when gumming narrow paper strips the cutting of paper and the gumming of single strips is altogether avoided. The bordering machines—a better name would be perhaps automatic strip gumming machines—should not be missing in any factory where bordered boxes are made. The same machines can also be used for closing up air-tight boxes, etc.

A very interesting machine for the cardboard industry is a box-covering machine which serves the purpose of putting at one time two or three strips around the cover of the box. The excellent qualities of this machine are evident if one imagines that there are factories which with one of these appliances cover 7 to 800 boxes (lower parts) per hour, or 600 covers, the latter with two strips, one of which may be a gold strip. As a special advantage of the Renger machine the automatic marking apparatus must be considered, which shows the girl where to put the box cover and through which the border is led. Another appliance is the edging machine which works the edging strips from the reel. The operator places an exercise book in a groove on the machine table and by simply pulling the book is bordered. The cutting off of the paper strips is done by means of a treadle action and the machine can of course produce an enormous quantity.

The firm also constructs a little machine for glueing pasteboard strips at the edges which serve as sides on cardboard boxes. This is the so-called Edge Glueing Apparatus.

In industries where cardboard boxes are

Digitized by Google

made with separate sides the use of such an apparatus is indispensable.

A further excellent appliance is the Renger Drying Apparatus, for drying gummed and lacquered sheets, by which an even drying is attained, so that the paper does not curl and crystallising of the gum does not occur.

A machine much sought after is the Reel Cutting Machine, or Slitting and Rewinding Machine, which will cut up large reels into narrow ones, as for instance telegraph reels and other narrow reels. The variety of work done by the Renger Reel Cutting Machine is considerable, and this machine can also be adapted for the cutting of toilet paper reels, so that its use is many-sided.

For small firms there is an inexpensive special machine that should especially interest firms abroad.

The longitudinal and cross cutter serves for cutting paper reels longitudinally and cross-ways, and works very accurately; in addition the price is so low that even small concerns are enabled to purchase.

We would also draw attention to the Pasteboard Scissors, or Cardboard Cutter, which deserve, through their rigidity and accurate work, to be mentioned; also the large assortment of punches for labels, etc., in varied shapes and forms, as well as knives for the most varied systems, which this firm keeps in stock. These punching irons and knives are of the best quality and of reasonable price. Wire and staples can be also had from this firm at most reasonable prices.

There is also a paraffin and impregnating machine made by the firm, and we may point out that they construct a paraffin machine on a new principle.

We may also mention the manufacture of adhesives by the firm. Although cold glue has been used in the largest cardboard factories for many years, there are many concerns yet where the cold glue method is unknown, or at any rate is not favoured. We would, therefore, point out that when using cold glue, several manipulations, which are essential when using hot glue, can be absolutely dispensed with, as, for instance, the soaking, the warming up and the heating of the glue. When starting the cold glue box is simply adjusted and the work can be commenced. When using hot glue the same must first be heated up, which takes generally a quarter-of-an-hour before a start is made. Cold glue has no nasty smell, whereas hot glue has a very bad odour. The firm manufactures cold glue for the most varied industries, and the prices have been made as low as possible. Re-sellers who occupy themselves specially with this article receive preferential prices.

These adhesives are absolutely sterilised and can be used in tropical climates. The firm manufactures substitutes for hot glue as well as pastes, and manufactures an excellent substitute for gum-arabic and Senegal gum. In Germany the use of substitutes for gum has become very popular. "Gummin," as made by the firm, is acid free, possesses great adhesive power, and dries much quicker than natural gum. Natural gum must be filtered and its solution requires much time. The "gummin" is quickly melted and nothing is wasted.

Messrs. Renger will give further particulars regarding their machinery, and forward printed price lists, and are prepared to supply samples of cold glue, or "gummin," on application.

We have asked Mr. Joseph Renger, Düsseldorf, Germany, the head of this firm, who may be known to some of our readers, to give us his photograph, and have pleasure herewith in reproducing it.

MESSRS. CHARLES BARKER AND SONS, the old-established advertising agents, are removing to White Lion-court, Cornhill.

Printers' Managers and Overseers ASSOCIATION.

Final Discussion on Future Policy.

The third and concluding meeting of the Parent Association at which the report of the Special Committee on Future Policy has been considered was held on Tuesday evening, 1st inst., at the Old Bell, Holborn, E.C. In the absence of the President (Mr. C. J. Gray), who has seriously injured one of his legs by slipping off a motor bus in London the other day, the Vice-President (Mr. T. A. Catling) occupied the chair. Before proceeding to the business of the meeting it was agreed, on the motion of Mr. A. J. SMITH, seconded by Mr. BLENKINS, that the Secretary convey an expression of the sympathy of the members to the President and their hopes for his speedy recovery. On the motion of Mr. JACK, seconded by Mr. W. HERMON GILL, the meeting confirmed the Council's nomination of the following new members:—Mr. H. J. Ellis (Messrs. Haycocks, Ltd., general overseer—letterpress); Mr. H. C. Macro (Messrs. Gerrards, Ltd., works overseer); Mr. F. Norris (Messrs. Haycocks, Ltd.—litho); and Mr. G. S. Waller (Avenue Press, Ltd.—litho).

Limit of Age for Death Benefit.

The first recommendation for consideration was the following:—

That the age limit for death benefit be raised to 50 years, with reduced payment of £20, and £10 for full and half benefit respectively, and that this extension be retrospective with regard to members who joined under previous scale, provided that they meet payment of all levies made subsequent to their election.

Mr. F. W. SEELEY strongly opposed this recommendation, and all the more strenuously, he said, as one of the trustees of the Association. He reminded the members that the subject of the death benefit had been much discussed in the past, and was considerably amended some few years back to meet a strain upon the funds which they felt to be more than the circumstances justified. Although they amended that rule by making a sliding scale, many felt they had gone even then further than they could afford. In face of that they were met with this recommendation, allowing members up to 50 years of age to participate in the Death Benefit Fund. He thought they would agree that the life of any member of 50 years of age was probably not worth more actuarially than another fifteen years. The average was perhaps more like ten years. Their death levies had not yet reached ten per year, and possibly the average was seven or eight. Taking it as ten per year, a member of fifteen years standing would only pay £15 into the Association's funds as levies, whereas they were going to guarantee him a payment of £20 benefit. They or any other association could not afford to give £20 for £15. He thought it very unsound to extend their death benefit to 50 years for sentimental reasons only; they must look more at the practical side. He maintained they could not afford to guarantee a £20 death benefit payment for a man of 50 years of age, paying only a levy of 2s. Sooner or later someone would have to pay, and they had no right to saddle the future with the responsibility of the present day.

Mr. DAWSON said he could not altogether agree with Mr. Seeley's argument that the funds of the Association would not stand this recommendation. The funds of the Association were not touched for a death benefit; the money paid over to the nominees of a deceased member was raised entirely by levy. Consequently the Association funds did not suffer; if anything they benefitted, because more money was raised than was paid over for death benefit. With regard to Mr. Seeley's remarks about the actuarial life of a member of 50 years, the Committee had not suggested that they should pay benefit for a member of 50 unless he paid up the back levies that had accrued previous to his joining to carry him down to the lower age of 45. They would not have the risk to run of a member who joins at 45 dying at 48. They will have had his five years' levies, and consequently the risk was not anything approaching what it was with a younger man. He hoped they would carry this recommendation from the Committee, and he moved its adoption.

Mr. S. M. BATEMAN said he did not know whether the Committee eventually decided that it was to be optional on the part of a candidate as to whether he would come within the death benefit and pay up back levies in order to be eligible for it.

Mr. W. HERMON GILL said he strongly supported the proposer of the adoption of the recommendation. Like him he could not altogether agree with what Mr. Seeley had said. He seconded the proposition and hoped the recommendation would be carried.

Mr. E. C. MOYCE said the way in which the recommendation was put before them was in order to embody a principle; certain details would have to be threshed out in the revision of rules and the optional arrangement would not be lost sight of. Where a member of the Association did not like to pay up the back levies, no power could force him to do so, and there the option would necessarily be exercised. Details like that would be better left to be fought out at the revision of rules. With regard to Mr. Seeley's remarks about the danger of it, he did not see where it came in. It was merely the extension of a principle which already existed. Up to 45 years of age they paid a man a death benefit of £30. On joining at a later age they penalised him £10. If there was anything to be said against it, it was that the Committee had erred rather on the side of safety than of danger. Cases had been brought to their notice, and had come before the Council from time to time, which amounted to real hardship. But they must stop at a certain point, and the Committee had selected the age of 50 years. It might be said, "Why not go on to 60?" but they did not want to encourage old men joining the Association, because that would bring members on the unemployed benefit earlier than was now the case. With regard to the Centres, they had already extended a privilege to them by Affiliation Articles, in advancing the age to 48 years for the first six months after the formation of a new Centre. In the cities and towns where Centres were formed there were a good many men who formed the backbone of the trade who were unable to join the Association with full benefit, and it was important to those Centres that they should get the adherence of those men, not only because it increased their membership, but because it also secured the adhesion of younger men. The only thing they could do that night was to settle the broad principle.

Mr. SEELEY said he was looking more to the future than the past. He might be right or he might be wrong, but he did not think their Death Benefit Fund was sound, and to increase the liability to 50 years they made it worse still.

Mr. BERRYMAN said this recommendation was decided upon at one of the last meetings of the Committee, and the ultimate cause of it being passed he thought was that they had a special application from the North Midland Centre, and with that feeling of a parent of always being kind to the last-born, they thought they would like to put this matter before the members. He thought it was a matter in which they should be guided to some extent—he did not say wholly—by the experience and feeling of the provincial members who, in opening new centres, were touched by it more than they were at the present time. When the Association was

started they had members who were considerably over 50 at the time, or somewhere about that age, and members were taken in quite indiscriminately as to age, and so he could not say he was wholly in favour of this proposal. He thought they should pass the principle of it, and, as Mr. Moyce suggested, leave it to the Committee to thoroughly sift the matter to find the best plan for carrying it into operation.

The recommendation was then put to the meeting and agreed to.

Combined Meetings.

The following recommendation was then considered :—

That it is advisable to hold a combined Meeting of the Association annually at Whitsuntide or other suitable date, and that the arrangements for such Meeting should be made in turn by each section of the Association.

Mr. BERRYMAN said he had much pleasure in proposing that this rule be accepted. He thought it required very little to be said in its favour as its advantages were obvious. He had read in the Circular that their fellow-members had a very joyful and pleasurable time in Liverpool, and he joined in the wish that the next combined meeting in London would be a very successful one.

Mr. BATEMAN said this seemed to be a proposal that nine of the Centres should hold an outing once every nine years, but it was impossible to expect the majority of the members of the Association to go to Liverpool, Manchester, Glasgow, Edinburgh or Dublin. A very small number—he understood from the report it was 48—went to Liverpool, and to make up that number four were members of the Council, there were 24 other members, and the remainder were friends or ladies. That being so it did not seem to him they could very well go in for arranging meetings at Centres regularly in succession each year. Next year he believed it was settled, or at all events it was proposed that they should hold a meeting in London. The better way to him would be to hold an outing every year like they used to, and then to each outing of the Provincial Centres about the same number would go down as would if they did not have their own outing. He did not think they ever got more than about 50 at the provincial gatherings. Birmingham, he thought, was about the most successful one, though it was made up largely of wives and other friends. If they were only going to have an outing once every nine years it seemed to him they would become quite a provincial Association. With an Association membership of something like 600 they ought to have a Saturday outing like they used to and get a very good attendance.

Mr. BLUETT drew attention to the attractions of Dublin for a meeting of the Association.

Mr. MOYCE spoke of the general feeling there was that it was almost impossible to hold a combined gathering in Glasgow, Edinburgh or Dublin, and said he saw nothing inconsistent in this union of the Centres because a comparatively small number participated. There was no reason why the London members should not re-constitute their garden party if they chose, and hold these combined gatherings too.

Mr. SEELEY seconded Mr. Berryman's motion, suggesting that the Committee should bear in mind the various points raised in the discussion, and the recommendation was accepted.

Debates.

The next recommendation was :—

That certain evenings in each year should be devoted to debates as distinct from lectures upon questions of trade and general interest.

Mr. BERRYMAN said the idea of making this recommendation was that on several occasions they had a lecture which occupied the best part of an evening, and then a member got up and proposed a vote of thanks—nearly always the same gentleman—and another member seconded it—again generally the same gentleman. The Committee thought it might be possible for a social section of the Council to make certain suggestions for debates—to put down subjects, not necessarily trade topics, and announce an opener and someone else to take the opposite view. He thought at the time it was a very good suggestion.

Mr. BATEMAN said he originated this idea in his paper, and the reason was that some years ago when it was suggested they should discuss some burning topics and one or two political topics, some gentlemen on the Council were strongly against anything of a political nature being debated. (Hear, hear.) There were political subjects that were not party politics, which could be debated. Important questions came along, and they did not trouble to notice them. If they were going to live up to their reputation they should have debates on these burning topics as well as trade questions, so as to get themselves talked about, to advertise themselves, and to bring them new members.

The CHAIRMAN said he thought the idea of holding debates a good one, and would add interest to the Association. It might be settled by the Committee.

Mr. W. H. GILL proposed to amend the recommendation by adding that four evenings in the year—in February, May, September, and November—be devoted to debates, but he found no seconder, and the recommendation as printed was put to the meeting and accepted.

An Honours Board.

The acceptance of the following recommendation was proposed by Mr. BLUETT, seconded by Mr. FORDER :—

The Committee recommend that each Centre provide a Respect or Honours Board for the display of a permanent record of the names of the chief officials and those who have rendered meritorious service to the Association.

Mr. SEELEY did not think the dignity of the Association would be added to by a Board of the kind suggested, and considered that their appreciation of members' services was best shown by a simple vote of thanks recorded on the minutes.

Mr. GILL proposed that this paragraph be omitted from the recommendations of the Committee.

Mr. DAWSON spoke in favour of the recommendation.

Mr. BLUETT withdrew his proposition, and on a vote of the meeting being taken, the Chairman declared the recommendation not accepted.

The final recommendation of the Committee was as follows :—

That the Council afford facilities by means of the Monthly Circular for the organisation of parties in various districts for recreative purposes.

On the motion of Mr. MOYCE, seconded by Mr. SEELEY, the recommendation was accepted.

To Give Effect.

Mr. MOYCE said that having gone through the whole of the recommendations of the Committee, the next thing was the method of giving effect to them as passed by the general meeting. He suggested that the proper course was first to circulate to all the Centres the recommendations as they now stood, asking them whether they were in agreement with them, and then to appoint a revision of rules committee.

During the course of some further discussion as to the method of procedure, Mr. DALBY, secretary of the Yorkshire Centre, said he thought the whole thing would be simplified if they adopted the proposal brought forward by the Manchester Centre and endorsed by the Birmingham Centre, that a business meeting, composed of the president and secretary and one additional member for each fifty members from each Centre, be held once a year to discuss these Association matters. With a business section from each Centre, appointed yearly, all these things could be threshed out, and would save them being sent backwards and forwards indefinitely.

Mr. A. J. SMITH said this was just his idea differently expressed.

Mr. DAWSON said they saw what Manchester had been doing, as reported in the *British and Colonial Printer*. They had been discussing this matter and all the vital points they themselves had accepted were passed by the Manchester Centre. He failed to see, however, how they could take all the principal officers of the Association away from the united gathering next year to discuss these matters. They could not be discussed in an hour ; they would take an evening or two.

Mr. MOYCE moved the following resolution :—

That the recommendations as adopted be forwarded to the Provincial Centres with a request for their observations thereon, and that the Centres be informed that a revision of rules committee has been appointed to give effect to such of the recommendations as involve alteration or amendment of rule.

Mr. BERRYMAN seconded, and the motion was carried unanimously.

The Revision of Rules Committee.

Mr. FORDER proposed and Mr. GILL seconded that the revision of rules committee be appointed and that they get to work without delay.

On being put to the meeting the motion was declared carried.

On the motion of Mr. SEELEY, seconded by Mr. G. PHILLIPS, it was decided that the revision of rules committee consist of nine members, five of them to be members of the Special Committee on Future Policy.

The following were then chosen members of the revision of rules committee :—Messrs. E. H. Berryman, S. A. Dawson, H. W. Jackson, A. H. Wilson, J. French, H. J. Forder, A. W. Hart, V. Ives, and A. J. Gyngell. This committee was unanimously elected on the motion of Mr. J. G. H. RADFORD, seconded by Mr. G. PHILLIPS.

On the motion of Mr. F. W. SEELEY, a hearty vote of thanks was accorded to the members of the Special Committee on Future Policy for the splendid work they had performed on behalf of the Association.

Mr. BERRYMAN, in returning thanks on behalf of the Committee, admitted it had been rather arduous work sometimes, and testified to the mutual good feeling that had existed between the members of the Committee.

The CHAIRMAN having called the attention of members to the presence at their meeting of two provincial members in the persons of Mr. Dalby (Yorkshire) and Mr. Taylor (Glasgow), they were given a hearty reception and both briefly returned thanks.

On the motion of Mr. W. HERMON GILL, seconded by Mr. S. A. DAWSON, a hearty vote of thanks was accorded to the Liverpool Centre for the splendid reception they had given to the representatives from the Parent Association at the joint gathering in June, Mr. Dawson adding special thanks for the ladies' committee of the Liverpool Centre who so earnestly attended to the comfort of the ladies from the Parent and other Centres.

Mr. MOYCE also spoke in support of the vote of thanks to the Liverpool Centre, and intimated that he had written to the Liverpool Council expressing their warm thanks for the hospitality that had been accorded them and he did not forget to thank the ladies.

The meeting then terminated.

TESTING

Paper Sizing by the Microscope.

For qualitatively detecting the kind of sizing of paper large quantities of the material have always been heretofore required. After detailed investigations Kollmann has come to the conclusion that the sizing substance in paper can also be qualitatively investigated microchemically and with very little material. He recommends the following procedure :—

Test for rosin with the Raspail reaction by moistening a small sample of the paper on the object carrier with some concentrated cane sugar solution, disaggregate with the needle, remove the excess of the sugar solution by suction and pressure with filter paper, dab on concentrated sulphuric acid and examine under the microscope. When the paper is sized with rosin there appears in places a decided red colour which is also present when the paper is already dissolved by the acid.

Animal sizing is detected with tannin solution by heating a small piece of the paper on the object carrier with distilled water, removing the paper with the needle, concentrating the drop, if desired by evaporation, and mixing with tannin solution. Unsized paper and paper sized with rosin give no precipitate, but animal size paper forms abundant brownish masses of gritty structure.

To Practical Printers.

An excellent opportunity is offered to competent gentleman in old-established Printing Office in a British Colony capable of development.

Half interest may be acquired for £1,200. The incomer would become Managing-Partner with salary of £208 a year with bonus and share of profits. One knowing thoroughly the making of Process Blocks and experienced in the production of a high-class weekly paper preferred.—Address, in confidence, "X.L.N.T.," No. 14110, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.

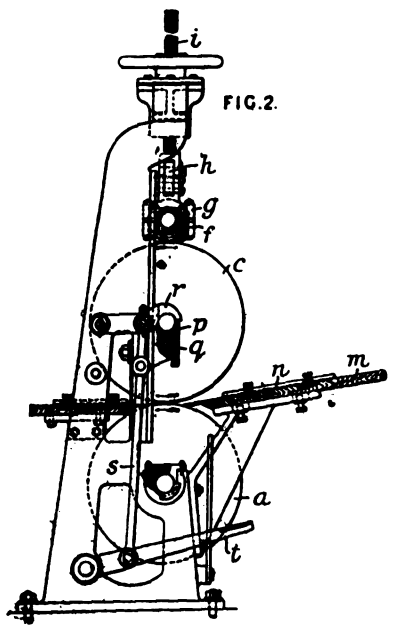
NEW INVENTIONS AND IMPROVEMENTS.

Transferring Designs.

This invention, patented by Mr. J. A. J. Hayes and others, relates to apparatus for transferring designs to rotary lithographic printing surfaces, such as are used in apparatus as described in Specification 9,365, of 1907, by a known method in which paper transfers are passed between the printing roller and a driving or pressure roller, and consists in an arrangement wherein the pressure between the rollers is obtained by applying pressure over the whole length of the roller to receive the design. As shown, the transfer sheet, which may be mounted on a backing sheet, is fed over a laying-in board *m* with gauges *n*, and is placed between the driving roller *a* and the roller tube or the like *c* adapted to receive the design. This roller is mounted in bearings adjustable vertically for rollers



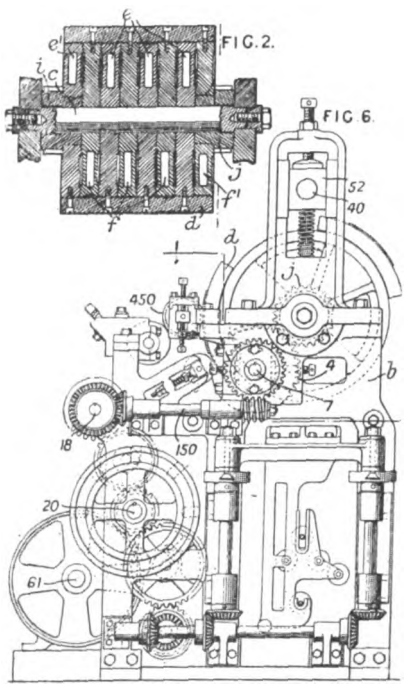


FIG.2.

of different sizes, and, as shown, it is normally maintained out of contact with the roller *a* by springs *q* acting on cups *p* forming the bearings of the cylinder. When the transfer paper is positioned between the rollers *a*, *c*, they are brought together by depressing the roller *c* by means of a roller *f* mounted in a frame *h*, which can be depressed by rotating a nut engaging a central threaded spindle *i* attached to the frame *h*. The roller *c* may be depressed by clamps *r* operated by a lever *t* and link *s*, this method being applicable for transferring a second design to a roller. Two designs may be simultaneously transferred to a cylinder, or two rollers may receive separate designs simultaneously. The roller *c* is prevented from moving axially by means of fixed collars.

Rotary Plate Printing Press.

In this invention a rotary plate printing press is constructed with a pair of independently mounted plate carrying beds which are driven intermittently to provide for one plate remaining stationary to allow of polishing by hand and feeding a sheet thereto, while the other prints a sheet against the common impression roller and then moves past inking and wiping devices, this construction permitting of two impressions being made in one complete cycle of the machine. One of the beds *d* is secured to counterweighted discs *e*, Fig. 2, freely mounted on a shaft *c*, and also to a disc e^1 secured to a mutilated gear *i* loose on the shaft, and the other bed is carried by free discs *f* and to a disc f^1 secured to a mutilated gear *j*. The gears *i*, *j* are driven intermittently by mutilated gears 4, Fig. 6, on stub shafts 7 adjustably mounted in the side frames *b* and driven by worm and bevel gear and a side shaft 150 from a cross shaft 18 which is driven by a train of gear from a shaft 20 and a motor shaft 61. The shaft 40 of the impression roller is mounted in vertically adjustable spring supported bearings 52, and is driven by worm gear from a vertical shaft opposite to the shaft 150. The worm driving the impression roller shaft is feathered on the vertical shaft

and yieldingly held against displacement by a helical spring on the shaft; this spring permits adjustment for small variations in the thickness of the impression blanket and printing plates. In passing from the printing position to the position of rest, each plate is inked by a roller 450 adjustable vertically and horizontally and is wiped by a device of the kind described in Specification 14,237, 1912. The patentee is Mr. M. A. Lathey.

Leeds Technical School.

An interesting and encouraging report on the work of the past session of the Department of Photography and the Printing Crafts in connection with this school was presented to a meeting of the Advisory Sub-Committee for the Printing and Allied Trades, last week, and was approved and adopted. It was as follows:—

During the past winter, the total number of individual students on the register in this department has been 215. This compares very favourably with 136, the total for 1911–12.

The volume of work done showed a still greater increase. The larger proportion of students took more than one evening per week, and indeed the total number of class entries amounted to 526, making an average of nearly 2½ classes per student.

These figures constitute a record for the department, and the attendance was excellent throughout the session. The interest in the work was well maintained, so much so that two classes asked for an extension of the work after Easter when it is usually closed. In these summer courses in letterpress and litho machine work, excellent results were achieved.

Two points are especially noticeable:

1. The increase in the proportion of students willing to attend two or more evenings and thus to follow the group course giving them facilities for extending their knowledge beyond their own particular section of the craft.
2. The large number of older workers and men occupying responsible positions, particularly among those joining the Offset and Letterpress Machine section.

Among other noteworthy features of the session have been:

1. The striking success of the young caseroom students in the open competitions in display composition.
2. The progress made in co-ordinating the work of the various sections, especially between process and the senior students of litho machine work.
3. The introduction of the Aerograph, Ben Day Shading Mediums, and several other improvements in equipment.
4. The organisation, in co-operation with the University of Leeds and the City Art Gallery Committee, of the Exhibition of Posters and Colour Printing held in the spring at the Leeds Art Gallery. Widespread interest was aroused by this display and many visitors came from other centres in the North of England. A large number of the exhibits will be transferred to the permanent collection used in the School for purposes of study.

The German Paper Trade.

Sir Francis Oppenheimer, Commercial Attaché to the British Embassy, in his annual report on the trade of Germany in 1912, said the total imports of "paper, pasteboard and wares thereof" amounted to:—

	1,000 Dz.	1,000 Marks.
IMPORTS.		
1912	1,175·9	32,469
1911	1,213·2	29,118
EXPORTS.		
1912	4,903·9	231,337
1911	4,826·1	227,735

(1 double centner (dz.) = 220·4 lbs.).

The export has become difficult owing to the home manufacture by duty-protected countries which used to be some of the best German customers. The increase in the value of export, 1912, as against 1911 is little more than 3,000,000 marks. The total export of printing paper undyed or dyed in the pulp has receded from 627,000 dz. in 1911 to 552,000 dz. in 1912; the export to the United Kingdom, which in 1911 had amounted to roughly 129,000 dz., has in 1912 receded to a little over 94,000 dz. The total export of cardboard has risen by nearly 4,000 dz.; the United Kingdom is by far the best customer, and in 1912 consumed 3,000 dz. more than in 1911. The total export of parchment paper has receded by 6,000 dz.; the export to the United Kingdom by 4,000 dz.

The total import of paper stock mechanically produced has receded from 152,000 to 83,000 dz. (chiefly owing to a reduced import from Sweden, Finland, and Austria-Hungary).

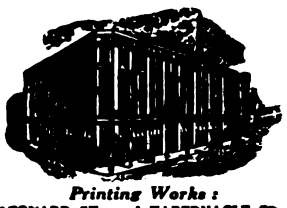
The foreign trade in photographic paper in the rough and of paper for wall-paper printing has undergone remarkable changes in quantities; the total German import receded by 5,000 dz. (total, 1912, 3,000 dz.); the export increased by 18,000 dz. (total, 1912, 102,000 dz.). The total export of wall-paper receded by 4,500 dz., and amounted in 1912 to 126,000 dz.; yet the value of this export has remained practically stationary with 9,500,000 marks. The import of British wall-papers is small, it amounted in 1912 to only 1,500 dz. The total export of cigar holders, etc., made of paper, has doubled, and amounted in 1912 to over 14,000 dz., of which nearly one-fourth went to the United Kingdom.

The following table shows the exports of paper, pasteboard and wares thereof from Germany to the United Kingdom during the last two years:—

	1911. Dz.	1912. Dz.
Paper stock of wood, straw, esparto grass	290,138	326,113
Pasteboard, of wood pulp, straw, etc. ...	56,410	65,946
Packing paper dyed in the pulp	...	304,385
Printing paper, dyed or undyed in the pulp	128,768	94,339
Cardboard, not for drawing purposes ...	27,618	30,704
Parchment paper ...	22,492	18,752
Coloured paper, coated with chalk, etc. ...	...	44,089
Picture post cards ...	5,197	6,877
Visiting cards, Christmas cards, labels, etc.	...	9,812
Photographic paper ...	3,607	2,858
Goods made of coloured paper	5,741	7,971

In the list of German imports from the United Kingdom waste paper is returned at 149,475 dz.

Paper in China.



Mr. Seki publishes his view on the future demand for paper in China in the May issue of the *Shigyo-Zasshi* (Paper Journal), Tokyo, of which he is editor. He enumerates the following points as the principal reasons why the new Republic will continue long in future to be a good customer for foreign paper. In the first place, China has very limited resources in the supply of wood pulp, whereas bamboo, cotton, and hemp wastes, which are in abundance, are not likely to produce the papers of extensive demand. In the second place, civilized localities are poorly made in geographical features for the utilisation of water-power. Thirdly, the Chinese people are not trained to become an industrial nation, technically as well as psychologically, ingenious as they are in commerce. Further, he argues on the position of Japan as supplier to the neighbouring vast market, and refers to the main policy of the paper manufacturers in Japan. To lead Japanese paper manufacturers on the direction to compete with European papers in high-grade commodities is unwise in every sense. Japan is the Scandinavia in the East, and Japanese paper manufacturers are following the course along which the Swedish and Norwegian paper industry has developed.

Civil List Pensions.

The announcements at last week-end of the pensions granted to workers in art, science and literature contained, among others, the following names:—

MISS CLEMENTINA BLACK, £75.—In recognition of her services for the amelioration of the conditions of industrial employment for women.

MR. WILLIAM CANTON, £50.—In recognition of the merits of his writings. Mr. Canton was for many years a sub-editor and leader writer on the *Glasgow Herald*.

MRS. JACINTHA LEIGH HUNT CHELTNAM, £50—In consideration of the services to literature of her father, the late Mr. Leigh Hunt.

MRS. AGNES HENDERSON, £50.—In recognition of the contributions of her husband, the late Rev. George Henderson, to the study of the Celtic language and literature.

MISS CHARLOTTE MCCARTHY, £75.—In consideration of the services to literature of her father, the late Mr. Justin McCarthy.

THE REV. EVAN REES ("DYFED"), £50.—In recognition of his contributions to Welsh verse.

MR. ARTHUR SYMONS, £120.—In consideration of the merit of his writings. Mr. Symons is a well-known writer of poetry and prose.

George Mann and Co.'s Business

CHANGES.

The business centre of the world has called another of our large provincial manufacturers within its borders, and it is interesting to note that Messrs. George Mann and Co., Ltd., have completely separated their commercial and manufacturing departments, the former now being concentrated at the head office, Henry-street, Gray's-inn-road, W.C., and the latter at Larchfield Works, Leeds.

A sub-office and show-room, under the control of Mr. R. B. Furnival who recently joined their board, has been opened at Withy-grove, Manchester, to attend to Provincial, Scottish and Irish matters, while Mr. C. Pollard, commercial manager, has, with his staff, been accommodated in the London office. Provincial and Colonial clients should note this and address all their enquiries to London.

Further, the foreign department, which is a most important branch of this business, is also now located in London.

London matters, as before, remain in the capable hands of Mr. F. V. Heywood, London manager, and with Mr. G. Wichmann, the managing director, at the helm, a complete and powerful selling organisation exists.

"MARRIAGE AND DIVORCE" is the title of an instructive little book by Mr. A. Hamilton (secretary of the Divorce Law Reform Union), to which a preface has been written by Sir Arthur Conan Doyle, LL.D., president of the same society. It gives a general view of the question of divorce law reform and the author states that it is "a plain book by a plain man for plain readers." It is published from the offices of the London *Daily Chronicle*.

THE Special Summer and Holiday Number of the *Amateur Photographer and Photographic News*, just published, contains a great variety of useful and suggestive articles of seasonable interest for those who are visiting the country or the seaside, and for those who stay in town. The hand-camera in particular is specially dealt with, and at this time of the year, when nearly everybody carries a camera either for pleasure or profit, the information given will be found both useful and instructive. The entire number is finely illustrated with many pages of holiday pictures in colours on art paper. The pictures alone are worth more than the price charged for the entire issue, which is twopence only. It is published by Hazell, Watson and Viney, Ltd., 52, Long-acre, W.C., and is obtainable from all bookstalls, newsagents, etc.

The Lord Mayor and Sheriffs

AT THE

PRINTERS' ALMSHOUSES.

The Almshouses at Wood-green, connected with the Printers' Pension, Almshouse, and Orphan Asylum Corporation, formed the scene of a very pleasurable function on Saturday last, when a garden party was held. The chief feature of the proceedings was the unveiling by the Lady Mayoress (Lady Burnett) of two tablets commemorating the endowment of homes by the City of London Printers' Musical Society (in memory of the late William Crespin), and the East Ham and Upton Park Auxiliary. The Lord Mayor and Sheriffs attended in their robes of office, and, in addition to a number of ladies, there were also present Mr. G. Rowland Blades (one of the auditors), Mr. T. W. George, Mr. W. Crespin, and the following members of the Council:—Messrs. J. F. Beck (chairman), A. F. Blades, C. J. Drummond, J.P., H. F. Harding, R. J. Hearnden, W. E. Hebditch, F. Hedger, C. W. Iveson, T. Johnson, F. P. Lewingdon, Alfred W. Paul, W. A. Perkins, W. Vandy, and C. S. Yeates, in addition to Mr. Joseph Mortimer (secretary), Dr. Porter (medical officer), Mr. W. H. Christopher (collector), and Mr. A. Shury (clerk).

After the Lord Mayor and Sheriffs and the ladies accompanying them had made an inspection of the Almshouses, and a lovely bouquet of flowers had been presented to the Lady Mayoress, Mr. J. F. Beck invited her ladyship to unveil the memorial tablets, and after that had been done the CHAIRMAN of the Council proposed a hearty vote of thanks to her ladyship for performing the ceremony, and to the Lord Mayor and Sheriffs for their presence.

Mr. A. F. BLADES, in seconding the vote of thanks, remarked that they, as poor printers, felt highly honoured by the presence of the Lord Mayor and Sheriffs and their ladies, and were grateful to them for their kindness in sparing the time to come to Wood-green.

The motion was passed with enthusiasm, and

The LORD MAYOR, in reply, said he could not conceive a more noble work than that which was being carried out by the Corporation, because a condition of its existence was a kindly feeling and bond of union between those engaged in the trade and those less fortunate brethren who had fallen by the way. One home could be endowed by a gift of £300, and as there were sixteen more to be endowed the work of the Council was not yet complete. He had been over some of the old people's houses that day, and he had found such an air of comfort and repose that it almost made one accustomed to a more exciting life envious of such a delightful existence. He should have liked to remain longer with them, but he must ask them to excuse him for leaving early, as he and the Sheriffs had to hurry away to attend the Royal Review in Hyde Park.

Notwithstanding the fact that there was a fall of rain during the afternoon, the attendance of printers and their friends was large. From three until six o'clock the Palmer's Green and District Orchestral Society discoursed sweet music, which was greatly appreciated, and at six o'clock (the weather having improved) an *al fresco* concert was held, a delightful programme being provided under the direction of Mr. Horace Ward.

Prior to the commencement of the concert, Mr. W. VANDY (chairman of the Almshouse Committee) proposed a vote of thanks to the City of London Musical Society for endowing one of the homes, and in doing so paid an eloquent tribute to the work in connection with the Corporation of the late Mr. William Crespin (the founder of the auxiliary).

Mr. C. YEATES seconded the resolution, which was carried by acclamation.

Mr. G. TAMS (hon. secretary of the City of London Printers' Musical Society) replied, and expressed the gratification it gave the committee and members of his organisation to be able to assist so worthy a cause.

Mr. C. J. DRUMMOND, in one of his characteristically effective speeches, proposed that hearty thanks be accorded to the East Ham and Upton Park Auxiliary for endowing one of the homes. In common with his brother members of the Council he had watched with pleasure the growth of this useful auxiliary, in connection with which he was sure they would wish him to refer to the great work of their good friend Mr. Joseph Mortimer.

Mr. W. A. PERKINS, in seconding, mentioned the loss which the East Ham Auxiliary, in common with the whole of the work of the Corporation, had sustained in the recent death of Mr. William Hilton. They were specially grateful to this auxiliary for its work on behalf of the trade charities, owing to the fact that its committee consisted largely of gentlemen who had no connection with printing.

The motion having been carried with enthusiasm, Mr. H. SKINNER (hon. secretary of the East Ham Auxiliary) appropriately replied.

It was not until "the shades of night were falling fast" that the large gathering dispersed, with one consent agreeing that, thanks to the excellent arrangements made by Mr. Joseph Mortimer and the Almshouse Committee, everything had passed off most successfully.

It may be well to mention that the Council, in a recent appeal on behalf of the Endowment Fund of the Almshouses, say, *inter alia*, "To complete the permanent endowment of the thirty-two homes, and to maintain the building in repair a capital sum of £7,000 is needed, and the Council submit with earnest hope an urgent appeal for its realisation."

THE Yellow Discoloration of Paper.

In the course of an article by Mr. V. Schoeller, of Duren, on the discoloration of paper, he points out that papers containing mechanical wood pulp discolour very readily with age, and papers containing straw and esparto pulp are likewise subject to discoloration. Chemical wood pulp turns yellow to a less extent, while a paper made entirely from rag suffers slight discoloration. The colouring may be due to: (1) Destruction of the ultramarine or other blue colour used in the manufacture of the paper; (2) actual yellowing of some component of the paper. The colour of ultramarine may be destroyed by atmospheric oxidation or by acid residues in the paper causing the sheet to return to its natural yellow colour. This is leaving out of account discoloration by external causes, such as exposure to coal gas, etc. The liability of a paper to discolour may be deterred by: (1) allowing to lie in absence of light for at least one year; (2) exposing to action of air and light for about one week; (3) heating under uniform moisture at 95 degs. for 5 and 30 hours. The intensity of colour developed by warming indicates the discoloration to be expected when the paper is aged. Unsized, unbleached cotton or linen half-stuff shows no tendency to discolour. Moderately bleached stock, washed immediately after bleaching, does not discolour, but over-bleached stock or one which has been allowed to rest in the drainer for even one day before washing will turn yellow with age. This is due to the oxidation of the cellulose fibres. The most important cause of the discoloration of paper is the rosin size. All rosin-sized papers turn yellow. This may be due to: (1) reagent used to ppt. the size; (2) formation of iron-rosin compounds; (3) oxidation of the rosin by atmospheric oxidation; (4) auto-oxidation or polymerisation of the rosin. The precipitant used has little effect on discoloration. Experiments showed that papers sized with rosin pptd. by com. $Al_2(SO_4)_3$, AcOH, $MgSO_4$ and AcOH, CO_2, alum, HCl, and from alc. soln. by water turned yellow on heating to the same extent. Comparative tests showed that within the limits of common practice presence of Fe or Fe resinate has little effect on discoloration of paper. Care must be taken, nevertheless, to use an alum low in iron. Discoloration due to the action of atmospheric oxidation on rosin is very slight in all cases, but, nevertheless, rosin develops a darker colour on standing, due to the polymerisation, or auto-oxidation, and it is to this fact that the discoloration of rosin-sized papers is chiefly due. By previous treatment of the rosin with bleaching powder this polymerisation may be accomplished, and size made from rosin so treated has no effect on the discoloration of paper.

THE current issue of the *Monotype Recorder*, the house organ of the Lanston Monotype Corporation, Ltd., Fetter-lane, E.C., is an excellent production, full of good typography and of suggestive value to the printer as showing the great and varied capacity of the Monotype for all classes of printing. The full range of sizes of type available for the printer who uses this composer is fifteen, ranging from 5 to 36-point, inclusive, and in the issue referred to there is shown a range of twelve sizes and thirteen faces. The 5½-point on page 47 and the 18-point on page 41 (with all intermediate sizes) were set and cast on the Monotype machine. The display type was cast by the aid of the display typecasting attachment. No mystery is attached to casting display and body type by the Monotype, the simplicity of which enables a printer to be his own typefounder. The *Monotype Recorder* keeps the printer well informed and those who have not got a copy should apply for one.

NEWSPAPER OFFICE ATTACKED.—During the rioting which took place in the Rand strike last week-end, the strikers and hooligans attacked the *Johannesburg Star* office in Pritchard-street. After vainly trying to set it on fire by throwing lighted matches through the windows they had smashed, a foreigner carrying a detonator went to the back of the premises and shortly after there was a terrific explosion, and the mob rushed into the offices and set fire to the files of correspondence and newspapers. The flames soon secured a firm hold, and though the fire engines came on the scene, the work of the firemen was obstructed, the hose-pipes were cut, and the four-storey building was gutted.

THE July issue of the *Royal Magazine* has plenty of light fiction, including "The Pantomime Cat," "The Whitewashing of the Clam," "Newmarket and the Riviera," and "Mrs. Mucklow's River Party." There are many other excellent articles and the contents as a whole form one of the best magazines of the month, while the illustrations, as usual, are of an artistic character.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

14,326 LINOTYPE AND MACHINERY, LTD., PEARCE, H., and BILLINGTON, J. E., typographical composing machines.

14,327 LINOTYPE AND MACHINERY, LTD. PRICHARD, C. H., and WETHERELL, F. W., instruments for measuring or check-measuring the dimensions of solid bodies.

14,328 PAINE, A. P., automatic stop for the distributor of a typographical machine.

14,393 HATT, J. A. H., half-tone screens.

14,458 FULAY, G., pens.

14,464 LEE, U. G., addressing and proving machines.

14,511 LINOTYPE AND MACHINERY, LTD., keys for key-operated or key-controlled machines.

14,512 LINOTYPE AND MACHINERY, LTD., typographical composing machines.

14,568 MORLAND, O., loose-leaf and like books or holders.

14,573 FOX, J. J., cash tray for advertising purposes.

14,582 JOHNSON, F. A., multiple writing machine.

14,594 HOLWEG, C., process and apparatus for folding the bottoms of paper bags.

14,750 RHODES, F., automatic apparatus for use in displaying pictures, cards, advertisements and the like.

14,754 WILKINSON, W., guards for use with penholders and the like.

14,759 DREYER, P., machine for stamping letters, post cards, or tickets of any kind.

14,858 BRENGOU, H., process for printing with fatty inks.

14,897 PICKETT, C., and EMMERSON, E. E. E., fountain pens and the like.

Specifications Published, 1912.

Process of manufacturing artificial lithographic Stones—Wagner; 14,022.

Paper cutting machines—Vickery; 14,368.

Process for producing lustrous effects on paper, fabrics, leather or the like, and compositions therefor—Sutherland; 16,156.

Machines used in the manufacture of paper bags—Dorman and W. H. Dorman and Co.; 20,969.

Account registers—Hare; 21,225.

Filing booklets—Culverwell; 23,759.

Advertising and display contrivances—Ell and Miller; 28,228.

Device for trimming the edges of paper, photographs and the like—Newbould; 29,136.

1913.

Book or like covers—Hare; 1,962.

Type holders—Dick; 2,875.

Mechanical type printing telegraphs mainly applicable as toys—Grasme; 4,665.

Ink erasers—Rush; 9,972

Trade Notes.

THE will has been proved of Mr. James Bell, late of Edwalton, Nottinghamshire, printer and stationer, at (net personalty, £22,258)—£29,094.

MR. ALFRED AUSTIN, the late Poet Laureate, of Swinford Old Manor, Ashford, who died on June 2nd, aged 78 years, left estate of the gross value of £2,098.

THE first number of a new periodical entitled the *British Journal of Surgery* has just been issued, published by Messrs. John Wright and Sons, Ltd., Bristol.

WE regret to announce the death, at Oundle, last week, of Mr. Alfred Pitman, of Royston Lodge, Sidcup, and Westbere, Sturry, Kent, for 30 years manager of the *Contract Journal*.

THE printing in connection with the Insurance Act has brought some benefit to the printing trade, for the cost of the printing in connection with Part I. up to the present time is approximately £140,000.

MR. WILLIAM LAMBERT LARGE, of Parkhurst, Appletree-gardens, Walker-gate, Newcastle, printer and stationer, formerly of Heaton, has left property sworn at £2,796 11s. 8d., with net personalty £1,014 2s.

ACCORDING to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, July 4th; the corresponding week in 1912 showed five.

THE death took place suddenly last week of Mr. Robert Henderson, of the advertising department of the *Liverpool Daily Post*. Before joining the *Daily Post* staff he had been connected with the old *Liverpool Mercury* for many years.

MESSRS. JONAS HAGEN AND CO., 19, Ludgate-hill, E.C., have been appointed the sole selling agents in London for the Holdfast Patent Carrier, manufactured by Messrs. Kerr and Richardson, Ltd., Glasgow. The great advantage of these bags is the patent string attachment. Their introduction to some of the leading London drapery firms has been highly satisfactory. Messrs. Jonas Hagen and Co. show at their offices samples in all sizes and colours.

TRADE WITH PALESTINE.—A British consular report on the Jerusalem district of Palestine, dealing with branches of trade which might afford openings to British merchants if they could see their way to adapt their methods to local usages, refers to cheap notepaper, and states that merchants are interested in the British make, provided that the British merchants can compete in price with the German or Austro-Hungarian, which is commonly used out there.

OFFSET MACHINES AT GHENT EXHIBITION.—It is interesting to note that Messrs. George Mann and Co., Ltd., London and Leeds, are well represented at the above Exhibition. In the Hall of Belgian Industries (Printing Section), on the stand of Messrs. J. Coffin Fils, Brussels, is to be found a Mann Quad-Crown Rotary Offset machine, which at the time of writing is printing a 16 colour job in excellent style. In addition a "Baby" Rotary Offset is on show and an Ink-Mixing and Blending machine. The Hall in which these machines can be seen is just on the right-hand side of the main entrance as you enter, intending visitors should note.

CRYSTAL PALACE SEASON TICKET PLAN.—An interesting scheme has been devised by the Anglo-German Exhibition Co. (Ltd.) for adding to the *Times* Fund in aid of the Mansion House effort. The company proposes to offer for sale to the public season tickets up to the number of 250,000, giving admission to the Palace and grounds—where the Anglo-German Exhibition is now in progress—throughout the season until October 30th next. The tickets will be sold at 5s. each; and of each 5s. received 4s. will be handed over by the company to the *Times* Crystal Palace Fund, after deducting the small expense incidental to the issue of the tickets. Upon each thousand tickets sold there would be an approximate yield for the Fund of £200. The ticket will be described as the Lord Mayor's Fund Season Ticket, and will be obtainable from Messrs. Tinling's, 13, Finsbury-circus, E.C., who are acting as hon. secretaries for this project. It is intended by the company to ask the Lord Mayors and Mayors of every city and town in the kingdom to assist the Lord Mayor of London, through the *Times* Fund, by offering to be responsible for the sale of a certain number of season tickets, or by appointing local committees for that purpose.

THE printing staff of the *Liverpool Daily Post* held their first annual picnic and sports on Saturday last at Heswall. The weather was favourable, and a large number of members and friends attended and enjoyed an excellent programme. Speeches were made by Mr. J. S. Fraser, the manager, and by Mr. J. Breamer, the hon. secretary.

THE members of the wholesale, retail, and printing staffs of Messrs. Guy and Co., Ltd., stationers and printers, Patrick-street, Cork, held their annual outing in ideal weather, the venue chosen being Courtmacherry. Luncheon and tea was served to a party of 200, and during the day dancing, boating, sports, etc., were indulged in.

THE Board of Trade has issued an order making obligatory the minimum time rates of wages fixed last January 6th by the Paperbox Trade Board of Great Britain for male workers employed in the making of boxes wholly or partially of paper, cardboard, chip or similar material. These rates are 6d. an hour for male workers over 21 years of age, and from 4s. 6d. a week of 52 hours for male learners under 15 years of age to 21s. a week for male learners who have turned 20 but are under 21.

PRIZE COMPETITIONS. — Lord Loreburn's Bill to prohibit prize competitions, which was read for the first time in the House of Lords last week, was published on Tuesday. The measure punishes with a maximum penalty of six months' hard labour, or £100 fine, or both, any person who conducts, or permits to be conducted, in or through any newspaper any prize competition which requires payment of money or use of a coupon or form. The same penalties apply to any announcement offering prizes in such competitions.

A "ROYAL VISIT" NUMBER.—We have received a copy of the Royal Visit Edition of the *Accrington Observer and Times*, issued on Tuesday last, the first of two Royal numbers published in connection with the visit of the King and Queen to East Lancashire. The paper, consisting of twelve pages and a supplement on art paper bearing fine portraits of their Majesties, is a wonderful halfpenny worth. A description of Accrington's industries is made a special feature, and this has been well supported from the advertising side.

AT the Central Criminal Court, on Friday, before the Recorder (Sir Forrest Fulton, K.C.), Charles Hosken, otherwise Charles Granville, otherwise Henry Charos James, 46, described as an author, was brought up for sentence, he having been found guilty of an indictment charging him with obtaining £2,000 by false pretences and with applying to his own use a cheque for £1,500, the property of the Swift Press, Ltd., of which he was a director. The defendant had been in custody for seven months, and the Recorder sentenced him to six months' imprisonment, on each of the two charges of bigamy, and to fifteen months' hard labour on the other charges, the sen-sentences to run concurrently.

TENDERS WANTED—For printing the burgess roll, for the Corporation of Hertford; specification of the conditions from Mr. Alfred Baker, town clerk, the Castle, Hertford. For the execution and supply of printing for three years from October, 1913, for the Deptford Borough Council, London, S.E.; form of tender from the Town Hall, New-cross-road, S.E.; for supplying stationery, books, etc., required for the institutions at Craw-road, Auchentorlie, and Riccartsbar, and for the outdoor departments, for a period of one year or three years (their option) from August 1st, for the Parish Council of Paisley and Paisley District Lunacy Board; tender forms from Mr. J. M. Campbell, inspector and clerk, Parish Council-chambers, Paisley. For the supply of printed forms and stationery for a period of one year from August 1st, 1913, for the St. Anne's Urban District Council; tenders from Mr. Thomas Bradley, clerk to the Council, Public Offices, St. Anne's-on-the-Sea.

"SUFFRAGETTE" PRINTER SENTENCED.—At the Manchester Assizes, on Monday, before Mr. Justice Bailhache, Edgar Whiteley, secretary and manager of the National Labour Press, Ltd., Blackfriars-street, Manchester, was indicted for conspiring with members of the Women's Social and Political Union to an incitement to commit crime—namely, damage to property and injury to Post Office letter-boxes, by the printing of the *Suffragette* newspaper. Mr. Gordon Hewart, K.C., M.P., and Mr. Wingate Saul were for the prosecution, and Mr. Rigby Swift, K.C., M.P., and Mr. Merriman for the defence. After a lengthy hearing the jury found the defendant guilty of incitement only. The Judge said he was not quite satisfied that the defendant took considerable pains to eliminate all execrable matter. He had left in matter which in the opinion of the jury was an incitement to crime. Sentence of six days' imprisonment from the opening of the court—meaning immediate discharge—was passed.

MESSRS. CHARLES BARKER AND SONS, advertising agents, of 8, Birchin-lane, E.C., have transferred their offices to White Lion-court, Cornhill, E.C.

THE death took place, on Saturday, of Mr. John Wallace, journalist, who was connected with the *Ayrshire Press* for close on 35 years, and acted as correspondent for various daily newspapers.

THE ART REPRODUCTION CO., LTD., 3 and 4, Plough-court, Fetter-lane, E.C., have issued their catalogue of stock fashion blocks for the coming autumn and winter seasons, comprising figures and millinery, waistcoats, boots and shoes, hosiery and sundries, and umbrellas.

THE death was announced, last week, of Mr. Francis Hansard Rivington, of Connaught-square, at the age of 79. Mr. Rivington was descended from Charles Rivington (1688-1742), the founder of the famous publishing house, whose name appeared on the title-page of "Pamela." His father, Francis Rivington, retired from the firm in 1859, and he succeeded to the business with a cousin. The latter retired in 1867, and Mr. F. H. Rivington carried on the firm with a brother until May, 1889. Thenceforward he was the sole member of the firm until June, 1890, when the business was taken over by Messrs. Longmans.

MR. "JIMMY" GLOVER, the conductor of the Drury-lane Theatre orchestra, last week brought an action for libel against Mr. W. F. de Wend Fenton, of the *Sporting Times*. Mr. Glover complained of an article and a caricature which appeared of him in the last Christmas Annual of the *Sporting Times*. The thing, said counsel for the defence, was published by way of a good-natured jest with regard to a gentleman who was something of a personage in his profession. The defendants desired to do what was rignt and handsome in the matter, and as Mr. Glover was not asking for damages they desired to express their regret and to pay him such a sum that he should come out of the matter without expense. They also desired him to state that nothing was further from their thoughts than to hurt his feelings or to make any attack on him. These terms had been accepted by Mr. Glover. The case was settled accordingly.

ALTERING PRINTING ESTIMATES.—In the City of London Court, last week, before His Honour Judge Rentoul, K.C., the London Printing Alliance, Ltd., 41, Cheapside, E.C., sued Kaurite, Ltd., 2, Coleman-street, E.C., for £43 3s. 10d. printing done for them. £35 10s. had been paid into Court, but defendants said they did not owe the balance as plaintiffs had charged more than at the estimated rates. The bill amounted at one time to £60 and in some cases the plaintiffs had charged double and even treble the prices of the estimates. Plaintiffs' managing director said that in some cases the defendants departed from the estimates. The work was longer and it had to be lithographed instead of letterpressed. Defendants wanted the work to look nice and the charges were fair and reasonable. Their prices had never been challenged. Judge Rentoul found for the plaintiffs for the amount claimed less £1 3s. 4d., which there being some doubt about, the plaintiffs waived.

TRADES UNION CONGRESS.—The Parliamentary Committee of the Trades Union Congress has issued the agenda for the next annual gathering, which takes place at Milton Hall, Manchester, on September 1st and five following days. There are in all nearly 90 resolutions on the agenda. The most important questions to be dealt with are the National Insurance Act and the eight hours days agitation. A ballot on the latter subject has been taken, and a special report will be presented to the Congress on the subject by the Parliamentary Committee. The suggestions for the amendment of the Insurance Act include a proposal that Part II. of the Act (unemployment) should be administered by the trade unions without reference to the Labour Exchanges, particular objection being taken to the character note system at present in use. It is also proposed that in connection with Part I. there shall be only one set of Insurance Commissioners for the whole country. Among other subjects to be dealt with are proposals for amending the Factory Acts and the Workmen's Compensation Acts. The Parliamentary Committee has itself set down three resolutions, one of which proposes that the Congress use a portion of its funds for the purpose of assisting a labour newspaper.

THE WORLD'S
Paper Trade Review
IS PUBLISHED EVERY FRIDAY AT

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Mr. Hazell found new questions proposed at Stoke Congress last week. In answer to one local printer he most strongly counselled printers to call in an expert and have an independent valuation of their plant.

o o o

At Bristol Congress he had also given his testimony that "not to have an inventory is a very great disadvantage."

o o o

The practice of some printers who have found that their plant has been undervalued and have had an independent inventory made has been to notify to their company that the figures of the outsider's, the independent valuation, are the figures they expect to be recognised in case of fire. They secure an agreement that this shall be so; and they attach that letter from the fire office, or a copy of it, to their fire policy, in the safe or strong room.

o o o

I once found a firm whose plant carefully and independently inventoried, proved to be worth about £4,500. The partners are practical men. They expected something like that figure to be declared. Yet the plant stood in their books at under £900!

o o o

While a book-written down value is not a legal admission that the plant is not worth more, it is none the less very embarrassing.

o o o

If the firm with plant written down to £900 had been burnt out before their plant had been independently valued, they would quite likely have compromised for about half as much as they would have got had a fire followed their valuation. They would in the first case have been at every disadvantage; and to save delays and contingent costs they would probably have been prepared to sacrifice a great deal.

o o o

And now *re* Leipzig Exhibition.

o o o

Whether the Board of Trade has changed its mind at all I cannot say; it has perhaps been a little misunderstood; anyhow, I am assured that it is willing to do as much for the British firm exhibiting at Leipzig as for the British firm exhibiting at Ghent.

o o o

That certainly alters matters, and removes any excuse for the British debacle which seems impending.

o o o

The consequences of a good British exhibit may well be quite wonderful. Look, for one thing, at the way Nelsons are conquering the Continent with their small cheap books.

o o o

Conversely, the consequences of disregard of this Leipzig Exhibition may well be disastrous for the craft and disastrous in national and international reactions.

o o o

Who can tell how much good, commercial, social, national, international—good of every kind—will be potential in the germ of a British triumph at the great City of Printers.

o o o

And what evil will be potential in the failure to score, or even to try to score.

o o o

This mere exhibiting is not a little matter. But if it were it would still demand the due carefulness.

o o o

For the lack of a nail the horse-shoe was lost. For the lack of the horse-shoe the horse was lost. For the lack of the horse the commander was lost. For the lack of the leader the battle was lost. For the lack of the victory the kingdom was lost. For the lack of a nail the kingdom was lost.

o o o

While on international matters I note a passage in the American *Fourth Estate.* It deals with the Associated Advertising Clubs of America, and with their Convention, four thousand strong, held at Baltimore last June. A great time to be sure, though I see Ingersoll missed his train and got left, and "was the subject of much kidding" about his watch.

o o o

But to my excerpt. Here it is:—

o o o

"London wants A. A. C. A. Convention.—The foreign delegates were much in evidence in Baltimore at the hotels. Among these were the three representing England—P. C. Burton, W. Blanchard Bancroft and F. Reginald Kennington. These delegates are prominent advertising men in England. Through marriage Mr. Burton is a brother-in-law of Lord Northcliffe, Mr. Bancroft is a nephew of H. H. Bancroft, historian and publisher, and Mr. Kennington is connected with numerous newspapers in various sections of Europe.

o o o

"All of the delegates claimed that they were exceedingly surprised to see the decorating that had been done for the convention and loudly praised the local Advertising Club.

o o o

"London in 1916" was the slogan of Mr. Bancroft, and he has big plans for the 1916 convention.

o o o

"Our idea is to charter the Imperator, the greatest of the ocean steamships, and to carry 3,000 advertising men to the London Convention," he announced. "The passage is a very short one, and when they get to London our programme is, that every man will make a five-minute address in the course of the convention. This trip can be made, the advertising clubs see London and each man make his five-minute address and return in twenty-one days."

o o o

Three thousand speeches! It reminds me of the hymn I was once familiar with about the world to come, "Where congregations ne'er break up, and Sabbaths never end."

o o o

Ten speeches in an hour will be good packing; and the 300 hours that would mean must become 400 at the out working; 400 at the very least. With the eight-hour day in operation that would account for 50 out of the 21 days, leaving the minus 29 days for all the rest of the programme and for seeing London.

o o o

However, we'll give a welcome to the 3,000; we're not bound to listen through all the fifty days.

o o o

They had better elect Carl Hentschel as President. He would make the 3,000 print all their harangues beforehand, and then he'd move they be all taken as read.

o o o

Here are other items from the same journal which may have their interest and suggestiveness for readers:—

o o o

"Desiring more light on the print paper question, the American Senate Finance subcommittee, which is considering the wood pulp and paper schedule of the Underwood Tariff Bill, conferred with John Norris, chairman of the committee on paper of the American Newspaper Publishers' Association.

o o o

"Print paper costing not more than two-and-a-half cents a pound was put on the free list in the Underwood Bill, but representatives of the paper manufacturers, appearing before the Senate sub-committee, urged a countervailing duty, because of Canadian restrictions on pulp wood. The sub-committee has not yet acted on that proposal.

o o o

"Mr. Norris is opposed to any countervailing duty on the ground that every measure which the United States has imposed upon the Canadian provinces has reacted against the American papermaker and the consumer."

o o o

"At the recent Senate hearing on the paper schedule at Washington, Arthur C. Hastings, president of the American Paper and Pulp Association, said:—

o o o

'It has been repeatedly alleged by those who are eager to procure cheap paper without regard to the source from which it comes, that the American mills do not compare in efficiency and modern equipment with mills of certain other countries, and that, therefore, the American paper manufacturer is asking a duty to protect him against his own lack of progressiveness.

o o o

'In answer to that much advertised but erroneous statement it would seem necessary only to refer to the fact ascertained by the Tariff Board that Canada can produce news print paper at a cost of $5.35 a ton less than it can be produced in the United States, and to the other well-established fact that the wood required for the production of a ton of paper can be purchased in Canada for about as much less than it can be obtained in the United States as the difference in cost above-mentioned.

o o o

'Therefore, if the Canadian and American mills were supplied with wood at the same price, there would be practically no difference in the cost of manufacture; and this would not be true if the American mills were less efficient than the Canadian.

o o o

'The fact should not be overlooked that in putting news print on the free list we are not only withdrawing a proper protection and encouragement from our local industry, but are actually discriminating against it in favour of the foreign producer, inasmuch as the countries to which we are freely offering our market are at the same time exacting a duty upon every pound of American paper shipped into their market. In this manner the market for the American mill is limited, while that for the foreign producer is expanded. Even the advocate of free trade should insist that as between two countries the freedom should be extended to both parties.

o o o

'We call your attention to the daily production of news printing paper in the United States, which at present is about 4,900 tons. The capital invested is $100,000 000. The number of employees is 26,500.'"

FRANK COLEBROOK.

The Universal Typecaster.

We are informed that the Stringertype Manufacturing Co., Ltd., of Ladbrook-road, South Norwood, S.E., has lately acquired the European agency for the sale of the Universal Typecasting Machine. This machine, we understand, is already installed in the offices of several of the leading printers in London, viz.:—Messrs. Cassell and Co., Ltd., Kelly's Directories, Ltd., The London Printing Alliance, Ltd., Odhams, Ltd., George Hulman and Sons, Ltd.; and in the Provinces, viz.:—Messrs. Burroughs, Wellcome and Co., Dartford, Kent, and Willsons' Printing Works, Leicester.

The average output on this machine is:—

5-Pt., 4 lbs. per hour.		18-Pt., 12 lbs. per hour.	
8-Pt., 6	" "	36-Pt., 14	" "
12-Pt., 10	" "	48-Pt., 16	" "

There are always 9 lbs. 16 ozs. of good solid type in every 10 lbs. cast. The type is ready for the case as it falls from the machine, there being no breaking off, rubbing, setting up or dressing necessary. A stock of old type with varying bodies can be re-cast on a Universal with point body and up-to-date faces, at an average cost of less than 1½d. per lb.

For the convenience of purchasers of machines, a large assortment of matrices and moulds are kept in stock and considerable additions are being made to same, thus affording the owner of a machine a wide selection of faces, the matrices for which are available for hire at the rate of 2s. per day per fount, and letter moulds at 4s. per day.

It may be noted that this firm are the makers of the Stringertype Composing and Typecasting Machine, having a specially equipped works for this purpose; they are therefore in a position to deal promptly and efficiently with any form of replacements or repairs to the Universal Typecasting Machine.

MESSRS. STRONG, HANBURY AND CO., LTD., 196-7, Upper Thames-street, E.C., send us a batch of samples of papers suited to a variety of uses by the printer. They include Colindia pulp and pasteboards in different sizes; a vellum stocked in small and large post and in various weights; a special line of tub-sized extra strong cream laid typewriting paper; Colindia printings in various sizes and weights, used for all purposes but especially suitable for cheap poster work; emerald green and poppy red poster papers; and extra strong kraft brown in different sizes and weights, either in sheets or reels, with quick delivery.

A CHEAP tint block may be easily made by pasting a piece of heavy press board upon a wood base of the right height and cutting the surface to the desired shape when dry. Such tint blocks may be made for many purposes, among them being the background for illustrations or initial letters in booklet pages or mailing motto cards, their use giving the touch of colour needed to make the work attractive and distinctive.

The Trade Boards Act.

A MEMORANDUM issued by the Board of Trade on the working of the Trade Boards Act gives some interesting particulars of what has been done during the three-and-a-half years they have been in operation. It appears that the officers under the Act have power to enter factories, workshops, and places for giving out work and to require the production of wages sheets, lists of out-workers, and other information. These officers have also to enforce the proper settlement of wages rates. In four cases proceedings have been taken against employers, and in each case a conviction was obtained. One of these prosecutions was that of a box manufacturer for failure to pay wages to a female worker at the minimum time rate fixed by the Paper Box Trade Board (Great Britain). In this case the defendant was fined £3 3s. with £5 5s. costs, and was also ordered by the magistrate to pay the sum of 17s. to the worker. Another prosecution was that of a man and his wife who were carrying on business as sub-contractors for hindering an investigating officer. The man was fined 10s. and his wife was acquitted with a caution. It is difficult, at present, to get at a reliable estimate of the number of workers within the scope of the Act, but it is believed that about 200,000 persons are covered, of whom about 70 per cent. are women and girls. The second largest trade to come under the Act is that of paper and cardboard box-making, and a provisional order proposes to extend its scope so as to cover the making of tin boxes and canisters, as well as a number of other trades. By this provisional order it is estimated that roughly between 150,000 and 200,000 additional persons would be brought under the Act, of whom the vast majority would be women and girls. Thus the number of workpeople covered by the Act would be approximately doubled.

* * *

A Newspaper for Children.

THE London County Council, although ultra-conservative in many directions, are progressive in most things that affect educational matters, the latest development in which is the proposal to start a newspaper for the children attending the Council's schools in the metropolis. A report has been issued on the project, which suggests the lines upon which such a paper should be conducted to be successful, and proposes the following features:—(1) A short chronicle of the events told in such a fashion as to interest children; (2) original stories, serial or other, suitable for boys and girls: (3) biographical sketches of great personalities; (4) extracts from English literature in prose and poetry connected with current events or anniversaries; (5) articles on London history in its association with buildings, streets, or districts; (6) a reproduction in each number of some noted picture or portrait, or a representation of some building of historic or architectural interest with simple descriptive details; (7) essays or other school work of exceptional merit; (8) problems for solution in such subjects as literature, history, geography, and arithmetic; (9) accounts of pupils' visits to places of interest in town or country; (10) records of special achievements by pupils or ex-pupils in any field of distinction: (11) a correspondence column; (12) a page for parents. A paper planned on such lines would be welcomed both by teachers and pupils, and would help to extend healthy and attractive literary influences to thousands of London homes. While at the same time it might possibly supplant the "penny blood" that is at present so much patronised by the printers' boy.

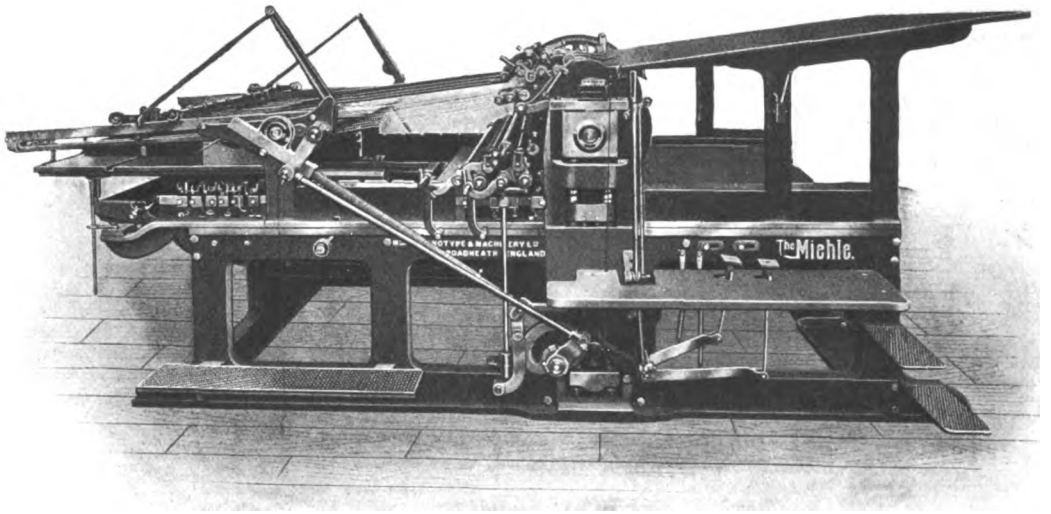
* * *

The Disappearance of Papier Mache.

AS ILLUSTRATING the changes that may take place in the demand for certain classes of goods, and how they may sometimes even disappear entirely from the market, a correspondent of the *Liverpool Post and Mercury* recently called attention to the vanishing of papier maché articles that were at one time quite a feature in the stock of all stationery and fancy goods dealers. This class of goods was very popular at one time, and the articles, with their fine polish and beautifully inlaid surfaces, were to be found in practically every household. Manufactured out of paper pulp and inlaid with mother-of-pearl, papier maché goods made a brave show in window or on counter, and were bought freely and at good prices by the public. The writer in the *Mercury* says:—"The vogue has apparently passed, like many others, and the once popular fabric, so light to handle, so deftly contrived and so artistically ornamented, has been supplemented in public favour by heavier substances, such as bronze and earthenware. One contributory cause, and probably the dominant one, is that goods made of these latter materials, though heavier, are for the most part 'lighter' on the pocket. In other words, they possess the convincing advantage of cheapness, coupled with much elegance of style and ornamentation. . . . . Yet there is more than one good word to be said for poor deposed papier maché, particularly as regards its adaptability and especial suitability for the manufacture of smokers' ash-trays. For this purpose metal

Digitized by Google

and delf have manifest disadvantages, since the knocking out of the contents of a pipe upon them is necessarily a noisy process in either instance, while the earthenware variety is, in addition, liable to break under the ordeal, and shatter at once not only the peace of mind of the smoker, but that also of the careful housewife. It is true that hot ashes, if hot enough, will mark an ash-tray made of paper pulp ; but against this comparatively insignificant drawback there are to be weighed the facts that the element of noisiness is reduced to a minimum, and that of fragibility absolutely to nil in the case of the papier maché receptacle. The first-mentioned quality alone would suffice to commend the article to the minds of most men. With pre-eminent qualifications to recommend it, it is surprising that there is not an enduring demand for papier maché.



Technical Education in India.

TECHNICAL training of the young in India, as in this country, is attracting much attention from those interested in education, and the system of State technical scholarships, which was established in 1904, has just been the subject of an inquiry by a committee appointed by the Secretary of State for India. The report of the committee is favourable to a continuation of the present system of Government Technical Scholarships, with a few modifications, and goes on to say :—" The system may be expected to yield even better results in the future, but this expensive form of training at public cost should only be given to a well-chosen few who may reasonably be expected to help the industrial development of India. We recognise that the openings for such men are not at present numerous, and that the most urgent demand of Indian industry at present is for skilled mechanics, and we are in complete sympathy with the efforts now being made for giving in India a better training to men of that class. But the necessity for training the artisan does not preclude the desirability of having a limited number of men with the highest technological training capable of holding posts of control. Both classes are needed for the development of Indian industry, and opportunities for the improvement of both should be given simultaneously."

A SCOTTISH society is being formed with the object of publishing works in the Gaelic language. The founder is the Hon. R. Erskine, whose labours on behalf of Gaelic literature are well known to Gaelic scholars. Amongst those who are interesting themselves in the scheme are the Duke of Argyll, the Duke of Richmond and Gordon, and the Marquis of Bute.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.

WEDNESDAY, July 9th, 1913.

THE money market has been liquidating its indebtedness to the Bank of England during the past week, and yesterday it came to the end of its obligations there so far as loans are concerned, when a large amount was repaid, and for the first time rates became rather firmer, very little money being offered below 3 per cent. Discounts show a weaker tendency. Yesterday tenders were received at the Bank of England for London County Council bills of six months' currency, to the amount of £500,000. Applications totalled £1,177,000, and the average rate was £4 8s. 11.12d. per cent. Bullion movements this week have resulted in a net influx to date of £830,000. Stock markets have met with an additional cause of depression this week in the Rand strike, but happily better news has created a more hopeful outlook, and though the Balkan war continues a disturbing factor, the undertone of markets is steady. Consols at one time reached as low as 72 1/8, but have since rallied to 72 3/8 to 72 1/2 for cash, and 72 1/2 to 72 5/8 for the account.

Dullness has continued in the miscellaneous industrial market, with an absence of business and movements of little importance. In the section relating to paper and print Amalgamated Press Ord. are up 3/16 to 6 5/16—6 9/16; Associated Newspapers have gained 6d. to 23s.—24s.; Lanston Monotype Corporation, which have just declared an interim dividend of 2½ per cent., have risen 1/16 to 7/16—8/16, and Raphael Tuck and Sons Ord. have fallen 3 1/2 to 1 3/16—1 5/16. Business has been done during the past seven days in Associated Newspapers Pref. at 18s. 9d. and 20s. 3d.; in Cassell and Co. at 90s.; in Ilford Pref. at 17s. 9d.; in *Illustrated London News* and *Sketch* Pref. at 13s. 3d. xd., and in the Ord. at 3s. and 3s. 3d.; in International Linotype at 79, 76 and 74; in *Lady's Pictorial* and *Sporting and Dramatic* Publishing Co. Pref. at 52s. 6d.; in Edward Lloyd Pref. at 22s.; in Linotype and Machinery A Deb. at 54 xd.; in George Newnes Pref. at 14s. 6d.; in C. Arthur Pearson Pref. at 67s. 6d. and 68s. 1½d.; and in Weldons Ord. at 32s. 6d., 32s. 3d., 32s. 6d., and 31s., and in the Pref. at 20s. 6d.

COMPANY NOTICES.

CHARLES J. FORWARD and SON, Ltd.

Notice is given, that a petition for the winding-up of the company by the High Court of Justice was, on July 1st, presented to the Court by Thomas Owden Hart, James Hopgood Hart, and Stanley Graham Hart, trading in co-partnership, under the style or firm of S. H. and W. Hart, of Tanner-street, Bermondsey, leather merchants, and James Wilson Garnar, Sidney Thomas Garnar, and Harry Fife Garnar, trading in co-partnership, under the style or firm of James Garnar and Sons, of The Grange, Bermondsey, leather merchants, creditors of the company; and that the petition is directed to be heard before the Court sitting at the Royal Courts of Justice, Strand, London, on July 15th.

ENGLISH ILLUSTRATED MAGAZINE, Ltd.

At a meeting of the company, at 358, Strand, London, W.C., on June 28th, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly the company be wound up voluntarily, and that Mr. John A. Heiron, chartered accountant, be appointed liquidator for the purposes of such winding-up."

COMMERCIAL INTELLIGENCE.

Re RICHARD W. J. MEYE, Lithographic Printer.

A sitting of the London Bankruptcy Court was held last week before Mr. Registrar Brougham, for the public examination of this debtor, who formerly traded as a lithographic printer at 68, Aldersgate-street, E.C. The statement of affairs showed total liabilities £1,144 4s. 0d. (unsecured £1,002 6s. 0d.), and assets "bad book debts £83." Replying to Mr. W. G. Williams, official receiver, the debtor stated that in 1900, with a capital of about £80, he commenced business as a lithographic artist at 29, Spencer-street, Goswell-road, E.C. Early in 1906 he gave up that business in order to join in partnership a lithographic printer carrying on business at 68, Aldersgate-street. He (debtor) contributed £50. The trading was not successful and the partnership was dissolved in January, 1907, the partner retiring from the firm. The title was then changed from Woodroffe, Meye and Co. to Richard Meye and Co. Witness discharged the firm's liabilities of £600 by means of borrowed money, and by running up fresh debts. He continued the business alone without success, and in January, 1912, he sold the good will for £60 to a company registered as Richard Meye and Co., Ltd., with a capital of £100. The whole of the shares were allotted to a creditor in satisfaction of his claim. Witness was appointed a director, his remuneration being one-third of the profits of the company, but all he had received had been about £50 by way of commission. He attributed his insolvency to want of capital to loss owing to inability to attend to business through an accident, and to bad trade during the past four or five years. The books kept in the business had been handed over to the company. Witness knew he was insolvent when the partnership was dissolved in January, 1907. Nothing was transferred to the company except the name. He now owed £481 for money borrowed. In October, 1911, he gave a bill of sale to secure a loan, and he had borrowed £505 from his brother on the security of an annuity. This was his first failure. The examination was concluded.

THE JAPAN PRESS, LTD. Official Receiver's Report.

Under a compulsory winding-up order made last April against this company, which carried on business at 9, Byward-street, E.C., accounts have been lodged showing liabilities £802 18s. 0d., and assets consisting of copyrights of the company's publications; a book debt, £26 6s. 3d., and unpaid calls £11, but none of them estimated to produce anything, whilst the deficiency as regards contributories is returned at £7,384 18s. 0d. The winding-up order was made on the petition of the Anglo-Japanese Bank, Ltd. Mr. H. M. Winearls, official receiver and liquidator, reports that the Japanese Press, Ltd., was registered as a private company in January, 1908, with a nominal capital of £7,500, of which £6,593 (*i.e.*, 5,000 ordinary and 1,593 preference shares) has been issued. It was promoted by Mr. Alfred Joseph Mitchell for the purpose of taking over his interest in the *Anglo-Japanese Gazette*, and the assets used in connection with its publication and sale. The directors of the company at the date of the winding-up order were Mr. G. H. Greatbach and Mr. Henry Schafer, but the affairs of the company were controlled throughout by Mr. Mitchell, although he states that he resigned his directorship when a receiving order was made against him in February, 1912. Mr. Mitchell and the directors state that the company's minute book has been lost. It, however, appears from an agreement dated February 20th, 1908, filed with the Registrar of Joint Stock Companies, that the company took over Mr. Mitchell's business as from January 1st, 1908, together with the stock-in-trade, the electros, the office furniture and fittings and the copyrights of the *Anglo-Japanese Gazette*, the *Anglo-Japanese Trade Review* and *Export Gazette*, and the *Anglo-Eastern Trade Register*. The consideration for the sale was fixed by Mr. Mitchell at £6,000, which was satisfied by the allotment as fully paid up of 5,000 ordinary and 1,000 preference shares. According to Mr. Schafer, the monthly publication of the *Anglo-Japanese Gazette* was continued until December, 1912, but the income, derived principally from advertisements, has always been insufficient to meet the expenses of carrying on the business of the company. The company's accounts show that the loss incurred during the five years to December 31st, 1912, amounted to £846. No offer has been received for the company's copyrights. In July, 1910, the directors resolved to create debentures, charged on all the company's property, and in August, 1910, a debenture for £70 was issued to Mr. Edgar Curtis, to secure advances for a like amount, shown by the books to have been made in June and July, 1910. On May 4th, 1911, a further debenture for £30 was issued to Mr. Curtis in respect of an advance of £30, shown to have been made by him on May 5th. No receiver has been appointed. The assets of the company are returned as of no value, and as the possible claim against the directors is worthless, there is no prospect of there being anything for the debenture holder or for the unsecured creditors. The failure of the company is attributed by Mitchell to insufficient working capital on its formation, and to the inability to raise further capital, which resulted in the business being carried on at a loss throughout. In the official receiver's opinion the failure is due also to the unbusinesslike methods of the directors.

Re SAMUEL DAVID HARDING, Printer.

At a sitting of the Crewe Bankruptcy Court, this debtor, trading as Harding and Son, Birch-villas, Webb's-lane, Middlewich, and carrying on business as a printer at 14, Kinderton-street, Middlewich, attended for his public examination. The official receiver (Mr. F. T. Halcomb) stated that the receiving order was made on the debtor on May 30th, and on the same day he was adjudged bankrupt. At the first meeting of the creditors, held on June 12th, Mr. R. D. Clark, Hanley, was appointed trustee of the estate with a committee of inspection. He (the official receiver) understood that all debts were to be paid in full, together with the costs of the proceedings, and the debtor's legal adviser desired that the examination should be formally adjourned. To that application he did not propose to object, as there was a good deal to be done in regard to ascertaining the correctness of the claim to payment of the debts and costs in full. That would justify the examination being formally adjourned until August 29th. Debtor's legal representative (Mr. H. P. Rigby) said that the whole of the debtor's assets were in printing machinery, and it was only for protection that he came to Court. Since the date of the receiving order he had been able to dispose of the business as a going concern to a local printer. The business was now being carried on by the prospective purchaser in debtor's name, with the sanction of the trustee of the estate, Mr. Clark. Debtor was now able to pay his creditors in full, and also the costs of the bankruptcy proceedings. It was not his wish that debtor should go through his public examination, but that the receiving order should be discharged and the bankrupt's adjudication annulled. The Registrar (Mr. C. E. Speakman) said that if debtor paid his creditors in full there would be no examination, as there would be nothing to inquire into.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

GUPPY, W. and J., trading as W. Guppy and Son, 8 South-street, Finsbury, London, E.C., paper merchants and agents. Debts by J. Guppy. June 30th.

HALTON, J. B, W. J., H. and J. S., trading as W. Halton and Sons, Whitehaven, Cumberland, newspaper proprietors, printers and stationers. Debts by W. J., H. and J. S. Halton, who will in future carry on the business. July 1st.

JEFFERY, J. and J. W. M., trading as J. W. Jeffery and Co. and E. Baynes and Co., at 120, Cannon-street and King's-head-court, London, E.C., wholesale and retail stationers, printers, and account book makers. July 7th.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDER.

DEAN, R. S., 78, Gillygate, York, stationer, newsagent, etc. Date of order, and of adjudication order, June 30th, made on the debtor's own petition. First meeting of creditors, July 15th, 3.15 p.m., at the official receiver's office, Duncombe-place, York. Public examination of debtor, August 1st, 11 a.m., at the Courts of Justice, Clifford-street, York.

FIRST MEETING AND PUBLIC EXAMINATION.

ETESON, G. H., trading as Eteson and Co., at 44, West Derby-street, formerly 67, Dale-street, Liverpool, stationer. First meeting, July 15th, 11 a.m., at the official receiver's office, 11, Dale-street, Liverpool. Examination, July 21st, 11 a.m., at the Court House, Government-buildings, Victoria-street, Liverpool. Date of adjudication order, June 30th.

NOTICES OF INTENDED DIVIDENDS.

SHAW, L. B., trading as Shaw and Sons, 105, Loampit-vale, Lewisham, London, S.E., printer. Claims by July 25th to E. W. J. Savill, official receiver, 132, York-road, Westminster-bridge-road, S.E.

MYNOTT, F., The East Anglian Press, Queen's-road, Felixstowe, printer and journalist. Claims by July 23rd to F. Messent, official receiver, 36, Princes-street, Ipswich.

NOTICE OF DIVIDEND.

SNODGRASS, A. E., 92, Ridgmount-gardens, Gower-street, London, W.C., journalist. Supplemental dividend of 2s. 6d., any day (except Saturday) 11 till 2, at Bankruptcy-buildings, Carey-street, W.C.

APPLICATION FOR DEBTOR'S DISCHARGE.

QUELCH, H., 35, Limesford-road, Nunhead, London, S.E., newspaper editor. To be heard July 25th, 11 a.m., at Bankruptcy-buildings, Carey-street, W.C. Trustee, E. S. Grey, official receiver, Bankruptcy-buildings, Carey-street, W.C. Released February 21st.

NOTICES OF RELEASE OF TRUSTEES.

McCARTHY, E. A., 24, Little Russell-street, lately of 12, Whitefriars-street, London, E.C., journalist. Trustee, W. P. Bowyer, official receiver, Bankruptcy-buildings, Carey-street, W.C. Released February 21st.

SKUCE, W. H., 15, Shaftesbury-road, Oldfield-road, Bath, bookbinder. Trustee, C. H. King, official receiver, 26, Baldwin-street, Bristol. Released March 3rd.

Newspaper Reporters for Ocean Liners.

No modern ocean liner is complete nowadays without its own printing office and little news sheet, and its wireless apparatus to keep it in touch with what is happening in the world, from the everyday life of which it is temporarily cut off. The latest move is to keep the world in touch with the life incidents on the ocean liners during their voyages. Before very long every ocean steamship may carry on board at all times a trained newspaper man to report for newspapers in Europe and the United States news incidents on voyages, interviews with passengers, etc., vouched for as being in accurate form and in the most approved newspaper style.

The plan is one which a man of long newspaper experience in New York and other of the big cities of the United States, Mr. Willis C. Pratt, has been working out for some years, and he predicts now that he will have his arrangements completed with the various ocean steamship companies so that his system will be in working order for the autumn ocean traffic. Mr. Pratt will leave New York on August 15th for London to complete the final arrangements with the ship-owners. He says he has unlimited financial backing behind him in the Ocean News Association, an English corporation, organised especially to finance and conduct his system. Mr. Pratt will be the general manager of this company, which will have its chief offices in New York and London, he working between those two cities.

Mr. Pratt's scheme is outlined as follows, in an interview with the *Fourth Estate*:—

"The Ocean News Association will adequately cover the news originating or having a 'follow' on board the great trans-atlantic steamships. Briefly the plan is this:—To make close selection of a staff of the best known newspaper writers who have special equipment for this special work; to initiate the service by assigning two men to each of the big steamship lines and to gradually extend the service until one high-class man is placed on every prominent passenger trans-atlantic service.

"It has come to be generally understood among newspaper proprietors that the modern liner is a floating hotel where for varying periods are segregated a larger percentage of persons of note than can usually be found in any of the big land hostelries. It is a matter of common knowledge that approximately 10,000 'newsmakers' are constantly travelling the ocean highways.

"Practically all of the big steamships entering or leaving the port of New York habitually carry scores of passengers whose individual opinions newspapers here and abroad are anxious to have. With a trained correspondent on board these may be obtained during the voyage without any of the hurry and slap-dash that characterises a pier-head interview as obtained under the present method of ship news reporting.

"Where the matter in hand is of prime importance, the interview may be submitted to the person interviewed after it is put into type script, and thus the dangers of misquotation so frequent in cases where facts are hurriedly gathered on arrival or departure are avoided. This matter will be sent ashore by wireless telegraph, thus anticipating the arrival of the ship by from twelve to seventy-two hours.

"Besides the greater degree of accuracy and the more comprehensive sweep-up of matters of importance and general interest there are numerous other advantages to this plan. From the newspaper point of view these are so obvious that there is no need to recount them. Epitomised it means the covering of an extensive and important news field in a manner that has not been attempted until now.

"The correspondents of the Ocean News Association will travel first class. Tasteful pamphlets describing the service and containing the portraits of the men and designating the steamships to which they are assigned will be distributed on board the vessels on which they travel. Each correspondent will have a state-room set aside for him, and there he may be found by any passenger who may have an item of news which may be interesting for his home city.

"The news matter gathered by the ocean correspondents will be delivered to the representatives of inland papers stationed in New York, or will be distributed to these papers direct by wire from the offices of the Ocean News Association. All stories of importance will be protected by copyright, so subscribers to the service need have no fear of news pirates."

Mr. Pratt has been connected in executive news position with most of the New York daily papers. He retired from this phase of newspaper work several years ago and studied wireless telegraphy to the point that has made him an expert. He was connected with the United Wireless Co. in an important position and was behind some of the long distance feats of message sending in the early days of wireless that brought the company into much fame. His plan is to place his service on the steamships beyond control of the steamship owners as to censorship and allow the true sending of news at all times. Mr. Pratt believes that the withholding of the true news of the "Titanic" is the best argument of the need of the news expert on all steamships in such a position as to insure the truthful accounts of news happenings coming ashore at once.

Printers on Holidays.

The old-established firm of Morton and Burt, Ltd., of Edgware-road, and High-road, Willesden, and Burt and Sons, Porchester-Road, Paddington, held their annual outing at the "Cricketers' Hotel," Chertsey, on Saturday last. The usual cricket match was held, and at 1 o'clock the party assembled in the spacious dining hall, doing ample justice to the excellent menu provided.

"The King" was proposed by the Chairman, Mr. J. R. Burt, "The Firm and its Chairman, Mr. Chas. Wm. Burt," was proposed by Mr. W. Varndell, who paid a high tribute to the firm and regretted the absence through illness of Mr. C. W. Burt, whose kindly presence they missed. This was responded to by Mr. J. R. Burt and Mr. Emlyn Jones. Mr. Burt dwelt at some length on the hearty co-operation existing between the firm and its employees, and referred to the many members who had put in years of faithful service. He expressed the pleasure he felt in being once more amongst them, and trusted that each year these meetings would continue.

Mr. Emlyn Jones followed briefly, paying a high tribute to the Porchester-road staff, remarking on the pleasure it gave him to meet so many who had been with the firm a number of years, and playfully touching on the peculiarities of some of the members of the staff, he welcomed the appearance of other members this year, which the growth of the firm necessitated, and he asked for their co-operation to still further increase the reputation of the firm for good work punctually produced. The extension of premises made their services all the more valuable. In closing, Mr. Jones expressed his grateful thanks for the beautiful fragrant expressions of their kindly sympathy in his great loss, sent by the three houses, on the occasion of the death of his dear wife. They had helped and comforted him greatly, and he would always cherish their kindness. Mr. Emlyn Jones read a letter from Mr. A. H. K. Burt, who was unable to be present, but who sent his best wishes for a very happy day.

"Heads of Departments," given by Mr. Davey, met with responses from Mr. Varndell and Mr. Wilson (Willesden-green branch). In the course of his remarks, Mr. Davey complimented Mr. Llewellyn Jones (son of Mr. Emlyn Jones) on the programmes for the day, remarking that it was a remarkable production for one who had not yet been two years in the business, and vouched for its being entirely his own work.

"The Stewards," given by Mr. Goddard, was responded to by Messrs. Dunk and Ansell. "The Chairman," by Mr. Eatwell, was humorously responded to by Mr. J. R. Burt, who again expressed the pleasure it gave him and Mrs. Burt to be amongst them. After dinner various pastimes were indulged in, including boating on the river. At 5 o'clock a capital tea was served, followed by the party undergoing the scrutiny of the camera. A very exciting tug-of-war followed, and then the party adjourned to the concert-room, and sang as printers only can, till time for returning to town, everyone declaring that all previous outings had that day been eclipsed.

The programme is excellently printed in chocolate and green, the letterpress being in chocolate on a pale green ground with a dark green fancy border. This runs to eight pages, and is enclosed in a stiff brown cover with ornamentally designed title, and is secured at the back with chocolate silk ribbon.

MR. A. MORETON MANDEVILLE (editor of *London Mail*), the Lonmail Syndicate, Ltd. (owners of the paper), and the Walbrook Co., Ltd. (the printers), were the defendants in an action which was settled in Mr. Justice Darling's Court in the King's Bench Division last week. They were sued by Mr. William Bankier, known as "Apollo, the strong man," for libel contained in a paragraph in the *London Mail*. Plaintiff's counsel having stated that there was no ground whatever for the libel, and that the defendant's were prepared to consent to judgment for a handsome sum which would include the plaintiff's costs, judgment was entered for the plaintiff accordingly.

Special Prepaid Advertisements.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS
(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C

Situations Vacant.

LARGE Manufacturing Firm requires for their extensive Litho and Letterpress Department a competent FOREMAN, with the view of ultimately assisting in the Management; only men who have experience in first-class work need apply; state experience, age, etc.—Address, "Litho," William Porteous and Co., Glasgow. 13231

REQUIRED, for a large high-class Retail Stationery Business in London, a fully qualified MANAGER, of good address and between 35 and 45 years of age; must have an intimate knowledge of the trade in all its branches and have a practical acquaintance with the Picture and Fancy Goods Trades; a good salary will be given to a thoroughly efficient man.—Write, fully stating qualifications and with copies of references, etc., to A. Z. 577, Sell's Advertising Offices, Fleet-street, London. 13233

Business for Sale.

OLD-ESTABLISHED, well-equipped LETTERPRESS BUSINESS for disposal, exclusively serving a district of over 30,000 in large Lancashire manufacturing town; profitable specialities for increasing mail-order connection; £1,250 required; ill-health; every investigation; no agents.—Replies to Box 903, Smiths', 100, Fleet-street, London, E.C. 13232

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

MONOTYPE "D" KEYBOARD for Sale; as good as new; satisfactory reasons for disposing of same.—Address, No. 13228, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13228

Miscellaneous.

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13181

☛ A TODOS NUESTROS LECTORES ESPAÑOLES y à los libreros Papeleros, Litógrafos, Impresores, España otipadores y Encuadernadores en Estere-l'Hispano-América.

'Phone: HOLBORN 2288.

146, FLEET STREET,
LONDON, E.C.

July 1st, 1913.

To Any Printer,

DEAR SIR,—

I have now personally attended 11 Costing Congresses in London (3), Edinburgh, Dublin, Newcastle, Leeds, Liverpool, Portsmouth, Swansea and Bristol.

After so much study I think I may offer my opinion. I would instal the system, both adopting and adapting it. I would talk it over with my staff; telling them that this is "not directed against labour but only against labour in vain." Pass on Mr. Howard Hazell's warning that it is not meant for speeding up and setting man against man, and that anyone so using it, or abusing it, is looking for trouble.

To start right have an independent plant inventory if you have not one. To quote Mr. Hazell again: "If you have no plant inventory, it is a great disadvantage." (Bristol Congress.) Can I help you there? At Stoke last week Mr. Hazell said: "I strongly counsel printers to call in an expert and have their plant valued."

The costing system is flexible; particularly in such matters as special overtime, special travelling or carriage costs, infrequent use of expensive machines, the division of the year by 50 or 52 weeks; standing-matter usage, working small jobs on large machines, "washing up," extra proofs, or charges for paper handling.

Its exponents continually repeat that in many applications each printer must decide for himself just how to apply its essential principles.

Practically they only impress that he shall instal this system to get his hourly cost for each process, to get the *whole* cost of that hour—important adjective!—to work out each job cost on that basis, and weekly to check, by the simple balancing method embodied, so as to see that his hourly cost is right. This check affording a fine barometer all the while of the state of the business.

You are not asked to adopt certain selling prices. You are not asked to add a definite profit. That is all left to your judgment.

Although the system "turns on the pivot of a central costing clerk," it may not cost any more than your present system as it takes clerical work off your highly paid technically skilled workers.

You cannot start it properly without a correct Inventory of your Plant.

Can I make that Inventory?

Yours very faithfully,

FRANK COLEBROOK,

Printers' Valuer.

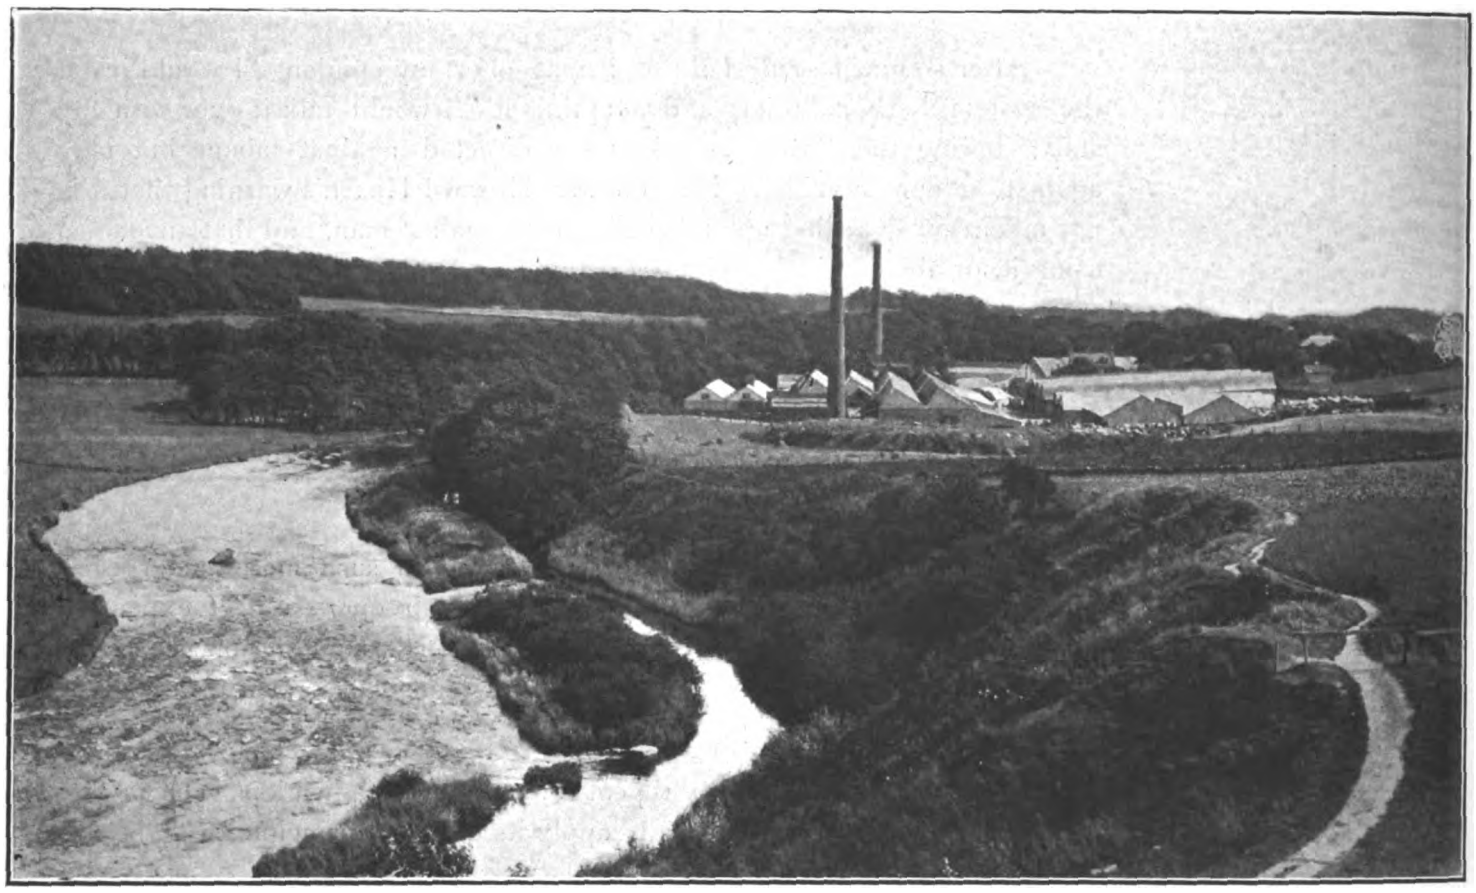
SOME CONTRIBUTIONS TO

Scottish Paper Trade History.

IX.



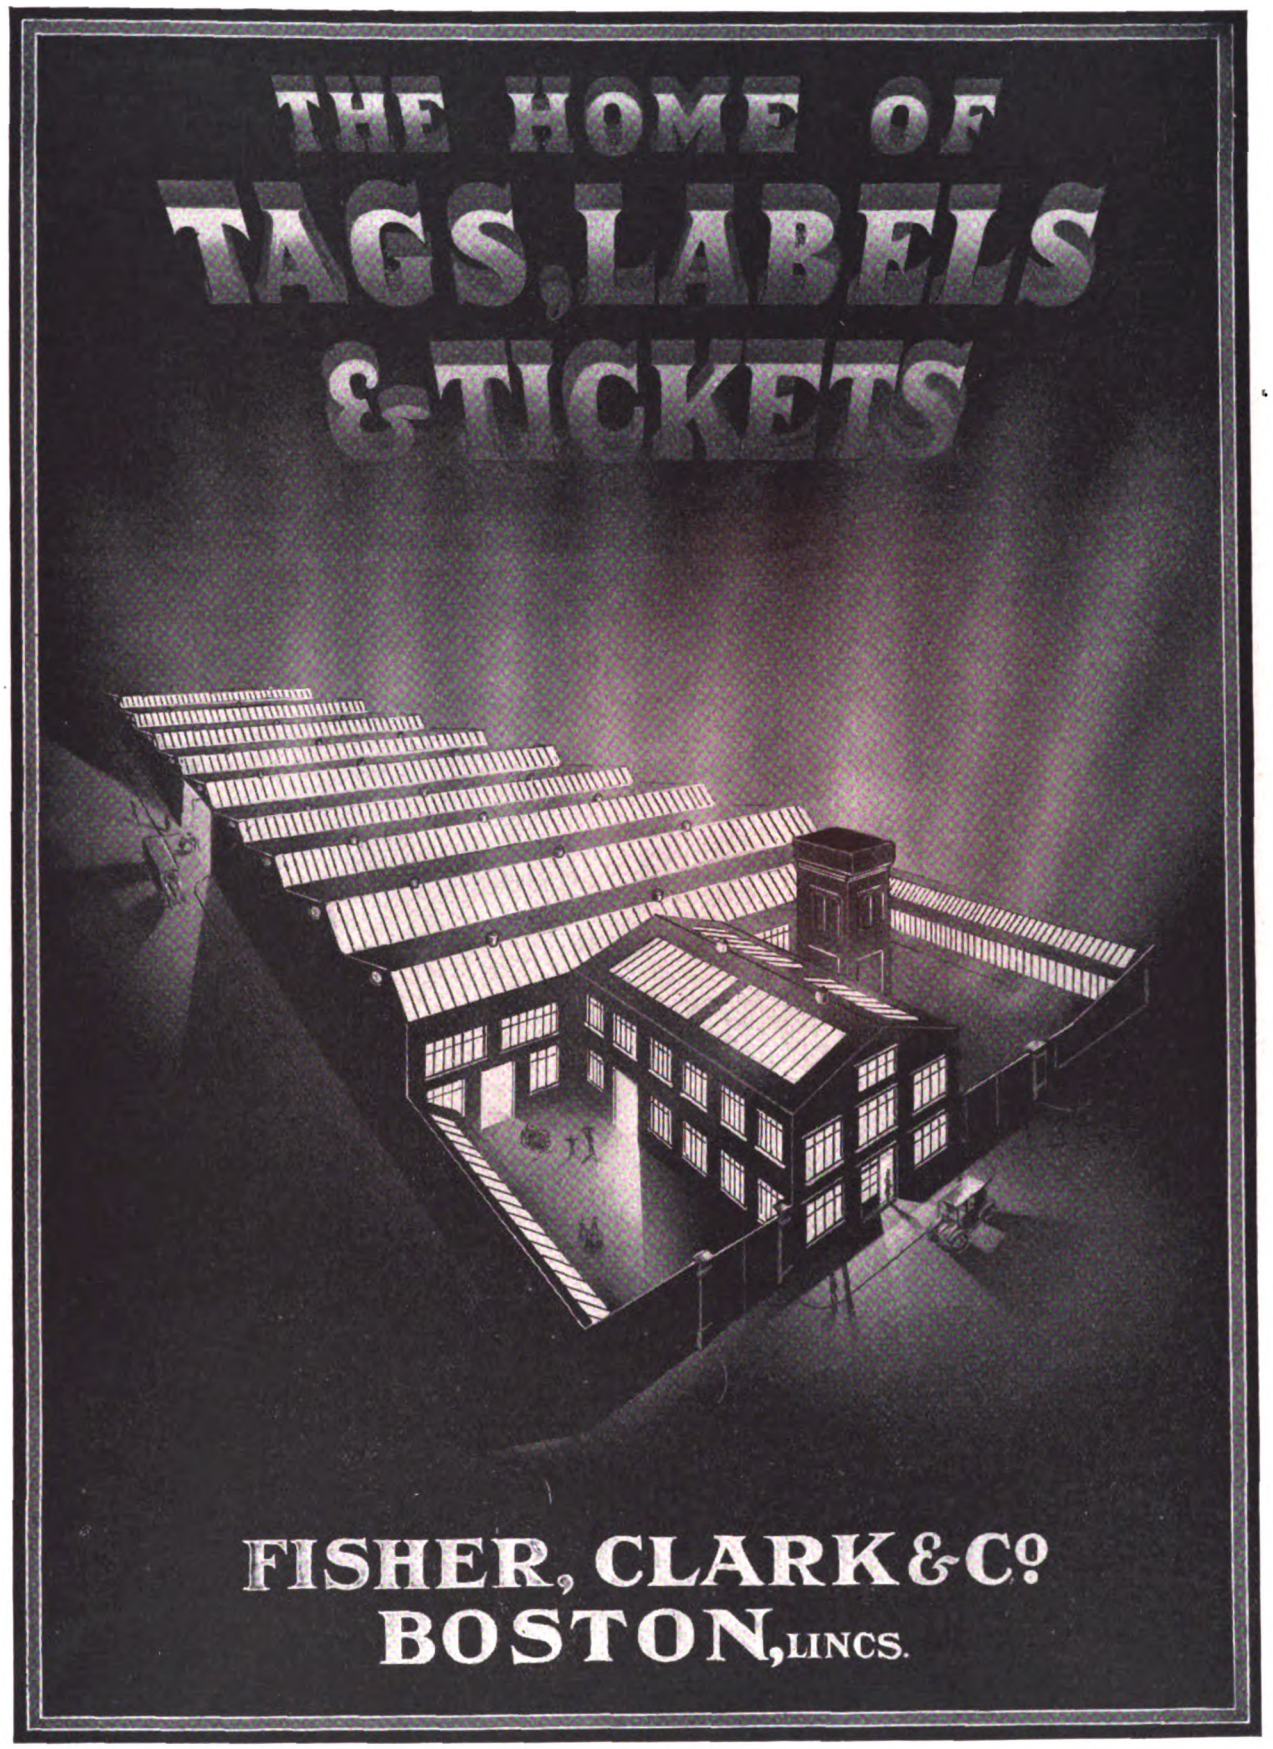
Prominent amongst the larger Scotch papermaking firms is the well-known house of C. Davidson and Sons, Ltd., whose headquarters are at Mugie Moss, Aberdeen. This firm formerly had three mills in operation, but now only two, viz., Mugie Moss (No. 66) and Bucksburn (No. 80). The sequence of numbers suggests that the former is the older of the two, but as a matter of fact Bucksburn Mill is the successor of an establishment founded long before the present one. Prior to 1809 it was in the occupation of Jas. Stephen, but in November of that year the machinery and a stock of paper were advertised for sale by public roup. A little later, James Hogg started up a paper mill at Bucksburn, but not apparently in the same premises, which had been converted into a woollen factory. In 1825 the mill was still in the occupation of Hogg, and contained one vat and a "couching machine." It must, however, have been shut down within the next few years, as in 1832 it does not appear in the list of Scotch mills.

The founder of the present business, Mr. Chas. Davidson, was the son of a dyer. Born in 1772, he was originally brought up as a millwright, but subsequently—towards the close of the eighteenth century—went into partnership for a time with Mr. C. Smith, who had set up a mill at Stoneywood. Afterwards he was at Grandhome Waulk Mill, and in 1818 started in the same line of business for himself at Mugie Moss, on a piece of ground leased from Mr. Forbes of Seaton. The establishment also comprised a flax beating mill and a snuff mill. The latter was carried on until 1830, but the fulling and beating branches of the business were discontinued in 1821, when the premises were converted into a paper mill, the germ of the present extensive establishment at Mugie Moss. As time went on, Mr. Davidson took his sons William and George into the business, and both of them grew up to be expert papermakers.

Mr. Chas. Davidson laid the foundation of the present plant by putting down a Fourdrinier machine. He resided close to his mill, but went into Aberdeen on Fridays. The output, consisting of browns and wrappings, was by no means large, as in 1834 only 109 tons of browns was made by all the four mills in the neighbourhood of the Granite City. Within the following five years, however, the turnout was practically doubled. The mill was operated by water power, and the raw material—common rags, ropes and mill waste—was collected in Aberdeenshire and the adjacent counties. The founder of the business died in 1843, and George Davidson, who had been trained in Hogg's mill, retired about 1856, leaving the business in the hands of his brother William (who died in 1873, at the age of 68) and his sons and nephews, Charles, George, John, David and Alexander Davidson. The first named of these died in 1870, at the early age of 38. George was the inventor of a machine for making paper bags from the web at the rate of 4,000 per hour, which contributed considerably to the firm's success. This apparatus was patented in December, 1859, and a further patent, for some improvements, was taken out in June, 1863. In June, 1872, Mr. Davidson patented a method of washing pulp in a flat sieve with wire gauze bottom and sides, the upper surface of the gauze being covered with flat pieces of india-rubber carried in frames, and arranged like louvre boards.

About 1860 Messrs Davidson acquired the one-vat Waterton Mill (No. 63) which is said to have been started by Hogg in an old meal factory, presumably after he gave up Bucksburn. He was succeeded there by R. McKilliam, who in turn gave way to Thos. Jaffray, who made tea and grey papers. In 1836 he put down a new water wheel, 40 feet in diameter. He was still there in 1845, according to a list of that date, but was not successful in his business. The mill site was the property of the Pirie family, of Waterton House, and as the smoke from its chimney was considered objectionable by them, the lease of the premises was not renewed when it expired, and some time afterwards they were pulled down. At the time Messrs. Davidson acquired the mill it had a 54-inch machine running on browns and grocery papers, etc. Messrs. Davidson and Sons worked it down to about 1887, some dozen years prior to which date the present Bucksburn Mill had been added to the firm's two other ones, the makes turned out there being much the same as in the other mills. About 1867 Mr. George Davidson took over another old mill at Bucksburn and converted it into an experimental mechanical wood pulp factory, but it was burnt down a few years later. There is now a 108-inch machine at Bucksburn, and to-day this mill produces the finer of the sorts which Messrs. Davidson and Sons manufacture, viz., M.G., litho, envelope, bag, royal buff and poster papers, glazed imitation parchment, white and coloured tea papers, tobacco, starch, manilla and super-calendered sorts.

In 1886, Mugie Moss Mill contained twenty steam engines, used for various purposes, as well as half-a-dozen water wheels. It still retains its two 64-inch machines, which have been running there for many years, and makes, in addition to the browns, cartridges and mill wrappers of former years, krafts and sealings, duplex papers and all kinds of paper bags, as well as the carpet, "patent cedar," and roofing felts for which the firm have an established reputation of many years standing. In the early part of 1875 the business was converted into a company under the present title, the capital being £80,000 in £10 shares, which ten years later were divided up into £1 shares. In 1891 the capital was increased to £100,000 by the issue of fresh shares. The company's mills



THE MUGIE MOSS MILLS OF MESSRS. C. DAVIDSON AND SONS, LTD.

are situate within a few minutes walk of Bucksburn Station on the G.N. of Scotland railway. The London warehouse and offices (formerly at 80, Upper Thames-street) have for many years past occupied Paul's Pier Wharf, and 23, Upper Thames-street, a little further west than the old location. There are also warehouses at Aberdeen, Glasgow, Edinburgh, Liverpool, and Newcastle. This firm alone probably produces more paper in the course of a few weeks than the whole of the mills in the neighbourhood of Aberdeen did in a year, three-quarters of a century ago. The number of employees in the trade has of course greatly increased during the same period, only 300 to 400 persons being engaged at the local mills in 1839. In those days the chief raw material used for the fine papers made was foreign rags, though some were procured in the district itself. The accompanying general view of Mugie Moss Mills gives a good idea of the extremely picturesque surroundings of some of these papermaking establishments in the far North.

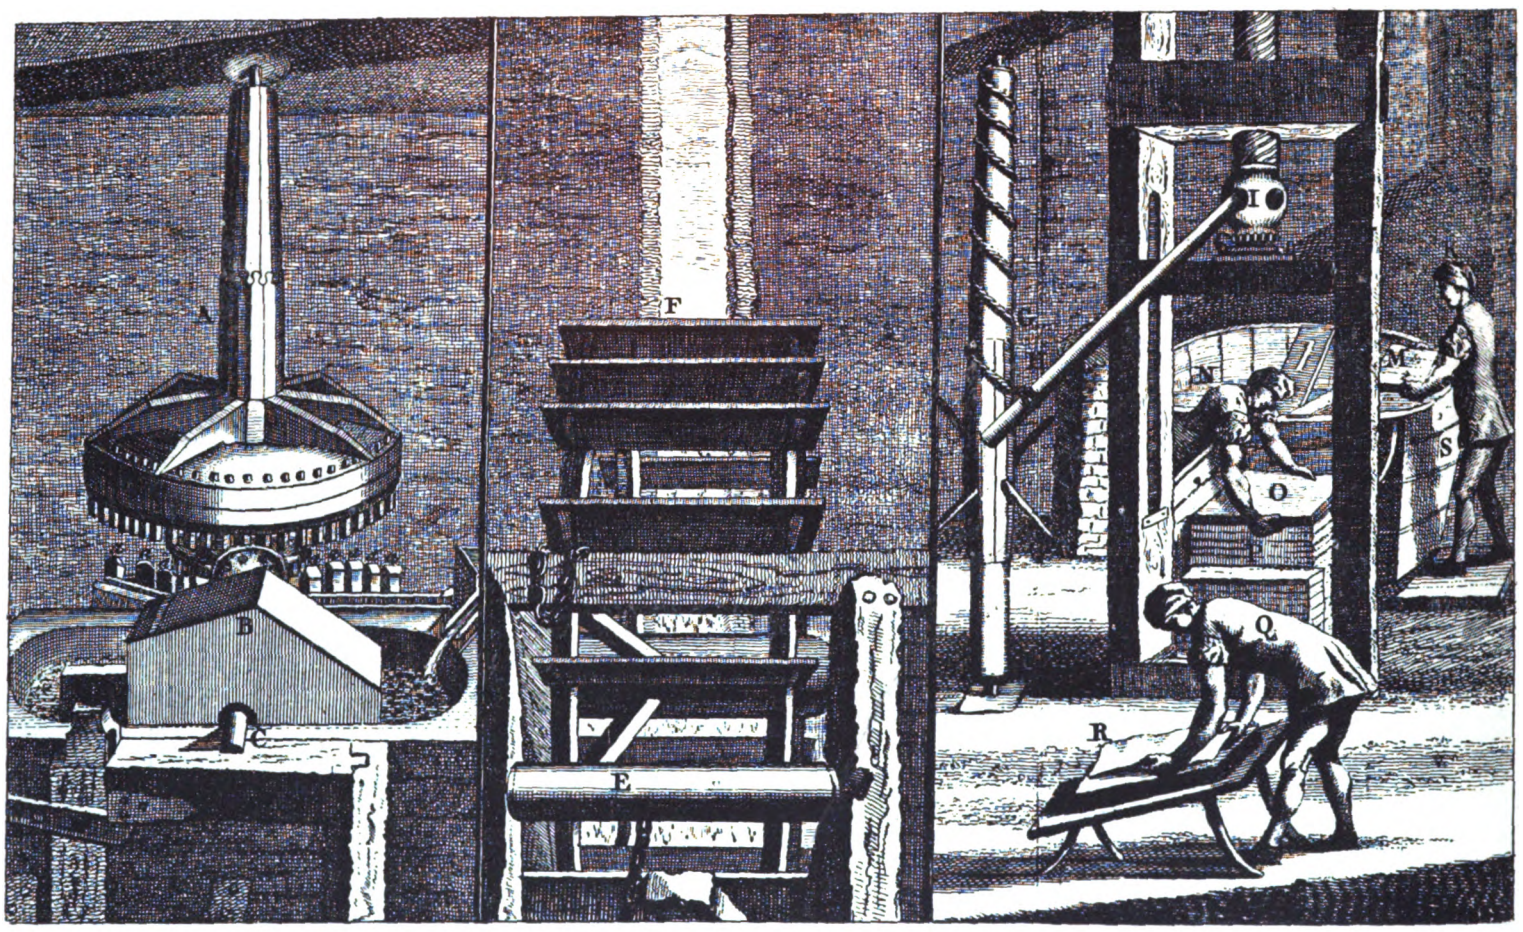
Richard Naumann, Umdruckpapierfabrik,

Schumannstrasse 45, Dresden—A. Germany.

Digitized by Google

century, it will be of interest to say something about the method of making paper at that period. We do not know any detailed description of that in use at a Scotch mill then, but it is not likely that the practice in the northern kingdom differed from that which obtained in England, and of this we fortunately possess a contemporary account. which we reproduce below from the supplement to the (London) *Universal Magazine*, published in June, 1752, together with the illustration that accompanied it. After some remarks on the history of paper manufacture, the old writer continued as follows:—



"The linen rags (of which our European paper is made) being carried to the mill, are first sorted, then washed very clean in puncheons whose sides are grated with strong wires and the bottoms bored full of holes After this they are fermented, that is, laid in square heaps, close covered with sacking, till they sweat and rot, which is commonly done in four or five days. When duly fermented, they are twisted into handfuls, cut small, and thrown into oval mortars made of well-seasoned oak, about half a yard deep, with an iron plate at bottom an inch thick, 8 inches broad, and 30 long. In the middle is a washing-block with five holes in it, and a piece of hair sieve fastened on the inside, so that nothing can pass out except dirty water. These mortars are continually supplied with water by little troughs from a cistern filled by buckets fastened to the floats of the great wheel, which raises the wooden hammers for pounding the rags in the mortars. When the rags are beaten to a certain degree, called the first stuff, the pulp is removed into presses where it is left to mellow about a week; then it is put into a clean mortar, pounded afresh, and then removed into presses or boxes as before, in which state it is called the second stuff. The mass being beat a third time till it resembles flour and water without lumps, it is thereby fitted for the pit mortar, where it is perfectly dissolved, and is then carried to the vat to be formed into paper. But, lately, instead of pounding the rags to a pulp with large hammers, as above, they make use of engines, which perform the work in much less time.* These engines consist of a round solid piece of wood, into which are fastened several long pieces of steel ground very sharp. This is placed in a large trough with the rags, and a sufficient quantity of water; at the bottom of the trough is a plate with steel bars ground sharp like the former. The engine, being carried round with a prodigious velocity, reduces the rags to a pulp in a very short time. It must be observed that the motion of the engine causes the water in the trough to circulate, and by that means constantly returns the stuff to the engine. The trough is constantly fed with clean water at one end, while the dirty water from the rags is carried at the other through a hole defended with wire gratings, in order to hinder any of the pulp from going off with the dirty water. When the stuff is sufficiently prepared as above, it is carried to the vat, and mixed with a proper quantity of water, which they call priming the vat. The vat is rightly primed when the liquor has such a proportion of the pulp so that the mould dipped into it will just take up enough to make a sheet of paper of the thickness required. The mould is a square sieve above one inch deep, having a brass wire bottom, resting on sticks to prevent its bagging, and keep it exactly horizontal. This mould the maker dips into the liquor, and gives it a shake as he takes it out to clear the water from the pulp. He then slides it along a groove to the coucher, who turns the sheet, lays it on a felt, and returns the mould to the maker, who by this time has prepared a second sheet in another mould, and thus they proceed, laying alternately a sheet and a felt till they have made six quires of paper, which is called a post. This quantity is then put under a press, and by the strength of five or six men all the water is pressed from it, after which it is separated from the felts, laid regularly one sheet upon another, and, having undergone a second pressing, is hung up to dry. When sufficiently dried it is taken off the lines, rubbed smooth with the hands, and laid by till sized, which is the next operation. For this they chuse a fine temperate day, and having boiled a proper quantity of clean parchment or vellum shavings until they come to a size, they prepare a fine cloth, on which they strew a due proportion of white vitriol and rock alum finely powdered, and strain the size through it into a large tub, wherein they dip as much paper at once as they can conveniently hold, and with a quick motion give every sheet its share of the size, which must be as hot as the hand can well bear it. After this it is pressed, hung up sheet by sheet to dry, and then, being sorted, is told into quires, which are folded, pressed very hard, and so tied up in reams or bundles for sale."

*This is the "Hollander" beating engine, so called from the country of its origin, where it was certainly in use by the end of the seventeenth century. Its introduction into Great Britain apparently dated from a rather later period, as the above suggests.

Then comes the following "Explanation of the Copper-Plate, representing a Paper Mill, with the men at work."

A, the wheel which turns the engines.
B, the cover of the engine, which hinders the water and stuff from being thrown out of the trough by the velocity of the engine.
C, the spindle of the engine.
D, a lever, whereby the engine is either raised or depressed, as occasion requires.
a, a, a, a, etc., hammers for pounding the rags.
E, a roll for drawing up the penstock, or sluice.
F, the water wheel, which turns the engine, hammers, etc.
G, a windlass for pressing the paper.
H, a lever, one end of which goes to the nut of the press, and to the other is fastened a rope, going round the windlass.
I, the press.
K, the maker at work at the vat.
L, the chimney which carries off the smoke from the fire under the vat.
M, a mould, on which the paper is made.
N, the couch-man at work.
O, the mould, containing a sheet of paper, couching upon a felt.
P, a pile of paper and felts before it is pressed.
Q, the layer at work.
R, a sheet of paper which he is laying smooth on the heap.

The text and the description of the picture are so clear as to leave hardly any point in doubt as to the method of making paper 160 years ago, except perhaps the precise nature of the connection between the water wheel and the wheel A. This latter, it will be noticed, actuated the spindle of the beater roll as well (apparently) as the toothed barrel that alternately raised and let fall the stampers of the mortars in the way seen in the old print reproduced in the second article of this series. In the latter the handle of the press was pulled over directly by the operator, but in the later English mill now illustrated it is attached to a long vertical spindle by a rope, which was wound up, and the handle consequently pulled round, by a sort of capstan arrangement. The rope evidently had to be unwound, and wound afresh for each successive quarter turn of the press, which, as well as the water wheel, is a much more massive affair than that of the seventeenth century mill illustrated in the previous article.

A PAPER MILL IN THE MIDDLE OF THE EIGHTEENTH CENTURY, FROM AN OLD PRINT.

Some of our readers may care to compare this description of papermaking in the middle of the eighteenth century with that of some sixty years later, which was printed, with illustrations, in our issues of January 18th and 25th, and February 1st and 8th, 1901.

Before returning to follow the fortunes of individual Scotch mills, we will give some statistics with regard to the output and classes of paper made in Scotland late in the eighteenth century, from contemporary official documents.

Before May, 1781, when the Excise duties on home-made paper were altered, the bulk of the paper made in Scotland did not belong to any of the descriptions for which special duties were provided in the Acts of Parliament, *i.e.*, were mostly of the sorts which are now officially catalogued as "unenumerated."

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

In 1770, the duty on Scotch-made paper realised £829 10s., of which £516 was from unenumerated sorts and £210 from browns, but the best year of the decade 1770—1780 was 1773, when £940 was collected by the Scots Excise officers from the paper trade, £546 of which was in respect of unenumerated sorts, £226 from browns and £95 from "second Pott" quality. The worst year in the decade was that ending July 5th, 1780, when the duty only realised £627 2s. 7½d., of which £325 8s. 6½d. was for unenumerated sorts. As the duty on these was then £18 per cent. *ad val.*, the value of the whole was only £1,800. For "second pott" paper £20 6s. 8½d. was received, which, as the duty was a trifle over 9d. a ream, represented rather more than 500 reams. "Small ordinary brown" paper realised 17 guineas for the Government, and the duty on this being just over 6d. a ream, theless, during the thirteen years these new duties remained in force the manufacture of paper in Scotland steadily increased. In 1781-2, the first complete year under the new rules, the Scotch paper duty realised £1,147 8s. 11d., as compared with £38,539 in England, so that the industry was still on a comparatively small scale. Five years later the product of the duty had tripled, amounting to £3,413, though there was not a corresponding increase of output, most of the duties having by then been increased by some 40 per cent. For the financial year 1791-2, the figures have been preserved in full detail, and are given on the opposite page.

Papermakers had then to take out a licence, costing £2 every year, and as 29 such licences were issued during the year in question, it may be assumed that there were then that number of paper manufacturers in Scotland.

about 700 reams were made. "Whited brown" produced £187 1s., and as the duty was at a rate of 9d. per bundle of two reams, about 10,000 reams must have been made. Pasteboard, millboard and scaleboard, dutiable at about 4s. 9d. per cwt., brought in £76 9s. 8½d. to the Revenue, so that not more than 16 tons could have been made. It will be evident from these figures that the paper manufacturing trade of Scotland, 133 years ago, was on a comparatively small scale, and the bulk of the output must have been browns. The better sorts, writings and the like, were probably included amongst the unenumerated, whilst the pott may have served both as a writing and a book paper.

From May, 1781, the old classification of paper for taxing purposes, which had been in force for some 70 years, was altered, five "classes" being substituted, under which duties varying from 3d. to £1 13s. per ream were levied, which on the whole meant a considerable increase on the old rates. Nevertheless, during the thirteen years these new duties remained in force the manufacture of paper in Scotland steadily increased. In 1781-2, the first complete year under the new rules, the Scotch paper duty realised £1,147 8s. 11d., as compared with £38,539 in England, so that the industry was still on a comparatively small scale. Five years later the product of the duty had tripled, amounting to £3,413, though there was not a corresponding increase of output, most of the duties having by then been increased by some 40 per cent. For the financial year 1791-2, the figures have been preserved in full detail, and are given on the opposite page.

Papermakers had then to take out a licence, costing £2 every year, and as 29 such licences were issued during the year in question, it may be assumed that there were then that number of paper manufacturers in Scotland.

In addition there were four paperstainers, whose annual licence also cost £2.

With regard to this latter industry, Arnot, writing some thirteen years earlier, says that "painted paper, or paper for hangings of rooms, was begun to be made by Mr. Esplin, about the same time with printing paper [*i.e.*, about the middle of the eighteenth century]. At first, Mr. Esplin confined himself to two colours, and sold his paper at a shilling per piece, consisting of twelve yards. The manufacture was improved by degrees, and a variety of colours and patterns introduced, so that the painted papers made at Edinburgh may now vie with those that are sent from England, but vast quantities of painted paper are still poured into Edinburgh from the metropolis," *i.e.*, London. For the next three quarters of a century or so most of the paperhangings used in Scotland were imported from England, as though their manufacture was still carried on locally, it was only on a small scale. In 1835 there were but two firms of paper stainers in Scotland, viz., W. McCrie, of Edinburgh, and Jos. Perrin, of Glasgow, who turned out between them about 60,000 pieces per annum. As recently as 1869 there were half-a-dozen or so Scotch firms in the trade, but only one of these conducted its operations on a large scale, employing 300 out of the 500 hands engaged in the industry in question in Scotland. This was Messrs. Wylie and Lochhead, a Glasgow house-furnishing firm, who started to add the manufacture of paper hangings to their business about 1857, erecting a factory at Whiteinch, near Partick, soon after the abolition of the Paper Duty in 1861, where they were a few years later turning out 80,000 pieces per week. The Whiteinch Mills at Darwen, now forming the "Wylie and Lochhead Branch" of the Wall-Paper Manufacturers, Ltd., still serve to retain the memory of an industry which has now practically ceased in Scotland.

From April, 1794, the paper duties, which had been hitherto at the rate of so much per ream, were charged on the actual weight of paper made. Writings, printings, drawing and elephant papers were taxed at 2½d. per lb.; high-class brown papers, and coloured sorts, at 1d., and common wrappings at ½d. Unenumerated sorts were dutiable at 2½d. per lb., millboards and pasteboards at 10s. 6d. per cwt., and glazed paper 6s. per cwt. Heavy though these rates were, the Scotch paper trade continued to increase, and for the year ended March 31st, 1801, the duty realised £19,000, about 1145 tons of paper being made, in addition to over 40 tons of pasteboard.

THE late Mr. George Munt, wholesale stationer, of Hatton-garden, has left estate of the value of £68,726.

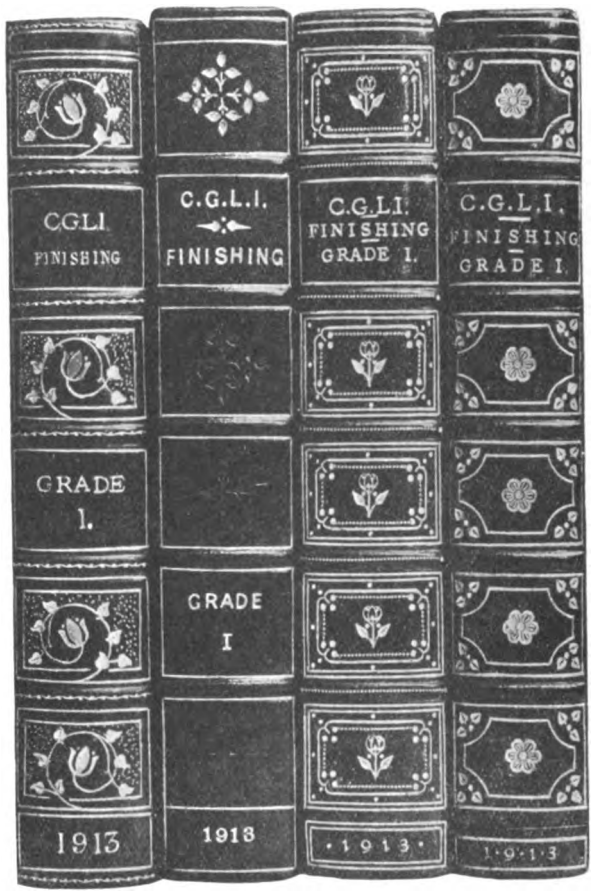
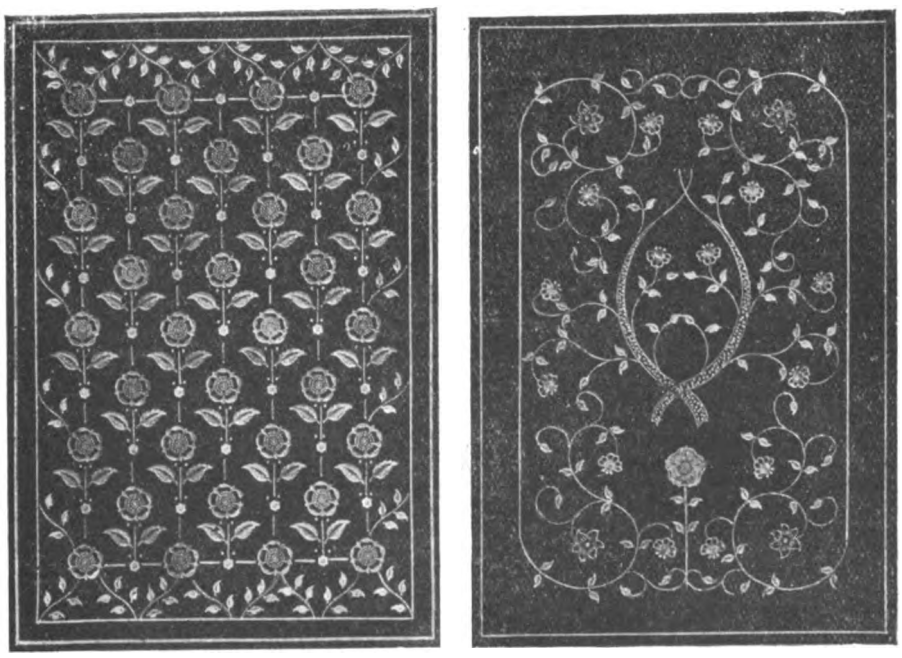
City and Guilds of London Institute.

Examinations in Bookbinding, 1913.



Some Remarks on the Practical Work.

The Institute's Examiner in Bookbinding, Mr. Douglas Cockerell, was particularly prompt this year in his pilgrimage to Exhibition-road to inspect the practical work done by those who competed at the recent examinations. At the latter part of last month, therefore, the writer was enabled, by the kind permission of Sir Philip Magnus, M.P., head of the Technology Department of the Institute, to pay *his* annual visit of inspection, with the view of getting some general impressions of the character of the work.



The first—indeed, the principal impression was that there was more evenness shown in the examples of binding and tooling sent in by the examinees, *i.e.*, there was not such a wide gulf between the worst and the best specimens as has been the case in some previous years.

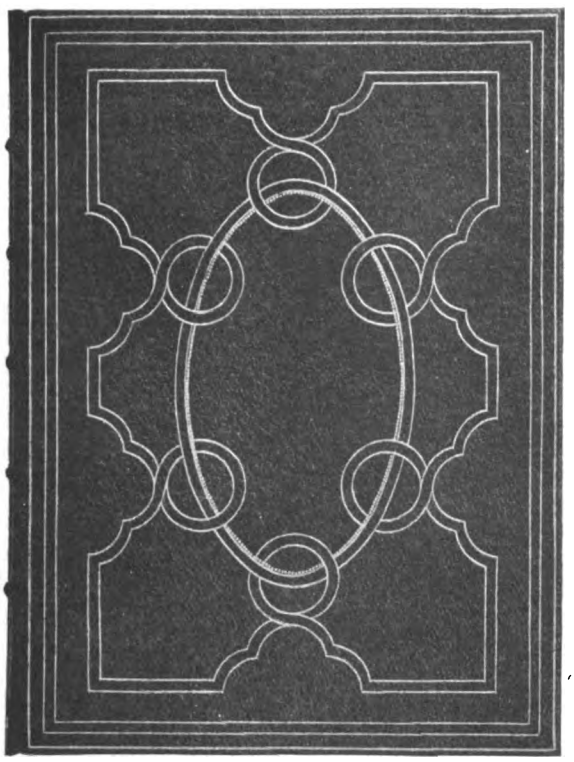
First in order amongst the "Practical Tests" submitted at the examination comes Grade I Forwarding. The task set (see syllabus in our May Bookbinding Number) was the comparatively simple one of making a case for a thin small folio guard book, about 14 by 10 inches, half-bound in cloth, marbled sides, and attaching the ready-taped book of brown paper leaves thereto. In the majority of cases this was fairly well done, regard being had to the fact that probably only beginners would tackle such an ordinary problem, involving nothing more than a fair amount of technical skill and some care for appearances. In only one instance, we think, were the half-bound sides left uncovered, and some of the cases were really very creditably forwarded, though looseness was here and there apparent.

The "Test" in the Second Grade of Forwarding was somewhat similar. An 8vo work of fiction, printed, it may be mentioned, on good, stout paper, was handed to the aspirant for "Honours," with instructions to forward it and cover in half morocco, t e.g., others uncut. This does not seem a very formidable job, taken in connection with the fact that the rules of the examination allowed the candidate several hours in which to execute it. Nevertheless, the sum total of the results attained cannot be considered brilliant.

City and Guilds of London Institute:—Bookbinding Examination, 1913. Examples of Candidates' Work in First Grade Finishing.

City and Guilds of London Institute:—Bookbinding Examination 1913. Examples of Candidates' Work in Second Grade Finishing.

In several instances the boards were left bare, the candidate having apparently taken the whole of the time allotted merely to forward the book ready for covering. *Festina lente* is a good motto, but in these cases the moral it points was certainly overstrained. Nor was there much out of the ordinary in those instances in which the work was carried through to a conclusion. It was just "fair," and so far as the writer's opinion goes, was rather below than above the average.



Next we come to First Grade Finishing, *i.e.*, the old familiar job of gold tooling a morocco-covered dummy back. The purely decorative part was generally creditable, in

City and Guilds of London Institute:—A Specimen Book Submitted in connection with the 1913 Examination in Bookbinding.

Digitized by Google

some instances quite good, but, as in previous years, the lettering was the weak point, though on this occasion there was less evidence of bungling, only one or two of the backs being lettered wrongly or very badly. The work, however, showed considerable variety in the choice of type used, some of it being obviously too large for the scale of the back, thus producing a rather unsightly effect. Even the four numerals required for the date 1913 showed quite a variety of "sorts," particularly some curious 1-like characters which in several cases did duty for 1 (see two of the backs illustrated herewith). More than one otherwise neat job was marred by this attempt to improve upon plain, if old-fashioned, figures. A good deal of care was evidently bestowed upon the work generally, and though in a few instances "time" was called before the task set was completed (as in one of those we illustrate) we do not suppose this

City and Guilds of London Institute:—A "Specimen Book" submitted in connection with the 1913 Examination in Bookbinding.

will militate greatly, in the examiner's mind, against the candidates' very evident desire to do their best.

The Second Grade Finishing part of the Examination produced some tolerably good work, though here also there was a proportion of unfinished examples. The impression broadly conveyed was that those who went in for this section were on the whole a painstaking lot, fully alive to the value of good workmanship as compared with mere speed or showiness. We illustrate a couple of examples; one of them would have been better had the rather heavy-looking central ornament (presumably intended for a pair of plant stems) been absent. If it was really bound to go in, it should have been aligned properly with the ornament below, and with the edges of the board.

The "specimen books" sent in were on much the usual lines, *i.e.*, frequently rather too showy to be absolutely pleasing. If carefully inspected at close quarters, imperfections or blemishes of one sort or another frequently come to light, betraying the prentice hand, and evidencing the possession of the false idea that a gaudy appearance is everything in bookbinding, which it isn't by a long way. One of the best of these jobs—or at any rate one of the handsomest looking—was a copy of Jenkinson's "Fiona McIver," 8vo., in blue morocco, very elaborately got-up, with quite a gorgeous display of coloured inlays, silk-lined end-papers, and doublures quite as fine as the outside of the boards, if not more so. On the whole a nice piece of work and well carried through. The elaborate colour effects would be lost if we illustrated the design here, so we selected for this purpose a couple of plainer volumes, quietly but tastefully tooled. Shakespeare's Sonnets, a small 4to., is in green morocco, with green silk linings to the boards and end-papers. The other volume, Hugo's "Sara La Baigneuse," a thin folio, is in red morocco, and its simple tooling, somewhat *à la* Grolier, makes as good if not a better appeal than many of the wonderful triumphs of inlaying seen on other of the specimen books. This is the only volume the writer was able to locate, and he hopes he is not transgressing any of the Institute rules by saying that it is the work of a pupil of Mr. McLeish, Instructor in Bookbinding at the L.C.C. Central School of Arts and Crafts.

The Cleveland Guild.

The seventh annual report of the Cleveland Guild of Printers, Lithographers, Bookbinders and Kindred Arts and Crafts, for the session 1912-13, states that, contrary to the state of matters at the last annual meeting, there is an increase in membership, the total now standing at 188, which is the highest in the history of the Guild.

After a reference to the annual picnic to Guisborough, the report deals with the summer excursions, and states that "following the usual custom, an excursion was arranged to Leeds during Race Week, when permission had been kindly granted to visit the works of Messrs. Goodall and Suddick, Ltd., and Messrs. Geo. Mann and Co., Ltd. The former is an old-fashioned firm who have deservedly acquired a reputation for high-class commercial work. The arrangement of plant and materials was well thought out, and the employees, many of whom had grown grey in the service of the firm, bore willing testimony to the cordial relationship existing between masters and workers. Messrs. Mann's works are well equipped with automatic machinery and up-to-date labour-saving devices. The large number of rotary litho machines in course of construction proves that this machine is destined to play an important part in the future of lithographic printing."

During the winter, ten lectures and three discussions on specimens submitted at the Guild's 1912 Exhibition were held. "Apprentices' Night" is an annual event with the Guild, which was attended by 50 persons on December 18th, and the seventh annual Exhibition was held in the Cleveland Literary and Philosophical Society's Hall, Middlesbrough, and was attended by the Mayor and Mayoress of Middlesbrough, the Mayor of West Hartlepool and others. Under the direction of Mr. Wilkinson, classes have again been held in Stockton, and a good winter's work has been put in by the students. The Guild again commends these classes to its members and urges all who can do so to avail themselves of these opportunities and make themselves more efficient craftsmen.

Concluding, the report briefly recounts some of the useful work the Guild has accomplished in its seven years' life, stating that it "has done something to foster a friendly feeling amongst fellow-workers, it has helped to show employers and employed more clearly that their interests are identical and inseparable, it has stimulated a desire to excel in their daily work amongst craftsmen, it has assisted many a lad who was a junior apprentice seven years ago to become a more efficient workman to-day than otherwise he would have been, it has done much to create a desire for better class work amongst the general public, and it has spread its influence farther afield with the result that similar Guilds have been established in various parts of the country."

Accompanying the report is a portrait of the Guild Master, Mr. C. W. Richardson, nicely printed on art paper.

The House of Tuck in America.

Messrs. Raphael Tuck and Sons, Ltd., has taken over the shares and bonds of the branch of its business conducted in America under a separate corporation. This transfer was made possible through the recent death of the president of the American house, Mr. Charles Kaufmann. Together with the interests of Mr. Kaufmann, the English house, or the original proprietors, was able to secure the other holdings of the American company. At an election directly after the stock transfer the following new officers of the American house were elected: Sir Adolph Tuck, Bart., president; Mr. Gustave Tuck, vice-president; Mr. Desmond A. Tuck, secretary and treasurer. These three gentlemen are all directors in the London company, and in addition to Messrs. Milton J. Greenebaum, Norvin R. Lundheim, and Louis Herman, comprise the board of directors of the American house. The remaining directors of the English house are Sir Arthur Conan Doyle and Mr. Alfred Parsons, R.A.

Sir Adolph Tuck, Bart., has been in America for three weeks, during which time, says the *American Stationer*, he and his son, Mr. Desmond A. Tuck, have been interviewing a number of the representative firms there, and had the extreme pleasure of learning that the methods of business which the London house has been pursuing for the past 50 years are practically the same as the American style. Following out a plan which has worked successfully with the London house, an advisory committee made up of the heads of the different departments will meet from time to time for the purpose of discussing things in general with Mr. Desmond A. Tuck, who, in addition to being an official of the company, will be the manager. The latter is well fitted and fully qualified to fill the position, and with the co-operation of those behind him the American house will rise to greater proportions than ever, or to use the words of Sir Adolph Tuck, Bart., "we have been publishers to three reigns, and we hope to be publishers to every home in America as well as abroad." Sir Adolph returned home on Saturday, 5th inst., by the steamer "Olympic," evidently much pleased with his visit.

ALTHOUGH cricket is still with us, preparations for the coming football season are actively progressing, a fact we are reminded of by the arrival of Leng's Football Handbook for 1913-14. The latest issue of this complete and useful penny handbook, arrayed in a green cover, contains within its 100 pages a host of facts and figures relating to the great winter sport. All the principal league tables and next season's fixtures are given, while a complete directory of clubs, players and officials is a feature which will be keenly relished.

EPITOME OF NEW PATENTS.

Copyright Compilation for the BRITISH AND COLONIAL PRINTER AND STATIONER. Further information concerning the following Patents may be obtained by Subscribers upon application to the Editor. Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be Endorsed "PATENT DEPARTMENT," Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London. Telegrams:—"STONHILL, London."

The Editor does not necessarily endorse the statements contained in the following abstract of specifications, which are condensed from official documents. He holds himself responsible only for the criticism and explanation which is considered desirable in regard to certain of the Patents.

6,346 (1910).—**Improvements in Typesetting or Composing Machines.**—HUGO FRIEDMANN (Germany). Accepted April 18th, 1911.

Relates to a composing machine of the kind in which types are adapted to be released according to requirement from magazines charged with printing type, by the compositor depressing the corresponding key of a keyboard. The several magazines are arranged one above another in such a way that common type pushers can be used for all the magazines, the pushers being held in common carriers or quivers that can be pushed forward, upwardly and downwardly in front of the magazines, so that the type pushers can be brought into the ejecting position in front of each magazine by a suitable movement controlled by arresting devices. An outlet orifice with inclined base enables the smooth transference of the type from the magazine and facilitates its slide down the magazine. The changing from one type to another is effected by the simple movement of a handle, and the release of the type from the magazines is effected by pressure upon a key lever. Other means provide for the transference of the set-up and justified lines of type to the composing galley, the cutting off of the thin connecting portions of the justifying wedges, and the withdrawal of types that frequently occur from each of a number of channels successively by the pressure on the key.

8,308 (1910).—**Improvements in Printing Machines.**—R. HOE AND CO. (America). Accepted April 6th, 1911.

In relation to web printing machines of the class known as straight line machines, in which rotary printing couples are arranged with their cylinders in parallelism, the webs from the couples being led in a substantially straight line to longitudinal folders, the present invention consists in the following arrangement:—The printing sets are placed on the opposite sides of their folders, and gearing is employed such as will enable the printing sets to be used as separate items, each using its own folder; as a single item, both sets using one folder between them; or one or both printing sets used in conjunction with both folders.

14,317 (1910).—**Improvements in and relating to Mechanism for All-Size Rotary Printing and Folding Machinery.**—ALBERT VICTOR PAUL (Scotland). Accepted March 30th, 1911.

The object of this invention is to alter the position of the printed paper on the cylinder of an all-size rotary printing and folding machine, to vary at will the position of the fold, and to cause the folded pages to register with each other while the machine is in motion. To this end a registering device is arranged on the tucking blade cylinder, at a suitable position between the tucking blade and the grippers, or other means employed for holding the front end of the paper. The registering device slides or moves in and out in such a manner as to draw or move the paper on the cylinder across the tucking blade, in either direction as desired, in order to adjust the position of the fold exactly in the centre of the printed matter so that the printed pages, after folding, will register perfectly with one another. The registering device can be operated while the tucking blade is in motion, thereby obviating the necessity for stopping the machinery.

13,439 (1910).—**Sheet Lifting Device for Platen Printing Presses.**—SIMEON B. YATES (England). Accepted March 30th, 1911.

Applies chiefly to platen printing presses where the sheets are fed into the machine by hand to receive the impression and are removed by hand after the operation. To facilitate the taking off of the sheet after the impression has been made, a bracket of suitable shape to fit the platen is clamped thereto. An arm, or arms, of convenient length and lying on the platen are pivoted to this bracket, and attached to this is pivoted a secondary arm, or finger, made of thin spring metal and having its outer end slightly bent in an upward direction. This secondary arm can be made to reach any part of the platen where the sheet is being printed, and lies between the platen and the sheet. When the sheet is being brought into contact with the type for printing this secondary arm is pressed flat down on to the platen, and after the impression has been made on the sheet and the platen leaves the type, the bent part of the arm, or finger, springs up and raises the sheet from the platen and thus gives greater facilities for the fingers of the feeder to lay hold of the sheet.

26,641 (1910).—**Improvements in Web-Perfecting Printing Presses.**—GOSS PRINTING PRESS CO. (America). Accepted April 13th, 1911.

According to this invention the web in being perfected forms a pocket, and a flexible shield is arranged so as to be constantly interposed between the impression cylinder and the pocket of the web during the travel of the cylinder, for the purpose of shielding the web from the "wind" action and consequent breakages.

WHILE a large majority of the offset printers are using zinc plates there are still a few who stick to aluminum. Then once in a while a user of zinc is called upon to handle an aluminum plate. While there is very little difference in the manner of printing from the two metals, the mode of preparing the plate is somewhat different. A good strong etching solution for aluminium is made by taking three pints of gum, strained through a muslin cloth, one pint nutgall solution, two fluid ounces phosphoric acid, 20 per cent. strength, and a few drops of carbolic acid to keep it sweet. For a weak etching solution use the same except make it six pints of gum instead of three.—*Harris Monthly.*

THE OLDEST TRADE PROTECTION OFFICE IN THE UNITED KINGDOM.

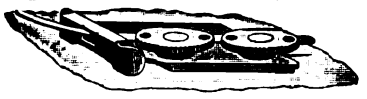
ESTABLISHED 1776.

PERRY'S Trade Protection Offices.
(W. R. PERRY, LTD.).
26 & 27, BUSH LANE, CANNON ST., LONDON.

Status Inquiries made as to the position and standing of Traders and others.

PERRY'S GAZETTE & LIST OF CREDITORS are published weekly, and are invaluable to every one in business.

DEBTS RECOVERED & PAID OVER PROMPTLY.



Particular attention is called to the fact that this is the only TRADE PROTECTION SOCIETY that possesses at its offices in London Registers containing full Bankruptcy and other Registered information, together with Status Information FOR THE WHOLE OF THE THREE KINGDOMS.

TERMS from £1 1s. upwards, according to requirements. PROSPECTUS and further particulars on application to the above offices.

MEGILL'S GAUGES

The Handy and Sure Lays.

You need them on your Platen Machines to get the sheets all true and square and in perfect register with the form. Adjustable.

This is Megill's DOUBLE-GRIP GAUGE.
Adjustable all-round heavy stock gauge.
Vice grip, no pin-points, no glueing.
From your Furnishers or Headquarters:
EDWARD L. MEGILL, 60, Duane St., New York, U.S.A.
The Original Inventor and Manufacturer.
Many styles. His Signature and Trade Mark on packets denote genuineness. ESTABLISHED 1870. Ref.—National Park Bank, of New York, having Foreign Correspondents.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

PRINTING TRADE NEWS.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

THE GRAPHIC ARTS, 530, ATLANTIC AVENUE, BOSTON, U.S.A.

KRAFT PAPER IN CANADA.—The Wayagamack Pulp and Paper Co., Ltd., Three Rivers, Que., intend enlarging their paper mill plant, by the addition of a machine to make a complete line of kraft paper, in addition to the paper which they are already manufacturing. The company will then be in a position to manufacture kraft paper glazed on one side or on both sides as may be required. This will give them a full line of products. Extension has been added to the main plant next to the kraft paper mill, and this is now ready for the installation of the machinery.

Exports of British Paper, etc.

Foreign and British Paper.

Our Foreign Trade.

The trade returns for the past month show increased values in imports, exports, and re-exports, whilst the figures for the half-year denote a considerable advance compared with the corresponding periods of last year:—

JUNE.

Imports ...	...	£620,826	+ £165,701
Exports ...	...	294,041	+ 77,764
Re-Exports	...	27,751	+ 20,123

JANUARY–JUNE.

Imports ...	...	£3,686,633	+ £381,706
Exports ...	...	1,888,826	+ 197,484
Re-Exports	...	126,028	+ 33,897

Six Months' Imports.

A formidable item in the list of imports of paper, etc., into the United Kingdom is that of packings and wrappings, the value standing at £1,386,791, or nearly 38 per cent. of the total. Compared with the first half of last year an increase is shown of £187,383, all countries, with the exception of Russia, increasing their shipments. The six months' imports of reel paper amount to £625,464, an increase of £46,126. The principal supplies come from Norway, Sweden and Newfoundland. Shipments from the latter country show an increase of £37,438, whilst Swedish supplies have declined. Printings and writings not on reels were imported more largely to the extent of £34,635, the total value being £435,253. Germany, who holds premier position in supplying the British market, has increased her trade, and substantial headway has been made by Norway. American competition in both printings and writings on reels and not on reels continues to decline. Printed paper was received of the value of £211,440, there being a decrease in hangings of £4,532, and a reduction on other sorts of £7,186 compared with the first half of last year. Imports of strawboards were of the value of £490,673, mill and wood pulp boards £325,121, and unenumerated and articles of paper £211,891, showing increases, respectively, of £65,925, £19,535, and £39,820.

Half-Year's Exports.

A feature of the British export paper trade is the satisfactory expansion in the shipments of printings, the value for the last six months (£953,423) showing an increase of £146,436 compared with the first half of last year. British Possessions bought printings of the value of £608,428, and Foreign Countries to the amount of £344,998, increases of £85,968 and £60,468 respectively. Excellent markets were found in Australia and India for British printings, and Canada also increased her purchases. Exports of writings show very little movement, the total value standing at £223,292, a decline of £340. This reduction was solely due to a lessened demand on the part of British Possessions, mainly Australia, exports to the latter country declining from £72,251 to £63,519. The shipments to British Possessions amounted to £154,928, a reduction of £3,451, whilst the supplies to Foreign Countries were of the value of £68,364, an increase of £3,111. With the exception of a decrease of £18,946 in printed or coated papers, the exports of other articles during the last half-year, as compared with 1912, show increases, viz.:—Packings and wrappings, £21,594; paper hangings, £11,232; paste, mill and cardboard, £7,563; manufactures of paste, mill and cardboard, £5,043; playing cards, £2,273; envelopes, £5,302; bags, £4,815; and unenumerated, £12,512.

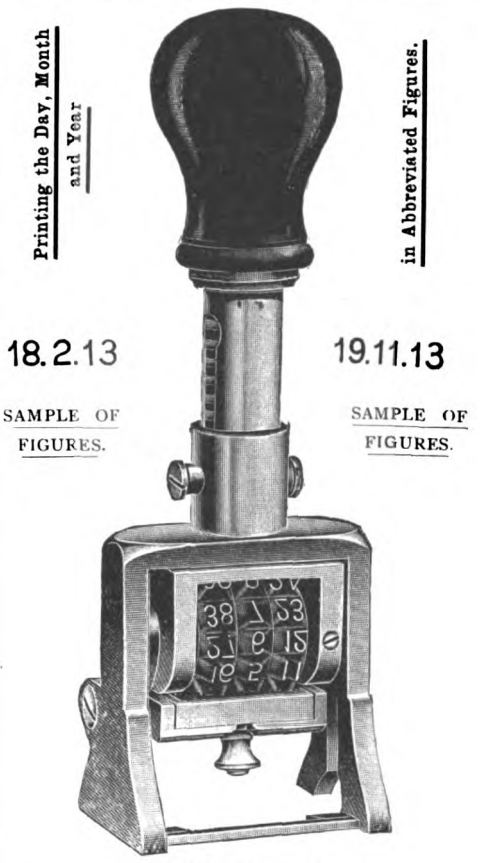
The National Insurance Act

A

GREAT SUCCESS.

"Number of Insurance Stamps sold in England from June 21, 1912, to March 31st, 1913,



342,848,351

Value £10,451,569 11s. 7d."

THE "UNIQUE" DATING MACHINE

"The Right Machine for Cancelling Insurance Stamps."

RELIABLE. ACCURATE. EFFICIENT.

ACTUAL SIZE.

Self-Inking, Clean, Clear Impressions from METAL ENGRAVED WHEELS.

Fitted with gauge to place the date across the Stamp and cancel it, according to the requirements of the Act.

The Quickest Method of cancelling Revenue Stamps on Insurance Contribution Cards.

Price 14/6 each

The Price includes small Bottle of Ink, and Stylo, packed in Box complete.

Black Indelible Ink, No. 1 Size, 1/- per bottle.
No. 2 Size, 2/- per bottle. Pads 2/6 per dozen.

The above MACHINE is made by the "Bates Manufacturing Company," of Orange, N.J., U.S.A., who for twenty years have enjoyed an enviable reputation in the sale of the "Original Bates Automatic Hand-Numbering Machines."

"The figures are easily set for use, one only having to press the plunger down, push the head of the locking pin through the opening in the top, pull out the fork pin at the right hand side of figure wheels, and turn the wheels to the date or dates required. The pad is inked with a small camel hair brush, and the wheels and figures may be kept clean with equal parts of benzine and paraffin. Indelible ink for use with this dating stamp is also supplied. . . . . The 'Unique' dating machine gives the quickest method of cancelling the stamps on the employees' contribution cards, while at the same time it may be found useful in many other ways."—Extract from "*The British and Colonial Printer and Stationer.*"

Similar commendatory notices appeared in "Sales and Wants Advertiser," "The Caxton Magazine," "The Stationery Trades Journal," "The Stationery World," "The Irish Printer," and the "Home and Colonial Stationer and Printers' Review."

Liberal Discounts upon orders for the above Machines in lots of half-a-dozen.

High Grade made Automatic Hand and Type-High Numbering Machines kept in Stock.

Trade Notes.

THE *Times* is to be heartily congratulated on the success of its appeal for raising the necessary £90,000 for the purchase of the Crystal Palace for the public. To have raised £60,000 in a fortnight is a remarkable achievement.

THE *Data Circulation Magazine* is the title of a new monthly periodical catering for the interests of publishers of newspapers, magazines and trade journals. It is published by the Data Circulation Publishing Co., of 24, Murray-street, New York.

THE Northern Federation of Newsagents, who, under their popular president, Mr. A. H. Herries, have gathered into their fold a very large number of the trade in the North of England, have had a very successful excursion to Bishop Auckland.

EDINBURGH.—Negotiations have been proceeding for some time between the Edinburgh stereotypers and their employers regarding wages. The employers offered 2s. of an increase, bringing the standard to 35s. per week, and this has been accepted by the men.

A FIRE occurred last week at the works of Messrs. Emery and Son. Ltd., printers and publishers of the *Hove Gazette*, in Church-road, Hove. The upper part of the building suffered most, the studio being completely gutted. The stock and buildings were insured.

MR. HAROLD HODGE is relinquishing the editorship of the *Saturday Review* at the end of August next, after having been editor for 14 years. Mr. Gervase Beckett, M.P., will act as editor-in-chief himself and Mr. George A. B Dewar will be literary editor with a place on the Board.

THE VOTERS' LISTS BILL.—Preparation of the voters' lists by the various metropolitan boroughs last year cost a total of £16,751. The prices for printing the lists in the various boroughs varied from £1 6s. 10½d. per 100 names in St. Pancras to 13s. 6d. in Hampstead, the average being £1 0s. 11d.

THERE passed away last week, at Newcastle-on-Tyne, Mr. Henry Greenwood, a well-known compositor, for a number of years on the staff of Messrs. R. Ward and Sons, in that city. Mr. Greenwood, who was a native of Driffield, and at one time a master printer, came to Newcastle many years ago and joined the staff of the *Newcastle Daily Leader*, being there employed till that organ closed its career.

TECHNICAL INSTRUCTORS.—Applications are invited from persons desirous of having their names placed on the panels which it is contemplated to form in a number of subjects for employment in evening institutes as occasion requires, including printing; photo process (*a*) negative making, (*b*) line etching, (*c*) half-tone etching; lithography; and bookbinding. The question of the rate of pay is now before the Council. Particulars may be obtained by sending a stamped addressed foolscap envelope to the Education Officer, London County Council, Education Offices, Victoria Embankment, W.C.

THE London Society of Compositors, in addition to attempting to secure the adoption of a specific date for the termination of all agreements between affiliated societies and employers' organisations with the evident object of making a general strike possible, is proposing a plan for securing a general advance of wages of at least 5s. per week for all classes of workers in both public and private employ where the time or piece system is in operation. It is proposed that the Parliamentary Committee of the Trade Union Congress shall take whatever steps may be necessary in conjunction with the unions prepared to take part in the movement to give effect to this demand at the earliest practicable moment. Another suggestion emanating from the same source is that the Prime Minister should be asked to introduce legislation immediately to compel all employers to pay their workers for statute holidays.

MR. W. M. VOYNICH, the well-known antiquarian bookseller, 68-70, Shaftesbury-avenue, W., has just issued an "Illustrated Catalogue of Remarkable Incunabula, many with woodcuts, and a Specimen of an Unknown Hylographic Press." Although only 166 items are listed, their description extends over 174 8vo. pp., which is accounted for by the very copious notes, on points of typographical and bibliographical interest connected with the books offered for sale, that always make Mr. Voynich's catalogues such good reading for book lovers, even those whose means will not permit more than a very occasional purchase. This particular list is priced at only 1s., notwithstanding that there are 43 illustrations printed on art paper (many of them folding), with facsimiles of type, woodcuts, printers' marks, etc. The xylographic fragment is of Polish origin, that Mr. Voynich, who is particularly well versed in the bibliography of that part of Europe, discusses its possible origin at some length. By the way, he has lately opened a Parisian branch establishment at the Hotel St. James, in the Rue St. Honoré.

A VERDICT of accidental death was returned at an inquest, held at Lambeth on Saturday, on Ethel May Lock, aged 23, a book folder, who was killed by a motor-'bus while cycling along Westminster-bridge-road.

ACCORDING to *Kemp's Mercantile Gazette* there was one failure in the printing and stationery trades of England and Wales for the week ending Friday, July 11th; the corresponding week in 1912 showed three.

AT Sotheby's, last week, no less than £61 was paid for the fine Edinburgh edition of Stevenson's works, including the letters. The 30 volumes were issued between 1894-9 at £18 10s. This Stevenson set was in the library of the late Mr. Bram Stoker.

SIR GEORGE RIDDELL has kindly consented to occupy the chair on the occasion of the seventy-fourth anniversary festival of the Newsvendors' Benevolent and Provident Institution, which will be held at De Keyser's Royal Hotel, Whitefriars, London, on Monday, November 3rd next.

THE "POLYTECHNIC TYPOGRAPHIA."—The twentieth edition of this large quarto portfolio of examples of the work of the students attending the printing classes, during the session 1912-13, of the Regent-street Polytechnic, again testifies to the soundness of the instruction given. There are illustrations in various processes—three-colour half-tone, monotones, two-colour half-tone, line block, and as frontispiece some Alpine scenery showing five colours worked in two operations; also title pages, circulars, memo. headings, designs for menu cards, catalogue covers, invitation cards, programmes, advertisement pages, etc., all exhibiting good taste in display under careful restraint. A number of the designs are competition pages, and these we are informed exceed in number those of any previous year. The volume also includes an instructive article on "Typographical Display," by Mr. A. H. Lovell, one of the instructors. We must not omit to mention the excellence of the presswork throughout, and altogether the volume reflects much credit on the principal (Mr. E. R. Alexander) and his able band of assistants.

Stationery Exports.

The following are the exports of stationery, other than paper, from the United Kingdom for the month of June, compared with the corresponding month of the two previous years:—

	1911.	1912.	1913.
To Germany ...	£10,234	£8,790	£10,948
" France... ...	5,227	3,410	3,516
" United States of America ..	6,938	4,468	6,334
" British India...	12,307	13,890	15,041
" Straits Settlements ...	3,297	4,298	4,553
" Ceylon ...	2,030	2,002	2,897
" Australia ...	14,570	8,510	13,868
" New Zealand	6,182	2,181	5,218
" Canada ...	9,437	8,549	11,081
" Other Countries... ...	70,367	57,826	78,178
Totals	£140,589	£113,924	£151,634

For the six months, ending June, the total exports reached £877,454, an increase of £71,688 over the same period of 1912, and an increase of £114,843 over the corresponding period of 1911.

BRITISH Exports & Imports of Printing Type.

The following figures show the exports and imports of printing type into the United Kingdom for the periods mentioned:—

Imports:—

	June		Jan.-June	
	Tons.	£	Tons.	£
1913	7	908	28	5,335
1912	5	1,271	20	4,197
1911	6	1,328	34	6,612

Exports:—

	June		Jan.-June	
	Tons.	£	Tons.	£
1913	34	7,011	283	50,429
1912	39	5,194	243	34,583
1911	60	8,737	260	41,894

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

"A Chat on the Future Policy of the P. M. and O. A."

Our Gracious King and Queen being in the district and royal weather prevailing, the number of members who put in an appearance at the last meeting was below the average. Enthusiasm, however, made up for the shortness in numbers. The minutes of meetings held June 7th, 14th and 21st were read and confirmed on the motion of Mr. JAS. E. MAYO, seconded by Mr. GEO. SHEARSMITH.

Under the heading of "As You Like It," the meeting was open to members for free conversation on current events. Mr. F. J. HUGHES, the hon. secretary, read the following paper, entitled "A Chat on the Future Policy of the P. M. and O. A."

The Secretariat.

The London members perhaps do not see that their resolution to have two separate officers—a general secretary and a financial secretary—will entail increased labour, worry and friction upon the general secretary and distant members. Will a foreign member write and ask the general secretary for some information, and at the same time be at the expense of posting his subscriptions to a financial secretary when all could be done through one person and by one postage? Would it not be wise to give the general secretary an assistant, and let everything pass through the general secretary's hands so that he would know all the moves on the board as regards local and provincial membership, and he will then pass on to his assistant what is not necessary for him to personally deal with.

The average person who joins a mutual benefit association does not bother his head with a lot of rules and irritating little duties. He ignores all such things, being desirous of wasting as little as possible his leisure time and energy in keeping up his membership. Some Manchester members very rarely attend ordinary meetings because they have other hobbies more interesting. As they pay their subscriptions regularly through the post, no one can say they are bad members. Certainly, a good attendance at meetings gives encouragement to officers and lecturers, and each one should put forth efforts to attend when a gentleman gives his leisure time to enlighten us on some particular subject.

General Funds.

Should the Parent Centre decide to separate its two-thirds in the same way as the Provincial Centres now do, some of those critics who scan the balance sheets for the annual losses of the Parent Centre, may perhaps get a rude awakening. However, it is only fair that as all Centres are expected to work on their own bases, London should fall into line.

Subscriptions and Benefits.

The special committee have been desirous of helping the unfortunate by suggesting an advance of four shillings per member per annum.

Pensions.—As it would take five years to create a pension of five shillings per week for one person, their suggestion of 1s. 1d. falls to the ground.

Unemployment Allowance.—Everyone will agree that the two shillings towards the unemployed fund is a wise suggestion.

Further Benefits.—We would query: Is it necessary to put any greater tax than two shillings upon both fortunate and unfortunate members, seeing that out of the present contributions we are each year able to add to the reserve fund?

Should the members be desirous of increasing their liabilities, sixpence might be added for benevolent purposes to make the fund more useful, and sixpence for local management.

The question of meeting members over 60 years of age with a 15 years' membership, if put in operation, would cause a good deal of jealousy and dissatisfaction.

Unemployed Allowance.

The suggested special levy of two shillings per member as an addition to the present annual subscriptions should provide sufficient extra capital for increasing the period of unemployment allowance from five to eight weeks in any twelve months.

Taking the figures for the years 1907 to 1912 inclusive, we find the yearly average cost per member has been 2s. 1d., 3s. 4d., 2s. 10d., 2s. 6d., 2s., and 3s. 7d., respectively, making a total average annual call of 2s. 8d., per member.

Digitized by Google

As the maximum average call for the three extra weeks would be three-fifths of 2s. 8d., we observe that the suggested extra levy of 2s., under ordinary circumstances, would provide ample funds.

Limit of Age for Death Benefit.

The age for entitlement to Death Benefit should be fixed at 48 years and no alteration allowed on the formation of new Centres. A new Centre may be on its first three months when a person living in the radius of an older Centre may for the first time hear of such an Association as the P. M. and O. A. Should that person be over the age limit of 45, he would not be eligible for death benefit although another person just in the radius of the new Centre and on the verge of the 48 year limit would be able to walk into full membership and smile at his disqualified younger friend.

All the Provincial Centres formed previous to the North Midlands Centre have had the same trials as the latter, but as we believe more in the stability of the Association than in increased membership, we say, "Have a care for the future!"

Should it be found feasible to increase the age limit to 48 or 50 there might be a death benefit allowance of £5 for half, and £10 for full benefit. These calls might be met out of the reserve Death Benefit Fund.

At the last meeting of the Parent Centre, Mr. Berryman is reported to have said that London at the commencement accepted practically all comers regardless of age, but he did not mention that the death benefit was paid according to the amount received by levy, there being no guarantee of a stipulated sum as at present.

Should the age extension be passed, it is suggested that present members may pay up arrear calls and be entitled to death benefit. We would ask: Why tax a member 50 years of age who joined after the age limit of 45, by making him pay up five years' death levies? On the other hand a person will be allowed to join at 50 years of age and come into equal death benefit without paying any arrears.

Is the Association, in order to swell its ranks, to be run as a charitable institution for outsiders, and a squeezing institution for members who have helped to build up the Association?

The older we accept members for death benefit, the greater will be the number of calls, and instead of relieving aged and distressed members, a bigger burden will be placed upon their shoulders to meet the extra calls.

Annual Meeting of the Association.

All Centres should meet in some appointed district once every year to discuss Association business and fraternise together. Every three or five years the meeting should take place in London, and in other years Centres should periodically come forward with their invites. Should there be more than one invite a vote should be taken at the business meeting. Members will not be expected to travel from one end of the kingdom to another, but those who are delegates representing Centres should be in their places during the transaction of business at the annual meeting so as not to penalise their Centre.

Some of the London members have stated in open meeting that they could not attend Dublin, Glasgow, or Edinburgh. Perhaps not, but the gap would be filled by a larger attendance of members belonging to Centres in the nearer districts, and as the years went by individuals who could not go far afield would have the pleasure of attending an annual meeting now and again when it came to their own Centre or one in close proximity.

As a suggestion for the day's proceedings, business might commence at 10 o'clock on the Saturday morning and be continued until one o'clock, during which time a paper on trade matters might be read by some gentleman and afterwards discussed by the members.

Some London members think that the time allowed would be too little. As we are not an Association of rapid changes, the average business would probably be completed within an hour. At one o'clock lunch could be taken, and at half-past two, a drive, sight-seeing, or inspection of some famous works, would occupy the time until six o'clock for tea, after which a concert could commence at 7.30 o'clock.

Respect or Honours Board.

Such a Board might be useful in showing new members the names of those who have been workers for the Association, and further it might act as a stimulus to those who had the Association at heart.

Register Book.

A register book should be kept by the general secretary containing particulars of all member's application forms, payments for unemployment, etc. Supposing a local secretary has a fire, robbery, or something else which destroys information about each member's application, who is to decide what would be the death benefit allowance, or what proof would there be of any discrepances that may arise at a later period?

National Council.

There should be one representative per hundred or part of a hundred to sit upon the National Council Such council to meet on the morning of the annual gathering or at such other times as circumstances required. Full voting power to be given them. This method would save months of referring back and standing still which goes on under the present system.

Rip Van Winkle.

To keep the general secretary from getting into mischief, or allowing him to become encircled with cobwebs, we recommend that each Centre receive annually particulars of the expenditure incurred on its behalf by the head office, such as unemployed allowance, benevolence, legal, death payments, etc.

DISCUSSION.

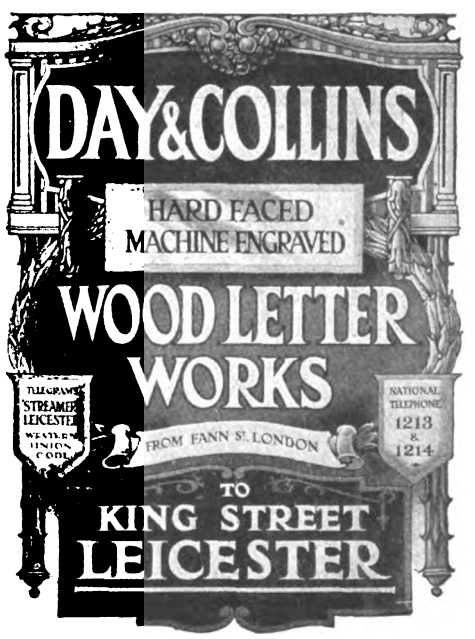
The PRESIDENT (Mr. Thos. Kirkwood) said he thought the paper was very practical, and the London special committee might note some of their hon. secretary's remarks. The united meetings gave members an opportunity of making more friends and gaining useful information about other parts of the country. The general secretary should have some assistance, but the creating of a separate office for a financial secretary would probably not work smoothly. It had been tried in Manchester, but instead of relieving the local secretary, it had placed more care upon his shoulders. No one expected the suggested pension scheme to pass, seeing the structure was so frail and flimsy. Unemployment scheme was very good and practical. As to further benefits, the members had not to forget that the demands made by trade union upkeep, insurance, and other incidentals made a great hole in the extra remuneration the average manager or overseer received, and if subscriptions to the P. M. and O. A. began to increase unreasonably by extra calls, instead of adding to the membership they would find it decreasing.

Mr. EDWARD MCVAY: I think we ought to try and get more of these older people advocated by the North Midlands Centre, and every member should be entitled to death benefit. The £10 and £20 recommended by the London special committee is a fair sum and should encourage these people to join. Mr. Hughes' £5 and £10 is too little seeing that Mr. F. W. Seeley allows 15 years for life after the suggested extension of age limit. I agree that 50 should be the age limit for death benefit, and we as an Association should make it worthy of acceptance by gentlemen holding responsible positions in the trade. As to aged and unfortunate members, I take it that it should be our endeavour to see that no member loses his benefits under such circumstances. Should death intervene at the period under discussion it would be extremely hard for them—the aged widow or the younger widow with small family whose husband had previous to his death been in unfortunate circumstances—if we said, "Oh! we are sorry there is nothing for you as your husband was three or six months out of benefit." Another point that ought to be taken up is the limit for membership. The unemployment rule says, "three months in arrear, no benefit until three months after clearance," and a further rule says, "After six months' arrears a member is liable to expulsion." Seeing that we meet only once a month, and printers' managers and overseers have so many things to consider, we should make a uniform time of six months. The subscriptions being due in advance a member is three months in arrear on the first meeting night of the next quarter. He does not keep his subscription card always before him and perhaps the unfortunate happens just after the first meeting in the second quarter, when he finds he is barred from unemployed allowance. Should he have a wife and young family the hardship soon is felt, and therefore I think the uniform six months would more nearly approach the masonic element about which we boast in our P. M. and O. A. membership.

Mr. GEO. E. SHEARSMITH: I notice there is nothing mentioned about a National Council in the report of the special committee. Is it being ignored or dropped? Centres should have representation on the management, and more so than those who hold individual membership direct with the Parent Centre. A good many of us younger members might desire to increase the usefulness of the Association by adding to the subscriptions, but we have to consider the aged members and the unfortunate, and I agree with Mr. McVay that when trade union, lodges, and other demands are met, there is not that great amount of extra money beyond the journeyman's standpoint, that we should lump up the subscriptions to the P. M. and O. A.

Mr. J. BALL: Should we increase the sum of £5 and £10 to £10 and £20 as suggested by the London special committee and supported by Mr. McVay, I think we should increase our burdens and at the same time check the influx of new blood, and increase the number of aged members. A person joining at 50 years of age, and living the suggested 15 years, would pay in something like £20 according to the present average. As the average life of the printer's manager or overseer did not reach the age of 65, it would mean that old members who joined at the 50 age limit would drain the funds of the Association.

Mr. JAS. E. MAYO: I entirely agree with Mr. Ball. We must look to the financial standing of the Association. It is all very well being sympathetic to those people who at present are outside the age limit and not members of the Association, but we must not let our sympathies overrule our just management. I think Mr. Hughes, in his short but practical paper, is quite right in not asking our present members to pay up arrears of death benefit. These members are more useful to us than those who may join when a death benefit is attached, because the former joined without a pecuniary advantage, whilst the latter would join because we flaunt before their eyes a death benefit allowance. The suggested £10 and £20 put forward by the special committee is too great, and not fair to the person who joins at 30 or 35 years of age. Mr. Hughes' £5 and £10 is ample, because we have to consider that when a person who joins at say 50 years becomes unattached, the chances of his securing another reliable position are very remote. You increase the unemployed allowance to eight weeks, and in the first two years he is entitled to draw unemployment allowance he may absorb £16, and should he live up to Mr. F. W. Seeley's maximum, he pays in about £20, and for that £20 you are going to give during his life £16 unemployment allowance and £20 to his widow or nominee at death. Is this practical, or is it business?



Mr. E. MURPHY also supported the hon. secretary's views. Mr. GEO. E. SHEARSMITH moved a vote of thanks to the secretary. Mr. J. BALL seconded, and Mr. F. J. HUGHES said he was pleased with the way the several speakers had taken up portions of his little paper, and their remarks along with his might be of some service to the proposed Parent Committee who would have to plan and lay out a scheme for the Provincial Centres to discuss.

The HON. SECRETARY pointed out that according to the Parent report in the official trade organ, the *British and Colonial Printer and Stationer*, the London President had met with an unfortunate accident.

The members instructed the hon. secretary to add to his report of that night's proceedings: "That the members of the Manchester and District Centre learn with regret of the accident to Mr. C. J. Gray, the London President, and heartily wish for his speedy recovery to convalescence."

The Newspaper Competitions Bill.

THANKS to the efforts of the representative bodies both of newspaper proprietors and working journalists, including the Federation of Northern Newspaper Owners and the National Union of Journalists, legislation to prohibit certain pernicious prize competitions in newspapers is in a fair way to being secured. Lord Loreburn's Prize Competitions Bill was introduced in the House of Lords by Lord Loreburn and read a first time last week, and the second reading was to have been taken last Thursday, but was postponed. The text of the Bill has been printed, and it has the merit of going to the root of the matter. It aims at removing a parasitical growth on the public press that has increased amazingly of late years, and which is intensely disliked by the vast majority of newspaper proprietors. The desire to get something for nothing is unhappily a very prevalent weakness in human nature, and to pander to it in the form of these inept but subtly vicious competitions is highly reprehensible. The promoters of such competitions have shown no little ingenuity in keeping within the ambit of the existing Acts, whereby the smallest element of skill, notwithstanding the greatly preponderating elements of chance, is sufficient to take a competition out of the Lotteries Acts, but they will find an effectual check in this prohibition. The Bill provides a maximum penalty of six months' hard labour, or a fine of £100, or both, for any person conducting or permitting to be conducted, in or through any newspaper, any prize competition, advertisement or announcement directly or indirectly offering any prize or gift, which requires payment of money or use of a coupon or form. We shall watch with close interest the Bill's safe passage through Parliament.

* * *

Bad Copy for Compositors.

IT may seem superfluous, in these days of typewriters and schools of caligraphy, to refer to such a thing as bad MS., but even with all modern aids to accuracy in writing copy the compositor is still troubled by the slipshod or careless methods of the hurried writer, who in his haste to finish makes contractions that are only readable by himself, and sometimes even he cannot decipher his own scribble. Crossing *t*'s or dotting *i*'s is quite neglected, and punctuation is left to the printer. The oldest, and perhaps the most expressive simile of bad writing, is the track that would be left by a spider that escaped out of an ink bottle. As a rule, the copy put into the hands of printers is not quite so bad as this. Indeed, the majority of it is fair and symmetrical, quite lucid at a first glance. It is when the constituent letters are analysed that the complexity of the composition becomes apparent. Then it is found that the gracefully parallel strokes, the elegant curves, and all the other caligraphic embellishments are delusive—masking vague twists and turns, uncertainties, and indolencies, so that it is only from the general form of the word, not from the identification of the component letters, that the matter becomes legible at all. What the compositor asks—but at present cannot obtain—is not that the *n* and *u* be made alike, but that each have its distinctive shape; not that the *t* be made similar to *l*, but that it be crossed, or else formed after the fashion much in vogue, namely, a stroke more or less sloping, with a loop in the centre on the side farthest from the letter following it; and lastly, that the *i* be dotted—an omission which seems to meet with great favour among authors, though it is very tantalising to the compositor, since in bad manuscript the undotted *i* may be taken to represent *c*, *e*, or *r*, or even be supposed to form part of what in reality is the letter *m*. But if the *i*'s were dotted, and *t*'s crossed, few complaints would emanate from printing offices, so great an aid is the due placing of these letter appendages in the task of deciphering. Possessing these requisites, it might be said, still further, that there is scarcely a bad manuscript you can place in an intelligent compositor's hands but what he will be able to read every word. The extra trouble which such thoughtfulness implies is too insignificant to need mention; but the benefit its universal adoption would confer on compositors is incalculable; and if the thanks of a large body of men are not below accepting, then the assurance remains that such thanks will be unanimously accorded. There are one or two instances, unfortunately, where even carrying out the above reforms will not admit of plain sailing in the matter of deciphering—where every letter is slovenly and wretchedly constructed. For this there exists no cure but a few lessons from a writing master. Bad copy means depreciation of the compositor's earnings, and it is unfair on the part of writers to let their slipshod methods take the bread and butter away from a hard-working class of workmen.

TENDERS are invited for the supply of printed forms and books during the year ending July 3 st, 1914, for the Whitehaven Harbour Commissioners; particulars from Mr. J. Tyson, clerk, Harbour Office, Queen's Dock Quay, Whitehaven. For printing the parliamentary electors, burgess and parochial electors' lists of voters for the township of Blackburn, for the Corporation; particulars from Mr. L. Beard, town clerk, Town Hall, Blackburn. For the execution and supply of printing for three years from October, 1913, for the Deptford Borough Council; particulars from Mr. V. Orchard, town clerk, Town Hall, Newcross-road, S.E.

A Printers' Flower Show.

On Saturday last the employees of the Associated Newspapers, Ltd., and of the Amalgamated Press, held their annual flower show at the St. Bride Institute. Lady Northcliffe, who takes a personal interest in the exhibition, as, indeed, her ladyship does in every matter that concerns and benefits the employee, opened the show with an elegant little speech, and called upon her gardener, Mr. J. Goatley, to commence the judging of the exhibits. During the judging the Associated Glee Singers, under the presidency of Mr. T. W. George, gave a very fine rendering of Mendelssohn's "A Vintage Song," and Adams' popular part song, "Comrades in Arms," for which the singers received well-merited applause. The conductor, Mr. F. J. Fewster, is a master of his art, and the singing was a testimonial to his skill.

Lady Northcliffe exhibited a fine lot of gloxinias, begonias and other rare plants, flowers and ferns, whilst the vegetables and fruit were extremely good, especially the two baskets of loganberries, the whole of which were sold for the benefit of the funds. It is hoped that her ladyship will be able to accompany Lord Northcliffe to Deal later on in the year to unveil the *Daily Mail* Bed No. 2 and the *Evening News* Bed at the Lloyd Memorial Caxton Seaside Home, to which the proceeds were allocated.

St. Bride Institute was a veritable paradise of scent and colour derived from the magnificent roses that formed a feature of the show. Upon entering the door at the top of the room attention was immediately arrested with the fragrance from a splendid exhibit of roses by Mr. George Sharvell, a well-known medallist and exhibitor of chrysanthemums. On this occasion, however, Mr. G. Sharvell was not competing, the blooms being specially sent for sale for the benefit of the funds of the Deal Home.

The competitors were all amateurs and employees of the Associated Newspapers, Ltd., and of the Amalgamated Press, of Lavington-street and of Fleetway House. There was little or no difficulty in judging the first prizes, but in the seconds and thirds great scrutiny had to be exercised to make the selections. Mr. J. P. Hobbs won four first prizes. For the best exhibit in the show—four roses of beautiful form and colour—he was awarded the Lady Northcliffe bowl.

The possibilities of real flowers used for hat trimming decorations were shown to delightful advantage in a smaller room. The majority of the competitors, however, disqualified themselves in failing to adhere to the rules which demanded that practically the whole of the trimming should consist of one or two sprays as cut from the trees, and, as a consequence, the prettiest looking hats were not the prize-winners.

In the vegetable class great excellence prevailed, and it was difficult to realise that amateurs were responsible for the production. The funds of this popular institution will considerably benefit by the exhibition.

THE annual outing of the members of the *Bournemouth Guardian* staff took place the other day, when the party visited Southampton, Winchester and Romsey.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, July 16th, 1913.

THE money market has been amply supplied with funds this week, and little effect was felt by the better demand yesterday. The discount market is influenced by the continued good supply of money, and rates have eased. Bullion movements have resulted to date in a net influx of £450,000. Stock markets have maintained a satisfactory tone, and the news regarding the Balkan position has led to a general recovery in prices. Business, however, continues restricted. The gilt-edged section is strong, and Consols have risen, the quotations now being 72 13/16 to 72 15/16 for money, and 72 15/16 to 73 1/16 for the account.

The miscellaneous industrial market has remained inactive but has kept firm in tone. In the section relating to paper and print movements have been on the weaker side, Ilford Ord. having fallen 1/16 to 1 3/16—1 5/16. International Linotype having conceded 2 to 73—78, and *Lady's Pictorial* having dropped 1/8 to 2 3/8—2 7/8. Business has been done during the past seven days in Amalgamated Press Pref. at acc. 20s. 6d.; in Associated Newspapers Pref. at 19s. 6d.; in Cassell and Co. at 82s. 6d.; in *Illustrated London News* and *Sketch* Deb. at 63, and in the Ord. at 3s. 9d.; in International Linotype at 74; in Linotype and Machinery A Deb. at 55½, and in the B Deb. at acc. 39¾ and 40; in George Newnes Pref. at acc. 15s. 9d., 15s. 6d. and 15s. 3d.; in Spicer Bros. Pref. at acc. 8¾; in Raphael Tuck and Sons Ord. at 17s. 9d., and in the Pref. at 95s.; in Waterlow and Sons Def. Ord. at 25 and 26½, in the Cum. Pref. at acc. 7⅞, and in the Pref. Ord. at 12 1/16.

DIVIDENDS AND REPORTS.

W. B. FORDHAM AND SONS, LTD.—An interim dividend has been declared at the rate of 4 per cent. per annum for the half-year.

C. ARTHUR PEARSON.—The report for the year shows a profit of £42,614. The directors recommend a dividend on the ordinary shares, making 10 per cent. for the year, place to reserve for special advertising, etc., £6,000, add to reserve account £2,000, and carry forward £6,461. The profit reported a year ago was £33,979 and the dividend 6 per cent. For each of two years before that 10 per cent. was paid.

NEW COMPANIES.

AMATEUR SPORTS PUBLISHING CO. (1913), LTD.—Registered on July 4th, with a capital of £1,000, in 985 preferred shares of £1 each and 300 ordinary shares of 1s. each, to print, publish and own journals, newspapers or periodicals, and to enter into a contract with the Amateur Sports Publishing Co., Ltd., and C. L. Sims, as liquidator, for the acquisition of the copyright of *Lawn Tennis* and *Badminton*, the official journal of the Lawn Tennis Association. The subscribers are H. S. Scrivener and G. R. Mewburn. Private company. The number of directors is not to be less than three nor more than seven; the first are J. F. Blyth, G. E. Hardisty, G. R. Mewburn, H. S. Scrivener and V. K. Woodhouse. Qualification, 100 shares, or one share and £25 debentures, with the exception of J. F. Blyth, G. E. Hardisty and V. K. Woodhouse, who may retain office while the Hotel Tariff Bureau, Ltd., hold 150 ordinary shares or three preferred shares and £75 debentures. Remuneration as fixed by the company. Registered office, 353, Strand, W.C.

CORNISH AND DEVON POST, LTD.—Registered on July 3rd, with a capital of £2,500, in £1 shares, to take over the business of proprietor and publisher of the *Cornish and Devon Post* carried on by C. O. Sharp at Western-buildings, Launceston, Cornwall. The subscribers are C. O. Sharp, M. Prout and A. B. Venning. Private company. The number of directors is not to be less than two nor more than five; the first are to be C. O. Sharp (permanent) and others to be appointed by him. Qualification, £100. A. B. Venning is first secretary.

SCANDRETT AND GRAHAM, LTD.—Registered in Edinburgh on July 1st, with a capital of £5,000, in 2,500 preferred and 2,500 ordinary shares of £1 each, to carry on the business of stationers, printers, publishers, etc. The subscribers are G. Scandrett and R. P. Graham. Private company. The number of directors is not to be less than two; the first are G. Scandrett and R. P. Graham. Qualification, 10 ordinary shares. Registered office, 341, Argyle-street, Glasgow.

PROVINCIAL ART CO., LTD.—Registered on July 7th, with a capital of £1,000, in £1 shares, to take over the business of picture post card dealers and publishers carried on at 31A, The Arcade, 85, Lord-street, Liverpool, as the "Provincial Art Company." The subscribers are W. J. Sloane and F. W. Maddock. Private company. The number of directors is not to be less than two nor more than seven; the subscribers are to appoint the first. W. J. Sloane signs documents as "director." B. N. Hanmer is first secretary. Remuneration as fixed by the company. Registered office, 9, Cook-street, Liverpool.

LADIES' WEAR PRESS, LTD.—Registered on July 9th, with a capital of £2,000, in £1 shares, to acquire the copyright of and take over the business carried on by the Millinery Trade Press, Ltd., at 30-31, Furnival-street, E.C., as proprietors or publishers of a magazine called *Ladies' Wear Trade Journal*. The subscribers are H. Hutchings and E. A. Attwood. Private company. The number of directors is not to be less than two nor more than three; the first are H. Hutchings and E. A. Attwood. Qualification, £100 shares or stock. Remuneration as fixed by the company. Registered office, 30 and 31, Furnival-street, E.C.

LONDON SCOTTISH AGENCY, LTD.—Registered on July 9th, with a capital of £3,000, in £1 shares, to carry on the business of press and publicity agents, agents for dramatic authors, journalists, novelists, theatre and music hall managers and proprietors, agents for the supply of photographs to newspapers, journals, magazines, and periodical proprietors, editors and publishers, etc., and to adopt agreements (1) with A. Wareing, and (2) with John Carpenter. The subscribers are L. C. Graysmark and C. W. H. Lee. Private company. The number of directors is not to be less than two nor more than six. A. Wareing is first permanent managing director.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

COMPANY NOTICES.

GLOBE ADVERTISING AGENCY, Ltd.

(In Liquidation).

Notice is given, that a meeting of the company will be held at the offices of Messrs. Morgan, Hardcastle and Morgan, 62, London-wall, London, on Wednesday, July 30th, at 12 o'clock noon, for the purpose of having the liquidators' accounts, showing the manner in which the winding-up has been conducted and the property and company disposed of, laid before such meeting, and of hearing any explanation that may be given by the liquidators.

ENGLISH ILLUSTRATED MAGAZINE, Ltd.

Notice is given, that a meeting of the creditors of the *English Illustrated Magazine*, Ltd., will be held at 30, Moorgate-street, London, E.C., on Monday, July 21st, at 3 o'clock in the afternoon.

THE NATIONAL WEEKLY, Ltd.

At a meeting of the company, at London, on July 9th, the following resolution was passed, viz.: — "That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and that the company be wound up accordingly, and that William B. Pearson, of 4, Suffolk-street, Pall-mall East, London,

Digitized by Google

S.W., be and is hereby appointed liquidator for the purposes of such winding-up." A meeting of the creditors of the company will be held at above address on Thursday, July 24th.

COMMERCIAL INTELLIGENCE.

Re LUCIEN STOKVIS.
Sporting Publications.

The public examination of this debtor, late of Austin Friars, E.C., and elsewhere, was held recently, before Mr. Registrar Brougham, at the London Bankruptcy Court, the accounts showing liabilities £4,730 and a deficiency estimated at £4,349. In the course of his evidence the debtor stated that he had been in business as a turf commission agent, an outside stock and share dealer, and he had been partner in a racing stable at Epsom; he had published a sporting journal called the *Quizzer*, and had promoted a boot polish manufacturing company. He took offices at 127, Fenchurch-street, for the purpose of sending out circulars and advertising *Sporting Luck*, which he published down to November, 1912, when he sold the paper to the Sporting and Financial Press, Ltd., of which he became managing director. The consideration for the sale was £15,000 in fully paid up shares of the company. The examination was concluded.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

You have an unusual opportunity to reach the Office Equipment Dealer, Retail Stationer, and Purchasing Agent—through ONE medium—the
INLAND STATIONER,
Business Equipment Journal
An examination of the magazine itself shows you why.
The Office Equipment Dealer and the Retail Stationer subscribe to it because it handles the selling end of their lines in a business-like manner. Every issue contains articles of sales plans of real practical value.
The Purchasing Agent subscribes to it because it keeps him in close touch at all times with the latest and best developments in business equipment.
You can reach all three with ONE advertisement and at ONE price by using ONLY *INLAND STATIONER* — BUSINESS EQUIPMENT. Let us send you some important facts.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Better be a rich poor man than a poor rich man.

o o o

I'm dead sure that's good advice. I've just been passing the quite magnificent home of one in our graphic craft whose business is doing well, no doubt, but not, I think, doing magnificently. He had to refuse me when I lately asked him to join me in assisting a particular effort which had its interest and appeal for both of us. "He had so much to meet just now."

o o o

Some time ago I was called a long way from London to report upon a plant owing to a death having occurred. There was an old-standing acquaintance in that case, and instead of hotelling I was entertained at the printer's home.

o o o

Some misgiving qualified any satisfaction there might have been in that hospitality. Those splendid equipments, those ultra-expensive hangings and adornments of the large best bed-room, they made me a bit uneasy.

o o o

The uneasiness increased when I found that while the home was surfeited the printing works were starved. There were plenty of silken draperies; there was not a plenty of quadding and spacing matter, nor a plentiful strength of the most useful founts.

o o o

A year or two afterwards a receiver was in. The business had been prospering for a decade or two, but a death had brought an unforeseen testing of its strength, and it could not stand the test.

o o o

Pro contra I recall another case, this time of a rich poor man. A very small printer, possessing only one "pony," *i.e.*, a double crown cylinder, and the minimum of smaller press power. He had yet done well for himself, and for his widow and his son, to whom he had given a most exceptional education, so much so that he had qualified him for earning a very good living in a specialist connection abroad.

o o o

This printer lived behind his shop, in, to be sure, a home of comfortably large—in fact, very large—rooms. He didn't get away from business very much; but then he made it so pleasant, so free from worry, that he had no particular hankering after getting away from it.

o o o

The poor rich man is likely to borrow money sooner or later; not for the extension of enterprise; not as a mere business transaction, in which someone presumably is as glad to lend as he may be to borrow; but as a devil-drive compulsion, involving possibly some humble pie, that most injurious as well as unpleasant of diets.

o o o

I'm anxious not to talk cant about borrowing. We are too fond of rolling under our tongue those words of Polonius, "Neither a borrower nor a lender be." Why should we worry about "Polonius's opinions, anyhow? Shakespeare creates him, but doesn't ask us to admire him. I prefer the Biblical, "Lend, never despairing," which is the true rendering of the verse, incorrectly translated in the Authorised Version, "Lend, hoping for nothing again."

o o o

Borrowing and lending *per se* are neither moral, nor immoral, but are as non-moral as is the multiplication table itself.

o o o

This I set down to guard against misunderstanding; and particularly to free myself from a suspicion of priggishness, of posing, of preaching.

o o o

There are times for everything we are told; and there are times for borrowing, but——

o o o

But, they are rare times. And in so far as concerns our borrowing not for extension but for carrying on, and getting out of holes, why the times, the proper times, are widely separate indeed.

o o o

A reckless and feckless disposition to borrow is not necessarily the mark of the true Bohemian.

o o o

Rabbie Burns was Bohemian enough for anyone; and he had, as we all know, certain human weaknesses. But he was scrupulously honourable in money matters. He lent rather than borrowed; he used his first important gains to start his brother in business; and dying in straits and sadness he yet left no debts.

o o o

A year or two ago, being called in, it was my unpleasant business to report to a client that he had lost £1,000 he had advanced to assist a brother in a business coming into our craft purview, though not exactly a printery.

o o o

That very fraternally-minded man was not a dour-faced, grim, canny Scots elder; he was a hard-working comedian.

o o o

I could cite another like instance from my own experience of the careful "Bohemian."

o o o

W. J. Locke had a true instinct when sketching his "dragon fly" of a hero in his delightful book, "The Joyous Adventures of Aristide Pujole."

o o o

This splendid liar, but really finely toned, great hearted, man, was one whose canon of conduct seemed to preclude borrowing. Never once do we find him turning to it for extrication.

o o o

"The best way to get power over another man," said Dr. Johnson, is to lend him money. And the best way to get into a man's power is to borrow money; when the borrowing is of the getting-out-of-a-hole description.

o o o

Apropos, the Koran forbids lending money for interest.

o o o

A printing friend returned from India tells me that he once found that some Mahommedans took shares in a certain railway. They returned the warrants for dividends during the period prior to the railway earning anything. Their religion, they said, forbade taking this usury. But as soon as the line began earning they took dividends without compunction.

o o o

Perhaps that partly explains why another "verra releegious mon," according to a yarn in Sir Wm. Butler's "Life," hurried up the profit stage of a little Asia Minor railway.

o o o

He was a Scot. He made the pashas understand that if they could help to "mak the railway pay it wadna be onything oot o' their pockets. Sae," as he afterwards told the tale, the pashas had some of the trading men "weel whippit," and when they speered wherefore were they weel whippit he explained that it was because they still used camel-backs and didna use the reelway which of their grat boonty the pashas had provided for them. The reelway soon paid.

o o o

Before I pass to another note let me put in a word again *re* Aristide Pujole. Do treat yourself to that book in your holiday. You'll read it during one day's, almost during one afternoon's laze. It will certainly give you a friend for life.

o o o

I don't know that we should run up to Sherlock Holmes if we saw him moving about in the flesh. But we should most certainly want to rope Aristide into our company.

FRANK COLEBROOK.

THE Secretary of the Newspaper Press Fund has received a letter from the Albert Hall Concert Committee of the League of Mercy stating that at their final meeting a resolution was passed that a grant of £20 be made to the Newspaper Press Fund, in recognition of the assistance which the Press has always so kindly given to the work of the League. The cheque was received through Sir James Harrison.

BOOKBINDING SECTION.

Bookbinding Notes and News.

It is announced that Major Cyril J. H. Davenport, V.D., F.S.A., has retired from the post of Superintendent of Bookbinding at the British Museum, which he has held for 25 years past. The Major, who is in his 66th year, and has thus just passed the age limit of service, is the son of a captain in the 1st Foot Guards, and has himself served in the Auxiliary Forces. After he had completed his education at the Charterhouse, he entered the Royal Engineer Department of the War Office as a draughtsman, a training which has stood him in good stead ever since. Although his connection with bookbinding was not attained through trade channels, Major Davenport is a skilful amateur binder. Since he gained a Society of Arts silver medal in 1900 he has almost continuously interested himself in bibliopegic matters, both from a literary and a professional point of view. He was a member of the Society of Arts Committee on Leather in 1903-5, and binding editor of the *Anglo-Saxon Review* in 1899-1901. He is the author of numerous works on bookbinding, including "Royal English Bookbindings" (1897); and "English Embroidered Bookbindings" (1899). One of his recreations is painting, and it has long been a hobby of his to make lantern slides from photos of fine and historic bindings at the British Museum and elsewhere, colour them himself, and use them for the purpose of illustrating the lectures on bibliopegic matters which he delivered before various public and private gatherings. In 1898 he gave a Cantor course of lectures on Decorative Bookbindings, and he has been a juror at many British and foreign exhibitions in connection with exhibits relating to binding, etc. His latest work, on "Cameo Book Stamps," appeared in 1911. We are sure that Major Davenport's friends will, like ourselves, wish him many years of enjoyable retirement. He is succeeded by Mr. Taylor, who for some years was Asistant Superintendent of the Reading Room. The *Daily Chronicle* for July 10th contained an interesting article on Major Davenport's connection with the Museum and with binding.

The report for 1912—published a week or two since, of the Chief Inspector of Factories and Workshops, contains only a couple of references to the bookbinding trade, so it may be assumed that the conditions under which that work is carried on are generally healthy. Miss Ahrons, one of the lady inspectors, says that in one workshop she found a phthisical girl (not fit to be at work, who yet had been the support of her father and mother) in a room in which a gold-blocking machine was used, which machine raised the temperature of the room and hindered ventilation, because draught interferes with the work owing to the lightness of the gold leaf. It is in such cases as this girl's, says Miss Ahrons, that the benefits of the Insurance Act ought to be of so much value. Another lady inspector, Miss Whitlock, mentions that a complaint of inadequate lighting for a book-sewing machine was investigated at a bookbinding factory, and it was found that owing to a fire in the factory the machine, which was power-driven, had been removed to the only available space with shafting convenient, which happened to be the darker side of a not very well lighted printing-room, and was being worked by a girl with very defective eyesight, who was undoubtedly suffering from eye-strain, the trying part of the work being the threading of the needles embedded in the framework of the machine, especially as the nearest artificial light was some little distance away. The occupier promised to remove the machine as soon as possible to a better position.

Employment in the bookbinding trades in London continued quiet during May, with short time, but was better than a year ago. In the provinces it was good, and better than a month ago or a year ago, except at Edinburgh and Belfast, where it was bad and worse than a month and a year ago. The percentage of unemployed, amongst 3,381 London trade unionists, was 5·3 at the end of the month, as compared with 5·4 in April, and 7·9 in May last year. In other parts of the kingdom, the percentage, out of a total of 3,300, was only 3·2, against 3·6 in April and 3·7 in May, 1912. Employment with morocco leather workers continued very bad, but with other fancy leather workers it remained fair.

The contracts placed by H.M. Stationery Office during May included the following:—Binding, etc., 2,000 Engineers' Pocket Note Books, 16,000 Books (demy quarto), 2,000 Note Books, 500 Portfolios, Fenner, Appleton and Co., Ltd., 77, St. John-street, E.C.; Binding, etc., 50,000 Army Book 153, supplying 1,470 Portfolios, 18,000 Cases, McCorquodale and Co., Ltd., Wolverton, Bucks; Binding, etc., 14,000 Books S. 1,295 A, 1,500 London Delivery Book 1913, 8,000 London T.S. 14, 1,900 Memo. Books supplying 360 Portfolios (making-up card), 1,250 File Covers, 3,175 Portfolios, Waterlow and Sons, Ltd., Finsbury, E.C.; Binding, etc., 40,000 Books S. 575 F. D. 195, 14,000 Books T.S. 66, Whitmore, Ltd., Edmund-street, Birmingham; Binding 10,000 copies "Our Indian Empire," Davison, Clarke and Co., Ltd., 16-20, Underwood-street, N.; Binding, etc., 600 Memo. Books, 1,800 Books T.S.M. 196 Prescription Book, supplying 1,400 Portfolios O.R. 106A, 2,000 Millboards, 3,000 Cases, 30,000 Pads P.P. No. 2, Drake, Driver and Leaver, Ltd., Rosebery-avenue, E.C.; Binding 10,000 Musketry Regulations, M. Bell and Co., Ltd., Cursitor-street, E.C.

Tenders are invited by the Egyptian Ministry of Finance for the supply of cloths for binding, Bristol boards, mill boards, and papers required by the National Printing Department during the year 1914. Sealed tenders, on the proper form, accompanied by samples of the articles it is proposed to supply, will be received up to noon on August 18th, in the case of the boards, etc., and August 27th in the case of the binding cloth, by the Director, National Printing Department, Cairo, whence copies of the specifications and forms of tender may be obtained. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must, says the *Board of Trade Journal*, be a person residing in Egypt, or must have a representative in Egypt, and give in his offer an Egyptian address at which notices may be served upon him. Copies of the conditions of the contract and form of tender may be obtained from Sir A. L. Webb, K.C.M.G., Queen Anne-chambers, Westmister, S.W., or seen, together with samples of the materials at present in use (by manufacturers in the United Kingdom) at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C.

Tenders for bookbinding for the Norwich Public Library, for one year commencing August 1st next, are now being invited. Forms of tender and specification may be obtained from the Town Clerk, Guildhall, Norwich, and must be delivered on or before July 22nd, after which date no tender will be considered. We note with satisfaction that the specification requires the leathers to conform to the Royal Society of Arts' standard, and that the cloths are to be Winterbottom's "Imperial Morocco Cloth," fast finish, and Bancroft's "Legal Buckram," as directed. The conditions of contract include the following wages' clause, which should please the Bookbinding Trades Union: "The Contractor shall pay all workmen (except a reasonable number of his legally bound apprentices) employed by him in and about the execution of the contract or any part thereof, not less than the standard rate of wages or prices customarily paid at the date to workmen engaged in the trade in the district where such work is being performed, and shall observe such conditions and hours of labour as are current in such district. The standard rate of wages shall be defined as the rate of wages recognised by associations of employers and in practice obtained by the trade unions in each trade."

The imports of book cloth, during June, amounted to 18,200 yards, value £503, as compared with 20,580 yards, of the value of £509, in the corresponding month of last year, and 21,129 yards, valued at £590, in June, 1911.

Referring to the exhibits of ruling made on the occasion of the last annual display of the Cleveland Guild of Printers (Middlesborough), the judge, Mr. R. Bradshaw, says that the specimens on the whole are not bad for an apprentice of two years, "but when I look at the pattern which I have marked best, and at the sheet sample which I have marked worst, it is difficult for me to believe they have both been ruled by the same person. One would not disgrace a journeyman and the other would not be passed by any foreman who knew his business. The most of specimens are ruled on the thick side, and I would recommend the boy to try to cultivate fine work—use his sandpaper up the sides of his pens a little more and have headlines if anything a shade heavier than the down lines, but never lighter."

Amongst new appliances lately introduced to bookbinders is the Leda No. 3 automatic hand-numbering machine, made by Messrs. W. Lethaby and Co., 97, Hatton-garden, London, E.C. This possesses seven separate actions for numbering—consecutive, duplicate, even and uneven, consecutive and duplicate respectively, and repeat. The Leda is strongly built, quickly adjustable, and intended for hard wear.

A correspondent of the *British Printer*, writing recently to that periodical, said that for some time he had had difficulty in making gold leaf stick to cloth so that it will not fly about when being put on the blocking press. The preparation used always discoloured the cloth, and so he sought particulars of a preparation that he could put on the bright red cloth, which would not discolour it. The reply was to the effect that where Mackay's blocking powder is used, and the gold leaf laid or blown flat, the latter should not blow about if the ordinary rule of draught exclusion is observed. The portion of a department assigned to blocking should be boarded or partitioned off in order to exclude draughts. This being achieved, there remain only the operator's motions to cause the leaf to lift. With ordinary dexterity of movement this latter contingency is provided against. As regards the discolouration of the cloth, Mackay's powder leaves the surface without trace if a slightly greased cloth is used for dusting superfluous leaf and powder from the blocked cloth. Too much grease on the cloth used as a "rubber" will defeat the object where a bright colour is concerned.

The Bookbinders' branch of the Parisian Federation des Industries du Papier is taking steps to reorganise the scale of wages for its members. The maximum wage in Paris for the average workman bookbinder is 6d. per hour. The Society has issued poster advertisements warning parents against permitting sons to enter a trade in which the workers are so inadequately remunerated.

At the recent twenty-eighth exhibition of the Society of Decorative Artists, held at the Museum of Decorative Arts, Paris, there were several art bookbinders represented, including M.M. Marius-Michel, René Kieffer, Baudin, and Mlle. Germain.

Employment in the German bookbinding trade fell off somewhat during April, so that the percentage of unemployed amongst 33,410 unionists rose from 2·7 in March to 3·0. In April last year it was 2·7.

Trade continues good in the Norwegian bookbinding industry, the percentage of unemployed at the end of April, out of a total of 552, being only 0·5.

There is nothing fresh to report in connection with the proposed reduction of the import duty on bound books entering the U.S., but the operative bookbinders are still hoping that the Senate will do something for them. During last year the imports of bound books were valued at £580,000, and it is anticipated that this will be nearly doubled if the proposed reductions are made. A writer in the official organ of the International Brotherhood of Bookbinders says:—"If all our members saw the system to which the old country binderies have reduced their magazine and art binding methods, they would deluge Washington with an avalanche of written protests, if only for self-protection, because the European bindery can make good profits on a class of work which American bindery proprietors often won't even bid on, and the European pays the freight both ways across the pond in addition. I claim that this class of work, including even library work, can be done here at a profit, but to do so men must be trained to specialise in that line until their prestige is so well established that European firms will not seek to compete with them, and the American proprietor for a while must be content with small profits and quick returns."

Digitized by Google

The same writer also has something to say about the British bookbinding trade union organs. "As I write, before me is a copy of an English bookbinding publication issued by the British bookbinders. It is replete with beautifully worded contributions, good grammar and lofty ideals. But a union is an economic growth. Primarily to secure for its members more to eat, wear, and better living conditions, and shorter hours of labour. In this field of activity the British unions are behind the American I. B. of B., although their trade publications (two every quarter) are almost faultless in their make-up; but for bed-rock results the I. B. of B. leads them all. Therefore, I for one prefer our Journal, and our union, with its more or less hit and miss methods, to the methodically precise but very conservative union practices and publications of our British brothers, who are still working fifty-four and fifty-two hours in all cities outside of London and perhaps one or two other big cities in Britain. One feature, however, which is very noticeable in the British bookbinding publications, is that Socialism, referred to over there as the Labour cause, occupies as much space nearly as the trade items, not in discussing what Socialism is, as they learn that much as soon as they are old enough to reason from cause to effect, but they discuss only ways and means of bringing it more and more into being, and quote what has already been accomplished in the way of blazing the trails ready for the pioneering parties of the coming civilization."

A correspondent of an American contemporary lately asked what was the best way to strike and pick up a line accurately on a ruling job. In reply, the Dredge Ruling Pen Co. said that "we have been informed by rulers of known ability that it is best to run the down-line pens as steep as possible. This will not only give you the desired uniformity of work but also make it possible for you to overcome the difficulty experienced in trying to pick up and drop again closer than an inch, because the steeper you use your pens the less you will have to lift your clamp to clear the paper and the quicker action you will have. In some cases it is advisable to file the cams when the strike is very short."

The Dexter Folder Co., New York, has taken over the manufacture and sale of the Kast Insetting, Gathering and Stitching Machine, which is widely known in the American trade, especially among periodical publishers. It takes the signatures just as they are delivered by the folding machines and automatically gathers them from the hoppers into which these signatures are placed, inserting one signature within the other until the book is complete. It then adds the cover and wire stitches (saddle stitch fashion). It automatically calipers the signatures and also automatically detects a missing signature or the presence of an extra one. The machine is simple in construction and operation, and is said to be able to turn out twenty-one to twenty-five thousand complete books in a working day of eight hours. A number of them are in successful operation. After a recent thorough trial by a leading American publishing company (a weekly publication) it gave an order for nine additional machines. The flexibility of the machine will appeal to the periodical publishers whose publications vary in the number of pages from week to week.

A correspondent of an American contemporary recently asked the editor, "What can be used for size for leaf-stamping Keratol? The sizing advertised comes in too large a quantity for occasional small runs. Any method of sizing that can be used for small runs would be found a great convenience to the printer-binder who has an occasional small job of Keratol stamping." The reply stated that orange shellac dissolved in alcohol will do it, but it must be used thin, as it is liable to turn the material grey, and that can not be seen until the covers are dry, when it is extremely difficult to clean off. A good thing is a thin solution of Horlick's malted milk, applied after a washing of denatured alcohol. This does not leave any trace of the sizing on the surface, fixes the gold firmly and leaves the impression clear.

The Montreal Printers' Board of Trade are endeavouring to establish a new selling price for bindery work, and with this end in view are compiling a list of the time required for the different operations. On account of the wide differences of opinion as to the necessary time required, it is their desire to acquire an average from as many binderies as possible, so that a number of detailed printed forms are being sent out to the local binderies, with a request for the details needed to be filled in.

MORE ABOUT
A Cost System for Bookbinders.

A well-known American Cost System advocate, Mr. Isaac H. Blanchard, recently made a lecturing tour in the United States, visiting and speaking at Milwaukee, Minneapolis, St. Paul, Grand Rapids and Madison. The importance of keeping proper cost records was one of the subjects he dealt with. He pointed out that in edition binderies whose work consists of cloth and leather bound books, as well as in pamphlet binderies whose work consists solely of paper-covered books, catalogues and magazines, there often arises the necessity for the use of a high-priced mechanic on a machine whose cost was but a few dollars, while the lower-priced mechanic is able to operate a machine costing many thousands of dollars. Where the method of computing costs is based on a "classified wage" scale, the results obtained give untrue records for both operations named above, and the results of business competition where such a method of cost accounting is employed, compared with the results obtained in a shop where the "scientific" cost-finding method is used, would be to give to the "classified wages" shop all the work on which they were losing money and take away from them all of the work on which they were making more money than their cost system showed.

Mr. Blanchard suggested the use of a bindery-cost table, which would show a record of machine time charged against individual jobs during the year, plus operators' wages charged against individual jobs during the year, omitting supervision and wage of foreman. The overhead items of bindery, covering (a) fixed charges on all bindery equipment except machines whose time is charged; (b) supervision expenditures, being the wages of foreman, boys and all non-chargeable pay roll, and (c) all other department charges, including the share of the entire business general overhead expense assessed against the bindery department, divided by the total machine time and operators' wages charged against individual jobs, gives the percentage to be added to the total of the machine time and operator's wages on each job, to get at the actual costs of the job in the department,

He quoted a case in which, by this method, it was found that a certain machine cost £78 for standing on the bindery floor all through a year, although it only earned about £10 during that time. It would possibly be a good policy to dispose of the machine and replace it with something more profitable. A proprietor having these records before him at the end of the year can readily figure out the availability and usefulness of each machine, and either raise or lower the rate charged for the machine's time or do away with the machine, as may seem best.

A "classified wages" system, in which the earnings of different workers in a particular department were all lumped together to extract an average, Mr. Blanchard strongly condemned, as in actual operation it would probably lead to work of one description being taken below cost, whilst a share of

another could hardly be obtained at all, owing to the excessive rate of charging which the system imposed for it. He therefore repeated the suggestion made by every student of cost accounting, that the most scientific method of computing costs is to reduce the volume of overhead charges to a minimum, while keeping the volume of direct charges at a maximum.

Restoring Old Prints and Books.

Too often, alas, old prints and books that come into the possession of collectors and book-lovers have not withstood the passage of years (in many cases centuries) without showing signs of more or less serious damage. If only the paper be considered, the prints frequently display margins "tattered and torn," or altogether wanting; while the books present whole pages which are "things of shreds and patches," or deficient in other necessary respects. It is not a question of the sleight-of-hand of certain specialists, veritable fake artists, who so expertly "doctor" old prints and books, and give to relatively common and worthless specimens the characteristics of this or that rare edition, so that even collectors are at loggerheads over them. These are dubious processes which sometimes entrap even the wariest and most experienced collectors. To satisfy curiosity, however, a short description may be given of those methods which, among divers works of restoration, are more particularly connected with bookbinding—that is to say, the remounting of dilapidated engravings, and the repairing of books, operations which resemble more the "making-up," or even the manufacture, of paper.

The operation of remounting prints consists in removing what remains of the old margin and in putting an entirely new margin around the print. This may be done by professional mounters or by amateurs themselves. The margin, or what remains of it, is removed exactly level with the "frame" so as to render the repairs as little visible as possible. The edges of the print are then bevelled by means of an extremely sharp knife. In a strip of paper of exactly the same quality and "grain" as the paper of the print, a "window" is cut of the same dimensions as the print to be inserted in it, but with edges bevelled in an opposite direction to the bevel of the print. The sheet from which the "framing" is cut is previously tinted, if necessary, to the exact shade of the print, this tinting being effected by immersion in tea or coffee grounds of the required strength, and carefully filtered. Coffee gives better results than tea, which imparts to the paper a less natural tint. The two parts prepared in this way insures the perfect fit of the print in its "frame," the parts being then glued together at the bevels by means of fishglue. An ivory folding-stick is used to smooth the line of glueing and to insure the adhesion of the two parts, a strip of paper being interposed to avoid rubbing the print and the margin at the point of junction. A print thus remounted, without possessing the marketable value of a print of the period having the original margins, has nevertheless in the eyes of its possessor the well-proportioned and harmonious appearance of the work of primitive art.

The professional book repairer is content to merely replace the missing portion of the page by another piece of paper. The *modus operandi* is the same as previously described, except that the bevellings are geometrical in form. All this necessitates a dexterity and a skill that is only acquired by long practice, conjoined to a natural aptitude, but it is simply a work of manipulation.

An ardent book lover, Monsieur Bochet (an engineer in the firm of Frédéric Fouché, well known in the paper trade for his aero-condensers), penetrates, however, into King Paper's domain. In order to render the repairs more perfect, Monsieur Bochet conceived the idea of remaking the paper at those parts where it was wanting. For this purpose the book is first carefully rebound, care being taken not to damage the fly-leaves. The separate leaves are then washed in a bleaching liquid, chloride of lime, chlorohydric acid, oxalate of potash or permanganate of potash, the permanganate treatment being followed by passing through soda hyposulphite, so as to remove the violet hue of the paper, which, having reassumed its pristine whiteness, is rinsed several times in clear water to remove all traces of the bleaching agents, and is then stretched in its moist state over a wire cloth. Meanwhile, a very strongly diluted paper pulp is prepared by pounding cigarette paper in a mortar, a certain quantity of this pulp being taken up in a small tube and very carefully spread over the metallic cloth at the missing portions. The pulp drips across the cloth, and thus reconstitutes the missing portion of the leaf; it is united by means of a penknife or a fine spatula with the old paper, and pressed closely between the felts. Repairs thus executed are, so to speak, invisible. The bleached paper is then retinted, in tea or coffee grounds, to the colour it had before treatment; then resized according to the standard method—namely by gelatine and alum.

The original text will naturally be defective upon the joined portions. Writers—artists indeed in their particular line—rewrite this by hand, using inks resembling ancient inks, and taking as models, if possible, intact copies of the same work. So that it be well executed, such a copy immediately attracts the intelligent amateur. Better than writing the text upon paper is the making of a good block and printing the text on those portions where the text is wanting. Certain printing firms can make inks that perfectly imitate the printing of the period treated. The operations of remounting prints and of restoring books by glueing paper in the holes necessitates the use of a paper analogous to the original as regards grain and—in the case of books—as regards "laying" and watermarks, if the original is "laid." It is, therefore, a claustral task to dispose the piece in such a way that the "lay" and the watermarks unite. A paper similar to, or at least of the same period as the work to be treated must be found, and certain merchants specialise in old papers employed for this purpose. Monsieur Bochet's process appears to be more suitable for the restoration of vellum papers. In the case of laid papers, if the value of the work to be treated justifies it, a small special mould may be made or even a portion of a mould, with wires and watermarks.—*La Papeterie.*

Points About Bookbinding,

FROM THE

BRITISH COST CONGRESSES.

The Printers' Cost Congresses recently held in various parts of the kingdom resulted in a good deal of useful advice being given, by some of the experts, as to the best methods of Cost System accounting in binderies.

From the detailed reports published in the *Caxton Magazine* we make the following extracts, as likely to be of use to readers of this Section.

At the Leeds Congress, Mr. Harry Cooke (Alf. Cooke, Ltd., Crown Point Works), was the principal speaker, and in the course of the proceedings he was questioned as to the binding-room, where men or girls are now doing hand work and now machine work. He said that they must recover the due

Bookbinders' MACHINERY and SUPPLIES

We have a very fine range of machinery for the Binding Trade, and solicit your enquiries. We can meet all your requirements whether large or small.

Caxton-Beatrice Blockers

Made in England from the original patterns—not a German imitation. Four supports to head, sliding feed table, powerful inking system.

Caxton Rotary Perforator

For run-through and stop work. Gives a clean reliable, slot-like perforation. Easy to adjust, speedy in operation.

Stitchers, Cutters, Presses

Large and small, hand and power.

JOHN HADDON & CO.

Specialists in Labor-Saving Machinery.

Digitized by Google

on-cost by seeing first how much it cost that department for the week's run. Having got that, they proceeded to make certain deductions from it. One deduction was of the amounts which were the special costs of the machines. The other deduction was for wages of those who made out working dockets and whose time could be allocated to specific jobs. Say, for instance, that the whole cost of the department is £100, and £10 of that is the special cost of running the machines, and £40 the wages paid to employees whose time is entered on dockets. "The £40 and £10 equal £50 out of the £100, which is the whole cost in the case supposed; therefore on to that chargeable £50 you add 100 per cent. To a girl's possible 3d. per hour you in this case add 3d. per hour; to a machine's possible 2d. you add 2d. If the girl moves from a 2d. to a 4d. machine her hour charge at once rises from 3d. plus 3d. for herself, plus 2d. plus 2d. for the machine, or total 10d. an hour, to 3d. plus 3d. for herself, plus 4d. plus 4d. for the machine, or total 1s. 2d. The machines under £10 original cost in the binding we call tools, and don't apply this method to them; we disregard them as machines. A man has certain forwarding work—he may have a dozen orders without arriving at a rate for a certain portion of binding work. Well, I credit the time necessary for the amount of work going through; credit it just as money might be credited; and balance on the outworking. If your rates on which (adopting them from what you understand that experience approves), are too low, then in the course of time proper rates will be arrived at."

Mr. Hazell, the chief apostle of the British Cost Finding System, said at the same Congress: We do a great deal of binding. When I introduced the system into the vellum binding department some time ago, I was faced with the difficulty that a man is given half-a-dozen books to carry through various processes. So he does not record so many minutes on this, so many minutes on that. It is left to him to write down the various job numbers and divide his hours as he thinks fit over those various books.

In reply to a question asked as to ruling done by a trade house, Mr. Hazell said "If you send work out, you have certain expenses, but not, of course, a representation of every one of your main items of expense. Outwork should bear its share of rent, rates and taxes. There should be no charge for power, no depreciation, and no repairs. You know what you pay your trade ruler. You must add a percentage to cover the cost of handling. It should be a little less than your percentage on paper, because in the case of paper the percentage has to cover warehousing and depreciation of stock. By adding the proper additional percentage you get your total cost. Whatever you add is net profit."

Answering another question as to binding and ruling, Mr. Hazell replied: "Divide the binding department into ruling and binding. Time workers on hand work would be charged their wages hour rate plus an on-cost percentage, which might be 100 per cent. till the weekly value of production checks supported or corrected this figure. A man goes to a ruling machine. You charge his hourly rate plus the percentage 100 per cent. (or whatever is your per cent.), plus cost of the ruling machine, to which machine cost the on-cost percentage has also to be added. There were thus four items; the on-cost percentage being, however, the same in each case."

Another questioner said: "In your tables you do not show the depreciation of guillotines." Mr. Hazell: "In the binding-room you would make similar forms to those for the machine-room, but in the one case your unit would be £50, and in the binding-room the unit would be £10. You would ascertain any special machine costs, which would, of course, include the depreciation of a guillotine, and you would divide by the number of the machine units."

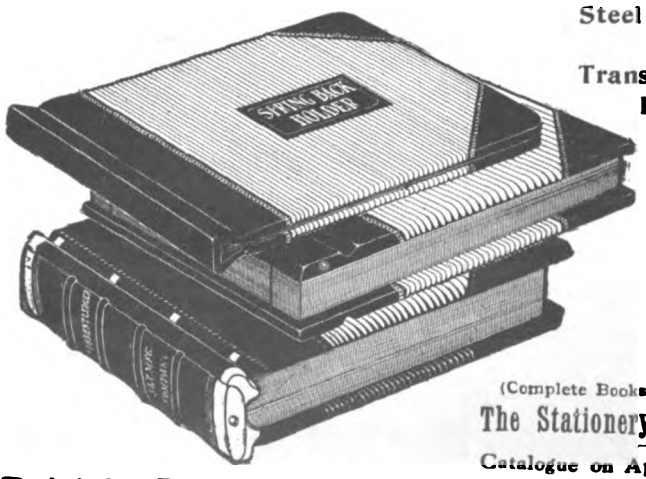
At the Portsmouth Congress, Mr. Hazell explained fully how the Committee think one should deal with the binding department, which is a little more awkward to deal with, since the same worker may be part of the time working on a machine and part of time working by hand. The machines should be divided into £10 units; one should see, that is, how many times £10 goes into the capital cost of the binding machines. Machines under £10 in original cost should be treated as tools. Both worker and machine in the binding-room should have a percentage added to the hourly wage or hourly piece unit cost in the one case, and to the hourly machine running cost in the other case, to represent the general costs of the room—it would be the same percentage for worker and for machine. An arbitrary percentage of 75 per cent. or 100 per cent. might be taken for a start; and the value of production forms be watched for a few weeks to see if that arbitrary percentage had proven to be correct. "Say then," said Mr. Hazell, "you add 75 per cent. or 100 per cent. and you get your gross costs. If you are estimating on a job you proceed in this way, adding together the workers' hourly rate, and the 75 per cent. or 100 per cent. as the case may be, and there you will get the cost. It will be the gross cost. You will soon find by the weekly statement of cost if the percentages adopted are correct. If you have been adding 100 per cent. and you find there is always a surplus, your percentage is a little too high; in future you will add 75 per cent. or perhaps 80 per cent. When the job is finished you compare the job cost of the sheet with the original estimate, and see if the customer departed from the original instructions."

Is the Plough Obsolete?

This article is the outcome of a statement—quoted as coming from the teacher of a technical school—in the June Bookbinding issue of the *British and Colonial Printer and Stationer*, viz.: "Why all this piffle and cant about 'cutting a book inboard'? Why shouldn't a craft class be brought up-to-date so as to compare with the modern workshop. It is no use whatever teaching obsolete methods with obsolete appliances."

With this statement I cannot by any manner of means agree, and I can only put it down to ignorance or incompetence on the part of the teacher referred to, or, as has happened before now, laziness on his part to teach this so-called obsolete process. Obsolete, as I understand the word, means a method discarded and out-of-date, one that has been improved upon by some other process which gives equally good results with a big saving in time and labour. Now, that a process can be out-of-date when it is in constant use by the most famous firms in the trade at the present day, sounds to me an entirely erroneous statement.

In London, the firms who are known to all lovers of our craft, such as Messrs. Riviere, Morrell and Co., Sansgorski and Sutcliffe, Zaehnsdorf, and many others who produce work of the highest class, have the plough in constant use in their workshops. In the provinces, Messrs. Fazakerley, of Liverpool, and Messrs. Schulze and Co., of Edinburgh, to mention only two firms, have the plough also in constant use on all their best work. The above names, and the proud position the several firms mentioned hold in our craft, disposes at once of the statement that the plough is an obsolete part of a bookbinder's equipment. But I know many readers of this paper who are unacquainted with the plough will ask, what are the advantages in using it as compared to the modern guillotine, and are they really worth the extra skill required in their successful carrying out? I would recommend doubters just to compare two pieces of millboard, one cut by the board-cutting machine and one cut by the plough, and as far as the boards are concerned the beautiful clean cut of the latter process will at once, I am sure, appeal to them. Then as regards the cutting of the book itself, cutting by guillotine has to be done while the book is flat. It may look nice and square at the time, but see the difference when it is rounded. Sheets begin to start, perhaps just a little at the foredge, and that tends to throw the ends out also. Then in the backing, which really finally determines the shape of the book, a very little twist of the backing boards, a slight fault in the rounding, or a little too much swell on the back, tend immediately to throw the book out of shape. But with the plough taking the part of the guillotine, not one of these things can happen. The book is rounded and backed and the boards laced on, then placed in the standing press and left under a heavy pressure until it is thoroughly solid; after that the cutting is done. First the head is cut and the book comes out with a beautiful smooth and square edge, and perfectly true with the boards. Then the tail is cut, and by marking both boards properly the squares on each side should be exactly the same; the book is then marked at the foredge and turned up with trindles at the back and put squarely in the cutting press and cut. When taken out of the press, the book immediately falls into the round again, and not a start can be seen either on the ends or foredge. These advantages may seem to some readers, as they apparently have done to the teacher who made the statement which begins this article, as of no account, but to a craftsman who loves his work, and delights in turning out a book the binding of which is a credit to himself and the firm that employs him, these points are everything, and go far towards producing a sample of the bookbinder's art which is at once pleasing to the eye of the book-lover, by reason of its beautiful squareness and solidity, and also to the craftsman, who knows that so far as he is concerned the best has been done to make his work a perfect example of his craft.



The day has not yet come for the scrapping of the plough, and it will be bad for British bookbinders should that day ever arrive, as it will mean that our craft is dying out, and that the love for bindings of the highest class has left our land.

In conclusion, I would just shortly appeal to members of our trade, and to teachers in the various trade classes more especially, to weigh

ANDREW CURRIE.

Bookbinding for Women.

An Artistic Trade.

In spite of the remarkable advance which has been made within the last few years with regard to the binding and general decoration of the machine-bound book, the hand-bound volume, with its cover designed in harmony with its contents, finds a public that is steadily, if slowly, increasing, says a writer in a recent issue of the *Standard*. The reason is not far to seek. Firstly, it is impossible that the cover designs provided for a publisher's "series" of reprints, no matter how tastefully carried out both as regards tooling and leather, should be equally significant in the case of each volume; and secondly, the hand-made book, involving a very considerable amount of time and labour, is seldom fashioned from any but the best materials, and is, in consequence, able to stand an amount of hard wear and tear that would spell dissolution in the case of a machine-bound volume. Whether the growing public for well-bound books has had the effect of attracting women in larger numbers to the pleasant profession of bookbinding, or whether the good work produced by women has influenced the growing cult of the hand-bound book, is diffiult to determine. In any case the two have been coincident, and the last couple of years has seen a considerable increase in the ranks of women who are employed in bookbinding works or have established their own connection and their own workrooms. Bookbinding, by reason of its artistic nature and the pleasant character of the craft, is one which is particularly suited to women, especially to those who combine originalty of taste with manual dexterity and neatness. The tools are light to handle, and the binder's press, with its system of cogwheels and leverage, presents no difficulties in the manipulation even to the least muscular. The modest sum of £10 covers the initial outfit of a bookbinder's tools, press, and set of letters, and the training, which should occupy two years, but may be covered in one, may be acquired in the most thorough manner possible at the London County Council Central School of Arts and Crafts, in Southampton-row, at the modest fee of 15s. for each half-yearly session. This sum entitles pupils to the privilege of working independently in the bookbinding "workshop" on days other than those on which they attend the instruction class. The training at the Westminster School of Art, under Miss Robinson, is also exceedingly good.

The woman student of bookbinding trains under a disadvantage as compared with the male worker, in so far as the binders' trade union does not admit her either to membership or to apprenticeship. Her work in the schools is bound to be somewhat theoretical rather than practical, but the trained woman bookbinder is on the other hand singularly at home with every section of her work, and instead of having specialised in an ordinary workshop merely on one portion of it, such as the "forwarding" or the gilding, she is able to carry it through herself from start to finish. From the financial point of view, the success of the woman bookbinder is mainly dependent on two factors—the first is the individuality of her designs, and the second is the personal connection which she is able to build up. A bookbinder's clientèle is seldom one of chance buyers; it is formed from recommendations and personal acquaintanceships. It therefore behoves the woman binder to develop as large an acquaintance as possible among that cultured section of the community that loves to clothe in lovely and appropriate garb the books which they have made their friends. Glasgow enjoys the reputation of having the advantage over London in the numbers of those who have their books hand-bound, and some of the most prosperous and successful women binders are established there. It must not be imagined that the bookbinder is for ever engaged on books elaborately tooled and gilt. Some admirable work is being turned out by women, which is entirely free from decoration of any kind beyond that produced by denoting the structure by means of the threads which bind the leaves and attach the back. The material of the cover is cut away in such a manner as to leave these threads to view, and they are then twisted and knotted so as to form an ornamental finish. These volumes recall the old vellum-bound missals with their leather thongs to tie across the edges. The efficient woman binder has the greatest contempt for the common device of false decoration in the direction of bands across the back which do not represent the actual cords with which the book is sewn, and rigorously sets her face against any type of decoration which does not tally with construction and harmonise with subject. The book that is bound on sound, constructive principles has no weakness at the joints, and opens, and remains open, without effort, at any page that may please the reader. Some women binders are making a speciality of the treatment of the edges of the leaves, and are doing work in regard to these which is reminiscent of the German bindings of the sixteenth century. Some especially gorgeous examples, suitable for the somewhat ornate style of such poets as Swinburne and William Morris, show gilt edges, tooled and ornamented with figures, and even with scenes illustrating the contents. Some quaint examples have the title written along the front edges above "a background of pale gold, such as the Tuscan early art adores." Each binder likes to design her own tools and have them cut by a workman according to her instructions. Among the women who have risen to particular distinction as regards individuality of design and of workmanship, Miss Althea Giles holds a high place. The disposition to follow faithfully on the lines of antique bindings is steadily giving way to a tendency to evolve fresh ideas, which shall carry out the salient features of the book involved, and though the student is educated on the lessons to be learn from the old bindings, she at the same time realises that these were for the most part designed for books of devotion and copies of the Gospels intended for the use of clerics, monks, and nuns, and by no means equally adapted for volumes of Henley, Omar Khayyam, Kipling, and Mrs. Beeton!

WOMEN IN THE BOOKBINDING TRADE, by Mary Van Kleeck. 12mo. 290 pp. Cloth boards. $1.50 (6s. 3d.). Survey Associates, Inc., 105, East Twenty-second-street, New York. 1913.

This is one of the most interesting works connected with the bookbinding industry that we have read for a long time. Hitherto, the literature of this trade has been largely, indeed almost entirely, concerned with the technicalities of the business, so that hardly anything has been published dealing with what we may term the human aspect of the bookbinding trade, its position, the prospects it offers to the worker, and its future possibilities both for employer and employed. In the book under notice, however, the human factor stands first, and all else is subordinated to it. The work has been published for the Russell Sage Foundation, a philanthropic concern associated with the name of a well-known American millionaire. Within the last two or three years, this organisation has established a Committee on Women's Work, with Miss Van Kleeck as secretary, for the purpose of studying women in industry as a distinct

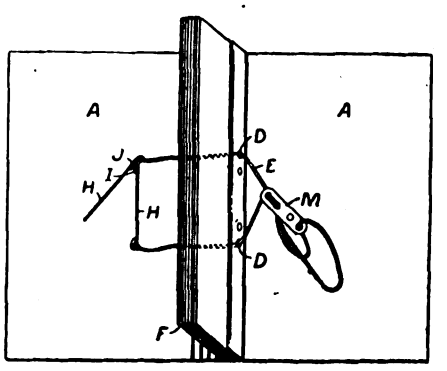
class, the conditions of whose employment present a distinct problem. The Bookbinding Trade was chosen as the subject of the Women's Committee's first enquiry, because it is one of the most important trades for women in New York City, and also in many respects a typical one. The work of collecting the necessary statistical, social, labour and other details on which the book is based extended over about three years (1908–11). New York City is the headquarters of the bookbinding industry of the United States, and in the central portion of it, *i.e.*, the borough of Manhattan, it was found that 247 binderies, or binding departments of printing offices or other establishments, employed a regular staff of women. Every one of these was visited, and the proprietors of 210 of them were found willing to impart the information required for the purposes of the enquiry. As regards the female employees themselves, it was, of course, impossible, in the ordinary way, to interview personally every one of the 6,000 and odd women employed in the bookbinding business in New York, but representatives of the Foundation's Committee selected about 200 typical workers, and gathered from them, mostly as the result of personal interviews at their own homes, a mass of useful and practical information bearing upon the conditions of their employment in the trade, hours, wages, surroundings, past experiences, probable future prospects, and so on. The particulars thus obtained were carefully tabulated and the text of the present work is plentifully sprinkled with the statistics compiled therefrom. The book, then, gives a very complete and comprehensive account of the position of the bookbinding trade of New York, in its relation to women's work. It cannot be said that the picture drawn is a very cheering or satisfactory one. The problem of employment amongst the women engaged in the trade is apparently more acute than in this country, owing to the more extensive adoption of labour-saving machinery and the concentration of a large volume of the business done in the hands of a few big firms, half of the women in the trade being employed at less than a dozen binderies. With a few exceptions, that seem to merely prove the rule, the units in both halves are constantly tossed about between the Scylla of frequent inter-seasonal unemployment and the Charybdis of the hostility of the male workers in the trade to their female colleagues, which to a large extent prevents their working out their own salvation. This last difficulty is an almost insuperable one, so far as the extension of female labour in the trade is concerned, but whilst strictly circumscribing the limits within which alone women may work in American binderies, the Trade Unionist is fully alive to the importance of gathering the bindery girls in his fold, and hence one of the New York branches of the International Brotherhood of Bookbinders is for women workers only, has 1,600 members, and is managed by women officials. Its relations with the trade are generally harmonious, but as 75 per cent. of the bindery women are still non-union, it has not yet been able to effect much in the way of raising wages to an adequate living standard. The statistics Miss Van Kleeck has gathered go to prove that the average weekly wage of a female worker in a New York bindery is about 30s., which, owing to the far higher cost of living in the States, has much less purchasing power than £1 in this country. Many girls get more than this, up to £3 in exceptional cases, and a large number get less, though the wages of even a learner seldom fall below 15s. a week. The learner, however, is largely thrown on her own resources, and generally has to learn her chosen trade in a very haphazard fashion, as there are no trade schools for this branch, and the men's unions regard with disfavour any schemes for their establishment. The "all-round" woman binder, who can turn her hand to hand or machine folding or sewing, inset, gather, collate, etc., of course stands the best chance of continued employment. Those who have only learned one or two of these branches are all too frequently "laid off, slack," for periods which vary from a week or two to several months, according to circumstances, a misfortune that a rush of overtime for a short period in the "season" is far from making up to the unlucky ones. We think there is a good deal of truth in Miss Van Kleeck's denunciation of the bi-annual seasonal rush as a needless piece of absurdity on the part of publishers, as the ordinary public knows no "season" for reading. She would stamp this nonsense out by penalising "rush" overtime, and thus enable the binderies to provide steady all-the-year-round employment for a permanent staff. She would also prohibit night work for women employed in binderies. There are, of course, laws to regulate the hours of labour in America, but they seem to be so largely a dead letter that convictions for infringement are almost impossible to obtain.



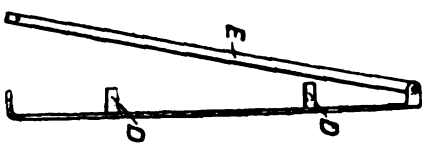
We have dealt with this book at some length, because we regard it as a very interesting and important addition to the literature of the trade, written practically without bias, and detailing only facts. It is exceptionally well illustrated by some 30 pictures from photos showing the conditions, good and bad, under which bindery women and men alike have to work in the boasted Land of the Free. We think most women binders who may have the opportunity of reading this book will have no ambition to change their lot in our own country, cheerless and depressing though it often may be, for a precarious existence that makes girls of two-and-twenty look back with regret on the days when they were "young," and could attend dances and weddings, which a few years hard labour in New York binderies makes them "too tired" to do!

DER BUCHEINBAND, by G. A. E. Bogeng, 8vo., wrappers. 11.60 Marks (11s. 6d.).

This is another of the technical series issued by the well-known publishing house of Wilhelm Knapp, Halle-on-the-Saale, Germany. It is "A Handbook for Bookbinders and Book Collectors," but we would recommend this book to a good many more people, who ought to be book collectors and patrons of good bookbinding, but are not yet. Mr. Bogeng is a guide of exceptional ability, all-round experience, and with a vast accumulation of information in every direction, as far as books and their bindings are concerned. He has digested every notable authority, foreign as well as German, and never fails to cite those authorities. His well-balanced judgment does justice to every deserving country, school, or individual. The style is in good, even florid German, and though in most cases the technical terms in English, French, etc., are helpfully given, it never betrays a flavour of "Ausländerei" (affected use of foreign words). The cogency of his logical reasoning is abundantly apparent, both in the historical and technical parts. The scope of the work is all-embracing, and the vast material is judiciously sub-divided into 210 paragraphs, under six headings, with a full appendix of carefully sorted bibliography right up to date. (I.) An historical introduction dealing with the form of books and the method and means of guarding and preserving them, from hoary antiquity to the present. (II.) Describes exhaustively the various means employed to make the binding an effective help in the use of books. (III.) Deals with materials and their proper treatment. (IV.) is devoted to the decorations, their styles and subsequent development, a work of conspicuous introspection and many-sidedness. (V.) continues the historical development of binding and book craft. These two divisions form the kernel of the book, and will hold their own beside any other known work on the same subject. (VI.) contains valuable advice to bookbinders, but chiefly to book collectors, and ought to be read by people of means, who have hitherto given the cold shoulder to artistic bookbinding. We are sorry to say that the old adage, "in Germany books are read, but not bound," is still only too true. Things are better these last twenty years than formerly, but far from what they might be. Germans are not stingy in the main, as supporters of art in other directions, as Hulbe's well supported cut leather work proves. Germany has also a far greater number of trained artistic binders that can find bread and appreciation at present. Hence the many clever and ingenious workers who have emigrated to England, France and America, where paying book-lovers found employment for them. Here again the author is very fair in giving credit not only to the mere Germanism of those able emigrants, but also to the foreign patrons who encouraged them. Of course in the first edition of a book of such a vast scope there are bound to be some omissions that can be rectified in a second, which the work deserves to reach soon. We miss any reference to the washing of old, stained and discoloured books, a very important fact to collectors of valuable old works. The Germans, as the first chemists in the world, ought to *lead* in this direction, and find something better than the old pernicious lime wash. Hydrogen peroxyde is at present the only innocuous means we can suggest. Again, there is no mention of flexible glue, and surely, where England and America pay such attention to that most important factor in thoughtful binding, the Germans ought not to be behind in right appreciation of it. Though the authors inveighs against injurious acids in the treatment of leather, no innocuous alternative is given, for even vinegar is acetic acid, and thus injurious. And yet it was the Germans who brought the use of formic acid within general reach, by their cheap production of it. A great improvement in the appearance, but chiefly in the handy use of this book would be effected, if headings were placed over each of the 210 paragraphs. The proof-reader of the next edition might also prevent some misprints. We refer to the style as "florid," but the clever writer's pen seems to have run away sometimes under the copious flow of inspiration. In sentences of over 130 words, which in their many German combinations are equal to 150 English, the author runs Mr. Gladstone very close as a master of involution. A valuable adjunct to the book is its full index. A.O.H.

Some Bookbinding Patents.

In an invention by Mr. A. F. Liversedge, a loose-leaf binder comprises a single length of flexible binding line E, of cord, tape, chain, wire, etc., passing through perforations D in the leaves F and provided with a threader H at each end. One threader has a hook I at its fore end to engage an eye J in the rear end of



the other threader to form a complete loop. A runner M is placed on the double end of the line so that it can be slid along to take up the slack and hold the line in tension. A knot may be provided on the line to retain the runner. The line may be severed near each end and the parts connected by hook-and-eye or other couplings. A cover A may be provided.

Mr. S. P. Ringer has patented an invention relating to covers for holding letters, accounts, and other documents, of the type having projecting parts on which are placed indexing marks. All the marks of each category are represented serially on each cover of the group, and the desired division is obtained by the removal of the superfluous marks. Only part of the marks may be placed on the covers, the remaining part being added according to requirements, or the projections for the marks may be left blank. Covering

marks are applied to each cover behind the projections of the immediately preceding cover, so that the removal of a cover entails the covering mark on the following cover becoming visible. The vertical edges of the covers are stiffened by flat plates attached thereto by strips of linen or paper. Any desired number of covers may be fastened together, and the sides of the covers may be provided with forms, etc., for the entering-up of accounts, etc. The covers may be single or double, and two or more may be combined to form an envelope.

Mr. J. B. Dewhirst has patented an invention in loose-leaf binders for pocket books, in which the papers are filed on split pins D, the

bifurcations in which are engaged by a hinged or otherwise movable locking member E. The leaves may be perforated down the middle or along one edge.

As we go to press, we learn that the U.S. Senate has yielded to the urgent representations of the bookbinders, and decided that in future books over 20 years old will not be admitted free of duty, unless the bindings are also over 20 years old. Otherwise a duty of 15 per cent. *ad valorem* will be levied, as we understand it. This alteration will possibly mean the loss of many orders for fine bindings, hitherto placed by American collectors with British and European binding firms.

The Ghent Exhibition.

By THEODORE BIRCH.

Belgium, that busy little country, with its industrious population, has taught us a lesson of what hard work, perseverance, and—advertising can accomplish. That lesson is the Ghent Exhibition, and it must be seen to be appreciated to its full value.

Here we have a city of just over 200,000 inhabitants presenting to us a show the equal of which we have not seen for years in London! The Belgians may therefore be justly proud of what they have achieved, and if they call Ghent the city of flowers, it is not a vain boast either.

Of the nations—even Persia is represented—which have participated at the Universal Exposition, France occupies the foremost position, but Great Britain comes in an easy second. The British Section is a fairly representative one, and we may be well satisfied with the Machinery Section. If the British printing machinery builders are not there in full, there are at least three firms who valiantly uphold the reputation of English machines.

Linotype and Machinery, Ltd., have a fine stand in the British Section, and show to advantage on a large space two Linotypes, an offset press, a two-revolution Miehle press, and a Centurette. The working of these machines creates general interest, and the whole exhibit is a centre of attraction to visitors, who come from all parts of Europe.

Messrs. Geo. Mann and Co., Ltd., who have shown such a commendable enterprise in the past, by taking part at every exhibition of importance, have on view one of their Offset Presses on which is fitted a "Rotary" automatic self-feeder. This, in the Belgian portion of the Exhibition, is working at the stand of the important printing house of Messrs. Goossens. In the same section are also to be seen two Monotype casting machines with two keyboards, on the stand of the famous firm of Van Dooselaere. All these machines are working well.

The British Chambers of Commerce in Belgium have had the happy idea of organising a reception-room which contains a host of reference books and specimens of trade journals issued in Great Britain. But there are many publications which are not on the tables and the publishers of these would do well to post copies regularly to "The Reception Room, British Section, Exposition Universelle, Ghent."

Special mention must be made of the Canadian Exhibit. In a large separate building a splendid show is made of the vast resources and of the progress of the Dominion. The ever alert Canadian Pacific Railway, too, has a pavilion of its own, enhancing the attractiveness of the agricultural El Dorado traversed by this line.

If we are to judge from the collective exhibit of the Belgian printers, it is clearly proved that the graphic arts in that country is in a remarkably progressive condition. The numerous framed specimens of typography and lithography show that the trade across the channel is equal to all emergencies. There is a large variety of very fine examples which reflect credit on local printing. Noteworthy is the fine exhibit in the Belgian Section of the firm, Van Buyck, of Ghent. On a large floor space a very comprehensive show is made of the work produced in stationery and printing.

A spacious salon has been set apart for the Belgian Press where one may consult at leisure copies of all the papers published in the land. And it is surprising to find, by the number of the different periodicals published, how assiduously the Belgians read their papers, some of which can hold their own with any other Continental rivals. Here all Pressmen are welcome, and writing tables and utensils are provided for their use.

The Frenchmen, too (Vive la Belle France!) have made an imposing show. The section devoted to typography, lithography and publishing, is a very comprehensive one, embracing most interesting specimens of printing and publications. And I note with pleasure that two of my friends, Messrs. B. Arnaud, of Lyons—whose reputation as an art printer is world-wide—and Mr. G. Delmas, of Bordeaux, have been classed as "Hors Concours," members of the jury, the highest tribute that could be paid to their merit.

The French printing, writing, and cigarette papermakers are also present, and show their productions to advantage.

In machinery, we have the famous Etablissements Marinoni in evidence with a lithographic press and two stop-cylinder letterpress machines. The Etablissements Alauzet exhibit one of their latest perfecting machines with improved delivery, and Mr. Orsoni shows his multi-colour "Aquatype" stencil printing machine for illustrated journals. But a really attractive and ingenious masterpiece of mechanical work is the bijou rotary press at work on Mr. Louis Chambon's stand. This machine is designed for the production of tickets, small boxes or wrappers for various purposes—for cigarette, tobacco, chocolates, sweets, soap, tea, etc., etc.—and prints in several colours at a high speed, from 5,000 to 7,000 an hour, surprising good work. The paper or thin cardboard is self-fed and the cutting and delivery is necessarily automatic. Mr. Chambon's London representatives are Chambon, Ltd., 210, Tower-bridge-road.

It would require many columns of this paper to adequately describe the Ghent Exhibition. Suffice it say that it is well worth while paying a visit. Every reader of the *British and Colonial Printer and Stationer* can easily do it, for the journey can not only be done rapidly, but it costs only a trifle. Excursion tickets are issued daily (available for 14 days) for from 18s. 6d This covers the trip from London to Ghent and return. If pressed for time one could leave on Friday night at 9 p.m., arrive at Ghent next morning, visit the Exhibition all day, spend Sunday at gay Ostend and returning by the luxurious and most comfortable turbine steamer, could be back in London on Monday morning in ample time for business. There is a choice of two routes to Ghent, Charing Cross *viâ* Dover, Ostend and Bruges, or *viâ* Dover, Calais and Lille, and in each case the train on the quay across the Channel takes you straight to the Ghent Station, close to the Exhibition. Those who could spare the time should visit the delightful old-fashioned town of Bruges. The smart capital of Belgium—Brussels—which is in many respects a small counterpart of Paris, deserves a stay of a day or two, and Antwerp, the active seaport, should not be neglected.

All this can be done so simply and so inexpensively! The cheapest fares in the world are those charged by the Belgian State Railways, for you can travel 2,890 miles on their fast trains for the sum of 10s. 5d.! All you have to do is to ask for a five days' season ticket which enables you to journey wherever you please and as often as you like in any direction all over Belgium.

There need be no worry now. The answer to the ever-recurring question, "where to spend a pleasant holiday" is: "Go to Ghent" and overrun—a pacific invasion, of course—the smiling and picturesque Flemish and Wallon towns.

As regards accommodation, travellers who know of no particular hotel to stop at need not have any apprehension. They have only to apply to the Housing Committee (which has offices at both of the Ghent stations) who will willingly help them and thus facilitate what otherwise might be a difficult problem to solve. Further particulars may be obtained from the Belgian State Railways and Mail Packets, 53, Gracechurch-street, London, E.C.

The Costing Campaign.

East Anglia Aroused.

Norwich was visited on the 14th inst. by Mr. W. Howard Hazell, Mr. R. J. Lake and Mr. A. E. Goodwin, and the attendance from towns as far away as Yarmouth, Cromer, Ipswich and Lowestoft, indicated the widespread interest now shown in this movement.

The printers from the outlying districts were entertained to a dinner by the local committee.

Mr. H. RIVERS FLETCHER presided, and read a number of letters of apology from many who were unable to be present. He said that as he was the only reprsentative of the printing industry in Norwich able to spare the time to attend the London Costs Congress, he was anxious others should have the opportunity of hearing this system explained. He was putting the system into operation in his own works, and was sure that others would do likewise after they had heard it explained by so able an exponent as Mr. Hazell. Printing was certainly a trade that should be well paid. It required from managers, foremen, and men skill of an exceptional character, and they all ought to be better paid than workers in other industries. In the past they had been too much afraid of one another and of their customers, and he looked to this movement to not only enlighten them as to their costs, but to educate them to stick by the principle of giving good quality in their work and getting a good price for it.

Mr. HAZELL, in his introductory remarks, said that it was unquestionable that in the printing industry for some years everything had been going up except their profits. He urged them to instal the system which he had come to Norwich to explain, and not be satisfied with merely finding out what their costs were to-day; by the system they should find out week by week if the rates they were charging were in accordance with their actual costs.

The questions put were very numerous and many most interesting points were raised, showing that not only the main principles,

Digitized by Google

but the details of the system were being closely studied.

Why not charge spoilage to the department responsible, not as an overhead expense? Certainly if you can locate it, was Mr. Hazell's reply.

The importance of keeping a stock ledger for the paper stock was emphasised in reply to another query.

The charging of interest on the capital value of plant was questioned. Mr. Hazell showed very convincingly that the system could not be worked otherwise. How could you fix a fair hourly rate for your machine-room, where you have a heavy capital expenditure, as against your binding-room, where it is a comparatively small matter?

A new diagram illustrating the method of arriving at cost of machine hour rate in the binding-room was shown.

Mr. A. E. GOODWIN spoke briefly on the best methods of installing the system, and his suggestion that he should pay another early visit to Norwich to meet a smaller group of printers, or assist any individual firm, met with very cordial approval.

Mr. R. J. LAKE, Secretary of the Federation, expressed his pleasure at seeing such a well-attended meeting, and said that "Co-operation" was the great need of the printing community. The federating of the Master Printers' Associations had been of great benefit to the trade as a whole, and the success of the costing campaign inaugurated by the Federation was most gratifying to all concerned.

Mr. A. P. ROBINSON moved a resolution:—"That the Cost System discussed by this Congress with any very necessary amendments be approved and strongly recommended for universal adoption by the Trade."

Mr. W. T. F. JARROLD seconded, and said that if the system were universally adopted the industry would rest on a firmer basis than ever before; there would be greater confidence in one another and good feelings would be fostered in many ways.

The thanks of the meeting to Mr. Hazell, Mr. Goodwin, and Mr. Lake were accorded, on the motion of Mr. Peat, seconded by Mr. Lanham, and a similar hearty vote accorded to the chair was moved by Mr. Davies, Ipswich, seconded by Mr. Gibbs, Norwich.

Mr. Peat, the energetic Secretary of the Association, is to be congratulated on the very complete arrangements made, which certainly contributed largely to the success of the conference.

THE NEW YORK 1914 PRINTING SHOW.—Those who witnessed the National Printing and Advertising Exposition at the New Grand Central Palace in April, pronounced it a great success, but it has been announced by Mr. Harry A. Cochrane, the producer of this show, which will be held again in 1914, at the New Grand Central Palace, April 18th to 25th, that the 1914 Exposition will be wider in scope, and more of a Graphic Arts Exposition than was the 1913 show. The new features of special interest will be competitive exhibits of printing, lithographing, advertising, and all other allied branches of the graphic arts. This Graphic Arts Exhibit will include photography, design, illustration, engraving, and all classes of printing and lithography. A large section of the exhibit space of the New Grand Central Palace will be reserved for these exhibits, and only a nominal charge will be made for the space and equipment required. In order to bring into prominence the great variety of printing press and lithographic products, and the high standard which has been attained, a series of awards will be made at this exposition. All exhibits will be grouped under classifications, and awards will be made by a competent and non-partisan jury. These awards will consist of certificates of commendation for collective and individual exhibits.

The Costing Education Campaign.

Interest in the Potteries.

Not only were the five towns of the Potteries well represented at the Costs Congress at Stoke-on-Trent, on the 3rd inst., but printers came from Cheshire and Shropshire to learn something of the system recommended by the Costing Committee of the Federation of Master Printers.

Mr. WARWICK SAVAGE, in opening the meeting, said how impressed he was with the Congress in London in February, and that he felt sure the printers of that district would profit by Mr. Hazell's exposition of the system. A great effort was now being made to show how printers could ascertain the actual cost of their work, and the obvious and absurd differences in prices charged would before long be put an end to. They would not stop healthy competition, but many prices quoted to-day were certainly given in ignorance of real cost, and if estimates framed in ignorance were eliminated, it would be a great gain to their trade. The folly of taking work at some other printers' prices had been demonstrated over and over again, but when every printer knew his own cost for every hour he sold, then it would be impossible for him to follow this practice.

Mr. W. HOWARD HAZELL, in his customary clear and comprehensive way, explained with the aid of a set of new charts, illustrating a small business, how the system could be adopted to the requirements of a business of any size. Questions were numerous, and any obscure points were speedily made plain by Mr. Hazell.

Mr. A. E. GOODWIN, the organising secretary of the costing committee, gave an interesting address on "How to instal the system," and said that in touring the country he had found three classes of printers. One class had an excellent costing system which had been devised many years ago, and could not possibly be improved; to those he would say that the members of the costing committee, many of whom had studied costing methods for years, had found features of special value in the system now recommended. Another class said they were too busy to find time to instal a system; they could not afford to devote the necessary attention to it. He could only answer these by the testimony of those who had installed the system, that after doing so they had speedily found that they had more time afterwards to devote to the most important part of their business.

Then the other and perhaps larger class were those who said they fully appreciated all the advantages of the system, but it was too complicated for such a small business as they had. His reply to that was that many printers not in a large way of business had written saying that they had not found it difficult to work, and it was of so great value they could not think how they had gone on so long without it.

On the motion of COLONEL F. D. MORT (Stafford), seconded by Mr. G. T. BAGGULEY, J.P., a resolution was unanimously adopted approving of the Cost System, and strongly recommending it for universal adoption.

The thanks of the congress to Mr. Hazell and Mr. Goodwin were voiced by Messrs. A. L. HARBER, J.P., and E. H. EARDLEY, J.P., and Mr. A. C. J. SHERWIN and Mr. C. H. VYSE expressed the thanks of the meeting to the Federation for the use of the diagrams.

The local committee must have worked hard to have secured such an excellent conference, and the arrangements reflected great credit on Mr. H. Mitchell, the energetic secretary of the local Association.

HOW A Costing System Affects Overseers.

At a meeting of the newly-formed Newcastle-on-Tyne Printers' Managers and Overseers Association (not yet affiliated to the Parent Association) an interesting paper was read by Mr. A. J. Platt, on "How a Costing System affects Overseers," in the course of which he said the object of the meeting was to try and discover what connection there was between overseers of any department in the printing and allied trades and the methods used to fix the value of work done, usually designated "costing systems." He then proceeded to describe what he believed was the only method up to the present that had achieved results which had proved satisfactory in every way. Continuing, he said:—

This system is the hour-cost method of valuing work done. We all know that in any printing works there are a great many processes through which a job passes before it is completed. To find the exact cost per hour of each of these processes seems to the uninitiated an unnecessary or a hopeless task, yet before any man can place a true value on a finished piece of work, he must know exactly

How Much Expense

has been incurred in every step of its production. This word "expense" is a very comprehensive word, and includes other things besides wages and material. How are we to recover such items as rent, rates, lighting, heating, depreciation, supervision, distribution, repairs, power, travelling and office expenses, and a host of other items usually forgotten. The hour-cost system provides for them all.

If we take the composing-room as an example, and total up its cost, that is the overseer's, reader's, compositors' and apprentices' wages, and add to that a proportion of rent, depreciation of type and material, a share of lighting and heating expense, sundries such as proof-paper, etc., and then to the total amount thus ascertained we add, strictly in proportion, a share of overhead expenses such as previously mentioned, we then get the total cost of that room. It is advisable to use a yearly cost for this purpose, as we thus avoid any abnormal period which would make the amount unreliable. We now know how much our composing-room costs us, and the question arises—How are we to recover this amount?

We then find (and should we have no records must assume) the number of hours which are directly chargeable to jobs in the course of a year. These chargeable hours are generally taken to include composition, imposition, proofing, and author's corrections, but not distribution, reading, or office corrections.

How many of us know the proportion of such chargeable hours to the non-chargeable? I am afraid a correct record would be startling to those who have not been in the habit of keeping such information. How many realise that out of every 51 hours a compositor is paid for, a well-managed composing-room can only get an average of 35 charged direct to jobs? Who pays for the other 16?

I believe quite a respectable number of printers imagine a charge of 1s. per hour covers all this lost time, as well as covering all the other expenses of the room, but before we are anywhere near the mark 50 per cent. will need adding to this 1s., and probably more.

Well, for each firm to be certain as to the cost, it must divide the *grand total* of expenses by the total of *chargeable hours*, the answer being the cost per hour of composition.

The costs of the machine-room are ascertained in the same manner, with the exception that we have to apportion the total hour

Digitized by Google

cost of the room to each machine in proportion to its size.

The binding department is also treated the same, keeping the girls' section apart from the men's, on account of the different value of the work.

Now if we have not these figures, giving us the actual amount to charge per hour for each process to recover our expenses, what is the use of giving an estimate of so many hours for composition, so many for machining, etc? How can we arrive at a true valuation of the work? We all know the

Enormous Variations in Prices

which are common in our business. I heard recently of one job quoted at £30 by one firm and £40 by another. I was told of another job being placed at the price of £25, the highest estimate being about £100. How is it these variations occur? It cannot be that one firm's men work twice as hard as another's. Actual experience shows us that the difference is not so great as this, and as a rule the price cutter is the man who does not employ the best men, as the conditions of such an office are not conducive to comfort, and good men look for good situations. Now the installing of a costing system does not in itself change any conditions of working. It does not increase or decrease the cost of a single job. All it does is to record the existing conditions, and by the intelligent study of these records we find where the money is going.

It shows that what we thought was profit is often insufficient to cover the cost, and when we know the cost accurately, then comes the opportunity of the intelligent manager or overseer to stop leakages and endeavour to reach a higher efficiency. A cost system is like a gas meter. If the cost of gas is found higher than it ought to be, we look for a leakage. Let us consider

Some of the Leakages of Efficiency.

The paper warehouse may be giving out material indiscriminately, if there is no system of debiting each job with the actual value of paper used, and a proper method stops *this* leak.

Probably the composing-room records show an abnormally high cost, and this may be owing to a variety of causes. The number of hands may be too great for the work to be done, the time spent in distribution may be excessive (and on this point I would like to say that distribution should be given to good men, who will put more type in the cases in an hour than a poor one will in two). It may also be discovered that a lot of time is wasted in picking and waiting instructions, and these are admirable opportunities for an overseer to show his ability and resource, the result probably giving both himself and his firm great satisfaction. In some cases an investigation will show that the men book less than the actual time consumed, owing to the fact that some overseers complain of the time taken even when there is no cause for complaint, thus encouraging their men to deceive when they get the chance. A strict record of how every hour is spent obviates this undesirable practice, and when a man finds special difficulties arise in his job, he should not be blamed when those difficulties are not of his own making.

Picking may be avoided by pointing out to the firm the number of hours spent in looking for sorts, etc., and the fact that the cost of this time would probably buy a whole fount and become a solid asset, instead of sheer waste of money, will induce the firm to increase the amount of material.

In the Machine-Room.

A machine-room overseer who has a costing system to guide him, has splendid opportunities for increasing the efficiency of his department. Before he has any experience of the value of records, he will probably picture himself as the man who makes up for the losses incurred in the composing-room, but after a few months study of the results of his labours, he will probably shake hands with the composing-room foreman as a brother in distress.

He will first of all discover that the non-chargeable time in his department is a great deal more than he ever imagined, and taking the whole of his machines he will be a fortunate man if he obtains more than 50 per cent. time which can be directly booked to jobs.

He will learn which machines are most in demand, and whether he has too many or too few of a certain class for his usual run of work. He will soon know accurately the amount of ink consumed on different sizes and qualities of paper, and will have the fact brought home to him that ink costs money, and that every ream passing through his machines is absorbing some of that money, and will provide for its cost when estimating.

The Output of the Machines

in actual practice will also prove an education in itself. We all suppose that the average output of a Wharfedale is about 1,000 for every hour of running, but an examination of actual production upsets this assumption, it often being found that two-thirds of this quantity or even less is nearer the mark.

Then the machine-room overseer tries to find the cause of these leakages, and finds a good number of hours booked for waiting for paper, waiting for revise, trouble through raising of spaces (I suppose you all know of such a thing happening), trouble through cheap ink, and a host of other troubles.

The advantage of a cost system is that it localises these troubles, and thus when we have found the root of the disease we know what remedy will effect a cure.

Few workmen like to deliberately waste time, and the fact of them having to record the reason of delays makes them eager to ask for such causes to be removed, so that they may bring credit on themselves by accomplishing their work in reasonable time.

Every hour wasted in a machine-room is a serious item, as it includes that hour's share of all the standing charges as well as the wages, and an hour wasted each day with eight men means a loss probably of £5 a week, or £250 a year, an amount which I think you will agree has considerable effect on the profits.

A cost system will lessen troubles in this department by providing for reclothing of rollers, repairs, and general tuning up of the plant, thus making work more pleasant.

Now let us take

The Litho Department.

What advantage does a costing system confer on this? Well, its records will prove both educational and interesting. The overseer will be able to judge whether by using a smaller machine and putting down less transfers he can reduce the cost of work.

The hours spent on preparing stones or plates are of course calculated at a lower rate than machine hours, and sometimes a few hours extra spent in transferring will so reduce the machine hours that a considerable saving is effected. But until the proportional cost of these two processes is known one cannot with accuracy make such a calculation.

There may be considerable time wasted in the preparation of work, and this might so lift up the cost per hour that the firm having a class of work which keeps the machines constantly running may find its stone hours, if we may so call them, as expensive as machine hours.

Keeping records of the ink consumption will also prove interesting, and prevent heavy losses, which are easily made in this department.

The overseer of

The Binding-Room

will find considerable benefit result from the use of time and material records, and the fact that his department has to bear a share of overhead expenses, tends to a careful supervision of details to see that little jobs do not get put into his department without him getting credited with the value of the work done. We all know the slack method in some firms. A thousand circulars are printed and dumped into the bindery for folding, and possibly inserting in envelopes. If there is no accurate system in use very often this work is lost to the department, and the customer gets this portion of the job for nothing. Then if we study the dockets we find the average time for binding certain classes of books, and any excess of time is discovered and a reason asked for. In doing this we often find something which can be avoided in future, and the result is greater efficiency, and the saving goes to the credit side of that department.

Opportunities for higher efficiency are also plentiful in smaller departments, chiefly by seeing that whatever is done on a job is booked to that job, and not allowed to pass through simply because it is only a small item.

Now I suppose every overseer is largely responsible for the getting out of estimates, in some firms not only estimating the time, but also

The Value of the Work Done.

Where there has been no costing system at work it is a sheer impossibility to give an accurate estimate of the value of work. For instance it is simply guessing to say a pamphlet will cost £5 to set up if no one knows how much an hour's composition costs, as two firms could each say it costs £5 and yet one might be allowing only half as many hours as the other. One may be only calculating wages without even distribution allowance, while the other is allowing an hour-rate to cover all expenses.

There is always a feeling when estimating "how *low* can we do this job?" instead of how *much* can we get for it, or "which is the most economical method of doing it so as to save any unnecessary expense?"

If we could all debit each department with every expense it incurs, and then find the hour cost which covers this amount I do not think there would be anything like the variation in prices which is the case at present.

Even the small firm which imagines it can produce cheaper than a large firm would find very little difference, as its expenses are divided amongst a smaller number of men, so that although its total expenses are less, the proportion to each man is greater than is the case where a large number of hands are engaged.

To conclude, I would like to say that I think no business is so interesting as the printing business, to those who not only understand how to perform the manual part of it, but have the pleasure of planning and watching their efforts turn into material results.

As the object of business is not to supply people with printed matter or books, but to make a *financial* profit, and incidentally to exercise one's skill by trying to raise the standard of the craft, there are splendid opportunities for those in authority to study the subject of cost-keeping. Then by applying the knowledge gained and obtaining greater efficiency in the respective departments, they will raise the status of their position and have better opportunities of benefitting financially in consequence of the firm's business showing greater profits than is the case to-day.

Leeds Technical School.

The following are the Candidates who passed in the City and Guilds Typography Examination, 1913:—

GRADE. I.—Rowland D. Broadbent, Wilfred Leah, George S. Norton, John F. Wilson, Sam. Dickinson, Ernest Stockwell, James A. Eastburn, Arthur Hartley, James Smith, Simon Goldberg, Rowland Brayshay, Alfred Johnson, Albert E. Turner.

GRADE II. FIRST CLASS.—Fred. Densley, Charles R. Gallant, John W. Wood, Walter Schofield, Fred. Stanger. SECOND CLASS.—Laurie Chapman, Leonard Preston, Thomas Emmott, Joseph Henson, Thomas W. Hicks.

FINAL GRADE. FIRST CLASS.—George W. Clark, Frank Gaunt, Willie Preston, Harry Thornton, George H. Williamson. SECOND CLASS.—Edgar Crawshaw, Clifford Ellis, Charles H. Ford, Laurence E. Hodgson, John Lord, Harry Murgatroyd, John F. C. Park, Joseph Pollard.

TWO CASES of lead poisoning were reported to the Home Office from printing establishments during June, making a total of eight since the beginning of the year, as compared with fourteen for the same period of 1912.

Cassell's Annual Wayzgoose.

The employees of the House of Cassell had their annual wayzgoose at Clacton-on-Sea, in delightful weather. Dinner was served in the Winter-gardens, the general manager, Mr. Arthur Spurgeon, J.P., presiding. At the conclusion of the dinner, souvenirs were handed to all the guests with the compliments of the general manager, and an interesting episode was the presentation of special gifts to Miss Pegler, and Messrs. Glumart and Keen, who have all worked with the firm for more than fifty years—Miss Pegler, who completed her 50 years' service during the present month, received a gold brooch in a handsome case with the inscription, "A Golden Souvenir of your Golden Jubilee at La Belle Sauvage Yard. With all good wishes from the G.M."

The toast of "The House of Cassell" was proposed by Mr. E. H. Wicks, and Mr. Spurgeon, in reply, said he believed they had 92 people in the Yard who had been with Cassell's for over 30 years; 61 who had been there between 30 and 40 years; 26 between 40 and 50 years; and five who had been with them over 50 years. Was not this a tribute to the feeling which existed between employer and employed? (Applause.) Mr. Spurgeon referred to the spirit of comradeship, of kindliness and courtesy which prevailed at the Yard. They all rejoiced in it and it helped to make the work run smoothly. Referring to the success of the House, Mr. Spurgeon said they lived in strenuous times. Competition was never keener than now, but they were fully alive to their responsibilities, and he saw no reason why the results for current year should not be satisfactory to all concerned.

The "Health of the Guests" was given by Mr. T. W. M'Ara in felicitous terms. With it was coupled the name of Mr. Hugh Edwards, M.P., who, in the course of his reply, said he would like to associate himself with the general manager in congratulating those employees who had worked with the House for more than 50 years. Mr. Edwards said he could not forget that Cassell's were indirectly responsible for the Insurance Act. It was through their famous "Popular Educator" that Mr. Lloyd George had his thoughts turned to higher things, and it was to Cassell's that the Chancellor of the Exchequer owed his first steps to public life. But for John Cassell therefore, there would not have been any sanatorium benefit, which one of their own people was now enjoying. Mr. Edwards paid a tribute to Mr. Spurgeon and referred to the energy and the great ability with which he directed the manifold activities of the House.

The party spent a pleasant afternoon and evening among the attractions of the town and neighbourhood. Their return to Liverpool-street was considerably delayed owing to the dislocation of traffic in consequence of the railway accident at Colchester.

London and Norwich Press, Ltd.

Favoured with gloriously fine weather, the annual outing of the employees of the London and Norwich Press, Ltd., St. Giles', Norwich, to Ipswich, Harwich, and Felixstowe, on Saturday, 12th inst., proved most enjoyable. The party, numbering about 250, including wives and friends, left Norwich Victoria by the 6.45 a.m. train, and on arrival at Ipswich found time to inspect various places of interest prior to boarding the G.E.R. steamer "Essex" for the run down the river, Felixstowe being reached at about 11.30 a.m. At dinner, which was served at the Grand Hotel, Mr. H. Wingfield (managing director) presided, and supporting him were Mr. and Mrs. J. R. Peat, Mr. and Mrs. A. G. Turner, Mr. W. H. Marson, Mr. and Mrs. W. Muspratt, Mr. A. F. Sherock, Mr. and Mrs. G. Green, Mr. and Mrs. A. J. Page, Mr. T. Bartlett, Mr. J. T. Varden, Mr. R. Wingfield, Mr. R. Peat, Mr. A. Bagshaw, Mr. E. F. Gedge, Mr. and Mrs. D. B. Minns, etc.

Dinner over, Mr. A. J. Page, outing secretary, expressed the delight of the company at the presence of Mr. H. Wingfield, and regretted that his co-directors, Mr. J. V. Elliott Taylor, Mr. G. M. Chamberlin and Mr. E. M. Calvert, had found it impossible to accompany him. The toast of "The London and Norwich Press, Ltd.," coupled with the name of Mr. Wingfield, was submitted, in felicitous terms, by Mr. D. B. Minns (linotype overseer), and was heartily received by the company, who, upstanding, drank to the chairman's health with musical honours. Mr. Wingfield, in response, expressed thanks for the kind way in which his name had been received, and congratulated the company on the success of the trip and at still having the services, so freely given, of their worthy outing secretary, Mr. A. J. Page. Referring to the business, the chairman said the past year had been a record one for work done since he had been connected with the firm, and he sincerely trusted, and was sure it was the wish of all present, too, that such a prosperous state of affairs would continue. (Applause.)

Before the party dispersed, a pleasing little ceremony was performed, Mr. S. H. Smith, on behalf of the employees, presenting Mr. A. J. Page with a handsome barometer, as a memento of the trip and as a mark of appreciation of the excellent arrangements made for their enjoyment.

Mr. Page, who had a hearty reception, feelingly returned thanks, remarking that his services were purely a labour of love. He trusted the outing would still further cement the good feeling which existed between the employers and employed. There was not another body of directors in the city who took more interest in the welfare of their employees than did the gentlemen at the head of the London and Norwich Press. (Loud applause.)

During the afternoon the trippers disported themselves in the various delights of charming Felixstowe, and entered upon the return journey after a delightful trip.

Government Contracts.

Amongst the contracts placed by H.M. Stationery Office during June were the following:—

PRINTING, BINDING, ETC.

32,000 Ballot Papers, Harrison and Sons, St. Martin's-lane, W.C. 4,000 Diaries, A. Thom and Co., Ltd., Abbey-street, Dublin. Printing, binding, etc., 600 books, "C. 43," 700 Warehouse Register No. 80, Watson and Co., Exchange-street, Bolton. 1,000 Army Book 165, 2,500 Army Book 316A, 2,500 Diary No. 244, 1,500 Army Book 60A, 52,650 Income-Tax Receipt Books, McCorquodale and Co., Ltd., Wolverton. 15,000 Lineman's Diary, 160,000 Pencil Work Books, Exercise Books, Waterlow and Sons, Ltd., Finsbury, E.C. Printing Vol. 3 of Scottish Census Report, F. and E. Murray, 9 and 11, Young-street, Edinburgh. Printing Forms for Royal Aircraft Factory, Biddle and Son, Haydon-place, Guildford. Printing, etc., 5,000,000 Removal Slips, W. P. Griffith and Sons, Ltd., Old Bailey, E.C. 1,000,000 Filing Covers, Barclay and Fry, Ltd., Southwark.

STORES AND MISCELLANEOUS.

50 Hotchkiss Presses, 5,000 Boxes of Staples for ditto, M. Lindner, 17, Farringdon-avenue, E.C. Tape, J. N. Hardy and Son, Albion Mills, Heaton Park; G. H. Wheatcroft and Co., Wirksworth.

PARCHMENTS OF VARIOUS DESCRIPTIONS.

Cooper, Dennison and Co., Ltd., Verney-road, S.E.; W. Cowley, Newport Pagnell; G. J. Dilley, Potton, Beds, and Canonbury, N.; H. Gibbs and Son, Mitcham; G. W. Russell and Son, Hitchin.

Printer v. Furnisher.

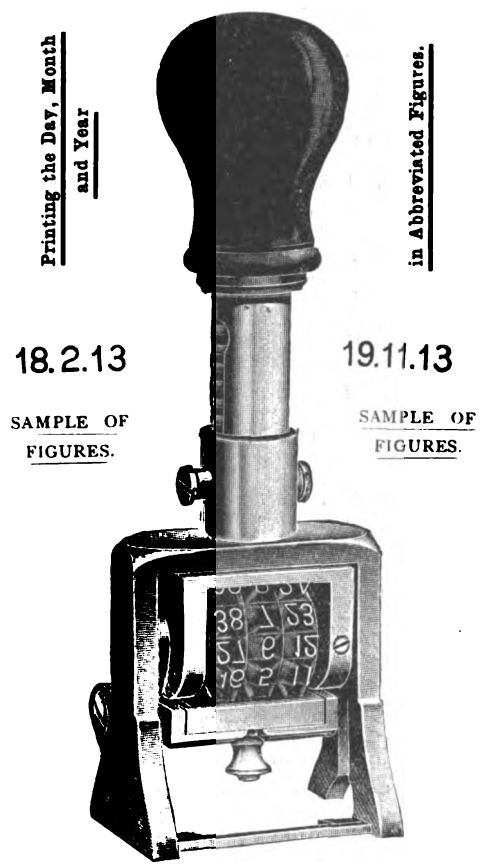
At the annual Congress of the French Master Printers' Association, held at Toulouse the first week in July, M. Deligne read a paper in which he emphasised the importance of strengthening the hands of the Association in every possible way, if it was to have any word in the combat against price cutting. He insisted that prices of printing must be raised, but without proper organisation amongst the members of the trade, it would be impossible to make such a movement a general, and thus a successful, one. One of the first things to be done, in his opinion, was for all master printers to resolve not to purchase anything from those firms of printers' furnishers who supplied goods on credit, by the hire-instalment system, in order to start new aspirants to the honour of "master" printer. The many mushroom firms that spring up, without any substantial foundation other than what the supply house provides, are a constant menace to the trade, said M. Deligne. He referred to one case within his own knowledge, where a certain printers' furnishing house had supplied plant and material to four such "firms" in succession, in a town in the north of France. That sent into the first passed into the hands of the furnishers again in the usual manner, and was by them sent out again to start up the third man, whilst the plant of the second went in like manner to the fourth. All four are now out of existence, and so are several small, but older, local printeries, which were doing fairly well before these furnisher-fed "cutters" came, but were soon afterwards compelled to shut down, not being able to make a living profit out of the prices which the unfair competition forced them to take.

The National Insurance Act

A

GREAT SUCCESS.

"Number of Insurance Stamps sold in England from June 21, 1912, to March 31st, 1913,



342,848,351

Value £10,451,569 11s. 7d."

THE "UNIQUE" DATING MACHINE

"The Right Machine for Cancelling Insurance Stamps."

RELIABLE. ACCURATE. EFFICIENT.

ACTUAL SIZE.

Self-Inking, Clean, Clear Impressions from METAL ENGRAVED WHEELS.

Fitted with gauge to place the date across the Stamp and cancel it, according to the requirements of the Act.

The Quickest Method of cancelling Revenue Stamps on Insurance Contribution Cards.

Price 14/6 each

The Price includes small Bottle of Ink, and Stylo, packed in Box complete.

Black Indelible Ink, No. 1 Size, 1/- per bottle.
No. 2 Size, 2/- per bottle. Pads 2/6 per dozen.

The above MACHINE is made by the "Bates Manufacturing Company," of Orange, N.J., U.S.A., who for twenty years have enjoyed an enviable reputation in the sale of the "Original Bates Automatic Hand-Numbering Machines."

"The figures are easily set for use, one only having to press the plunger down, push the head of the locking pin through the opening in the top, pull out the fork pin at the right hand side of figure wheels, and turn the wheels to the date or dates required. The pad is inked with a small camel hair brush, and the wheels and figures may be kept clean with equal parts of benzine and paraffin Indelible ink for use with this dating stamp is also supplied. . . . . The 'Unique' dating machine gives the quickest method of cancelling the stamps on the employees' contribution cards, while at the same time it may be found useful in many other ways."—Extract from "*The British and Colonial Printer and Stationer.*"

Similar commendatory notices appeared in "Sales and Wants Advertiser," "The Caxton Magazine," "The Stationery Trades Journal," "The Stationery World," "The Irish Printer," and the "Home and Colonial Stationer and Printers' Review."

Liberal Discounts upon orders for the above Machines in lots of half-a-dozen.

High Grade made Automatic Hand and Type-High Numbering Machines kept in Stock.

Trade Notes.

THE death is announced, at Vichy, of M. Paul Dreyfus-Bing, a well-known Parisian journalist.

WE are pleased to learn that Herr A. Biagosch, head of the well-known engineering house of Karl Krause, Leipzig, has had the honour of being appointed a Privy Councillor to the King of Saxony.

THERE passed away on the 16th inst., at his residence, The Grove, Gosforth, Newcastle-on-Tyne, Mr. John Turnbull Ross, principal of the well-known firm of wholesale newsagents in that city, which has been located in The Side for a great number of years.

THE employees of the *Kent Messenger* (Maidstone) have this year taken their "wayzgoose" in two parties, journeying in the comfortable Pullman motor 'buses of the Maidstone and District Motor Co., and the "Reliance," to Hastings and back, where a pleasant day has been spent by each party.

WE regret to record the death of Mr. Wm. Lyon (the chairman of Messrs. Lyon, Ltd., wholesale stationers, 474, Sauchiehall-street, Glasgow, and founder of the business in 1868), which occurred at a nursing home in Glasgow, on June 30th, in his 69th year. The funeral took place at Prestwick, Ayrshire.

THE death has occurred at Brixton of Mr. Andrew Clement Baker, a former editor of the *Illustrated Sporting and Dramatic News*, and the writer of the "Captious Critic" article. Mr. Baker, who at one time was employed on the *Daily Chronicle*, practically died in harness, being engaged in correcting a proof when he had a seizure.

MR. WALTER ELDRIDGE, who has been for upwards of twenty years in the service of Messrs. Badoureau and Jones, the well-known electrotypers, has been elected to a seat on the board of directors. Mr. Eldridge became secretary on the incorporation of the business under the Companies Act—now some ten years ago—and this position he retains under the new arrangement.

A FIRE occurred last week on the premises of Messrs. Morely and Son, of Fairfax-street, Bristol, occupied as a paper warehouse. The outbreak occurred on the top floor, and quickly gained a firm hold. Thirty girls at work made their escape, and were followed by the male employees, who endeavoured to cope with the fire without success. The flames were eventually got under by the brigade.

IN the King's Bench, on Tuesday, a verdict for £150 damages for libel was given against *John Bull*. The plaintiff, Mr. Harry Burns, music-hall agent, of West Hartlepool, complained of an article which suggested that he dismissed a chorus girl for leaving the stage for a few minutes. The jury found that the article was a libel and not true, and judgment was entered for plaintiff for £150 and costs.

THE death has occurred at Nordrach-on-Dee, Aberdeenshire, of Mr. Alexander Neilson Cumming, in his 55th year. Deceased having been called to the Bar by the Middle Temple, he practised till 1893, and then joined the staff of the *Manchester Courier* as leader-writer, afterwards becoming managing editor. From 1901 to 1904 he was on the staff of the *Morning Post*, and he had since been on the staff of the *Morning Advertiser*.

MESSRS. RAPHAEL TUCK AND SONS, LTD., the well-known fine art publishers, have just received the royal warrant of appointment to His Majesty the Emperor of Germany and King of Prussia, an honour that is the more highly valued, as we understand it to be the only warrant granted to an art publishing house outside the German Empire, the warrant being specifically granted to the English company.

TENDERS WANTED.—For the supply of school materials for two years, commencing September 1st, 1913, for the Portsmouth Education Committee (Elementary Education)—including books, maps, pictures, drawing requisites, kindergarten selections, school stationery; particulars from Mr. G. H. Etherton, clerk to the Committee, Education Committee's Offices, Town Hall, Portsmouth.—For the supply of books, printed forms and stationery required by the Rochdale Finance Department during year ending July 31st, 1914; information from Mr. W. Henry Hickson, Town Hall, Rochdale.—For the supply of printing for three years from October, 1913, for the Deptford Borough Council; form of tender from Mr. V. Orchard, Town Hall, New Cross-road, S.E.—For the supply of school materials for two years, commencing September 1st, 1913, for the Portsmouth Education Committee; form of tender from the Education Committee's Offices, Town Hall, Portsmouth.

ACCORDING to *Kemp's Mercantile Gazette* there was one failure in the printing and stationery trades of England and Wales for the week ending Friday, July 18th; the corresponding week in 1912 showed three.

NEWSPAPERS BY AEROPLANE.—After accomplishing a magnificent flight over Italy, starting from Milan, and eventually concluding his journey at Tarranto, thus flying over almost the whole of Italy from north to south, M. de Rove, a French aviator, on the way dropped bundles of Milan newspapers in the principal towns, thus achieving an aeroplane newspaper delivery.

AT a meeting of Aberystwyth printers, last week, Mr. Matthewman (organising secretary of the Typographical Association) spoke on the need of forming a trade union branch. Speakers who took part said there was severe undercutting at Aberystwyth, and work was being done at less than cost. The wages were 24s. per week and the hours 55, a condition of things which the chairman (Mr. Carl Hanson, vice-president of the North Cardiganshire Trade Unions and Labour Council) said was scandalous, as most of the work was done for public bodies and was paid for out of the rates. As a result of the meeting 21 men joined the branch.

WE understand that Messrs. Linotype and Machinery, Ltd., have turned their Paris branch into a separate company, under the managing directorship of its old chief, Major H. C. Higgs, who will be assisted by two French directors, MM. Lallier and Tihon, the latter of whom has been fifteen years with the firm. A display and typesetting competition was recently organised by Linotype and Machinery, open to any French users of the machine. Some 500 proofs were sent in, and the 40 prizewinners have just been designated by the jury of printers appointed to criticise them. The prizes amount to £400, half of which is given in the form of accessories such as matrices, etc., the balance being in cash, for the purpose of being distributed by the successful printers to those of their employees who were engaged in the work.

TENDERS ACCEPTED.—For printing and binding the supplementary catalogue of books at the Plashet Library, for the East Ham Corporation, South Essex Printing and Publishing Co.—For printing books and bookbinding, and stationery, etc., for the East Ham Corporation, South Essex Recorders, Ltd., printing; C. Straker and Sons, Ltd., books and bookbinding, stationery and office sundries.—For supply of printing, stationery and account books, etc., for three years, for the Newport (Mon.) Corporation, G. Bell, F. D. Biddle, R. H. Johns, Ltd., Mullock and Sons, Ltd., P. W. Raffan, Ltd., Sims and Son, Southall and Co.—For supply of school stationery and materials, for the Norwich Education Committee, Jarrold and Sons, Ltd.—For printing the various forms, etc., and also the agenda paper, for the Tottenham Education Committee, Greenway and Co., 435, Green-lanes, Harringay; Crusha and Son, *Herald* Office, High-road, Tottenham.

MANCHESTER SCHOOL OF TECHNOLOGY.—We have received a copy of volume 6 of "The Journal" of the Municipal School of Technology, Manchester, a most instructive, interesting and capitally printed book of 280 pages of letterpress, diagrams and half-tone illustrations. It contains a record of investigations undertaken or published by members of the teaching staff and students of the School during 1912, and being printed in the Photography and Printing Crafts Department of the School, forms an interesting example of the useful work that is being carried on there in the instruction of young printers. A prospectus of University Courses in the Municipal School of Technology, Manchester, for the session 1913-14 has also been published. It contains a brief history of the School and a description of the fine School buildings, and full information relating to the regulations, conduct and general University work of the School.

Newcastle-on-Tyne Press Bowling Club.

Success has at length crowned the efforts of the Newcastle Press Bowling Club in the Crawford Smith Cup competition, and, as showing the splendid form of this year's team, they have gone through the "tourney" without losing a single game. Naturally, after a series of nineteen strenuous attempts the "Press Gang" and their friends, of whom there was a large gathering to see the finals, are jubilant at their victory, and the proceedings at the annual dinner this year will no doubt be a record in more ways than one.

An interesting feature of the final was the fact that two members of the team were in the first competition played by the Press for the Cup—Messrs. J. McLean and J. T. Dennison.

One member (Mr. E. J. Dixon) of the Press Club had "hard luck" in not being able to play in the final through indisposition, having taken part as skip in all the other games, and having also played in many previous cup competitions. The Press have previously been four times in the final, and this is the nineteenth year they have competed for the trophy.

The game was a hard fought one, the Press being five down at the fifth end, but pulled up by the tenth, when they led by four; at the fifteenth end they had increased their lead to 22, finally winning by 14, East End, who are notorious stayers, creeping up a bit in the last stage.

The teams and scores were:—

Printers' Managers and Overseers ASSOCIATION.

North Midlands Centre Outing.

The North Midlands Centre of the above Association took their annual outing on Saturday, 19th inst., when a visit to Lincoln was arranged and a goodly company attended. Arriving at the Cathedral city they were met by a number of local friends connected with the trade, and the party proceeded by waggonnettes to the neighbouring wooded hilltops, from whence a series of panoramic views of the city were obtained.

It was a real summer's day and the country was looking its gayest, while from every viewpoint the minster stood out in bold relief upon the sky-line—the proudest and most glorious monument in the county.

The route taken for the drive started from the Midland Station to the South-west end of the city up Cross o'Cliff Hill, afterwards driving round to the village of Canwick, and continuing along South-park at the foot of the Common.

Returning to the city and the very ample tea provided at the "Arcadia Café" by Mr. Stokes, a welcome to the P. M. and O. A. was given by Mr. W. Cottam, managing diriector of the Lincolnshire Publishing Co., and secretary of the Masters' Association. Mr. Cottam was also supported by Mr. J. D. Ruddock, the T.A. being represented by the secretary, Mr. R. Fisher.

The President of the North Midlands Centre (Mr. Budden), responding on behalf of the company, and the Vice-President (Mr. Moore) in supporting the same, offered a hearty invitation to the Lincoln craftsmen to link on to the P. M. and O. A., and so keep themselves in touch with the advanced party in printerdom.

The whole evening was subsequently taken up with an exhaustive survey of the Cathedral (interior and exterior), and the party entrained for home quite comfortably tired with an unusually pleasant and unique experience.

The arrangements for the outing were all undertaken and carried out by Messrs. Sands and Traves, of Lincoln, and the wholehearted manner in which they performed their duties quite won the affections of the Nottingham party.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profitt, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

When everything else fails I'm going to turn canal bargee.

o o o

You draw three pounds a week for basking in the sunshine in the stern of a barge, lending moral support to your wife while she does the steering.

o o o

I've just been strolling along one of the Grand Junction Canal waterways of the more remote home counties and getting a little insight into the bargee life, its wages and conditions.

o o o

There is the other side of the medal, no doubt. After all, the old horse has to be driven, and you and your mate must take the walking in turn. There's something pretty muscular to do at the locks; and a lot to do at the loading and unloading.

o o o

It rains, too, as well as shines in dear old England, which owes its physical charms, in truth, largely to its abominable climate.

o o o

And then, if at times you have an itching to really get a bit of a hustle on you, if you have that speed thirst of these motoring days, you may find the pace restriction irksome.

o o o

Yes, I think on the whole I'll go on quietly prospering in my present line instead of failing and barging.

o o o

Yet I couldn't help thinking of some printing friends as I looked at the men and women in these barges in the delightful sequestered part of the country I was visiting, and looked, too, at the outer surfaces of the children, who I feel confident had faces somewhere behind the grime. The adults were quite comely.

I couldn't help thinking of a certain manager of a South London case-room. The head of his firm is quite a decent fellow; I know nothing at all to his discredit.

o o o

Yet the manager, one of the best known members of the Printers' Managers and Overseers Association, said to me about his predecessors in that post, that one committed suicide—"walked straight away from here one Friday night into the river"—another worried himself into a decline, and died; and there were one or two other experiences of earlier holders of the position carrying much the same suggestiveness.

o o o

They were all worried men; hard driven, not by their employer, but by the mere affairs.

o o o

It seems that they earned their money, whatever it was, hardly indeed in comparison with the experiences of these restful bargees. Life has too much stress and strain for most of us in our craft, employers not excepted.

o o o

Mr. Fletchers, of Norwich, recognised this last week in one of the manliest and frankest speeches I ever heard in my fifty years It had no platform merits: it was just a little apparently unpremeditated utterance at the end of a costing meeting. All the same, it should be printed in letters of gold.

o o o

"We must remember," he said, "there are far more men than masters, and I do not think men in the printing trade are any too well paid. Considering the skill they have to bring to their work, they are certainly entitled to better wages than they are getting to-day. But it is no good men coming and saying, 'We must have an advance.' How can we give that under present conditions? But if the costing system is installed throughout the length and breadth of the land, then what is going to be good for the masters is certainly going to be good for the men."

o o o

"And I am quite sure," he added, "that the great majority of masters do honestly wish well to the men. It has been the privilege of many of us to realise that we are in business not simply to get the most we can for ourselves, but to get the most we can in the interests of our workpeople also. You like to see them in a good position as well as being in a good position yourselves."

o o o

"That," he added, "is a greater incentive still for doing what we can to adopt this system."

o o o

It takes one's mind back to the speeches in which Colonel Wright Bemrose and Mr. Meredith Whittaker, at the annual dinner of the Master Printers' Association, both adumbrated in a shadowy way—the only way possible, perhaps—ideas they had, or perhaps I should rather say, aspirations they had, for some way of reconciling capital and labour.

o o o

"Has not the time come," Colonel Bemrose asked, "when this subject (the relationship of capital and labour) might be broached in a more useful way? When labour might broach it side by side with capital? Cannot they realise that independently we cannot hope for much, but that in the event of labour helping the management to producc a better state of affairs, labour will be amply assured of its share. . . . It would be a great thing if as printers *we could lead the way* in formulating some new idea or principle by which this problem might be advanced to a more happy and useful conclusion."

o o o

Why indeed should printing drag behind in great reforms? Why not try to "lead the way"?

o o o

Mr. Whittaker, too, the well-known President of the Linotype Users Association, and the seemingly universal conference president in the trade, said "he had been impressed by noting how they had got away from the old bad attitude of the past, and he wondered whether some workable means could be devised for a better adjustment of the relations between capital and labour, so that the employers' time should not be so largely engrossed in works of defence, but might be given in larger measure to positive productive efforts, valuable to him as employer and equally valuable to those he employed."

o o o

"It would indeed be well if they could arrive at some method of adjusting these diverse interests; if they could come closer together with those who represented the organised unions, and work for mutual benefit."

o o o

"It might seem only a dream, only an ideal, but all things that had come to be practical in time had once been dreams. If one could but secure and maintain a lofty ideal it would help one to secure something which in practice would be of great value."

o o o

I quote from the master printers' "Circular." The words are worth pondering. It is good to see prominent men in the trade turning earnestly to the contemplation and study of these grave matters. After all, to improve our own condition will be better than to fly to other conditions that we wot not of—even to that of the bargee.

FRANK COLEBROOK.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

The Inventive Printer.

PRINTERS are as a rule brainy men, the very character of their employment tending to develop whatever capabilities may be inherent in them, and yet, as a rule, they have not as a class been instrumental in inventing any great improvements in the machinery and appliances of their business. Most of the advances in composing machines and in printing presses have been the work of what may be termed rank outsiders. Robert Hoe, the founder of the great establishment that is renowned for its improvements in newspaper presses, was a carpenter. Mergenthaler, the inventor of the Linotype, was a working watchmaker; Lanston, the inventor of the Monotype, was a statistician; and so with many other important inventions and improvements the heads that conceived them were not those of printers, many of whom, however, have at one time or another had a notion that they could invent something which would be useful in the trade; that they possessed undeveloped ideas for mechanisms which would be far in advance of those already in use. Those who have smothered the desire to perfect such ideas have done well, for those who launched out on the sea of invention have mostly come to grief. Their ideas may have been good, but they lacked the necessary mechanical knowledge to develop them; or they may have tackled problems which were beyond their knowledge as to requirements. The popular idea that mechanisms are evolved by some happy thought, and that inventing consists in a clever idea, which any good thinker may have, is often erroneous. Nowadays we have mechanical engineers, educated draughtsmen and machine designers who develop machines as they are wanted, for any special purpose, acquiring a full knowledge of all conditions before they start in, and so achieving the best results without a waste of time, labour, and energy. The designing of machinery is as much a special business as printing, and it has as many branches and adjuncts as has the printing industry. It is almost as foolish for a printer to tackle the designing of a new press as for a machinist to tackle a job of fine printing, and expect to surpass a tasteful compositor and skilled pressman. A few printers may have succeeded in inventions in a moderate way, but as a general rule it is the man outside the trade who brings out the epoch-making improvements.

* * *

Prosecutions Under the Merchandise Marks Act.

FOR years past, in the hand-made paper industry, workers have agitated for easier measures in order to bring about prosecutions against makers of imitation hand-mades, and sellers passing off such goods as the genuine article. The other day it was reported to the Birmingham Chamber of Commerce that the Board of Trade had made, in pursuance of the power conferred upon them by Section 2 of the Merchandise Marks Act, 1891, and, with the concurrence of the Lord Chancellor, new regulations with reference to the undertaking by the Board of prosecutions under the Merchandise Marks Act, 1887. Under the previous regulations a complainant was required to produce all the evidence necessary to secure a conviction. Under the new regulations the Board might, if it considered it desirable to do so, obtain the necessary information, or any part thereof, through their own officers or agents. In this respect the new regulations represented an improvement on the old, and might therefore be regarded with some satisfaction. There was only one point which might be criticised. The Act provided that the expenses of prosecutions undertaken by the Board should be paid out of moneys provided by Parliament, but the regulations said that the Board might by undertaking a prosecution require an applicant to give security for costs on such terms and in such manner as they thought proper. Seeing that the only prosecutions the Board were empowered to undertake were those in cases where the alleged offences affected the general interests of the country or of a section of the community or of a trade, the Chamber thought it would be reasonable to expect the provisions of the Act of 1891 to be carried out in their entirety.

* * *

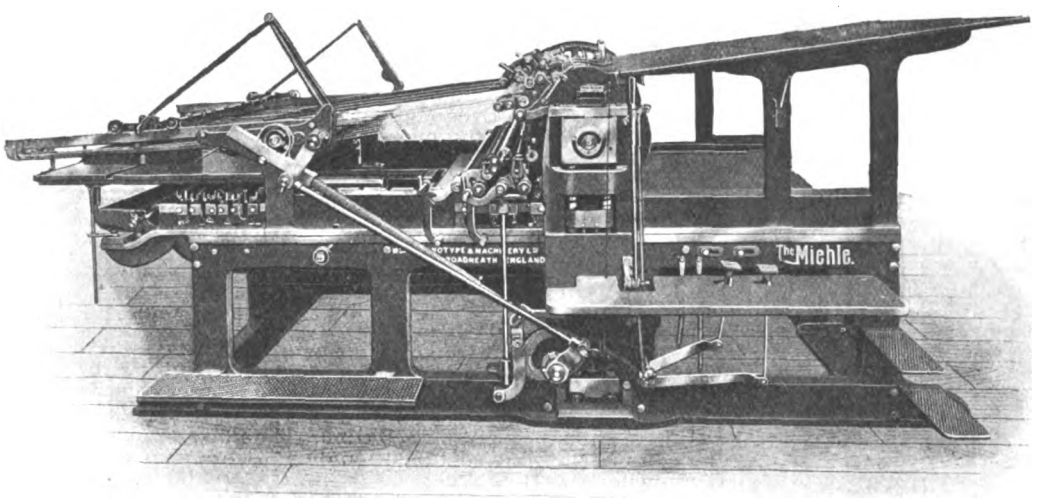
Labour Troubles in the British Paper Industry.

THE year 1913 will stand out prominently as one of great labour unrest in the British paper trade, and the disputes that have taken place mark a severe break in the close relations that have so long been a happy feature between employer and employed. This development is not a sudden one, as in all ranks of labour there has been a steady movement to improve working conditions and to secure a higher remuneration for service, and it is only natural that paper-makers and other mill employees, having the advantage of strong organisation, should contrast their conditions with those in force in other industries and seek for an improvement. In the introduction of a new order of things, and before a proper level is found, there is a risk of misunderstanding and possible conflict. This appears to have been the case at Ford Paper Works, where the employees went out on a strike, which has now been happily settled, the management making substantial increases in wages, etc. The National Union of Paper Mill Workers engineered the strike as a test case to emphasise that no reduction in pay was to follow reduced hours of labour. The dispute at Messrs. Peter Dixon and Sons, Ltd., Grimsby Paper Mills, which was settled about a fortnight ago, appears to have been

Digitized by Google

on a different footing. The labourers allied themselves to an outside organisation—the Gasworkers and General Labourers' Union—and put forward extraordinary demands. Mr. Joseph Dixon is not averse to Trade Unions, and recognises that labour has the right to organise. Messrs. Peter Dixon declined to grant any of the demands put forward, on the ground that the wages paid were the highest obtainable anywhere for a similar class of labour. The strike consequently fizzled out, due to an absence of strike pay and no general support. Labour troubles also lately affected the Bullionfield Paper Mills, Invergowrie.

* * *



British Imports of Printings or Writings.

THE receipts of printings or writings are divided into two classes—"on reels" and "not on reels." The value of the former has increased from £905,323 in 1908 to £1,451,005 in 1912. Last year the arrivals from Foreign Countries were of the value of £1,015,732, as compared with £794,854 in 1908; from British Possessions, £435,273 as against £110,469. Norway has made very satisfactory progress in the supply of reel paper to the British market during the last five years, the value increasing from £308,954 to £482,974. The headway made by Sweden has not been so marked, the value increasing from £313,723 to £336,331. Imports from the United States declined from £43,359 to £27,786. The substantial increase registered by British Possessions must be largely attributed to the growth in the imports from Newfoundland. As regards printings or writings not on reels, the returns in the "Annual Statement of the Trade of the United Kingdom" show a heavy falling off in British imports. The value of the receipts from Foreign Countries last year was £835,376, as compared with £1,426,984 in 1908; from British Possessions, £1,092 as against £66,559. Germany, Norway and Sweden all show heavy losses compared with the year 1908, whilst the supplies from the United States, which last year were of the value of £102,537, show an increase of £25,893. The additional classification of "unenumerated," formerly included with printings or writings, etc., probably has affected the entries under the latter heading since the year 1910.

THE *Manchester Courier* annual pic-nic was held on Saturday, when the members of the staff visited Dovedale for the second year in succession. Favoured by delightful weather the trip to this beauty spot, buried deep in the Derbyshire hills, proved most enjoyable. The Peveril of the Peak Hotel was made the headquarters of the party, and here they partook of lunch and dinner.

TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, July 23rd. 1913.

CREDIT has remained plentiful in the money market throughout the week, and while there has been a slightly increased demand the last two days, rates have not altered. The discount market continues steady. Bullion movements have resulted to date in a net influx to the Bank of England for the week of £460.000. Since the spell of depression in stock markets last week-end, owing to unsatisfactory news from the Balkans, a more cheerful tendency has manifested itself, and in most sections prices were on the up grade yesterday. Business, however, keeps very quiet. Consols have recovered the ground lost at the end of last week, the quotations now being 72 13/16 to 72 15/16 for money, and 72 7/8 to 73 for the account.

The miscellaneous industrial market has kept generally steady, and business is restricted. In the section relating to paper and print movements have occurred both ways. Amalgamated Press Ord. have risen 1/2 to 6 13/16—7 1/16; Associated Newspapers Ord. have fallen 6d. to 22s. 6d.—23s. 6d.; Ilford Ord. are up 1/2 to 3 1/2—3 5/8, and the Pref. are also up 1/2 to 3 7/8—3 15/16; Linotype and Machinery B Deb. have given way 1 to 37—42; and Raphael Tuck and Sons Ord. have gained 1/2 to 3 7/8—3 11/16. Business has been done during the past seven days in Amalgamated Press Pref. at 21s.; in Associated Newspapers Pref. at 20s. and 20s. 6d.; in *Country Life* Pref. at 15s. 7½d.; in John Dickinson and Co. Deb. at 100 and 99½; in Ilford Pref. at 17s. 6d.; in *Illustrated London News* and *Sketch* Pref. at 13s.; in International Linotype at 74 and 73½; in Linotype and Machinery A Deb. at 53, 53½, and 53, and in the B Deb. at 37; in Edward Lloyd Pref. at 21s. 10½d. and 21s. 9d.; in Mansell, Hunt, Catty and Co. Ord. at 36s. 3d.; in George Newnes Pref. at 15s.; in C. Arthur Pearson Pref at 7 3s. 9d.; in Spicer Bros. Pref. at 9 1/16, 9¼, and 9 1/8; in *Standard* Newspapers Deb. at 77½ and 77; in Raphael Tuck and Sons Ord. at 18s. and 19s. 3d.; and in Weldons Pref. at 19s. 6d.

DIVIDENDS AND REPORTS.

WELDONS.—The report of Weldons, Ltd., for the year ended June 30th, 1913, shows an amount available for dividend of £53.571. The directors recommend a dividend on the ordinary shares at the rate of 10 per cent. per annum for the half-year (making 10 per cent. for the year), adding £12,000 to reserve fund, setting aside £3,000 in respect of the depreciation in the market value of the investments, £1,000 bonus to staff, and carrying the balance of £9,571 to next account.

EDINBURGH "EVENING NEWS."—Mr. Robert Wilson presided at the annual meeting in Edinburgh, last Thursday, and the report already published, was adopted. The chairman said the new building operations were going on very satisfactorily, and he hoped to see the shareholders in the new buildings at the next meeting.

RAPHAEL TUCK AND SONS, LTD.—The report of Raphael Tuck and Sons, Ltd., for the year to April 30th, states that the trading for the year, after providing for bad and doubtful debts, depreciation and all expenses, has resulted in a net profit of £41,992. The balance brought forward from last year added to this makes a total of £47,502. Directors' remuneration absorbs £3,250, leaving an available balance of £44,252. After deducting the preference dividends and an interim dividend on the ordinary shares at the rate of 5 per cent. per annum for the half-year ending October last, there is left to dispose of £24,252. The directors recommend a final dividend on the ordinary shares at the rate of 7 per cent. per annum, making 6 per cent. for the year, transfer to special dividend reserve fund £2,000, and to the general reserve £8,000, leaving to be carried forward £5,502.

C. A. PEARSON, LTD.—At the annual meeting of the company, at Winchester House, London, on Friday, in moving the adoption of the report and accounts, Mr. Pearson said that they were of an exceedingly satisfactory nature. The profits showed a material increase compared with last year, and he was happy to be able to say that the state of business which had led to that increase showed no retrograde tendency in any way whatever. With every confidence he looked forward to a good showing when they met again in 12 months' time. The report was adopted. In reply to a shareholder, who asked why the shares had run down, Mr. Pearson said the reason was that there were no dealings in the shares. Everybody seemed satisfied and held. Unless this class of share was active, it was apt to fall back.

NEW COMPANIES.

WHEATLEY'S "MINING INVESTOR," LTD.—Registered on July 17th, with a capital of £2,500, in £1 shares (1,250 preference), to carry on the business of periodical and newspaper proprietors, etc. The subscribers are H. Zabell, H. S. Wheatley, N. M. Boyle, May E. Wheatley, Emily H. Miller, A. W. Francis and E. B. Miller. Minimum cash subscription, 5 per cent. of any shares offered to the public. Brown, both of 2A, Copthall-court, London; and that the said petition is directed to be heard before the Court sitting at the Royal Courts of Justice, Strand, London, on Tuesday, July 29th.

COMMERCIAL INTELLIGENCE.

Re FRANK HARRY GOOSE, Bookseller and Stationer.

At a sitting of the Norwich Bankruptcy Court, before Mr. Registrar Cooke, this debtor, of 16, Bishop-bridge-road, Norwich, and 6, Brigg-street, Norwich, came up for his public examination. The statement of affairs showed gross liabilities £323 12s. 10d., expected to rank £288 2s., deficiency £155 1s. 8d. In answer to the official receiver, debtor stated that he commenced business at Brigg-street in 1905 with about £15 capital of his own, and £150 lent to his wife. Previous to that debtor had been assistant to his father. He continued in the same premises to November, 1908, when he moved to No. 6 in the same street. The rent of both premises was £75, so there was no extra expense. At that time debtor was solvent, and although he had not been able to repay any of the money he had borrowed he had not lost any. Debtor's books showed a complete record of all his transactions, and he took stock every March and made a rough balance-sheet. About six months ago he first discovered he was insolvent. His deficiency of £155 did not include the £150 borrowed of his wife, and he was therefore really £300 deficient. The turnover for his first year's business was just £600, and for the remaining years the average was about £760, the gross profits being about £200 on that account. Out of that sum he had to pay rent, rates about £22, and labour about £25 a year. For himself he took out 30s. a week, and then there were sundry expenses, the total coming to about £230 a year. He must have been gradually going back for some years. Last December there was a fire on the premises, and debtor recovered from the insurance company £129 15s., which sum was paid into his banking account. For a time that put him in funds, but there were sums overdue to creditors at that time, and by the end of January it was all gone. The effect of that money was to relieve the tension for a time. In consequence of the fire his Christmas trade was disorganised, and he estimated that his ultimate loss was between £80 and £100. Early in June debtor was again under pressure from creditors, and his March rent still unpaid, and without waiting to be sued he filed his petition. Debtor attributed his insolvency to insufficient trade, loss of trade through his wife's illness, and loss through the fire. The examination was closed.

Re HAROLD WILLIAM RAWLINGS, Stationer.

At a sitting of the Luton Bankruptcy Court, last week, before Mr. Registrar Cooke, this debtor, described as of 51, Chatsworth-road, Luton, came up for his public examination, having filed his petition in bankruptcy on June 13th. The statement of affairs showed liabilities £706 9s. 5d., and assets estimated to produce £141 1s. 10d., leaving a deficiency of £565 7s. 7d. Debtor attributes his failure to "want of capital and pressure by creditors." The deficiency account filed (dating from December 3rd., 1912) is as follows:—Excess of liabilities over assets, £47; household enpenses of self, wife and two children, £50; depreciation of stock-in-trade, £375; depreciation of inside trade fixtures and fittings, £45; expenses in connection with fitting up outside of shop and removal from Watford, £50; expenses in connection with the illness of wife, £10; repaid loan to father (part), £13; travelling expenses in connection with business for six months (say), £25 7s. 7d.; total, £615 7s. 7d.; loss—net profit arising from carrying on business £50; deficiency, £565 7s. 7d. The official receiver, in his observations, says:—"The debtor states that he commenced business as a stationer ten years ago at Haverstock-hill, London, with a capital of £90 lent to him by his wife, and which has not been repaid. He continued there for two-and-a-half years and then sold the business for £150. Subsequently he opened a shop at Romford, Essex, and traded for three years and disposed of the business for £450. He then took a shop at Watford, and sold the business in April, 1912, for £500, and certain stock, not taken over by the purchaser, for £60. His debts at that time were about £450, which he paid off. He then travelled the country for some months looking for premises to commence a new business, and ultimately opened at 15, Wellington-street, Luton, on December 3rd, 1912, without any capital, but obtained credit from the firms he had previously done business with. He said that he considered he overstocked himself, and this, together with want of capital, and the sheriff being in possession obliged him to file his petition. The debtor states that he has not kept proper books of account at any time during his business career. Debtor also states that if he had not been pressed he could have paid his debts in time, as he was doing fairly well at Luton." The examination was closed.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

IN THE MATTER OF A DEED OF ASSIGNMENT for the benefit of creditors, dated March 26th, 1913, and executed by R. and J. R. Meek, trading as Meek and Son, 7 and 8, Frances-street, Truro, art publishers. Claims by August 1st, to the trustee, G. M. White, C.A., 14, Old Jewry-chambers, London, E.C.

THE BANKRUPTCY ACTS, 1883 AND 1890. RECEIVING ORDERS.

WALL, G. F., trading as G. Wall and Co., 2 and 4, Warburton-road, Hackney, London, late 6, Chalgrove-road, Mare-street, Hackney, sealing wax manufacturer. Date of order and of adjudication order, July 15th, made on the debtor's own petition. First meeting of creditors, July 30th, 11 a.m., and public examination of debtor, September 9th, 11 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

AVERY, R. H., Market-place, Fordingbridge, Hants, stationer, etc. Date of order and of adjudication order, July 16th, made on the debtor's own petition. First meeting of creditors, July 31st, 12.30 p.m., at the official receiver's offices, City-chambers, Catherine-street, Salisbury. Public examination of debtor, August 14th, 2 p.m., at the Council House, Salisbury.

NOTICES OF INTENDED DIVIDENDS.

HAKE, W. H., lately trading as the South Coast Emporiums Co., 23, Sea-road, Boscombe, Hants, stationer. Claims by August 2nd, to T. Easton, official receiver, Midland Bank-chambers, High-street, Southampton.

LAWRENCE, G., formerly 91, London-road, St. Albans, letterpress printer. Claims by August 6th, to C. H. Plant, official receiver, 13, Winckley-street, Preston.

ROTHERA, G. T., 39, Crown-street, and Portland-street, Halifax, stationer and printer (amended notice). Claims by July 30th, to W. Durrance, 12, Duke-street, Bradford.

NOTICES OF DIVIDENDS.

TATCHELL, C. J., 171 and 172, Snargate-street, Dover, dealer in stationery and fancy leather goods First and final dividend of 3s. 3¼d., July 29th, at the official receiver's offices, 68A, Castle-street, Canterbury.

PAYNE, A. E. and R., trading as A. E. Payne, 182, Finchley-road, London, N.W., stationers and fancy goods dealers. First and final dividend of 10s., August 6th, or any subsequent Monday or Wednesday, between 18 and 1, at the offices of F. Nicholls, White and Co., 14, Old Jewry-chambers, E.C., where also at the same times, a first and final dividend of 5s. in respect of the separate estate of A. E. Payne, and one of 8s. in respect of R. Payne, will be paid.

APPLICATION FOR DEBTOR'S DISCHARGE.

ALLEN, E. B. A., and M. J., trading as Davis and Allen, 91, Chertsey-road, and Duke-street, Woking, stationers and printers. To be heard, August 2nd, 10.30 a.m., at the Public Hall, Godalming.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

COX, H. F., late Georgian House, Bury-street, Westminster, S.W., newspaper proprietor. Date of order, June 25th. Discharge suspended for four years from June 19th, 1912. The grounds named in the order for refusing an absolute order of discharge were that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities; that he had contributed to his bankruptcy by rash and hazardous speculations and that he had on a previous occasion made an arrangement with his creditors.

NOTICES OF RELEASE OF TRUSTEES.

HAWORTH, H., 102, High-field-road, South Shore, Blackpool, journalist, etc. C. H. Plant, official receiver, 13, Winckley-street, Preston. Released March 6th.

THE COMPANIES ACTS, 1890 AND 1908. NOTICE OF DIVIDEND.

Institute of Printers.

In view of the successful visits to Paris in 1908, to Leipzig, Dresden and Berlin in 1909, and to Brussels in 1910, the Council of the Institute have arranged with the Polytechnic Touring Association, Ltd., by request, for a conducted tour to the Amsterdam and Ghent Exhibitions in the autumn of 1913, extending over a period of 10 days—Thursday 9th to Saturday, October 18th, inclusive.

At Amsterdam the chief points of interest are to be visited and the International Graphic Exhibition, and then the Municipal Printing Office, the Amsterdam Typefoundry, and the Typographical Library. Next day a visit is to be paid to Haarlem, where the well-known church, the interesting Typographical Museum of Messrs. Enschedé and Sons, and the Exhibition of Ancient Printing will be seen. The journey will then be resumed to the Hague, where the party will be conducted to the most interesting sights.

Antwerp is next journeyed to, where many visits will be made to places of interest, including the Plantin Museum. Then comes Brussels, with visits to the chief points of interest, as well as a printing office, a newspaper office, and the Schools of Typography, Lithography, and Binding. The Musée International (containing an important section concerning the Book), the Institut International de Bibliographique (Repertoire Bibliographique Universal), and the Section des Manuscrits of the Bibliothèque Royal are also to be inspected, and the party is to be received by the Committee of the Musée du Livre, who will be joined by a deputation from the Chambre Syndicale des Imprimeurs et Syndicale des Maitres-Imprimeurs de Bruxelles. The remaining itinerary includes a drive to the Battlefield of Waterloo, and the last two days are to be spent in seeing the chief sights of Ghent. as well as an inspection of the "School of the Book" and the office of Van Doosselacre, the principal printers of Ghent, and a visit to the Ghent Exhibition.

An Advertisement Claim.

In the City of London Court, on Friday, before Mr. Registrar Wild, Messrs. Ward Lock and Co., Ltd., Warwick House, Salisbury-square, sued Mr C. E. West, horticultural implement manufacturer and exporter, 11, Norfolk-road, Higham-hill, for the sum of £1 15s., balance of account for advertisements inserted in one of the plaintiffs handbooks. The plaintiffs manager said that they had received a letter from the defendant on May 24th, enclosing a sum of 15s, and promising to pay the balance £1 15s. The defendant said he had advertised in the plaintiffs book for a long time and it did not succeed. The plaintiffs had written to him stating that in order to meet trade requirements they were going to press at once and offered him a half page inside back of cover position at £3 3s., being a nominal figure for a special position. Defendant, in reply, wrote offering the plaintiffs £2 2s. for the position. The plaintiffs said that the offer was at a very low rate in view of the fact that the edition was for 25,000 copies of the handbook. They agreed to accept his offer upon his conditions. The special position on back of cover was not given him but a very inferior position inside the book. He complained to the plaintiffs who stated that they had sent repeated applications to the defendant for the renewal of his advertisement without hearing from him. To this he (defendant) had replied that it was impossible during the time they were negotiating over the advertisement for the plaintiffs to have sent him repeated applications as they stated. He complained several times that he had never ordered the advertisement in the position they had given him, and he now said it was not worth more than 7s. to him. The position on the cover was worth considerably more. He would have paid the plaintiffs' account but for the action coming so quickly upon him. The registrar said it was perfectly true that the plaintiffs had not given him the position he wanted, but if the defendant had declined the position at once he might have been successful in the defence he now raised. In view of the letter which he had written he could not go back and dispute the contract. He had paid 15s. on account and promised payment of the balance in a few days. That put him out of Court. Judgment for the plaintiffs for the amount claimed, payment to be made in a week.

Interesting Silhouettes.

The work of August Edouart (1789-1861), the brilliant French silhouettist, is well known to connoisseurs. Practising his art chiefly in the British Isles and in America, he has left behind him the most remarkable series of authentic pictorial documents which has ever been bequeathed to the world. Not only did this painstaking artist write on every portrait the full name of his sitter, date when taken, home address, and place where taken, but he frequently pasted cuttings from contemporary news-sheets in his reference folios.

Edouart cut each portrait in duplicate from folded black paper. Placing one of the originals in a folio, he added the name of his sitter, date, and place where taken, just as a modern photographer keeps his negatives, for reference; he used his volumes also for exhibition purposes. Edouart thus accumulated an enormous number of interesting portraits, not only of kings and princes, such as those beautiful portraits taken by him at Holyrood Palace in 1831, but of the "landed gentry and aristocracy," whose houses he visited, and also the humbler folk who thronged his studio when he worked in a town or village. These latter portraits are often of great value to the descendants on account of the rarity of other pictorial records, as well as the perfect accuracy of the likeness. The portraits measure about seven or eight inches. Almost all are full length.

Fifty representative examples have recently been presented by Mrs. Nevill Jackson to the Victoria and Albert Museum, and are now hung in Room 83, where they can be studied side by side with the silhouettes at present on loan from Mr. Francis Wellesley.

MESSRS. JOHN DICKINSON AND CO., LTD., papermakers, Old Bailey, London, are offering their latest make of Croxley Reliance at the reduced price of 4½d. per lb. Though revised in price, as a superior writing paper, genuinely tub-sized and air-dried, it represents value rarely met. Croxley Reliance is stocked regularly in the usual sizes and weights in cream laid, cream wove and parchment wove, and delivery can be effected by return. Sample sheets are available upon requisition.

THE PRINTING ART.
An Illustrated Monthly Magazine of the Art of Printing and of the Allied Arts Issued by The University Press, Cambridge, Mass., U.S.A.
THE PRINTING ART is the most beautifully printed periodical in America. It is entirely different from the other printing magazines, in that it does not go into the technical details of the crafts it represents, but gives **actual examples** which are of service to the publisher, printer, advertising man and book lover. It is full of suggestion for typography, design, colour of ink and selection of paper stock, and will be found invaluable by those desiring to improve the quality of their work. PRICE 21/- per year. Single copy 2/-. Send this amount for sample copy to—

23, ABCHURCH LANE, LOMBARD ST., E.C.

In AMERICA
There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—
Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.
We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the current month, employment in the printing trades was fairly good in June. It showed a slight improvement compared with a month ago, and a more decided improvement compared with a year ago. (See Table.)

In London, employment continued good, and was better that a year ago. In other centres, employment with letterpress printers was fairly good, and better than a month ago and a year ago. At Aberdeen and Dundee it was reported as very good, but at Leeds, Bradford, and Hull it was only moderate. With lithographic printers employment remained good, and was better than a year ago.

The Labour Exchanges of the Board of Trade, during the four weeks ended June 13th, found employment for 631 adult workers in the printing, stationery, paper and allied trades, of whom 445 were women. 875 vacancies had actually been notified, of which 603 were for women. On the other hand, 1,749 applications for work were received, of which 914 were made by women. In the juvenile branch, 854 vacancies were notified, including 518 for girls, and 549 filled, 369 of them by girls.

United Kingdom	52,438	4·0	4·1	4·9	— 0·1	— 0·9

COLONIAL.

The conditions in the printing trades of New Zealand are reported to have been fair of late, but there is no special demand for more labour.

FOREIGN.

From France, it is reported that employment in the printing trades improved during May, both at Paris and in the provinces. In Germany, however, there was a little falling off, so that the percentage of unemployed, out of about 65,000 trade unionists rose from 2·2 in April to 3·0. In May last year it was 2·9. The same was the case in Norway, where the percentage out of 1,947 increased from 2·0 to 2·8, as compared with only 0·5 in May, 1912. In Holland, no change was recorded.

Exports of Printed Books.

The following were the exports of printed books from the United Kingdom during June, compared with other previous periods:—

	June		Jan.-June	
	cwts.	£	cwts.	£
1913	35,235	197,860	207,456	1,202,262
1912	36,248	184,597	211,045	1,202,384
1911	35,709	233,787	195,556	1,181,907

THE Leicester Co-operative Printing Society has just celebrated its coming-of-age, upwards of 300 shareholders, workers, and friends journeying to Matlock by special train. The society was inaugurated by a few members from the Trades Council in 1892, and in 1905 a 48-hour week was established, the results having proved excellent. The fortieth balance-sheet, issued February, 1912, showed a trade of £7,469, and the total trade to date is nearly £140,000.

"CANADA TO-DAY," 1913: An Annual Reference Book on Canada, its Progress, Prosperity and Opportunities. 250 quarto pages, 300 illustrations and specially prepared map of the Dominion. Price 2s., bound in stiff boards. London: "Canada" Newspaper Co., Ltd., Kingsway House, W.C.

This eminently serviceable, interestingly written and attractively got-up publication has won much favour since it was first issued, two years ago, and this year with additional features of value and a considerable enlargement it cannot fail to be well received. Its publication has been slightly delayed, which has enabled the inclusion of official statistics and articles which would not otherwise have been available. The volume is much more than a year book or annual statistical review; it goes deeper into the life history, progress and opportunities of the great Dominion.

As was the case last year, "Canada Today" has been divided into sections, each of which deals in more or less detail with some broad aspect of Canadian life, such as Emigration, Finance, Transportation, etc. The first of these, "Canadian Affairs and Resources, is heralded, appropriately enough, by a very striking photograph of the Premier, the Right Hon. R. L. Borden, and an extract from his speech at the Royal Colonial Institute banquet when in England last year. A carefully prepared summary, illustrated with statistics compiled from the last Dominion census, bears a wonderful testimony to the growth of Canada; and it is followed by an article on "Canada's Population," which again, supported by a detailed statistical table, shows the different races and nations which make up the Canadian people. Some striking facts are evidenced in an article on the "Religious Bodies in Canada," which shows the comparative strength and the increase or decrease in numbers of the different denominations. These live statistical articles are followed by a review of the leading events in the Dominion during 1912, including the visits of the Canadian Ministers to London, the Duke of Connaught's tour, personal events, and obituary. "Canada and the Empire" is the title given to a series of New Year messages sent to *Canada* by leading politicians and statesmen, forming a remarkable inside testimony to Canadian progress.

Other articles deal with "Canada and the Imperial Navy," "Imperial Clubs and Societies in London," statistical articles on "Field Crops of Canada," and "Canada's Mineral Production," also "Canada's Record Fishing Year," and "Canada's Forests," which give an admirable survey of her resources in these two departments. Numerous articles in the Emigration Section contain valuable hints to emigrants, and conclude with a useful comparative table of "Wages and Cost of Living." Every article is profusely illustrated, and the proprietors have well carried out their ideal of presenting a volume of reference, replete with every necessary detail, written in attractive manner, taking the salient features of Canadian activity, and presenting them in a clear, lucid, and vitally interesting manner.

"OUTLINES OF STATIONERY TESTING." By H. A. Bromley. London: Charles Griffin and Co. Price 2s. 6d. net.

This excellent little volume of 69 pages forms one of the series of Griffin's technological handbooks. The author is an assistant examiner of paper at H.M. Stationery Office, and is, therefore, fully qualified to deal with the subject from inside experience. After a preliminary chapter on weighing and simple chemical manipulations, the author proceeds to the practical examination of papers in four chapters, dealing respectively with the physical, microscopical and chemical characters and with the characters of special papers. Then follow chapters on parchments, vellums and leathers, writing inks, sealing waxes and adhesives, and, lastly, miscellaneous articles of stationery, such as string, lead pencils, typewriter ribbons and erasers.

The subject is treated in a simple and entirely practical manner, which makes the book eminently suitable for the instruction of students in wholesale stationers' warehouses, since it presupposes no more profound scientific training than that which is now universally obtainable as an ingredient of a modern general education. With this plan in view, the author has avoided any deep discussion of theoretical principles and has contented himself with concise directions for simple, easily operated tests. The microphotographs of the principal papermaking fibres are clear and accurate, and these with the descriptions which accompany them should be of very great service to the student who is coaching himself in the practical use of the microscope for paper testing.

The treatment of the chemical side of paper analysis in the perfectly elementary manner suitable for non-professional workers is by no means an easy task, since the pitfalls which beset both sides of the path are numerous. Mr. Bromley is, therefore, to be congratulated in having evolved a scheme of paper chemistry giving a maximum of information with a minimum of ambiguities and sources of inaccuracy. Moreover, he is always careful to warn the student in those few cases where absolute accuracy has unavoidably to be sacrificed for the sake of simplicity.

The book is remarkably free from errors and there is little or nothing of any importance to criticise. On page 23, the table of lengths of fibres appears to require revision, since 5 mm. seems rather too long for the esparto fibre and 0·2 mm. too short for the straw fibre. On page 28, after the detailed scheme for the qualitative examination of the ash of papers, the remark that if both calcium sulphate and alumina are found, satin white has been used, requires some qualification, since both these will be found if, as is commonly the case, the paper has been loaded with a mixture of china clay and pearl hardening. Further criticism must be limited to matters of opinion rather than fact: not everyone would agree with the definition of "bulk" (page 9) as the ratio of *fibre* volume to total volume, but many would prefer to include the mineral matters in a practical definition and call it the ratio of total volume to *solid* volume. Further, the "breaking length" is not the purely theoretical conception which the author dismisses on page 17, but a very practical expression of the strength in relation to weight and one of the fundamentals of systematic paper testing. A description of Schopper's folding and rubbing machine would not have been out of place, as it is probable that this machine gives a more complete representation of the mechanical properties of paper than the usual tensile testers. In the chapter on writing inks, the practical scheme for testing the quality of a permanent ink is very sound, but in the introductory remarks it should have been mentioned that the days when iron-gall inks consisted of a precipitate suspended in a solution of gum, have long since passed away; modern ferrogallic inks are clear solutions coloured for temporary purposes with an aniline dye.

We heartily recommend this very practical handbook to all those engaged in the stationery trade who know what they want and intend to see that they get it.

PHILLIPS' PAPER TRADE DIRECTORY OF THE WORLD. 1913 Edition. 8vo. Cloth. London: S. C. Phillips and Co., 47, Cannon-street, E.C. 15s. 6d.

This year's edition of the Directory may in a special sense be said to represent the unceasing change and development which always characterise in greater or smaller measure the pulp and paper trades of the world, for the number of alterations in, additions to, and deletions from the previous issue have certainly never been surpassed in the history of the work. No effort has been spared to make the revision to which the Directory has been subjected complete and thorough, and the result is a compilation to which all may turn with confidence. Following broadly on the lines of its predecessors, the Directory for 1913 has undergone but little change in form, but the Canadian section has been remodelled to the extent that New Brunswick and British Columbia take their proper place in it as forming part of the Dominion of Canada, instead of being accorded independent positions as hitherto. In other respects the main features of the work have undergone no material alteration, and the compilers' efforts have been concentrated upon securing, as far as possible, complete and accurate lists of the paper and pulp mills of the world, buyers of paper, boards and stationery throughout the world, millboard makers, paper stainers, paper agents and merchants, wholesale stationers, and paper box and bag makers. In this they believe that they have so far succeeded that the Directory can conscientiously be recommended to the notice of all associated with the pulp and papermaking industries, and the allied trades. It may be of interest to mention that the number of paper board and pulp mills which find place in its pages approximates to nearly 5,000. The latest and most up-to-date particulars of the various trade organisations in this country, on the Continent, and in Canada and the United States will be found in the work, while to its numerous supplemental features—including the glossary of commercial and trade terms in six languages, the lengthy list of registered watermarks—have been added the Paper Trade Customs of France and the United States.

The advertising announcements appearing in the Directory present those responsible for the complete and up-to-date equipment of pulp and paper mills with a unique and world-wide field upon which to meet their requirements. In conclusion, we have no hesitation in asserting that this new edition of Phillips' Paper Trade Directory of the World will be found an exceedingly valuable investment as a standard work of reference for all associated with the great industries it represents.

"PAPERMAKERS' DIRECTORY OF ALL NATIONS." London: Dean and Son, Ltd. 22nd edition (790 pp., price 10s. 6d. net).

The "Papermakers' Directory of All Nations" for 1913 marks the 22nd edition of this work, which is of great interest and value to all persons identified with the paper industry. The compilers have exercised the greatest care to present a trustworthy and well-classified guide to some 5,000 mills, which are located in some 40 different countries. The opening pages deal with the mills in England and Wales. First of all the mill number is given, with names of firms (alphabetically arranged), passenger and goods stations, makes, number and width of machines, output per week, telegraphic address and telephone number, and the representatives in London and elsewhere. Ireland and Scotland follow, and also Foreign Countries and Colonies. The productions of mills are also classified. The directory embraces a very wide field, as British agents and mill representatives are given, also enamellers, varnishers, and surfacers of paper, export merchant shippers of paper, British paper bag manufacturers, pulp agents, rag merchants, paper stock dealers, etc., etc. In addition, associations connected with the British and foreign paper trade are given, together with trade customs and trade tables. The excellent arrangement of this directory, known as the "Red Book of the Paper Industry," makes it very popular for reference purposes, and, forming as it does, a reliable guide to handlers of paper as well as manufacturers, it should certainly find a place on the book shelf of all engaged in the trade.

Canada's Imports and Exports

OF

PAPER AND PULP.

The import of paper into Canda during the twelve months ended March of the present year totalled $8,347,311, as compared with $6,347,698 during the previous year.

Imports from the United States amounted to $5,743,103, and from the United Kingdom, $1,804,158. This increase of over two million dollars in paper imports in one year is phenomenally large.

Exports of paper during the same time amounted to $6,327,774, as compared with $3,881,063. The United States took $4,369,417 worth, and Great Britain $585,001 worth.

There was an increase from $5,697,901 to $6,806,445 in exports of wood blocks for pulp, all going to the United States, and an increase from $5,094,305 to $5,500,544 in exports of wood pulp. To the United States went $4,576,279, and to the United Kingdom $828,133.

NOTICE is given that the Tyneside Newspaper Co., Ltd., publishers of the *Jarrow Guardian* and *Wallsend Herald*, is in voluntary liquidation and ceased publication on February 15th, 1913.

THE AUSTIN LETTER FOUNDRY (A. Roddick and Co., proprietors), 11 and 12, Parkfield-street, Islington, London, N., have purchased the old-established business of the Austin Letter Foundry. They state that the concern will be under their personal supervision, and the quality of the type and materials supplied will be of the highest standard, they having for many years been engaged in the refining and supplying of type metals of various grades to many of the well-known newspapers and high-class printers in both London and country.

Factories and Workshops.

Annual Report of the Chief Inspector.

Accidents and Lead Poisoning Increase, Employees' Complaints Decrease.

The bulky blue book which contains the annual report of the work of the Factory Department has been issued, covering the year 1912, and contains much information of interest to the printing and kindred industries. The Chief Inspector of Factories (Mr. Arthur Whitelegge) states in his general report, referring to regulations for dangerous trades, that regulations for bronzing (in letterpress printing, lithographic printing, and coating of metal sheets), issued in draft in 1911, met with considerable opposition, especially as to the requirement of exhaust for intermittent hand bronzing. They were eventually modified, after discussion, to meet this point, and the other objections were not such as to render necessary a public enquiry under s. 81. The order was made on April 11th, 1912, and took effect on June 1st.

The departmental Committee, appointed in 1911 to consider the night employment of male young persons in factories and workshops, presented their report in November, 1912, in which they advise the discontinuance of the special exceptions now allowed for letterpress printing works (by s. 54, for boys over 14), and the same, but subject to substitution of other latitude for which the present Acts do not provide, as regards the exceptions for newspaper printing (s. 56, for boys over 16), but retention of those for continuous processes in paper mills (s. 54), subject to the age being raised from 14 to 16 years.

Early this year a Departmental Committee was appointed "to enquire and report as to the conditions necessary for the adequate and suitable lighting (natural and artificial) of factories and workshops, having regard to the nature of the work carried on, the protection of the eyesight of the persons employed and the various forms of illumination."

With regard to accidents, the reports show there has again been an increase, coincident with increased activity of trade. Notwithstanding this, complaints have decreased, and it is remarked how many relate to questions of employment, and how few to fencing and other safeguards. The proportion verified remains about the same. The advance in the use of electrical power for driving is again most marked. Reports on sanitation are, on the whole, encouraging, but still suggest the need for improvements in certain directions. Some general complaints are made as to the maintenance of and defects in the means of escape in case of fire. The cases of lead poisoning in letterpress printing have noticeably increased, and the experiences of the year tend to emphasise the views expressed in previous Annual Reports, that control of sources of dust is the really important factor in bringing about a reduction of cases.

In the matter of bronzing, the Dangerous Trades Inspector describes the negotiations with the trade that took place before agreement was arrived at on the subject of the new code, which deals with the prevention of the injurious effects of dry metallic powders used in printing and lithography, and provides for the suppression of the dust in manipulating the powders, for the personal cleanliness of the workers, and for the protection of their food from contamination. Since the introduction of the regulations many of the smaller works have ceased bronzing, and the work has, as a result, been concentrated in fewer hands. Great improvements in conditions for dry-bronzers are reported from all districts; satisfactory closed machines, with or without exhaust ventilation, are in general use, while hand bronzing is usually done either under a glass-covered frame with an open front and exhaust ventilation at the back, or in a closed cabinet with dust-proof arm holes.

South-Eastern Division.

In the Report of the Superintending Inspector occurs the following report from Mr. Parkes (North London), in reference to the lamentable fire which occurred in the City and involved the loss of nine lives:—The fire is attributed to the careless use of flaming sealing-wax, by which a boy set fire to a parcel, and in an endeavour to throw it through a window the lighted contents were scattered amongst the celluloid work, causing a fire which spread with great rapidity. The business was new and quite unique in the district; it consisted of ornamental pressing and finishing of thin celluloid for Christmas cards and seasonal almanacs. It was quite recently introduced from Germany, and grew so rapidly that in a few months the number of hands and the celluloid in stock increased about 300 per cent. The building was occupied by various tenants, including warehousemen, and the fatal premises comprised a top room on the fourth floor about 50 by 20 feet, divided at one-third its length from the front by a wooden partition. There were three separate means of exit from this room, namely, the front main staircase, a specially constructed fire gangway to the next premises, and a staircase on to the roof and from thence on to the adjoining roofs. The girls, unfortunately, fled on to the roof of the burning room from which they had first escaped and, remaining there, were quickly cut off and overcome by the fumes and smoke. The fire brigade had little chance, as there was no direct approach to the position for the escape. It must not be assumed that the premises and processes above described have any exact counterpart in the district, although it is obvious that where large stores of celluloid exist extra risk follows; a list of all places in which celluloid is used or stored has therefore been sent to the London County Council. Acting in conjunction with them, all places have been visited, and suggestions have been made with a view to reducing the risk of loss of life and of damage. Various safeguards against fire have been adopted, including steam warming in lieu of open fires, the electric heating of presses, electric lighting in place of gas, use of sealing-paper for sealing-wax and naked gas jets, provision in work-rooms of hose-pipes, tanks of water and buckets of sand (wet and dry), metal-covered work-tables, metal trunks for stock and materials.

In reference to bronzing the Inspector states that where hand bronzing is carried on it is usual to have the work done either under a glass-covered case with an open front, and with an exhaust draught at the back to draw the dust away from the workers, or in a closed cabinet fitted with suitable dust-tight armholes. Machine bronzing is done on enclosed machines, either with or without exhaust ventilation. Some of these machines have been brought to great perfection, and Mr. Barlow (East London) saw one which was so dustless, that although a sheet of black cloth was laid in a corner of the room where it was working not a speck of bronze powder was to be observed on it. Even more trouble seems to have been experienced by Inspectors in getting suitable washing conveniences provided than in dealing with the dust, but this matter, too, is being gradually brought into proper order.

South-Western Division.

The report of the Superintending Inspector for this Division includes the following:—Mr. Hooper (Southampton) draws attention to the danger of the fine dust containing lead from the type cases in letterpress printing works, which is responsible for so much injury to the health of the workers. In most factories no attempt is made to collect this dust, though there are now efficient appliances of the vacuum extraction type available. In many printing works he has found that the precaution of damping the floors before sweeping is not taken.

Many men prefer to have their own towels, and this is arranged in some works. Mr. Glyn Edwards (Swansea) remarks on this reluctance to use the general towels supplied. He says "the coach-painter sticks to his chamois and the printer to his apron," and refers to a very suggestive case where eight typesetters were expected to share a towel with a man suffering from a skin disease."

Midland Division.

In his report on the work of this Division, the Superintending Inspector, referring to sanitation, says the tests in letterpress printing works were fairly satisfactory. Excess of CO_2 was, in several cases, considered to be due to the use of flueless gas stoves. Mr. Pendock (Derby) has, during the year, got several new and important schemes of ventilation installed and old plants revised, especially in linotype rooms, among others. With regard to bronzing, the report shows that the regulations are being complied with, though in some instances they were not fully observed. The trade is not carried on extensively in the Midlands. In Lincoln, Wrexham and Leicester districts the report is that very little bronzing is done. Mr. Garvie (Wolverhampton) refers to a firm who mix French chalk with the bronze, and this tends to keep the bronze powder from flying about, and is also said to improve the work.

North-Eastern Division.

There is little of direct interest to the printing and kindred trades reported from this Division. In his report the Superintending Inspector, referring to platen printing machines, says, there have been nearly 30 accidents reported from these machines during the year as against 20 in 1911, notwithstanding a guard of some kind had been provided for each power-driven machine. This confirms the view which I have long held that there is not a really satisfactory guard at present on the market. Mr. Lauder (Newcastle) has had three accidents investigated during the year which occurred on treadle driven machines without guards, and he is endeavouring to have guards applied to them.

North-Western Division.

Reporting on the use of celluloid in this Division, the Superintendent Inspector says,

Digitized by Google

it is confined to the making of Christmas cards; reports have been received from Manchester, Liverpool, Preston, and Blackburn districts, and in each case ample precautions appear to be taken to safeguard its use. Warned by the recent disaster in London, additional means of escape was deemed necessary in one factory in the Blackburn district, and has now been provided.

With reference to lead poisoning in Manchester, where five deaths resulted, he observes that one case occurred to a designer using an aerograph, and is interesting as showing the danger of poisoning even when the amount of lead used is very small.

Northern Division.

In the report of the Superintending Inspector for this Division occurs the following relating to bronzing:—The new regulations for this work appear to be generally observed, and Mr. Burns (Glasgow) reports that the establishment of the regulations has undoubtedly effected a great improvement in the conditions under which bronzing is carried on. Closed machines, which are now in general use, have, with one exception, been found satisfactory. Moreover, the majority of those firms carrying on bronzing extensively have installed local exhaust systems for "dusting off" as well as for bronzing. In most cases the exhaust arrangements have been found satisfactory, though it was surprising how few places have adopted downward exhaust, the majority having installed systems of the type often found in cotton and linen factories. As regards hand bronzing little advantage has been taken of the power to claim conditional exemption from Reg. 2. In many cases where such bronzing has hitherto been carried on it has now been discontinued and any bronzing work sent out to other firms. The lavatory accommodation was generally satisfactory. Only in a few instances had attention to be drawn in non-provision of nail brushes and clean towels. The provision of overalls and head coverings was equally satisfactory, but as much cannot be said as regards their use by the workers, and in many factories females were found bronzing without wearing the caps provided. Caps made of paper were more readily worn than those made of cloth. In a very few cases occasional workers were ascertained to be in the habit of taking meals in bronzing rooms. In no instance was tobacco being used. Almost without exception employers have realised the dangers of the process, and in quite a number of cases have gone far beyond the legal requirements in ensuring that bronzing is carried on under the best possible conditions.

Lady Inspector's Report.

Much interesting information is contained in the sixteenth annual report of the Principal Lady Inspector on the work of the Women Inspectors of Factories for the year 1912. There is little directly relating to the printing and allied trades, the references being in connection with the systematic visiting of bronzing departments of printing works, and enquiries into the health among aerographers in Christmas card factories.

The call to attend three sets of inquests on loss by fire, one of which was in a Christmas card factory, is spoken of as "an unusual and sad record." Bearing on this subject it is recorded that Miss Tracy found in the North-western Division that the celluloid scraps from a card factory were removed daily in a sack by a woman, and that nobody knew where those scraps were stored or what precautions, if any, were taken against fire.

The cases confirmed as lead poisoning by certifying surgeons include three in the printing trade and one in the litho transfers making. Miss Lovibond reports that in the lithographic transfers industry special attention was given to all the factories early in the year, and many improvements have been made. The use of a power vacuum cleaner for the most dangerous process, the cleaning of machines, has met with great success. Other machinery for carrying and dusting the coloured sheets is being gradually installed, so that many young girls will be displaced from this dangerous process.

Referring to the pressing and obvious safeguard of supervision of girls' labour by trained women superintendents and supervisors, Miss Squire reports that:—In a large printing works in a small provincial town where 120 women and girls work among 600 men and boys, there were no foremen and no woman to supervise the girls generally. I had received a complaint that the behaviour was unseemly, and I found that the manager himself was anxious about the general tone of the factory and welcomed the visit of a woman Inspector. It seems that a serious warning had been given to the firm through the evidence that had been brought out by an inquest on a man killed while working a machine on which he had the assistance of a girl. Death overtook him while taking a liberty with his assistant. In spite of this warning, no steps had been taken to separate the girls or to provide proper supervision. I urged the appointment of suitable women overseers, and this was promised. This lack of supervision of men and girls working together is not at all uncommon in printing and in stationery works.

Dangerous Trades Report.

The Inspector for Dangerous Trades mentions the coming into force during the year of the code of Regulations for bronzing with dry metallic powders in printing processes, and states that:—An amended draft of the Regulations was issued to occupiers in February. Further objections were received, but as a result of visits to occupiers and conferences with several Master Printers' Associations, all the objections were withdrawn. The Regulations came into force on June 1st, 1912. They deal with the prevention of the injurious effects produced on the workers by dry metallic powders used in letterpress printing, lithographic printing and coating of metal sheets, either by inhalation or other absorption into the system, and provide for the suppression of dust in manipulating such powders, for the personal cleanliness of the workers, and for the protection of their food from contamination. Machine bronzing is required to be done under such conditions as to prevent, as far as practicable, the escape of bronze dust into the air of the work-rooms. Hand bronzing must be done under similar conditions, either in connection with an efficient exhaust draught or an efficient dust-proof appliance such as an enclosed cabinet. Exemption from these requirements is, however, allowed for hand bronzing for the purpose of proof-pulling, and under certain restrictions for occasional and intermittent work. Lavatories, overalls, including head coverings for females, and places for clothing are required in all works for the use of persons employed in bronzing processes and these are prohibited from partaking of meals in any part of the works in which the process is carried on.

The Medical Inspector's Report.

This report refers to the definite increase in the figures for lead poisoning in letterpress printing works, and states that in the making of facing paste for matrices (from which stereo plates are cast) in a letterpress printing works a worker contracted plumbism from use of white lead and sugar of lead. The lead is now replaced by borax.

Statistics.

The statistical tables appearing at the end of the blue book include one on "Reported Cases of Poisoning," from which it is shown that in the printing industry there were 37 cases of lead poisoning in 1912, against 32 in the previous year. Of these 33 were males, three were females, and there was one young person.

The tables of "All Reported Accidents, 1912," show that there was a total of 3,519 accidents in the industries connected with paper, printing, etc., of which 31 were fatal. Of these 2,844 were males and 675 females. The bulk of the accidents (1,676) occurred in connection with machinery moved by mechanical power, 12 of these being fatal. Persons falling accounted for 380 (four fatal), and 329 were struck by a falling body; 59 (one fatal) were due to molten metal and hot liquid.

Australian Labour Notes.

During the three months ended March 31st last, the number of unemployed, amongst 8,137 members of 29 trade unions connected with the printing and allied industries in the Australian Commonwealth was only 259, representing 3·2 per cent. For the previous quarter the percentage was 2·8. During the same period (January–March) the changes in rates of wages in those trades resulted in 675 persons having their wages raised by a total amount of £156 per week. Forty-one male and one female worker connected with the industries in question were included amongst the assisted immigrants entering the Commonwealth. The State Labour Bureaus appear to play only a small part in filling vacant situations in our trades, the number of applications for work, during three months referred to, being only 113, the number of vacancies actually filled being 26. One fatal accident was reported from the trades in question; also 30 others which entailed the incapacity of the sufferers from work for over 14 days. In New South Wales, persons under 16 are not allowed to be employed in typesetting; but in Victoria the minimum age is 15 for girls and 14 for boys. In South Australia, boys under 16 may not be employed in that trade nor may females work more than eight hours per day, nor after 6 p.m. or before 6 a.m. In Western Australia girls under 15 may not be so employed, and in Tasmania no boy under 16, nor may any female compositors work more than eight hours daily, or between 9 p.m. and 6 a.m.

RIGHTS OF THE PRESS.—The question of the Press being admitted to meetings of Insurance Committees is dealt with in a circular issued by the Scottish Insurance Commissioners:—It has been pointed out, they say, that as Insurance Committees are important Local Authorities, representative of varied interests and entrusted with the administration of public moneys, it is desirable that their proceedings should receive due publicity. The Commissioners agree with these views, and while they are advised that the Local Authorities (Admission of the Press to Meetings) Act, 1908, does not apply to an Insurance Committee in view of the definition of a Local Authority in Scotland therein contained, they say that there appears to be no reason to believe that had Insurance Committees been in existence at the passing of the Act they would have been regarded in the same light as other bodies to whom the Act was applied. The Commissioners accordingly suggest that Committees should apply the resolutions of Section 1 of the Act to their meetings, admitting the Press to every meeting. An exception could be made when exclusion was advisable in the public interest.

A LITHOGRAPHIC stone quarry, owned by a British company, has been started in the district of Etla, near Oaxaca, Mexico, says the British vice-consul in his annual report.

The Costing Campaign.

Organiser's Visit to Yorkshire, Etc.

Bradford is a busy spot, and business has been particularly brisk of late, yet in the opinion of the Chairman of the Costs Conference held there on July 18th, those engaged in the printing industry are not reaping their just reward for the skill, intelligence and hard work which their calling demands.

In order, therefore, to advance the Costing Campaign, Mr. Humphries, president of the local Master Printers' Association, explained that they had invited not only the printers of Bradford, but from the surrounding district, to discuss the recommendations of the Costing Committee.

Mr. A. E. Goodwin, the organising secretary of the Master Printers Federation Costing Committee, then gave a concise exposition of the Cost-finding System, and in doing so instanced many of the indirect benefits which printers who had installed the system had found therefrom, besides the important knowledge they obtained of the actual cost of every job and the working of every department. He gave many useful hints as to the best way of overcoming initial difficulties with the installation of the system.

Mr. Gilbert Johnson, of York, read a paper prepared by his brother, Mr. Cecil B. Johnson, member of the Costing Committee, in which he set forth the main features of the System, and said that no one need hesitate to adopt it because of any fear of it proving too complicated. He and his brother devoted a fortnight to the starting of the system and it had worked like a clock ever since.

An Object Lesson.

To show those present that they were taking the medicine themselves which they were offering to others, and also to prove the absurdity of the old fallacy that the composing-room could never be run at a profit, Mr. Johnson handed round the statement showing the cost of production and the value of production statement for their composing department for the past three months, which showed a surplus for the whole period, some weeks of course showing slight deficits and others small surpluses. He said he did not tell them what their rate per hour worked out, for obvious reasons, but they were charging the rate shown by those figures to be correct, and he was convinced that whilst it might shock some of those present when they did discover the actual rate per chargeable hour in their own businesses, yet they would all soon find their ability to recover some from their customers.

It did not make the hourly rate any lower because they did not know what it was.

What About Holidays?

Quite a number of searching questions were asked, one enquirer handing up a typed list of half-a-dozen questions based on a critical examination of the booklet issued by the Committee.

One question related to the method of finding the weekly assessment of departmental expenses, and that by dividing by 52 there would be a heavy leakage through holidays, slack time and short time. Would it not be better to find the average number of hours recorded in twelve months and obtain the hourly cost of departmental expenses in that way?

Mr. Goodwin pointed out that in the booklet an alternate method was suggested of dividing the annual assessment of expenses by 50 and treating the four holiday weeks as half weeks, and that it should be remembered that departmental expenses did not rise or fall with the number of chargeable hours.

It would also be apparent that no one could start a cost system on the lines suggested by the questioner, until they had the average number of chargeable hours for a year, which would mean at least two years' records before they could make a start.

Travelling Expenses.

Another question referred to the method of dealing with travellers' expenses. With a firm doing business both local and from afar is it possible to reckon the travelling expenses against each job?

For local work where the competitor comes from afar, the same travelling expenses can be added and you still have the advantage of carriage. Is it not therefore expedient to spread the travelling expenses over the whole of the turnover?

No! said Mr. Goodwin, the object of this system is to allocate your cost as accurately as possible, and it is unfair to burden your local work with the cost of travelling, and the printer who did so would probably find he would lose a good deal of local work. The question as to what he must charge in order to secure work he must settle for himself, the fact remains that the orders obtained by travellers at a distance must cost him more than those obtained in his own neighbourhood.

Is it wise to advise printers to charge overtime as an extra to their customers, seeing that overtime in reason is profitable and wherever possible should be encouraged, as all your establishment charges would be covered by your ordinary time, and you would only have to pay cost of lighting?

Should Overtime Be Charged.

Mr. Goodwin replied that there were two classes of overtime, one when you were obliged to work overtime because of an urgent order, in which case surely you were justified in telling your customer it would entail extra cost and he could not object to be charged accordingly, and the other kind of overtime occasioned by an influx of work above normal when of course you could not charge anyone. It was quite true that overtime in reason increased profits, but unless you increased your staff it would be found that the work produced in overtime was not in the same ratio to that produced in ordinary time.

Why should it be necessary to include the proprietor's salary as an expense, is not this recovered in the percentage added as profit?

It was because, aid Mr. Goodwin, so many overlooked the fact that theire own services entitled them to a living wage from their business, and that if they employed anyone else to obtain orders, put work in hand, collect accounts or manage the business they would not get it done for nothing.

Profit Worth Considering.

Don't the Committee think that the percentage of profit to be added to cost is more worthy of consideration. If one printer is prepared to accept 10 per cent. profit, another 20 per cent. on a £100 job, there is bound to be a great disparity.

Mr. Goodwin said that the Committee had considered this matter, but had decided to studiously refrain from making any recommendation as to what profit should be added. So many questions entered into this matter. But the first step was surely to get printers to find out their own costs, the differences in what printers thought work cost, varied considerably more than 10 per cent., judging by estimates quoted at every cost conference in the country.

It was unanimously resolved to support the Costing Committee in securing the adoption of the system in the Bradford district.

How to instal the System.

Mr. Humphries remarked in closing the proceedings that to printers who have an aptitude for figures the installation of the system would present little difficulty, but there were many very capable practical printers who would prefer spending a week amongst their machines to an hour with accounts, and he strongly urged any of this latter class not to attempt to instal the system without assistance. There were plenty of capable local accountants who would be glad to help them, or if they preferred to call in Mr. Goodwin he would no doubt arrange to give them the necessary aid.

The advantages of the system, he said, would only be fully realised after it had been at work for some time. Cordial votes of thanks to all who took part brought the proceedings to a close.

BRIGHTON COSTS CONGRESS.

Southern Printers Organising.

Hitherto, various attempts to convince the employing printers of Brighton and district of the value of co-operation and closer organisation have not been successful, but as a result of the costing campaign, there was a good muster of printers from Brighton, Lewes, Worthing, and Eastbourne, to hear Mr. Howard Hazell give an exposition of the Federation Cost-Finding System. Mr. D. W. Garnett (Brighton) who had convened the meeting (at the suggestion of the organiser of the Costing Committee) expressed his pleasure at seeing so representative an audience, and he also read several letters from firms expressing sympathy with the movement who were unable to be present.

He gave two instances from his own experience to show the great disparity in prices quoted by local printers in tendering for local contracts, and another to show how near estimates compared when two firms were working on a proper cost system such as the Costing Committee recommended.

Mr. Hazell explained with his customary lucidity how the Cost System devised by the committee could be adopted by or adapted to a printing business of any size, and that it would be found of equal value in the smallest shop in Brighton as in the largest works in London. A number of questions were asked at the close of his address, and finally Mr. Pike enquired what was to be the practical outcome of the meeting.

Mr. Goodwin spoke briefly as to how the system could be installed with least difficulty. A resolution was unanimously adopted approving of the system, and urging all firms in the district to give it their consideration.

It was also decided to appoint a small committee consisting of Mr. J. H. Infield, Mr. E. Terry, Mr. D. W. Garnett, Mr. Strange, and Mr. Pike to consider the advisability of forming a Master Printers' Association for Brighton and district which would be affiliated to the Master Printers' Federation.

SCARBOROUGH PRINTERS IN CONFERENCE.

Printers and Stationers' Problems.

Yorkshire is evidently thoroughly aroused to the importance of the Costing movement, so that it was not surprising that on the occasion of the visit of Mr. A. E. Goodwin, the Organising Secretary of the Costing Committee to Scarborough on July 19th, there was a good attendance of printers from the town and surrounding districts, Whitby, Filey and Pickering being well represented.

The exposition of the system by Mr. Goodwin was followed with keen interest, and numerous questions were asked. How the system might be applied in a business where the publication of a newspaper was the main concern was shown to be quite simple.

Treat the newspaper section of the business as a department, and allocate all the charges you consider are directly incurred in its production. If the same employees are engaged in the jobbing side of the business, then their wages should be divided in proportion to the time employed, and a fair amount for supervision, etc., worked out and allowed.

In the same way, in reply to a question as to how a combined printing and stationery business should be treated, Mr. Goodwin said that it was essential to separate the printing from the stationery portion of the business.

It might be found more profitable for those engaged in such businesses to get their printing orders executed by a neighbouring firm, but until they knew in which section of their business they were making money it was not possible to come to a right conclusion as to which they should try to develop.

Mr. Geo. K. S. Pindar, in a very earnest and clear address, emphasised some of the advantages which a reliable cost system would give to every business, and said that since attending the Leeds Cost Congress they were adopting the suggestions of the Costing Committee in their own system.

Mr. Barber (Messrs. W. H. Smith and Son) also remarked that it was surprising how smoothly and easily such a system as outlined by Mr. Goodwin could be worked, and the saving in time and worry could only be realised by those who had installed a similar system. He moved a resolution approving of the system, and advising its general adoption by the trade.

Mr. Frater (Scarborough) complimented those who had arranged the meeting in having secured so competent a speaker to explain the system, and said that, to use a homely Yorkshire phrase, it was evident Mr. Goodwin did know what he was talking about. He was pleased to say that the firm he represented were installing the system. No better recommendation could be given than that.

Mr. T. P. Robinson (Wakefield) expressed on behalf of the visitors their deep sense of indebtedness to the local friends for their kind invitation, and said he had spent many pleasant times in Scarborough, but certainly none more profitable.

Mr. Geo. Pindar, in returning thanks, said that printers had done much for the liberation of other people throughout the world, and he thought it high time they set themselves free from many unjust aspersions due to unfair and unsatisfactory methods of charging for their work, which would soon cease if they adopted the Federation System of Cost Finding.

PRINTING machinery of the value of £6,800 was imported into Japan in 1912, as against £19,400 in 1911, and £7,000 in 1910.

Printers' Eyesight.

SIR,—In a recent issue of your journal there appeared a short article on "Printers' Eyesight," which I read with great interest, as I have had some practical experience in working in dark holes of offices. In some offices very little attention is paid to the matter of having light properly diffused. The superiority of diffused light over that which is direct is now generally insisted upon by scientific experts, the fact being urged that while direct light wearies the eyes and predisposes to shortsightedness, diffused light is, like sunlight, soft and soothing. The principle involved in lighting a composing-room, or any room in a printery, by this method is of a certainty sufficiently simple and practicable for its general adoption. It consists in having reflected upon the ceilings and walls the required luminous rays, which thus fall softly on the desk or on the case or keyboard.

All that is necessary to secure this result is to place a reflector, not *above* the source of light, but *below* it, by which arrangement all the rays are reflected towards the ceiling. In one place I know of a conical reflector, painted entirely white, is placed under arc lights; while in another a parabolic reflector is made use of, it being bronzed on the lower part and silvered on the upper. By this means a splendid light is obtained—far better for the eyes that if direct.

But then, sir, we can only look for improvement in the lighting of composing-rooms when the proprietors are educated up to the importance of the subject. They must eventually learn that proper lighting ensures to their own advantage. Of course, many of them are excusable, as they have to lease buildings according to the length of their pocket-books, and put up with their disadvantages; but even this excuse will not be of much avail in a short time, in view of the fact that buildings suitable in every way for carrying on the printing business are becoming marked features of our industrial life. The intelligent printer has put up with the inconveniences of the old-time structures for a long time, but is beginning to go in for something better. It takes a long time to get some things into people's heads, particularly if they don't want to be enlightened; but it is now evident that even master printers are marching with the times with regard to securing better conditions for their men to work under. Of course, there will always be the non-progressive, but perhaps they may be awakened to a sense of their duty toward their men, and give them such means of illumination in the composing-room as will tend to preserve their eyesight, and, incidentally, to increased profits for the business.

Yours, etc.,
BLIND BAT.

Printing Prospectuses.

In the City of London Court, last week, before Judge Lumley Smith, K.C., a claim was made by Messrs. Duncan Hardy and Co., Ltd., printers, etc., 19, Farringdon-street, against Messrs. Ellis, Strange and Co., solicitors, 93, Chancery-lane, to recover the sum of £4 10s. for printing memorandum and articles of association of the British Securities Co., Ltd. Mr. Priestley appeared for the plaintiffs, and Mr. Knight for the defendants. One of plaintiffs' clerks stated that on May 5th defendants wrote them a letter saying "we agree to be responsible for payment of accounts for all companies until we give you notice." Defendants ordered 25 copies of the memorandum and articles of association of the British Securities Co., Ltd., to be printed. They asked defendants for references, which surprised the defendants. The work was done, but defendants declined to pay. Mr. F. Lewis, defendants' managing clerk, said his firm were interested in several companies which were being floated. Plaintiffs' manager Rowley asked for printing orders, and arrangements as to payment were made. He ordered plaintiffs to print 25 copies of the articles of association and memorandum of the British Securities Co., Ltd., and although the defendants gave an undertaking to pay, the plaintiffs asked for references next day. He asked for his proofs to be returned, meaning his copy, as there was no time to give references. Then the plaintiffs asked for £2 on account, and as plaintiffs would not deliver the 25 proofs by the following day the matter came to an end. The plaintiffs had not done the work for which they were suing. He had since got the work done elsewhere for £5 16s. Judge Lumley Smith said he had never heard of a printer being entitled to recover where he had not finished his job. Plaintiffs had only done the proofs. He did not see how they could sue for part performance. So far as he could see, the defendants were in the right, but he would adjourn the case for Rowley to attend, but he thought the parties had better settle the matter in the meantime.

The Sun Paper Mill.

An article appeared in the Manchester *Daily Dispatch*, of the 15th inst., on the Sun Paper Mills, and incidentally the wonders of the papermaking industry are described. After indulging in a little ancient history, and making a contrast between old and new methods, the conclusion is rightly drawn that only men absolutely up-to-date, keen to seize the spirit of the times, willing to go in for the newest machinery and scrap the old, have been able to keep pace with the growth of the industry, and achieve success in the running of their works. All these factors, the writer says, have been at work in making the acknowledged and remarkable success which has been accomplished by the Sun Paper Mill Co., at their works at Feniscowles (near Blackburn) and at Pendleton. Here is a firm which has seized upon every new process or idea that has been evolved in their own industry, and to-day, they stand in the very front rank of papermakers, owning works which are, to those who see them and their operations, a veritable twentieth century marvel of machinery, skill, and rapidity of production. The history of the Sun Paper Mill Co. is brief, but a record of progress all along the line. About 1883 the present chairman, Mr. J. T. Jackson, with some other gentlemen, of whom he is the only one remaining on the board, formed the company, and commenced to make paper at the Feniscowles premises. At that time the raw material of the manufacture here was rags—wood pulp came later. Working with an assiduous attention to what the market demanded, the firm soon made a footing for itself, and, though the business done then was little compared with that of to-day, it was a respectable amount for a new firm. Growth soon began. The reason for success was not difficult to seek, for, from the very outset, the firm aimed at excellence of quality with economy of cost to the consumer—factors which are just as prominent in their business to-day as ever; and, moreover, whenever a better way of doing any part of their work was discovered, either by themselves or by anybody else, they took it up. There was no lagging behind the march of invention and progress. So it was that the Sun Paper Mill Co. at once realised the change which had happened with the coming of wood pulp, and they took opportunity by the forelock by adopting the new materials and methods. And in consequence the steady growth of their trade went on. Then one mill became insufficient for the demands upon them, and in 1895 they took over their Pendleton establishment, and now they are running both these mills with a success which has been won by brains and business methods, and by keeping pace all the time with the progress of their industry. At the commencement of its career the Sun Paper Mill turned out 30 tons of paper a week. To-day its output is 550 tons—350 at Feniscowles and 200 at Pendleton. Within the past twenty years (very much of it within the last few years) every scrap of machinery in the place has been renewed, and often the firm have taken the lead in their equipment through this eagerness to fulfil their function well; and to-day they stand with the very best in their plant and all the appurtenances of their trade.

The "Tagograph."

AN American contemporary says that a machine called the "Tagograph" has been devised, and will shortly be placed on the market, which will typewrite lot numbers, size, price, style, private mark, etc., on string tags, pin tickets, turnover tickets, gum labels and the like. The machine occupies about the same amount of space as a typewriter, is easily portable, and can be operated on any table or counter. It is constructed entirely of metal, with interchangeable parts. The desired markings on a ticket are set up in regular typewriter type and inserted in the machine, the handle is turned, and the tickets are printed as rapidly as they can be fed into the machine. Where sub-tickets are used the marking is duplicated without having to remove the ticket from the machine. Any boy or girl can operate the "Tagograph," and ten tickets or more can be marked on the machine as quickly as one ticket can be marked by hand. Prices, private marks, etc., can be printed either in figures or letters, together with any required description, such as colour, department, section, style, condition, etc., for which block type is furnished. The machine can be set for any number of repetitions of the same combination of figures, and required changes can be made very quickly. Tickets printed in this machine are, it is claimed, indelible, so that prices cannot be erased and others substituted without immediate detection. It prints almost any size ticket and makes any combination of ten figures and fourteen letters to the line. It will also print fractions, dollars and cents marks, division lines, etc. It will be put on the market by the Hulse Manufacturing Co., of 165, William-street, New York.

German Papermakers' Association.

ANNUAL REPORT.

The report of the German Papermakers' Association for the business year 1912-13 is a volume of 237 pages, compiled by Herr Ditges, the secretary, and published by Otto Elsner, Berlin. This year was one of the most favourable on record for all branches of German industry, most of which have shown notable advances. At the same time considerable advances in wages and prices of materials had to be faced, and in the autumn of 1912 a scarcity of rolling stock on the railways caused very serious inconvenience.

The activity of the paper trade was further enhanced by a general election. There was no lack of water supply such as had been experienced in 1911, and turbines and canal transit were working normally. Nevertheless there appears to be a tendency for the supply of paper to exceed the demand, and the erection of new mills and enlargement of existing ones seem to be proceeding too fast. The exportation of rags, chiefly to the United States, continues to increase; it is creating much uneasiness, and an agitation is on foot to obtain an export duty on rags. Wood and wood pulp are becoming scarcer and dearer and other materials, particularly coal, have likewise advanced without the papermaker having been able to obtain a corresponding readjustment of the prices of his manufactures. The end of 1912 and beginning of 1913 showed a lull in the general commercial activity, in consequence of the fear of war, and at the time of writing it was impossible to forecast the immediate trend of affairs, although it appeared that with restoration of confidence the interrupted progression would be resumed.

The statistics for the production of paper and boards for the German Empire for the year 1910 are only now available. These show total for paper of 1,436,509 tons, value 416,358,305 marks, and for boards a production of 354,276 tons, value 56,210,516 marks. As compared with the year 1909, there was an increase in production of 18·7 per cent. and in value of 14 per cent.; thus the production of cheaper sorts has increased faster than that of the dearer qualities. The figures are analysed and discussed in the report. The German chemical wood pulp industry has so developed that it is in a position to export large quantities, and there is a demand for a protective tariff against the importation of foreign pulp which is invading the German market. Given a sufficient supply of wood, largely however of foreign origin, the German papermaker may count on a full supply of home-manufactured pulp. Over a million tons of pulp wood were imported in the year 1912. As regards manufactured paper, the importation of raw paper and boards shows an increase in quantity of 3·8 per cent. for 1912 as compared with the previous year, whilst the exports show a decrease of 0·8 per cent. These figures are explained by the considerable increase in the importation of common boards of foreign manufacture which the German tariff is not sufficiently high to exclude. On the other hand the exports of the finer grades of boards and better sorts of paper are well maintained and show a satisfactory increase.

MESSRS. C. W. FAULKNER AND CO., LTD., 79, Golden-lane, E.C., have issued a new series of picture post cards that make a specially strong appeal to children and all who love children and their taking ways. One packet contains six oval portraits of a pretty little child, printed in colours with glossy surface, and surrounded with a grained white surface, and is called "A Little Sunbeam." "So Jolly by the Sea" is the title of a set of Dutch seascapes introducing little children. "Childhood's Ways" are very pleasingly illustrated in a packet so entitled. Some quaint situations, with appropriate mottoes, are suitably called "Early Days and Early Ways," and similar pretty incidents are depicted in "Love's Language of Flowers." Very clever effects are produced in "The Chinese Lantern" series, and highly amusing is the series called "Those Kids Again." A charming series of flower studies by Destouches are seen in "From My Cottage Garden." Pleasing designs of children and pet animals, by Feiertag, are dealt with in "Loving Comrades," and a popular series will be "Tubbies at the Seaside." For quality and attractiveness after their various kinds these cards will be hard to beat. They are characteristic of the high artistic merit of all this firm's productions.

THE late Mr. E. Wolff, of Tulse-hill, London, S.W., pencil manufacturer, has left estate of the value of £8,610.

BRITISH Imports of Printings and Writings.

Of the total imports of paper, etc., into the United Kingdom last year, amounting in value to £7,234,437, £2,287,473 represented printings and writings. The receipts were as under:—

	ON REELS.	NOT ON REELS.
1912	£1,451,005	£836,468
1911	1,357,598	801,862
1910	1,118,360	1,207,557
1909	866,635	1,416,296
1908	905,323	1,493,543

Countries Supplying "Reel" Paper.

The imports into the United Kingdom during 1912, as compared with the year 1908, from the following countries, were as under:—

From	1908.	1912.
Russia	£272	£37,951
Sweden	313,723	336,331
Norway	308,954	482,974
Germany	94,052	77,871
Netherlands ...	14,077	31,760
Belgium	11,671	4,720
France	3,983	3,144
Austria-Hungary ...	3,619	8,858
United States ...	43,359	27,786
Other For. Countries	1,144	4,337
B. Possessions ...	110,469	435,273

Last year the receipts from Foreign Countries were of the value of £1,015,732, as compared with £794,854 in 1908; from British Possessions, £435,273 as against £110,469.

The Receipts of Printings or Writings "Not on Reels."

From	1908.	1912.
Russia	£3,287	£4,463
Sweden	181,750	95,984
Norway	309,769	176,081
Denmark	2,552	343
Germany	447,246	253,324
Netherlands ...	65,126	35,116
Belgium	157,375	96,945
France	135,114	38,479
Italy	7,417	6,238
Austria-Hungary ...	8,825	4,747
Japan	25,641	20,319
United States ...	76,644	102,537
Other For. Countries	6,238	800
Canada	66,494	1,092
Other B. Possessions	65	—

Foreign Countries supplied £835,376 worth in 1912 as against £1,426,984 in 1908. Only £1,092 worth came to hand from British Possessions last year, as against £66,559 worth in 1908.

An additional classification appearing in the returns for 1912 is "Unenumerated and articles of paper," imported to the value of £384,390. The goods under this heading were previously mainly included with printings or writings, thus reducing last year's total values accordingly.

WILL.—Mr. Christopher Edward Weldon, of Bournemouth, founder and a director of Weldons, Ltd., publishers and paper pattern makers, has left £131,474. Amongst his bequests he leaves to the old employees (other than Albert Gordon) in the service of Weldons, Ltd., at the time of his death, and who were in such service for three years previous to the business being sold to Sir George Newnes, Bart., as to the men £50 each, and as to the women over 21 years of age £21 each. £250 to Albert Gordon, secretary of Weldons, Ltd. To the Newsvendors' Benevolent and Provident Institution a sum to provide an annuity of £25 per annum, to be called "The Christopher Weldon Pension Fund," to be used for the benefit of one man at a time.

Printers' Flower Show and Sports.

The third annual flower show and sports in connection with the Aylesbury works of Messrs. Hazell, Watson and Viney, Ltd., was held the other day with much success, there being a large attendance, including visitors from the firm's London establishments at Long-acre and Kirby-street. The flower show was excellent, both in its display of flowers and vegetables. At previous shows an arts and crafts exhibition had proved a source of great interest to visitors, and on this occasion the exhibition eclipsed both its predecessors in the number of exhibits and variety of interest in wood carving, fretwork, photography, pen, ink and pencil sketches, water colours, etc. During the afternoon a series of sports was held in the enclosure. Representatives of the firm's three houses took part in the events, but the London men were only successful in two or three. Some capital racing was, however, witnessed, particularly in the mile handicap, 440 yards and 100 yards.

At the conclusion of the sports, the prizes were presented to the successful competitors by Mrs. Walter Hazell, who was accompanied by Mr. Walter Hazell, Mr. and Mrs. Howard Hazell, and Mr. Ralph Hazell. She was introduced by Mr. Walter Jowett, who said that he was thankful to have such a large band of willing workers to do everything that was necessary to make the event a success. They had all put their hearts into the work, and if ever he was connected with a similar event again he could not hope to have a better band of workers than he had had on that occasion.

Mr. W. Malin proposed a vote of thanks to Mrs. Hazell for distributing the prizes. He said that in the morning they thought they would have a miserable failure, but the ladies had brought them a glorious afternoon.

Mr. Dobson proposed a vote of thanks to the officials and judges. He remarked that whilst they appreciated the work of their own members, they especially thanked the ladies and gentlemen not connected with the firm who had given their time to judge both the show exhibits and the athletic sports. He mentioned Mrs. Walter Jowett, Mrs. Theobald, Mr. R. Hazell, Mr. H. Bayfield, Mr. W. H. Warren, Mr. P. Mann, Mr. G. L. De Fraine, Mr. T. Ward, and the handicappers.

Mr. Walter Hazell said that, on behalf of Mrs. Hazell and all who had been helping in any way, he thanked them for their kind words of appreciation of their services. They were exceedingly pleased to see their friends from Kirby-street with them. His experience was that the more he knew of them the more he liked them. The people they did not know very well were often the people they did not like, and when they knew more of them they thought more highly of them. He did not know of any taste more worthy of cultivation than that of gardening. Being outdoor work, it was naturally a change from their ordinary occupations during the day, and was profitable in itself in every way and elevating. The sports had shown that their young people—and even the middle-aged ones—had a great amount of pluck in them. That was the third year they had held their show and sports. He hoped it would become more or less an annual function, and the next one would be even a greater success. It had been a great pleasure to him to be present that afternoon with his sons and daughters.

Dancing was then indulged in till 9 o'clock, the music being supplied by the Printing Works Brass Band.

THE annual outing of the staff of the Kentish District Times Co., Ltd., which this year was to Folkestone, was notable for the fact that the whole of the staff—from Sidcup, Bromley, Dartford, Eltham, and Orpington—united, and that occasion was taken to mark the silver wedding of Mr. W. D. Williamson, the overseer of the Sidcup news printing department, by presenting him with a Brazilian onyx clock, suitably inscribed, together with an autograph album, containing contributions from all the subscribers.

LIVERPOOL.—The results of the London City and Guilds Examination in Typography for the Liverpool and Cheshire districts show the following successes among students of the typography classes of the Liverpool City School of Art:—Preliminary Passes: Sydney J. Hill, William Sutherland, Albert E. Briggs, William Hankey, William B. Ross. Ordinary and Practical Passes: First class, William H. Fairbank, Harold N. Walton; second class, Charles H. Barlow, George W. Haslam, Arthur H. Parkes, Elias M. Epstein. Honours Pass: Second class, George A. Pitney. Sixteen sat for examination, twelve of whom passed and four failed.

Some Examination Results.

Camberwell School of Arts and Crafts.

The following are the City and Guilds of London examination results in connection with the artistic typography classes conducted by Mr. W. H. Amery at this printing centre:—

STAGE I.—Passed.—H. G. Atkins, N. G. Buckeridge, L. A. Cortes, D. A. Fletcher, A. S. Humphreys, E. J. Miles, H. A. Powell, V. H. Weeks, A. S. Marshall, C. J. Brown, F. L. Smith, C. W. Bean, L. O. Tooley, H. Hinckley, C. F. Arter, A. C. Jarratt, W. Foster, E. G. May, N. C. Rundle, P. Howden, W. H. Grimmer.

STAGE II.—First Class.—A. J. Brown, H. G. Buckeridge, L. T. Carter, C. T. W. Holbrook, A. S. Humphreys, S. F. Sibley.

STAGE II.—Second Class.—H. G. Atkins, L. A. Cortes, F. M. Dawe, D. A. Fletcher, T. Hand, C. J. Miles, H. A. Powell, V. H. Weeks.

FINAL.—First.—W. C. Milne.

FINAL.—Second Class.—R. Powell, A. T. Savings, G. J. R. Wraight, W. C. Simons, R. J. Brunton, E. A. Whitchelo, G. A. Stroud.

It may be interesting to state that in the new Session, commencing September 22nd, the L.C.C. Camberwell School of Arts and Crafts is starting whole afternoon classes for compositors, on Mondays from 2.30 to 6 p.m. This is in addition to the already existing part-afternoon classes held on Wednesdays and Thursdays at 4.45. Employers who desire the welfare of their apprentices are asked to support these classes.

Aldenham Institute Printing Classes.

The following are the results for this Institution:—

GRADE I.—Passed.—H. G. Harris, A. A. Leeder, P. F. Payne, E. G. Webb, T. Knight, S. C. Gilbert, R. J. Bewley, A. C. Hammond, A. G. Bennett, R. F. Faulkner, J. F. Chapman, A. Moys, A. Cox, A. E. Gorman, J. D. Dorward, A. Crudgington, R. D. Chambers, G. Bennett, A. Coyle, A. W. Gillard, F. Williamson, H. Burtenshaw.

GRADE II.—First Class.—T. Knight, J. F. Chapman, A. Moys, A. Crudgington, A. T. E. F. Playfair, F. W. Gordon, W. Whiting, S. E. Easton, E. A. Russell, G. Bennett, A. Coyle, S. J. F. Rose, F. Williamson. Second Class.—S. C. Gilbert, A. Cox, J. D. Dorward, R. D. Chambers, W. L. Groves, E. W. Tracey, A. F. Gregory, H. Jerrold, W. G. Huffer, G. T. Newbury, F. Harvey.

FINAL.—First Class.—W. J. Tillyer, W. H. Butler, E. E. Allen, R. G. Fenton, A. E. Hunt, C. A. Moody, E. W. Holland, E. Cadman. Second Class.—C. H. Hensby, C. E. Hamilton, E. E. Leeder, S. Williams, R. H. Foster, E. J. Edwards, A. J. Law, G. R. Peacock, S. J. Schneider.

Aylesbury, Bucks.

Messrs. Hazell, Watson and Viney have technical classes conducted by Mr. W. H. Amery at their works, held during business hours. They generously reward students who are successful, and in many ways do all they can to turn out efficient workmen. The following are the Aylesbury students who successfully passed the City and Guilds examinations:—

STAGE I.—Passed.—R. F. Johnson, H. J. Bartlett, P. Geeson, J. W. Blake, F. Sear, L. Bates, T. P. Winmill, W. Dixey, J. Goldswain.

STAGE II.—First Class.—W. H. Tapping, G. Woodward, W. A. Whipps, C. R. Moscrop.

STAGE II.—Second Class.—R. F. Johnson, A. Watson, H. J. Bartlett.

FRAUDULENT ADVERTISEMENTS. — The British Consul-General, at Boston, U.S.A., reports that flagrant abuses of advertising are to be prosecuted by the Boston Chamber of Commerce. A plan has been outlined by which authority is given to the governing board of the retail trade to form a corporation for this purpose. The plan calls for the formation of a corporation of retail merchants in Boston, to which each member shall subscribe at least one share of £1. It will be the business of the officers to lay before the proper authorities evidence of any infringement of the law. By this plan corporate responsibility, limited to the amount of subscription by each stockholder, will be assumed in case any counter litigation should arise from a prosecution. It is believed that this risk is seriously hindering the enforcement of the law at present. Misrepresentation of facts concerning the quality, quantity, method of manufacture or production, the cost of production, cost to the advertiser, present or former price and their reason, are the offences that are made a misdemeanour by the Act. They are punishable by a fine of £2 to £10.

"L'ART TYPOGRAPHIQUE DANS LES PAYS-BAS, 1500-1540."

(M. W. Nijhoff's fine work on early sixteenth century printing and book production in the Netherlands) has now reached its eighteenth Part, the many reproductions in which are of more than usual interest, as consisting chiefly of facsimiles of woodcuts from vernacular editions of the Bible, the Testament, or the Gospels. Illustrations of Biblical incidents appear to have been much less common in the Low Countries, at the period treated of, than cuts of the emblems of the Apostles or Evangelists, the marvels of the Apocalypse, or the legendary occupations of the Saints. Many of those reproduced are characteristically Dutch or Flemish, whilst others, in their crudity of design and execution, recall some of those in the "Nuremberg Chronicle" thirty years before. Several of them are of architectonic character, but display an odd mingling of classic and Gothic details, evidencing that the true spirit of the latter was even then gone out of the land. Some of the historiated initials are distinctly good, and not a few suggest those used in the contemporary Parisian Horæ. It seems quite likely, too, that these latter provided models for the Flemish typographers to follow. For instance, the 1526 Bible of J. van Liesveldt, Antwerp, has many of the small woodcuts surrounded with strips of decorative border, quite in the French style, but thrown together anyhow, upside down, on end, chopped in two to fit a space, and so on. One cannot help thinking that these old printers must have catered for a public who had little or no taste in Art. These typographical curiosities alone make this Part of interest. The general scope of the work itself we have referred to before, so need say no more than that full particulars about it can be had on application to the publisher, M. Martinus Nijhoff, bookseller, The Hague.

AMERICAN

Imports and Exports of Paper, etc.

The imports of paper, etc., into the United States, and exports therefrom, during the periods mentioned, were of the following values:—

Imports.

May—	1912.	1913.
Printing paper ...	$195,866	$687,938
Paperhangings... ...	130,168	109,135

Trade Notes.

MR. MOSTYN T. PIGGOTT has been elected to the board of directors of the *World*, to which journal he has contributed for nearly 20 years.

IT is announced that an increase in the prices charged for electrotyping and stereotyping will take place on September 1st next, and a price list of the revised charges is being sent to customers.

THE Printing and Allied Trades Charity Sports Association, of which Mr. Waldorf Astor, M.P., is president, announce that the annual swimming gala is to take place at the Lambeth Baths, Kennington-road, S.E., on Saturday, September 24th.

WE regret to announce the death of Mr. H. Caldwell Lipsett, a familiar figure in journalistic circles in this country and also in India. He was at one time on the editorial staff of the *Daily Chronicle*, and was also a contributor to the "Encyclopædia Britannica."

A COST CONGRESS for Swedish printers is to be held at Gothenburg on August 27th and 28th. The proceedings will be opened in the High School on the Wednesday with an address from Mr. R. A. Austen-Leigh, of Messrs. Spottiswoode and Co., London.

DURING the six months ended June, the changes in rates of wages in the printing and allied trades were equivalent to a total increase of £262 a week in respect of the 3,801 persons involved, against only £153 a week—when, however, only 1,811 persons were concerned—in the same period of last year.

A HANDSOME booklet has been issued from the office of the *Accrington Observer and Times*, which is intended as a souvenir of the royal visit to Accrington on July 9th last. It contains all the half-tone blocks that appeared in the newspaper or its supplements during the week of the royal visit, and is remarkably well got up.

THE Dublin Typographical Provident Society has passed the following resolution:—"That, in view of certain published statements regarding the initial printing and stationery work in connection with the proposed Irish Parliament, we herewith demand that all such work shall be executed in the city of Dublin and by trade unionists."

WAGES ADVANCED.—As a result of negotiations extending over some months, the members of the Typographical Association in Northampton have secured an advance in wages of two shillings weekly for men in all departments. Eighteenpence is to be paid in September and a further sixpence at the commencement of the New Year. The settlement is in the nature of a compromise, as the original demands of the men were for increases of two shillings to case hands (news), three shillings to jobbing hands (including machine minders), and four shillings to machine operators.

TENDERS WANTED. — For the supply of pencils to the Postmaster-General's Department in South Australia; tender forms from the Commonwealth Office, 72, Victoria-street, S.W. For the supply of books, printing, and stationery from October 1st, 1913, to September 30th, 1915, for the Guardians of Keighley Union; particulars from Mr. S. Green, clerk to the Guardians, Keighley. For printing the burgess roll and the abstract of accounts for year ending March 31st, 1914, for the Corporation of Southend-on-Sea; particulars from the Borough Accountant, Clarence-road, Southend-on-Sea. For printing and stationery required for the Corporation of Boston; tender forms may be had from Mr. M. Staniland, town clerk, Municipal Buildings, Boston.

ON Tuesday, in the Companies Winding-up Court, Mr. Justice Neville had before him the petition of A. L. Brown and another for the compulsory winding up of John Bull, Ltd. There was also in the list a motion in Odhams v. John Bull, Ltd., for the appointment of a receiver. The Hon. Frank Russell, K.C., said that since the presentation of the petition arrangements had been made which were satisfactory to the petitioners, and he now asked that the petition be dismissed without costs. Mr. Buckmaster, K.C., for the company, agreed. Mr. Peterson, K.C., said the motion for the appointment of a receiver was entered on the ground of jeopardy caused by the petition for compulsory winding up. He now asked that the motion be dismissed without costs. His Lordship agreed in both cases.

POST-IMPRESSIONIST POSTERS.—An exhibition of post-impressionist posters was opened at the Doré Galleries, 35, New Bond-street, on Tuesday, it being a selection from the International Colour Printing Exhibition recently held in the Leeds City Art Gallery, and demonstrates the advance made in this class of poster during the past few years. About a hundred examples are shown on the walls of the gallery, and an inspection of them is an education in the newer continental style of art as applied to poster work. The new "cubist" style figures in some of the examples, and several of the designs are weird-looking to the ordinary eye, but there is much of merit, and a visit to the Gallery should be productive of good to the printer, or those who are interested in artistic poster work.

ACCORDING to *Kemp's Mercantile Gazette* there were five failures in the printing and stationery trades of England and Wales for the week ending Friday, July 25th; the corresponding week in 1912 showed four.

AT the Leeds Assizes, last week, a man named Harry Johnson, described as a journalist, was sentenced to twelve months' imprisonment, with hard labour, for having broken into a house at Doncaster, with intent to set it on fire. It was stated that the suffragist, who accompanied Johnson, had disappeared whilst on licence under the "Cat-and-Mouse" Act.

ON Monday, in the Appeal Court, the *Times* Publishing Co. applied for an order of security for the costs of the appeal by Bishop Mathew of the Old Catholic Church, from an adverse verdict and judgment in a libel action which the Bishop had brought against the *Times*. The Court ordered Bishop Mathew to find £100 as security for costs of the appeal, and gave him until October 12th to do so. The Master of the Rolls said unless the security was found, the appeal would be struck out.

AN assistant sub-director for the Government Press, Cairo, is required, age from 24 to 30; unmarried; salary L.Egn. 300 to L.Egn. 444 per annum, according to qualifications. Candidates to have had a civil or mechanical engineering education, with a certain amount of workshop experience, and to have taken a University Degree in engineering or a diploma of some recognised engineering college. Though previous knowledge of printing is not essential, preference will be given for experience in electrical power installations, and a knowledge of French will be of assistance. Applications may be made to "Secretary, Egyptian Government Selection Board, East Ella, Putney, London, S.W.," not later than August 4th.

SECRET PROCESSES.—In the Chancery Division, last week, Mr. Justice Eve had before him a motion by the plaintiffs in the action of the Caribonum Co., Ltd., *v.* David Le Couch, in which the plaintiffs asked for an injunction to restrain the defendant from using for his own benefit or communicating any of the formulæ or processes used by the plaintiffs in the manufacture of its products to any person, firm or company, and from entering into and being connected with the business of manufacturing and selling carbon papers and typewriter ribbons, or any business carried on by the plaintiffs in the British Empire and the Continent of Europe in breach of an agreement. After hearing arguments His Lordship said there had clearly been a breach of the agreement, and he would, therefore, grant the injunction as asked for by the plaintiffs, in the terms of clause 10 of the agreement, excluding the words which covered the manufacture of carbon papers. Costs would be costs in the action.

THE British Loose Leaf Manufacturers, Ltd., 25, Finsbury-street, E.C., whose productions are being well appreciated, have just received an order for 475 "Majestic" ledgers and 260,000 sheets for a firm of stationers—quite a considerable order in this line of goods. The loose leaf system of book-keeping is rapidly coming to the front, the demand for such goods is daily increasing, and yet the stationery trade generally displays an attitude towards the loose leaf business that is playing into the hands of outside firms, which are gradually getting an increasing share of the sales, as they push the loose leaf system direct with the consumers, and consequently divert the trade away from its legitimate source of supply, the commercial stationer. This is to be regretted, and the trade should endeavour to secure the business in their own hands. The British Loose Leaf Manufacturers deal exclusively with the trade, and stationers desiring to take up the profitable line of loose leaf books should communicate with them.

AT the meeting of the North-Eastern District of the Institute of Journalists, held on Saturday evening last, at the "Crown Hotel," Newcastle-on-Tyne, Mr. A. Johnstone in the chair, the reports to be presented at the annual conference at York next month were considered and approved. Financially, the Institute was shown to be in a very satisfactory state; after writing off £825 for depreciation of securities during the year, the total funds of the Institute amounted to £27,487. The delegates selected to represent the district at the forthcoming conference were Messrs. J. C. Moore and J. P. Dorrian. The representative on the council was instructed to move that negotiations be entered into with the Newspaper Proprietors' Associations, with a view to securing a six days week on all dailies.

THE late Mr. Francis Hansard Rivington, formerly of the firm of Messrs. Rivingtons, publishers, has left estate of the gross value of £89,900.

"MERCHANTS in Palestine are interested in the British make of cheap notepaper, provided that British merchants can compete in price with the German or Austro-Hungarian, which is commonly used out here," says Mr. P. McGregor, Consul at Jerusalem, in his annual report.

THE death occurred on Monday of Mr. William Lindsey, a well-known Newcastle printer. He was for 38 years with the Co-operative Printing Society, and for thirty years secretary of the Newcastle Printers' Benefit Society; and published the Newcastle *Diocesan Gazette*.

ACCORDING to the *Daily Chronicle*, astonishment has been caused in Chicago by the revelation that Mr. Henry Lee, head of the prominent publishing house of Laird and Lee, in that city, who recently died, was a negro. He died intestate, and consequently his estate, which is about £50,000, will revert to the State of Illinois.

THERE is an appropriately seaside and holiday flavour about the August *Pearson's*, in which an article on "Sea Maidens" occupies a prominent place. Mabel Russell contributes a bright little article entitled "Black Cats or Billikens?" Miss Russell attributes her success to a change of mascot—hence the title. The new Open Champion, J. H. Taylor, writes a useful article on "The Art of Approaching," which merits the attention of all keen golfers; and the fiction is varied and excellent, comprising sentiment, romance, mystery, crime, humour—in fact, something for every taste.

IN a case that came before the King's Bench Division, on Monday, Messrs. Iliffe and Son, Ltd., claimed from Mr. William Waldorf Astor damages for breach of contract, an injunction restraining the defendant from publishing or distributing certain books entitled "Pictures of 1913," so as to convey that the same were issued as the *Pall Mall Magazine* Extra, and also restraining him from using a block or drawing appearing on the front page thereof, and a declaration that the said block or drawing was the property of the plaintiffs, and that the defendant was not entitled to publish any annual publication either under the title "Pictures of the Year," or so as to represent to the public in any way that the same was a continuation of the annual publication which was formerly published and issued by the defendant as an extra number of the *Pall Mall Magazine*. After a hearing Mr. Justice Atkin said that it appeared to him that "Pictures of the Year" was a separate and distinct publication from the *Pall Mall Magazine*, and it did not form part of the magazine, and that it was not sold by the defendant to the plaintiff. His Lordship also said that the defendant, in publishing "Pictures of 1913," did not represent that it was published by the then proprietors of the *Pall Mall Magazine*. He gave judgment for the defendant with costs.

More Trouble in the Printing Trade.

A strike in one Dublin printing house, affecting one man only, is threatening trouble that may possibly develop into a lock-out in other parts, or even the whole of the United Kingdom. The binders and rulers in the house in question having demanded that one man should be employed for each automatic ruling machine, hitherto operated by girls, the question was referred to the Federation of Master Printers and the Federation of Unions, there being no agreement between the Masters and the Unions upon the point. The officials on both sides met to discuss the matter, and the President of the Federated Unions suggested that the proper mode of settlement was a conference of the organisations on both sides with a view to arriving at a general agreement. This was followed by an invitation from the Employers' Federation to a conference, but whilst this was being arranged the men in the Dublin house in question handed in their notices. The employers feel they cannot allow such a condition to be forced on houses engaged perhaps on work which does not allow of a stoppage, and are obliged to consider the question of a lock-out of the members of the Union concerned. The condition demanded of one man one machine, on the machines in question, is quite contrary to previous practice as they have always been operated by girls, and

Digitized by Google

we are informed that H.M. Stationery Office has more than once informed the union concerned that the employment of girls on the machines fully complies with the Government fair wages clause.

City Bookbinder's Insolvency.

In the Chancery Division, on Tuesday, Mr. Justice Neville heard the petition of Messrs. S. H. and W. Hart and James Garner and Sons, leather merchants, for the compulsory winding-up of Messrs. C. J. Forward and Son, Ltd., bookbinders, of Sayer-street, S.E.

Mr. Jenkins, K.C., for the petitioners, stated that the company was incorporated in 1898 to acquire the business of the late Mr. Chas. J. Forward, and in 1909 it issued certain debentures of which £3,200 worth were outstanding. In May of this year a debenture holder, Mr. Chas. W. Forward, who was also chairman and managing director, and practically the only shareholder, appointed a Mr. C. H. Dommes as receiver under his debenture, and in June a resolution was passed for voluntarily winding-up, on the ground of insolvency. At present Mr. Dommes was in possession of the assets, but the petitioning creditors, who represented between them debts of between £800 and £900, and were supported by all the other trade creditors, desired a compulsory order, because it was alleged that there were matters requiring investigation, and relating specially to the issue of the debentures, and to a claim by Mr. Chas. W. Forward for a considerable sum said to have been lent to the company. By the agreement made at the time of the company's formation, provision was made that in place of a cash payment which was to form part of the purchase, the company should, if called upon, issue first mortgage debentures for any of the purchase money which might not be due to the vendor. No debentures were in fact issued till eleven years after, and when they were issued they were not issued to anyone on behalf of the old company, but to a Mr. Farmer. A creditors' meeting had been held at which it was suggested that the company should agree to a liquidator nominated by the creditors, without prejudice to the question of the legality of the debentures, but that was refused, it being stated that a receiver was already in possession on behalf of the debenture holder. On July 1st a petition was presented, and on the same day a circular was issued by the voluntary liquidator calling another meeting of creditors. At that meeting Mr. Dommes, who presided. refused to accept a motion for compulsory winding up although the majority of the creditors desired it, and the meeting broke up.

Mr. Gasson, for the company, urged that the voluntary liquidation was preferred because it would preserve the assets and prevent their being dissipated in litigation. With reference to the debentures, he said when the company was formed in 1898, it was arranged that the former company should receive £5,000 in cash. The latter amount was not paid, and some years later the amount was reduced to £3,200. The interest was paid on that amount, and debentures were not called for till 1909, when they were issued to the executor of the late Mr. C. J. Forward, the founder of the business some 60 years ago, who had died a year or two before. Later on Mr. Chas. J. Forward, a cousin of Mr. C. W. Forward, the managing director, amalgamated with the company a business which he had previously carried on separately, but after about five years this was found not as profitable as represented, and Mr. C. W. Forward bought out his cousin for £1,445. Later on, to keep the company going, he borrowed from the bank various sums which he advanced to the business and he was now a creditor for £2,650. He repudiated as grossly untrue and malicious a suggestion that he had advanced this money out of monies improperly received by him for the company.

Counsel read Mr. C. W. Forward's affidavit in which he gave particulars of the monies advanced by him to the company. The last few years, he said, had been very disastrous to the bookbinding trade, and he had serious thoughts of winding up the business in 1909, but the good trade of 1910 led him to keep on in the hope that matters would improve, and because he did not wish to throw out of employment about 60 people, some of whom had been in the business 40 years.

In giving judgment, his Lordship remarked that under the present law limited companies were very unsatisfactory debtors to those who dealt with them in the ordinary way of trade. He supposed a trader would say it was no good giving that warning, because nowadays if one didn't deal with limited concerns there was nobody else left to be dealt with. The Legislature had provided that in the case of the existence of a voluntary winding-up, a trade creditor shall not have a *prima facie* right to insist on a compulsory order. It is not very satisfactory, because in nine cases out of ten, or I might say 99 out of 100, he will find a receiver in possession, and the whole of the property of the company devoted to the payment, not of those who have supplied goods in the ordinary course of trade, but persons who have advanced money for the purpose of carrying on the business. I think the Court should regard the wishes of the trade creditors and give them possibly the only chance they have of getting anything at all. Therefore I make the usual order for a compulsory winding-up.

A Remarkable Career.

From Sailor to Lithographer.

Mr. Max Schmidt, of San Francisco, who has been elected vice-president of the American National Association of Employing Lithographers, has had a remarkable career, which is told as follows in the *National Lithographer*:—

"In the year 1871 a husky young German sailor was strolling down Market-street, in San Francisco. He had landed a short time before from a sailing vessel which had come over from the old country, and after once setting foot on shore he had not the remotest intention of going back. He had had several years of sea life before the mast and that was enough. He knew nothing of the English language, but was possessed of the buoyancy of youth and a supreme confidence in himself that had stood him in good stead all the years of his active life. 'The world is my oyster!' he exclaimed, in the way of variation of the famous expression of the adventurous Count of Monte Cristo.

"While walking along he was confronted by one of his countrymen, who asked him if he was looking for work. He replied that he was. The stranger explained that he was a baker and wanted someone to drive his delivery wagon.

"'But I am a sailor,' replied the youth, 'and I know nothing of the mysteries of navigating a delivery wagon. I can't speak English, and I don't know anything about the city.'

"The stranger replied that he thought he could learn, and as he needed a man pretty badly wanted him to try. So he was taken around to the barn and given a bunk in the hay loft.

"At 2 a.m. he was awakened and tumbled down the stairs, where he was confronted with a great problem of rigging up the horse and attaching it to the wagon. After a long, desperate effort he got the nag connected after a fashion, climbed in the wagon and started the horse.

"Away he went out into the darkness aboard a strange craft, bound he knew not whither. The horse knew his business, however, for after trotting along a few blocks he voluntarily stopped in front of a lighted building. A man came out with his arms full of packages, and said:—

"'I marked the addresses on the bread this morning, but I won't do it again, I'm too busy. You got to remember where you go.'

"Somehow or other the bread was delivered that morning; but he learned the route, so that the next morning he made the rounds without error.

"The desire to improve his lot being uppermost in his mind, he learned to read a little, and got to plodding through the want columns of the dailies. When he saw an ad. of a lithographer: 'Wanted—A transfer man; $25 a week,' he thought he saw his chance, because on consulting his pocket dictionary it explained: 'Transfer—to carry articles from place to place.' 'Just what I've been doing,' he thought, and lost no time applying for the position in blissful ignorance that the transfer man wanted in this instance was an expert in a certain department of lithography.

"'You a transfer man?' asked the proprietor.

"'Sure.'

"'Where have you worked before?'

"'In der bakery across the street.'

"A series of rapid explosions of profanity followed from the manager which would have caused the average callow youth to withdraw with great speed. But not so our young friend. He had thrown up his job at the baker's, and he had come there to fill the position advertised. On board ship he was trained to shun idleness. Even before the bombardment had died away he was giving one of the employees a lift in moving some printing material, and then noticing that the windows needed washing, picked up a cloth and went to work. He didn't get $25 a week right away, but it wasn't very long before he had worked around in every department of the business, and had picked up a lot of valuable knowledge. Whether he had real artistic skill, or as in the job of rigging the horse and wagon, he simply set himself to master the task before him, is a matter of doubt in the mind of the writer. But in an incredibly short time he was an expert designer and etcher, with a finely developed sense of the artistic.

"Experimenting one day he put a coat of chemical on a sheet of zinc, and scratched it with a toothpick. It left an impression on the metal. Thus was discovered the process of etching on zinc. He started out for himself, and soon had a flourishing business of his own. The printer whose quarters he shared got in debt to him for $700 for engravings. This printer was printing labels and losing money on a contract for 300,000 at $3 per thousand.

"'I'll take the contract off your hands and pay you $20 a day for your press,' said the young man.

"The offer was accepted with alacrity. And that is the story of how Max Schmidt, to-day the head of one of the greatest lithographing plants in America, got into the business. All this happened within a year from the time of his landing."

ACCORDING to the British Consul-General at Turin, linotypists are paid at the rate of 1s. 5½d. to 3s. 2¼d. per day of eight hours. Printers get 3s. 4d. to 4s. a day.

THE *Daily Chronicle* "Football Guide"—which led the way in giving the public the fixtures of all the leading Leagues in the country for one penny—has just been issued for the coming season, and will be found even more useful than ever, as it contains everything that is of interest to the football enthusiast, be his cult Association, Rugby Union, or Northern Union. Fixtures, however, do not by any means exhaust the list of contents of the "Guide." The lists of players engaged by the great League clubs for the coming season are the most complete and accurate that can be obtained, while the records of the F.A. Cup Competition, the International games, and other matters which interest every football enthusiast, are thoroughly reliable. The "Guide" costs, as usual, one penny.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Wednesday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

The Costing Campaign.

OUR columns continue to contain evidence that the costing campaign is being conducted with considerable vigour. In Yorkshire and the North of England the ground has been fairly well covered, and but few printers have failed to attend one or other of the numerous conferences held in that district. It has been observed that those who have attended more than one meeting are still seeking information as to certain features of the system, and when one considers the fact that to many the possibility of being able to find out the actual cost of their work is a novel idea, this is not surprising. The point emphasised by Mr. Humphries at Bradford should also be kept in mind, that whereas some printers have good heads for figures others are much more at home amongst their machinery. To the latter class it is sound advice to recommend them to seek assistance in the installation of a cost system. The most gratifying items of information in the recent reports of meetings are the frequent statements that action has been taken by many of the speakers to instal the system in their own works. It will certainly be necessary for a good deal of personal canvassing to be done now, so that definite steps will be taken whilst interest in the movement is so much alive. Local master printers' associations should not allow the usual quiet time in the printing trade to elapse before following up the work of these series of meetings. We learn that in one centre every printer was personally called upon, and in several cases certain difficulties which were thought to be serious were shown to be easily surmounted by methods adopted with success in other works. As a result of this canvass it is confidently asserted that 50 per cent. of the printers in that centre will be working on the lines recommended by the Costing Committee on September 1st, and it will not be long then before the others are convinced.

* * *

The Factory and Workshops Report.

ELSEWHERE in this issue we deal with the Annual Report of the Inspectors of Factories in so far as it affects the trades we represent, and may say that in our opinion the bulky volume of nearly 300 pages covers the work of the year in a thorough manner. This view, however, has not been taken by several members of the House of Commons, and the other evening a spirited debate took place at Westminster as to the shortcomings of the department dealing with this work, the Home Secretary, Mr. McKenna, coming in for a considerable amount of blame for its alleged faults. The occasion was the vote of £177,613 for the salaries and expenses of the Home Department. Mr. J. R. Macdonald called attention to the annual report of the inspectors of factories. He referred to the large number of fatal accidents which took place, and complained that so little had been done by way of legislation or administration to check the number of accidents in factories and workshops. They had a certain number of new inspectors detailed at the end of a table in the report. He would like to know what the experience of these new inspectors had been. In regard to these positions there was a feeling that unless a man had a social smack about him he could not do public work. It was absurd to have a class of men designated "mister," with another body of men over them called "esquire." This sort of thing led to bad administration, and the Department was not getting the best it could out of its inferior officers. There ought to be a much larger staff of women inspectors, and he thought the time had now come for having some working women appointed as factory inspectors. Another complaint he had to make was in regard to the failure to get convictions under the Factory Acts. There were instances where magistrates dismissed cases against brother-magistrates in the face of clear evidence, and this was very discouraging to the inspectors. Mr. MacDonald asked how it was that fatal accidents were constantly increasing? Within the last twelve years the number of accidents had practically doubled, and everybody knew why. It was because of bad lighting, overcrowding of machinery, and accumulations of dirt and grease. He arrived at the conclusion that such conditions must continue to exist so long as inspectors were to be found inventing excuses for them, for although the inspectorate had been greatly increased in recent years, the staff was still so inadequate in proportion to its duties that if the work were to be covered at all, each inspector would have to visit ten factories a day all the year round. Another member, Mr. J. W. Hills, referring to the rules on the subject of lead poisoning, said that he welcomed them, though he did not think that they could put down lead poisoning by regulations. They had, he believed, to go a great deal further than they had yet gone. The figures for last year were not very satisfactory. There were 80 cases and 13 deaths, and in the first six months of this year there had been 36 cases and six deaths. He contended that these cases of lead poisoning were preventable, and he hoped that they would not be very long before they took action, assuming that the new rules did not do all that was expected of them. Most of the speakers referred to the excellence of the

* * *

Women Inspectors' Reports

as being of a more excellent character than those of their male confrères, and one member even went so far as to say that one woman

Digitized by Google

inspector was as good as ten men. The men had drawn up dull, barren, red-tapish reports, a wilderness of words without meaning and without life. The women, on the other hand, had presented them with vivid, picturesque, human descriptions of factory life and conditions, such as were a pleasure and delight to peruse. "Why does not the Chief Inspector get a lady to write his report?" exclaimed this ardent champion. "Then it would be a tale well worth reading." He called upon the Home Secretary to take immediate steps to increase the number of women on the staff. Not to be outdone in gallantry, Mr. Hills, Unionist, also declared that one woman inspector was worth many men, and Mr. Morrell said, "Give us more women inspectors." In his reply, Mr. McKenna dealt at length with the various criticisms, and, referring to the demand for more women inspectors, he pointed to the inordinate length of the ladies' reports. One of them had taken 35 pages to deal with a small part of her inspectional duties, whereas the Chief Inspector, a mere male, had compressed his review of the year's work, covering the whole field, into seven pages. "If the men in their effort to be picturesque, vivid, and human were to take the same latitude as the ladies, we should," he said, "have to issue not one volume but many volumes." The Home Secretary admitted the need for more inspectors, and though he had added twelve to the staff this year he hoped to secure a further increase next year. How many of these would be ladies he did not say, but after all that was said he could scarcely ignore their claims to a share of the appointments.

* * *

The German Paper Industry.

REPORTS regarding the condition of the German paper trade are of a pessimistic character. It is asserted that, in spite of the brisk demand experienced during the past year or so, excessive competition and overproduction have prevented really profitable prices being obtained for most classes of paper. Producers have attempted to reduce costs by increasing output, and owing to the lack of organisation amongst manufacturers, orders have frequently been taken at a loss in order to keep the machines fully employed. Raw material, wages, and coal have all been steadily advancing for some time, and there is no indication that the movement in this direction is at an end. Some of the companies who are engaged on specialities make handsome profits, and this accounts for the average dividend paid during the past five years by 50 of the leading joint stock companies, representing an aggregate capital of 80,000,000 marks, working out at 6½ per cent., for 36 per cent. of the companies, representing 27½ per cent. of the total capital, have paid no dividend whatever during the period. Including loans, the total capital employed is 124,000,000 marks, and as the average annual profit is 6·3 million marks, the annual return on the actual capital is only about 5 per cent., without allowing anything for reserves.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, July 30th, 1913.

TOWARDS the end of last week there was an uncertain tendency in the money market, the closing of the account preventing much in the nature of new business. Credit was in abundant supply. On Friday the Bank purchased £42,000 in bar gold, making a net influx to then of £458,000. This week's transactions began under the shadow of the Rand crisis, which caused considerable tension, and tended to restrict business, but a cheerfuller tone prevails to-day, and enquiries are brisker. Consols are quoted higher, at 73 for cash and account.

The industrial market, following the lead, has been very quiet, and movements have been few and irregular. Two rises are noted, Raphael Tuck and Sons $\frac{1}{32}$ to $\frac{7}{8}$–1, and Kelly's Directories Pref. $\frac{1}{8}$ to 9¾–10¼. Business has been done in Amalgamated Press Pref. at 95s.; in Associated Newspapers at 19s., 19s. 6d.; in Ilford Ord. at 14s. 3d., 14s. 6d., 14s., Pref. 17s. 9d., 18s.; in *Illustrated London News* and *Sketch* Pref. at 12s. 9d.; in International Linotype at 73¼, 77; in Lamson Paragon Supply Ord. at 20s.; in Edward Lloyd Pref. at 21s. 10½d., 22s. 3d.; in Linotype and Machinery A Deb. at 53½; in George Newnes Pref. at 16s. 3d.; in Raphael Tuck and Sons Ord. at 19s. 6d., 20s.; and in Wall-Paper Manufacturers at 18s., 18s. 1¼d.

DIVIDENDS AND REPORTS.

PERRY AND CO. (Birmingham).—Interim dividends, as for the first six months of this year, on both classes of the cumulative preference shares at the rate of 5 per cent. per annum, and on the ordinary shares at the rate of 15 per cent. per annum, free of income tax, being at the same rate as for the corresponding period last year.

THE FINANCIAL TIMES. — The directors of the *Financial Times*, Ltd., have declared an interim dividend at the rate of 15 per cent. per annum on the ordinary shares and 5 per cent. per annum on the preference shares for the half-year ended June 30th last, payable September 5th, to all shareholders on the register on 4th proximo. The transfer books will be closed from 4th to 11th proximo, inclusive.

GEORGE NEWNES, LTD.—The past year has been a very successful one, the profits amounting to £80,056, as compared with £47,278 for the previous financial year. The dividend on the preference shares has already been paid, and an interim dividend of 5 per cent. has been paid on the ordinary shares. The directors now recommend a final dividend of 10 per cent. on the ordinary shares, making 15 per cent. for the year. A larger dividend, the directors say, could have been recommended, but they prefer to adopt a conservative policy in that respect. Before arriving at the available profit, the directors have set aside the sum of £2,000 for distribution by way of special bonus amongst those members of the staff who are not entitled to commissions or bonuses under the agreement with the company.

THE "GRAPHIC." — The directors of the *Graphic*, the *Daily Graphic*, and the *Bystander* have declared a dividend at the rate of 10 per cent. per annum, £5,000 has been placed to an account for contingencies, leaving £5,139 to be carried forward.

NEW COMPANIES.

ANGLO-AMERICAN TECHNICAL CO., LTD.—Registered on July 24th, with a capital of £100, in £1 shares, to take over the business of a publisher and printer, carried on by Mr. C. GEORGE ALLEN AND CO., LTD.—Issue on July 10th, 1913, of £1,000 debentures, part of a series of which particulars have already been filed.

COMPANY NOTICES.

FORTESCUE WETHERMAN and Co., (1908), Ltd.

Notice is given, that a meeting of the company will be held at London, on August 29th, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

TRAFFIC PUBLISHING CO., Ltd.

At a meeting of the company, held at London, on July 8th, the subjoined resolution was passed viz :—" That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily ; and that Mr. T. H. Fraser, of 59-61, New Oxford-street, W.C., be appointed liquidator for the purposes of such winding-up."

THE QUICK TICKET PRESS CO., Ltd.
(In Voluntary Liquidation.)

Notice is given, that a meeting of the company will be held at Bolton Chambers, Eastbourne, on Monday, August 18th, at 11 o'clock, for the purpose of having laid before it an account, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation which may be given by the liquidator; and also of determining the manner in which the books and papers of the company, and of the liquidator, shall be disposed of.

COMMERCIAL INTELLIGENCE.

Re MAURICE RICHARD LYNDON WHITE,
Publisher, etc.

This bankrupt, described as late of 145, North End, Croydon, was adjudicated bankrupt in the London Bankruptcy Court on June 2nd, 1912, and the other day he applied to Mr. Registrar Hood for an order of discharge. Mr. J. B. Knight, official receiver, reported that the proved and probable liabilities amounted to £9,432 6s. 3d. ; the assets were estimated to realise £2,189, but had only produced £14, certain book debts, and the estimated surplus from securities in the hands of creditors having proved to be valueless. The bankrupt had stated that having had two years experience in journalism, he, in October, 1899, jointly with his father and a Mr. James, purchased the *Croydon Guardian* for £6,800. He provided towards the purchase price £4,000, of which £3,000 was a gift from his mother, the other £1,000 being a legacy under the will of a relative. The business was successful and his income therefrom averaged £600 per annum. In October, 1907, the bankrupt purchased the business of Andress and Co., printers and stationers, Croydon, for £3,500, the whole of which remained on mortgage of the lease of the premises. His net profits for that business averaged £600 per annum. He afterwards purchased a printing and stationery business at Sutton, which he later sold to Christopher Holt and Co., Ltd. That business was a failure, and in October, 1911, a receiver of the property was appointed at the instance of a debenture holder with the result that on May 14th, 1912, a resolution was passed for voluntary liquidation of the company. In February, 1910, the bankrupt sold his interest in the *Croydon Guardian* and Andress and Co., and his debentures in Christopher Holt and Co., Ltd., to the Croydon and County Newspapers, Ltd., which was formed with a nominal capital of £15,000. In his capacity as vendor the bankrupt received £5,000 cash of which he paid £2,850 to a firm of money lenders who had advanced money to him in 1909, and the balance he expended in discharging the liabilities of the *Croydon Guardian* and Andress and Co. He also received 5,400 £1 ordinary shares in the Croydon and County Newspapers, Ltd., 2,850 of which he transferred to his father for advances made from time to time; 1,500 he sold for cash, and the balance went to the creditors of the company, of which he acted as manager at a salary of £7 per week. The bankrupt attributed his failure and insolvency to loss sustained through the purchase of the Sutton business, and to liability under guarantees given by him in connection with the same. As offences the official receiver reported (1) insufficiency of assets to equal 10s. in the £ on the amount of the unsecured liabilities; (2) contracting a debt provable in bankruptcy without having reasonable or probable ground of expectation of being able to pay the same. After hearing Mr. Tindale Davies in support of the application, his Honour granted a discharge subject to a judgment for £250, to be paid within one month, or alternatively, a further suspension of two years. Order entered accordingly.

THE ANGLO-RUSSIAN GAZETTE (1911), Ltd.
Official Receiver's Report.

The report of Mr. H. E. Burgess, official receiver, on the liquidation of this company, which carried on business at Salisbury House, London-wall, E.C., has been issued to the creditors and shareholders. The accounts showed liabilities £2,622 2s. 4d., against assets valued at £2,628 3s., and a deficiency of £4,106 19s. 4d. with regard to contributories. According to the official receiver's report the company was incorporated on September 26th, 1911, to carry on business as newspaper proprietors. The nominal capital of the company was £6,000, divided into 4,000 ordinary and 2,000 founders' shares of £1 each. 2,113 ordinary shares and 2,000 founders' shares have been allotted for cash, representing a total of £4,113. The directors have been Messrs. Louis A. Rojansky, Charles Merrick, George H. Llewellyn and Dmitri Tchernine. The last-named was the promoter of the company and was the only director at the date of the winding-up order. In October, 1911, the company took over from Mme. Berthe Rouget, a relative of Mr. Tchernine, the proprietary rights in a newspaper called the *Anglo-Russian Gazette*, and in a booklet entitled " The Anglo-Russian Gazette Self-Teacher." The purchase price was fixed at £4,000, to be satisfied either in shares or cash at the option of the company. No part of the purchase consideration has been paid or satisfied. Mr. Tchernine states that it was intended to pay the purchase price in cash in the event of the newspaper being successful, but that the vendor now makes no claim in respect of this and that therefore the liability has not been included in the statement of affairs. The circulation of the *Anglo-Russian Gazette* has never been large enough to provide more than a small proportion of the expenses of production. During the company's ownership of the newspaper the income derived from sales and advertisements has amounted to only £267 7s. 9d., whereas the cost of production was £5,188 2s. 8d. The latter sum includes £1,680 17s. 3d. paid to or on behalf of Mr. Tchernine by way of remuneration under the above arrangement. The assets of the company, apart from its interest in a picture and photogravures, consist of office furniture, reference books and book debts valued in the statement of affairs at a total of £28 3s. The failure of the company is attributed by Mr. Tchernine to insufficient capital to enable the newspaper to be properly advertised in England and Russia, but in the official receiver's opinion the failure is also due to the fact that the business was from the commencement overburdened with expenses, and by an agreement with Mr. Tchernine of November 1st, 1911. The Court has appointed Mr. Wm. Peet, C.A., 27, Queen Victoria-street, E.C., and 1, High-street, Croydon, to act as liquidator of the company, with a committee of inspection.

Re GEO. ALLEN TIGWELL,
Stationer, etc.

This debtor, described as of High-street, Leatherhead, tobacconist and stationer, came up for examination at the Croydon Bankruptcy Court. His liabilities were scheduled at £658 1s. 11d., and the expected deficiency was £539 18s. 2d. Answering the official receiver debtor said that in December, 1910, he started on his own account with a capital of £50 borrowed on a reversion under his grandfather's will. He was not in partnership with his brother, who had a business at Dorking, although he admitted trading under the name of Tigwell and Co. so as to give the impression to the public that he was connected with his brother, who had a good business at Dorking. Debtor bought goods from his brother, to whom he owed £256, partly secured on the reversion referred to, which he had assigned to his brother. The examination was adjourned.

Re HERBERT JOHN LINSEY,
Stationer, Etc.

The public examination in bankruptcy of this debtor, of 92A and 258, Mill-road, Cambridge, was conducted before Mr. J. F. Eaden, registrar, at the Cambridge Bankruptcy Court. Debtor's statement of affairs showed gross liabilities £1,615 4s. 9d., expected to rank for dividend £1,403 3s. 6d., estimated assets £271 3s. 4d., leaving a deficiency of £1,132 0s. 2d. After a lengthy examination an adjournment took place until October, debtor to prepare a detailed account of receipts and payments since June 1st, 1911.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

MARSHALL, J. W. AND F., trading as J. W. Marshall and Co, paper manufacturers, Bolton, Lancs. Debts by F. Marshall, who will continue the business under the same style, in copartnership with his nephew, C. Marshall. June 30th.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

That was a good little business story told by Mr. Harry Sherwin at a Sheldon lunch the other day.

o o o

That fixture, I should explain, is a weekly lunch gathering at the regulation 1 o'clock hour at the Birkbeck Café in Holborn, close to the old Birkbeck Bank.

o o o

Fifty or sixty business men meet; all determined by attention to a half-hour speaker, and by question and answer, either to get a master grip of business science, or to dine in the attempt.

o o o

Quite a number of men well known in the printing world have been among the attendants at these lunches.

o o o

As they are not protracted beyond the regulation hour there is no reason why any man should not go, except that the room at present set aside for the lunch would not accommodate a great many more than sixty in comfort. Another room would be taken no doubt by the organisers, the Sheldon School whose offices are in Birkbeck-chambers in Holborn.

o o o

Mr. Sherwin was the half-hour speaker the other day, and he dealt with Salesmanship.

o o o

The little story he incidentally told was about a large cutlery house in London which sells "several price-maintained articles."

o o o

It found its cost of production for one article had been reduced, and because of this it had decided to give the trade the benefit of 3d. reduction upon each article.

o o o

Before putting the new schedule into operation the firm naturally advised the sales manager. He promptly asked his principals to confer with him as it involved his department. He put it to them something like this:

o o o

"We have fourteen loyal travellers who are doing their best for the house. It is through their efforts that we have been able to increase the sales of this articles, so that it is possible to make it in such quantity that the manufacturing cost has been reduced. Why not give the trade a reduction of 2d. and give our travellers an increase of 1d. and so show our appreciation of their efforts.

o o o

"It took that sales manager three days to win his point. As the article sold by the dozen it meant a 1s. increase to the traveller for every dozen sold."

o o o

So many readers of this column sell certain lines of stationery or related goods besides manufacturing printing to specific order, that I feel that what Mr. Sherwin had to say throughout his short talk is admirably suited for this place. I am very glad to have been able to get hold of his short paper for the purpose.

o o o

There were indeed two direct printing illustrations: Mr. Sherwin told how a firm making patented typecasting machines learned that a big printer in the City, had turned down a job owing to the fact that he had not the right face of type in stock. The job had to be finished in four days and the typefounder would not undertake to supply in time.

o o o

The sales manager of the typecasting firm called upon the printer and offered to cast the type he required in ten hours. The printer thereupon went to the telephone and undertook the customer's job.

o o o

The type was delivered in nine hours and at cost price (as the firm were not typefounders).

o o o

Two days later that printer bought a machine and equipment, although through six months previously he had repeatedly turned down the proposition.

o o o

Mr. Sherwin dealt with form letter as "great stimulants at different periods, particularly when a new territory is being opened or a new speciality is being launched."

o o o

He cautioned here that there was just "one obstacle to be avoided, that I have analysed by investigation. I am convinced that it will save a quantity from immediate burial in the waste-paper basket if the title of 'Sales Manager' does not appear below the signature.

o o o

"Better let it be 'Business Manager.' The magic word Sales before the Manager makes the prospective purchaser suspicious that you want to sell him something, and the message does not get by the censor."

o o o

I am not pretending to express the exact ordering of Mr. Sherwin's well thought-out paper, but am just selecting some points.

o o o

He particularly emphasised the inequality often seen between the efficiency of the manufacture of an article and the efficiency of its handling. And be it remembered that he speaks with the authority of success.

o o o

For the Davis Typecasters, manufactured under splendidly efficient conditions as I can witness from personal investigation, are selling like hot cakes. To continue my excerpts:

o o o

"Some houses have solved the art of making their product a satisfactory article, but their method of serving the customers is so inefficient that it destroys the value of the good work that the factory organisation has built up. Many firms again . . . do not realise or recognise the calibre of man that is required to handle the sales department. . . .

o o o

"Selling requires so much preparation and careful work, that it takes a man of peculiar qualifications to successfully market the goods. If we used the test tube of psychological analysis we should find that the ideal sales manager should possess an equal proportion of optimism, enthusiasm, tact, strength, love of people, knowledge of human nature, strong sympathies and constructive imagination. . . .

o o o

"You will please note that I head the list with 'optimism.' If he is not an optimist he cannot withstand the rigour of the problems that confront a sales manager every day, and which a pessimist labels 'worries.'

o o o
